

The background of the cover is a photograph of a person wearing a black academic gown. Their hands are visible, holding a white rolled-up diploma that is tied with a vibrant red ribbon. The person is holding the diploma diagonally across the frame. The lighting is soft, highlighting the texture of the gown and the skin of the hands.

Reader's Guide

The Reader's Guide is provided to help readers find entries on related topics. It classifies entries into 16 categories: Alternative Educational Models; Associations and Organizations; Biographies; Collegiate Education; Curriculum; Economics; Gender; Graduate and Professional Education; Historically Black Colleges and Universities; Legal Cases; Precollegiate Education; Psychology and Human Development; Publications; Public Policy; Religious Institutions and Schooling; and Segregation/Desegregation. Some entries appear in more than one category.

About the Editor

Kofi Lomotey is the chancellor and professor of education at Southern University and A&M College in Baton Rouge, Louisiana. His passion for excellence in education and inclusion was shaped largely by his undergraduate experience at Oberlin College in Ohio. A first-generation college student, Lomotey was inspired by Oberlin College and a diverse student body that was prepared to compete and motivated to achieve. With the help of fellow students, Kofi founded a preschool/early elementary school for African American children in the city of Oberlin. He is a published national expert in the fields of urban education, character building in early learners, and educational leadership that nurtures equal opportunity and inclusion.

Lomotey has served as executive vice president and provost at Fisk University, president of Fort Valley State University, senior vice president and provost at Medgar Evers College (CUNY), and as a member of the education faculties at Louisiana State University and the State University of New York at Buffalo. He is the editor of the journal, *Urban Education*, published by Corwin Press. He holds a PhD from Stanford University in educational administration and policy analysis, a

master's from Stanford in the same area, an MEd from Cleveland State University in curriculum and instruction, and a bachelor's degree from Oberlin College in economics.

Lomotey has published several books, articles in professional journals, and book chapters. His research interests include urban schools, students of African descent in higher education, principals of African descent in elementary schools, and independent African-centered schools. He is an active member of the American Education Research Association (AERA), the largest professional organization of professors and students of education. He served as principal investigator on several grants totaling more than \$4 million.

Among the awards Lomotey has received are the Outstanding Scholar Award and the Distinguished Scholar Award from the American Educational Research Association and the President's Award for Research from Phi Delta Kappa. He serves on the board of trustees for Oberlin College and Xechem International of New Brunswick, New Jersey.

Lomotey is married to A. Nahuja. They are the parents of three and grandparents of one.

Introduction

The Field

We know that Africans had both formal and informal education on the African continent prior to their arrival in the Americas. The education of Africans who were forcibly brought to the Americas continued once they arrived on these shores in the 1600s. They arrived as Africans and later came to be referred to by a number of names, including Negro, Colored, Black, Afro American, and African Americans—the designation which we have chosen to use in this encyclopedia. For enslaved Africans, upon their arrival on these shores, education took place in the woods, in the quarters of the enslaved and elsewhere—in spite of the fact that it was illegal. In the United States, Prince Hall, Richard Allen, and others started schools during the 1700s. The so-called native schools operated by African American women also operated during enslavement, as did the Sabbath Schools; both are described in this encyclopedia. More expansive formal education for African Americans followed the elimination of their legal physical bondage.

Postenslavement education in the United States for African Americans has been both public and private, parochial and secular, segregated and integrated—and desegregated. It is primarily this formal education of the previously enslaved that we address in this two-volume collection—from preschool through professional school.

For African Americans, to be sure, there have been challenges and successes—high points and low points—at every level of education and, indeed, in every region of the United States. There have been protests, killings, school closings, and legal battles emanating from educational issues—at every level.

In the 21st century, the view persists that the quality of education afforded African Americans is

inferior to that provided for their white counterparts. There remain questions of fiscal discrimination, teacher quality inequities, and other illegitimate barriers to quality education for African Americans. Elsewhere, I have argued that the disenfranchisement of African Americans in education has been persistent, pervasive, and disproportionate. (Lomotey, 1990).

Rationale

Although many books, articles, dissertations, theses, films, and journals have focused totally or in part on aspects of African American education, this encyclopedia is the first reference work to address this topic both historically and in the context of the 21st century. It is by far the most comprehensive encyclopedia on the subject, and it will have tremendous utility for a wide variety of users. Of course, librarians in academic as well as public libraries will use it as a primary reference guide available to individuals interested in education generally and African American education in particular. Scholars of education will find the topics in the encyclopedia of value in their work. Students—undergraduate and graduate—will find the volumes useful in education courses and in other social science courses. In addition, teachers at all levels should find much of value to them as they seek to facilitate the best possible teaching/learning process for their students—regardless of their racial backgrounds.

Origin

I was approached in 2005 by SAGE and asked to consider editing this encyclopedia. I was honored and humbled, but wondered if I had the time. I subsequently agreed and quickly began identifying

my proposed editorial advisors and developing a Reader's Guide and the proposed list of entries. Twice, our staff (i.e., editor, editorial assistants, and editorial advisors) met at annual meetings of the American Educational Research Association to get updates and to fine-tune the process. The effort has been continuously supported by the staff at SAGE, and in the final analysis, I am convinced that the project has been an important and valuable one.

The 212 contributors to these volumes are an outstanding group of distinguished students, scholars, and practitioners. I am honored to have been involved in this project with each of them. They are young and seasoned, professors and educational administrators, law students and practicing attorneys. Perhaps most important, we have taken great pains to ensure that all of the entries are accessible to readers who may be unfamiliar with the field.

Overview

The encyclopedia is intended to provide relatively short entries on numerous topics. It contains 247 entries, ranging from approximately 1,000 words to 4,000 words. Each of the topics is discussed as it relates to the education of African Americans. Most of the contributors have included suggested further readings should the reader be so inclined. Cross-references at the end of entries refer the reader to related entries within the encyclopedia.

For easy access to the subject, the Reader's Guide appears in the front matter of each volume. This guide lists the entries relevant to the following 16 general subject areas, with entries sometimes appearing in more than one category:

- Alternative Educational Models
- Associations and Organizations
- Biographies
- Collegiate Education
- Curriculum
- Economics
- Gender
- Graduate and Professional Education
- Historically Black Colleges and Universities

- Legal Cases
- Precollegiate Education
- Psychology and Human Development
- Publications
- Public Policy
- Religious Institutions and Schooling
- Segregation and Desegregation

Following the A–Z entries is the Appendix, which consists of a chronological listing of the tables of contents from each issue of the *Journal of Negro Education*, from its origin in 1932 through 2008. At the time of its founding, no other scholarly publication provided comprehensive coverage concerning the education of persons of African descent in the United States and elsewhere. The Appendix provides an overview of more than seven decades of work in this field.

Language

A word about language. I believe that words are very important and that they invariably deliver multiple lessons/messages. Generally, we have not used terms such as “slave,” “slavery,” and “ex-slave,” because these terms objectify people. That is, they suggest that these people were not people, but were, instead, things/slaves. We have used “enslaved African,” “enslaved African American,” “enslavement,” “formerly enslaved African,” or “formerly enslaved African American”—emphasizing their humanity.

In most cases, we have used “the United States” or “U.S.” (for example, “U.S. citizen”), as opposed to “America” or “American.” There are, of course, three Americas (i.e., North America, South American and Central America). To me, it seems a bit presumptuous or even arrogant to refer to a country that is only a part of one of three Americas as “America.”

Finally, we have attempted to distinguish between “integration” and “desegregation.” Barbara Sizemore makes the distinction, noting that desegregation is the forced placement into a diverse group, while integration is the free movement of individuals in and out of diverse groups (Sizemore, 1972).

In each of the instances noted above, of course, quotes and common terms, such as “Black Codes” and “American Dream” are left intact.

Acknowledgments

I am appreciative of the editors of the *Journal of Negro Education* for allowing us to include their complete bibliography of all of the articles that appeared in the journal from the very beginning through 2008. That bibliography appears in the Appendix at the end of Volume II and is an invaluable addition to this encyclopedia.

I want to acknowledge a number of other people without whom this encyclopedia would not have been done. When I first started working on the encyclopedia in 2006, Tamiko Black was my first managing editor. Her work was invaluable, as she established the encyclopedia office, made many of the initial contacts with prospective contributors, and served as a liaison between our office and the editorial advisors—and SAGE. Tamiko made many useful suggestions that ultimately benefited the encyclopedia—and she pushed me when I could not seem to find the time to do what needed to be done.

When I moved to Baton Rouge in 2008, I was fortunate enough to secure the services of Berlisha Ricard as my new managing editor. Berlisha is a quick study and immediately got up to speed in communication with the editorial advisors, the contributors, and SAGE. The transition from Fisk to Southern was made much smoother because of Berlisha. She was also good at pushing me to fulfill my responsibilities associated with the encyclopedia.

My wife, A. Nahuja, was a second managing editor throughout the project, with responsibilities primarily associated with the legal entries; she also worked with me during the copyediting process. She identified the large majority of the legal contributors, edited each of the entries, and maintained regular dialogue with the contributors throughout the process. She also contributed several legal entries. As my mate for more than 30 years, our relationship is, of course, priceless and she provided much more throughout the process. I love her more than life itself.

Each of the editorial board members—Joy Williamson-Lott, Adrienne Dixon, Jerome E. Morris, William A. Smith, and Melody L. Carter—was extremely helpful from beginning to end. They provided numerous suggestions for contributors; they offered invaluable input regarding appropriate and inappropriate entries; and, of

course, they edited several of the final entries—and contributed some also. I enjoyed working with each of them and I am proud to continue to call each one of them my friend.

The encyclopedia is made up of 247 entries, with 176 lead authors, and a total of 212 authors. Each of them carefully followed the guidelines, meticulously connected his or her topic to the education of African Americans, and provided entries that added to the strength of a great collection of entries. I am grateful to each of them.

My good friend, Mwalimu J. Shujaa, is one of the brightest human beings I have ever known. For nearly every project with which I have been involved over the past 30 years, I have—in one way or the other—sought and received his brilliant insights and advice. This encyclopedia was no exception. I love him like a brother.

Adenike Davidson, a colleague at Fisk and a contributor to this encyclopedia, made several useful suggestions for contributors to the volumes and read a few of the early drafts of entries for me. Her friendship is greatly appreciated.

Diana Axelsen, development editor at SAGE, clearly is an expert at what she does. At every challenge/impasse/decision point, she quickly articulated the issue—often before I was able to—and—equally as quickly—made concrete and practical suggestions as though she had just recently addressed challenges like the ones we had. She suggested contributors; she did it all. Every issue that came up, Diana was there to help. That made the process run more smoothly and certainly brought it to a quicker conclusion.

Carla Freeman, the production editor for this project from SAGE, was a welcome breath of fresh air from the day she first e-mailed her introductory message to me; it was a joy working with her. She is truly a professional. Also very helpful, supportive, and patient during the copyediting process were copy editors Renee Willers and Pam Suwinsky.

Rolf Janke, publisher, and Leticia Gutierrez, systems coordinator, at SAGE were also very supportive of me and of the project. Without their support, guidance and patience, I doubt that the project would have been completed.

Each of these individuals made invaluable contributions that added much to this encyclopedia; however, the reader should be very clear that any

faults/shortcomings/limitations of this encyclopedia are my responsibility—totally.

Enjoy.

Kofi Lomotey

ACADEMIC ACHIEVEMENT

Research on academic achievement among African American students often focuses on their underachievement or failure, its causes, and possible strategies for remediation. In reviewing that research, this entry inevitably reflects that emphasis. Nevertheless, it asserts at the start the historical understanding that laws were eradicated and practices carried out throughout the United States to ensure that enslaved Africans—and their descendants—would not become literate. If they were caught learning how to read or write, enslaved Africans—and the White people who taught them—would be punished.

Thus, historically for African American people in the United States, education has been viewed as a passport to freedom. This view is shown by the risks taken by the enslaved during enslavement to learn how to read and write, African Americans' push for mass public schooling in the southern United States during the 19th century, and African Americans' legal and political battles for equal and quality education during the 20th and 21st centuries.

Beginning with a historical review of various theories about academic achievement among African American students, this entry then turns to the contemporary dialogue about the so-called “academic achievement gap,” reviews the small body of literature about high-achieving African Americans, examines the available quantitative evidence on the subject, and briefly considers an agenda for future research.

20th-Century Perspectives

During the 20th century, a number of theoretical perspectives (e.g., geneticists, cultural deprivation, cultural difference, structural perspective, and groups' cultural expectations) have been used by the broader scholarly community to explain why African American students experience school failure. At different points during the 20th century, each became the dominant paradigm to explain why some groups achieved while others underachieved in mainstream U.S. schools.

Genetics

During the first half of the 20th century, geneticists such as Lewis Terman and Henry Goddard considered the low performance on intelligence tests of some racial, ethnic, and linguistic minorities to be a reflection of the supposed genetic inferiority of these groups. Instead of situating African Americans' schooling opportunities—or lack thereof—within a sociohistorical context of denied formal schooling during enslavement, racial segregation, and racism, geneticists attempted to prove that African American people—as well as some European ethnic minorities (Jews, Hungarians, Italians, and Russians), Native Americans, and Mexican Americans—were inferior.

The geneticists consider the differences in academic achievement among various groups of students (often measured by IQ test scores) as indicative of the innate intelligence of certain groups rather than a product of socioeconomic, historical, and cultural factors. Although African

American social scientists, in particular scholars such as Horace Mann Bond, W. E. B. Du Bois, and Allison Davis, critiqued the studies that tried to support the argument that African Americans were intellectually inferior, remnants of this belief continued to germinate within the academy, as exemplified by Richard J. Herrnstein and Charles H. Murray's 1996 book *The Bell Curve*. In this book, the authors assert that a major reason why some groups do not achieve in schools might be connected more to rank-and-file notions of intellectual inferiority than to persistent economic, structural, cultural, and historical forces.

Cultural Deprivation

Cultural deprivation theorists viewed students' academic differences on standardized measures as a result of nurture—or lack thereof—rather than on some inherent predisposition to fail the test, as asserted by geneticists. Emerging from the national thrust to eradicate poverty during the 1960s, cultural deprivation theorists offered a counter to geneticists and attributed the academic underachievement among some ethnic and racial groups to the failure of some students' families to transmit the values and cultural patterns necessary for the students to achieve in mainstream academic institutions.

The deprivation paradigm guided the formulation of programs such as Head Start and other compensatory educational programs for low-income populations during the 1960s. To better enable children to achieve academic success, cultural deprivation theorists believed that schools should assist low-income and racial and ethnic minority students in overcoming deficits caused by their families and communities, particularly during the early childhood years.

Cultural Difference

According to cultural difference theorists, however, this reasoning did not adequately explain why some students achieved and others underachieved. Instead, they suggested that the culture that students bring to schools should not be perceived from a deficit perspective just because it may be different from mainstream U.S. school culture. Instead, this perspective asserted that schools ignored the home cultures

that students, especially African American students, brought to school.

During the 1960s, cultural difference theorists began to challenge cultural deprivation theories by positing an alternative view of the academic failures of ethnic and racial minority students such as African Americans. This new group of theorists argued that the extent to which students learned or did not learn in schools reflected the cultural differences of the groups, which were either congruent with or incongruent with the White U.S. culture that pervaded many aspects of children's schooling experiences.

Other scholars, particularly sociolinguists during the 1970s, followed by asserting that differences in culture resulted in cultural and linguistic conflicts between students and their teachers, many of whom were White. This shifted part of the discourse from the notion that some groups' cultures were deficient toward the notion that cultures varied. An assumption, therefore, was that racially and ethnically diverse students' academic achievement could be enhanced if there was cultural congruence or synchronization between the home and the school and if the schooling experiences resonated with the unique cognitive or learning styles and cultural patterns of students.

Cultural difference scholars who have focused on African American students, such as Janice Hale-Benson and Barbara Shade, assert that the instructional strategies used in schools do not work well with African American students, and consequently, many African American students do not experience academic success. They emphasize the need for schools to specifically focus on creating settings that are conducive to the culture and learning styles of African American students in order to promote these students' academic achievement.

Others caution against research that categorizes students' learning styles and ways of learning based on cultural characteristics. Nevertheless, the cultural difference view of African American students' schooling experiences will remain a viable explanation because of an increasingly heterogeneous student population in which racially and ethnically diverse students accounted for more than 30% of the school-age population at the end of the 20th century. On the other hand, the teaching force in the United States is more than 90% White.

Multiculturalism

Multiculturalists, particularly James Banks and Geneva Gay, as well as proponents of ethnic-centered paradigms such as Molefi Asante (an advocate of African-centered education), assert that the White American culture of schools distorts the history, culture, and background of students from other backgrounds. They note that the knowledge that school officials and society expect children to acquire often invalidates these students' cultural experiences. These scholars believe that an infusion of multicultural education and/or cultural-centered education can be part and parcel of the solution to improving the academic achievement of students from diverse cultural backgrounds.

They propose teaching students in ways that are culturally synchronized, culturally centered, empowering, and culturally relevant. This infusion would move beyond an additive approach and would transform the entire schooling experiences for students. With roots in the ethnic studies movement of the 1960s, multicultural education and cultural-centered approaches such as African-centered education suggest infusing a multicultural ethos into schooling experiences so as to reaffirm the social, cultural, and historical experiences of students from diverse cultural backgrounds.

Societal Explanations

Rather than view issues of underachievement or achievement at the individual level, some scholars believe that larger societal forces are key determinants of student learning, as are the cultural forces within a particular ethnic or racial community. For example, this view asserts that race, ethnicity, and culture are more likely to predict what educators and schools expect of students rather than predict whether students will learn and achieve in schools.

Proponents of this view note how some educators often create a self-fulfilling prophecy in relation to students from diverse racial and ethnic backgrounds. Teachers' expectations of students greatly shape student learning and achievement. Also structural inequalities that can have deleterious consequences for students' learning may entail the limited access to knowledge and resources, the systematic denial of formal schooling, state-sanctioned discrimination, and gross disparities in the level of school funding.

Moreover, proponents of this view assert that contemporary examples of structural inequalities include differential levels of quality teaching for some students, as well as the disproportionate placement of some racial and ethnic minority group members into the lowest academic tracks. African American and Latino students are disproportionately placed in lower academic tracks in comparison to White and Asian students and therefore, experience lower levels of academic achievement. Scholars during the 1980s and 1990s such as Jeannie Oakes and Jomills Braddock noted how structures within schools such as academic tracking reproduce social inequalities within these schools. Yet, the disproportionate academic tracking of African American students into lower-level academic courses would continue to influence the disparities in achievement among various racial-ethnic groups in the 21st century and make the achievement gap of major concern in U.S. public schools.

Addressing the Achievement Gap

The inability of numerous educational reforms to substantively address the quality of schooling for African American students situates issues of achievement and the underachievement of African American students as critical concerns in the 21st century. In recent years, the underachievement of African American students—especially males—has been defined as the academic achievement gap. Discussions on the achievement gap are not necessarily about issues of achievement, per se, but about the historical inequities and denied opportunities to learn. Historian James Anderson noted that throughout their history in the United States, African Americans have closed many achievement gaps. For example, African Americans were able to close the literacy and the elementary school completion gaps during the 19th and 20th centuries, respectively. And the present gap—measured by standardized test scores—can also be closed.

Reflecting Group Values

Recent explanations for the academic achievement gap between African American and White students' academic outcomes suggest that students' learning and achievement in schools reflect the values, beliefs, and traditions of some racial-ethnic

groups, which may place a greater or lesser emphasis on achieving in the dominant educational context. John U. Ogbu's scholarship captures the essence of this view by asserting that the extent to which many members of some minority groups fail in mainstream schools can be linked to the way different minority groups enter into a society and approach schooling.

Using a cultural ecological model to explain school failure, Ogbu developed a typology of ethnic groups based on the groups' entry into the dominant society: voluntary or immigrant minorities (which include Asian Americans, recent African immigrants, and immigrants from the Caribbean) and involuntary or nonimmigrant minority groups such as African Americans and Native Americans. Ogbu noted that voluntary immigrant groups are more likely than involuntary minorities to accept the dominant achievement ideology, which holds the meritocratic view that hard work and motivation pay off.

The corpus of Ogbu's research, as well as his associates, supports the notion that African Americans' race, class, and gender consciousness, and their interpretation of inequality, can foster an attitude toward schooling that can lead to academic failure. To succeed in school, African American students became raceless, or disidentified with the African American community or a collective African American identity.

"Acting White"

Building on Ogbu's theory was a highly cited article in 1986 titled "Black Students' School Success: Coping with the Burden of Acting White," written by Signithia Fordham and Ogbu. In their ethnographic investigation of Capital High School—an urban high school that primarily enrolled low-income African American students in Washington, D.C.—Fordham and Ogbu found that some of these students did not achieve for fear of being labeled as trying to act White. For many of these students, schooling became a culturally subtractive, rather than an additive, process.

In later publications, Fordham examined the cultural and social factors that shaped African American adolescents' attitudes toward schooling and asserted that African American students valued their fictive kinship with their peers, that is,

collective identity, which was at odds with achieving in schools. Consequently, to protect their identities as African American people, many of these students consciously chose not to achieve in schools, achievement which was associated with Whiteness. Fordham further employed the concept of racelessness to describe how some high-achieving students disconnected themselves from the African American community and also minimized the significance of racial barriers in their academic success. In terms of gender, Fordham noted that some African American males chose not to achieve in school for fear of being labeled as gay; those males who excelled in school, camouflaged their academic success through clowning or by excelling in sports.

Controversial books during the beginning of the 20th century further asserted that African American culture plays a pivotal role in the low-achievement outcomes and negative school experiences of African American adolescents. Such explanations have created a maelstrom among the U.S. public and in policy and research circles, as they overlook long academic traditions in the larger African American community; fail to acknowledge the power of structural forces such as racism, discrimination, and poverty; and are discredited by contemporary models of African American success in some schools.

In his book *Losing the Race: Self-Sabotage in Black America*, John McWhorter asserted that African American cultural traits—rather than structural forces such as systemic racism, discrimination, and disproportionate poverty—were greatly responsible for the academic challenges experienced by many African American students. Based primarily on anecdotal accounts of his experiences with African American students in his classes and on the campus at University of California, Berkeley, as well as a selective review of scholarship, McWhorter argued that African American students embraced a culture of anti-intellectualism.

Furthermore, in their book *No Excuses: Closing the Racial Gap in Learning*, Abigail and Stephan Thernstrom conclude that a great deal of African American students' underachievement, even in the case of middle-class African American students, is due to the low effort by these students, as well as to the low expectations by their parents. In his

book *Black American Students in an Affluent Suburb: A Study of Academic Disengagement*, Ogbu asserted that living in and attending schools in a predominantly White and affluent suburb still did not mitigate the community forces that adversely impacted the school experiences of African American students. Ogbu concluded that African American parents in a predominantly White, affluent, suburban community (Shaker Heights, Ohio) did not value academic achievement for their children and that African American students did not make the effort to achieve.

Although the study focused on how community forces influenced academic disengagement, a number of African American scholars such as Theresa Perry, Asa Hilliard, and Claude Steele noted how Ogbu purposely ignored how structural forces within the school district and the schools can hinder academic achievement (i.e., policies and practices, teachers' expectations, etc.), did not include a substantive analysis of academically engaged students within the same community (specifically how gender might influence this process), and ignored the historical record of African Americans' efforts to shape their children's schooling.

Research on High Achievement

In contrast to the focus on academic failure or underachievement, a small body of scholarship has focused on the multiplicity of ways that involuntary immigrant groups such as African Americans approach schooling. One such study was done by Carla O'Connor. Based on interviews with 46 low- and high-achieving African American adolescents in two urban high schools in Chicago, Illinois, O'Connor found variations in how low-income African American adolescents captured the significance of social identity (race, class, and gender) in their opportunities for academic success.

Specifically, she noted that the high-achieving and resilient African American students in the study maintained a disposition toward struggle and displayed agency and optimism in the midst of recognizing persistent structural barriers facing African American people. These adolescents' awareness of struggle and their sense of collective orientation did not produce maladaptive behaviors that compromised their schooling, but instead reinforced their desire to do well academically. Likewise, Pedro

Noguera found that some high-achieving minority students challenged stereotypes by doing well in school while taking pride in their heritage and racial identity. Others learned how to succeed in both worlds by adopting multiple identities.

A number of studies have challenged the notion that African American students reject their peers who are academically successful primarily because they achieve in school. These studies particularly noted how certain school structures give rise to the emergence of what appear to be cultural patterns. For example, Karolyn Tyson and her colleagues found that racialized peer pressure against African American students' achievement most likely occurred in schools where African American students were grossly underrepresented in the most demanding courses such as Advanced Placement (AP) and honors courses. There was less animosity toward African American students by their African American peers if a higher percentage of African American students were enrolled in the advanced academic courses. Conversely, there was greater animosity in a school in which African American students were least represented in the AP courses.

Others researchers noted how low-income and racially diverse youth do not racialize being smart, doing well in school, or receiving good grades. In Prudence Carter's study of 68 African American and Latino youths, she found that none of the high achievers in her study (who represented 20% of the sample) indicated that their peers sanctioned them for "acting White" because they performed well in school. Peers identified four of the respondents as acting White because of their styles and preferences—the way they spoke, the music they liked, and how they dressed. Instead of being associated with academic achievement, acting White was affiliated with a set of styles and symbolic vehicles, such as speech and dress styles, and was not automatically associated with high-achieving African American students.

Quantitative Evidence

Methodologically, much attention has focused on the findings from qualitative studies of the ways that African American students approach schooling. Some quantitative data support the findings by researchers who employed ethnographic methods. Phillip J. Cook and Jens Ludwig used National

Education Longitudinal Study (NELS) data to assess the acting White thesis and its contribution to the academic achievement gap. Overall, they found that African American high school students were as likely to expect to enter and complete college as Whites and that African American students completed high school at the same rate as White students from the same social class. They also found that African American students who earned mostly A's in mathematics were more popular than those who earned mostly B's or C's—although the difference was not statistically significant.

Also, using NELS data, James Ainsworth-Darnell and Douglas Downey quantitatively assessed the oppositional culture explanation for the Black–White achievement gap. Contrary to the oppositional culture thesis, they found that African American students, in comparison to White students, were significantly more likely to report that education is important to get a job later on. African American students also had more optimistic occupational expectations. In terms of the acting White thesis, which further asserts that academically successful students also run the risk of not being popular, the authors found that African American students who are perceived to be very good students also hold positions of status with their peers.

Finally, the relationship between teachers and students is important to student achievement in general, and especially so for African American students. Historical, sociological, and educational studies of supportive and affirming relationships between teachers and African American students highlight how educators (mostly African American) developed communal bonds with African American students and noted how teachers' relationships with students were parentlike in nature. Many of these effective teachers of African American children saw themselves as having had similar experiences as the children they taught, took on the role of othermothers, and strongly identified with the communities where they taught.

When African American students feel that their teachers are supportive, caring, and encouraging, these students are more likely to succeed in school. For instance, Ronald Ferguson and colleagues at the Minority Student Achievement Network surveyed more than 8,000 African American students (out of a total of more than 40,000 students) across

15 urban-suburban school districts—known for their academic reputation—and found that in comparison to White and Hispanic students, African American students were most likely to say that they responded best (worked hard) in their classrooms when teachers encouraged them in their academic courses (47% of African Americans, 41% of Hispanic students, and 29% of White students).

A Research Agenda

Future discussions of African American academic achievement might usefully balance the focus on underachievement with more attention to the resilience and academic accomplishments of these students. As Anderson has written, African Americans have faced and overcome many achievement gaps in their history, and the role of history merits attention in contemporary dialogue. Whereas scholarly understandings have begun to go beyond urban and low-income African American student populations by focusing on more middle-income African American students in suburban schools, little research has focused on African American suburban contexts or on African American students who reside in the southern United States, the place where most African American people reside. The significance of place in shaping African American students' academic achievement outcomes needs greater attention in future research studies. Moreover, the interactions between teachers and African American students within classrooms need further study, particularly given the emerging body of research that shows how teacher encouragement can influence the extent to which African American students do their best academic work.

ACADEMIC FREEDOM

A hallmark of the U.S. higher-education system, academic freedom is the principle that college and university faculty should be given freedom in teaching and research and that their students should have the same freedom in regard to learning. Built on the notion that higher-education institutions are to promote the common good and not the individual interests of the institutions and individuals within the institutions, academic freedom is intended to allow for the open exploration of truth and the unrestricted dissemination and academic dialogue of that truth. This entry explores the original concept and the ongoing revisions and clarifications.

The Principle

In 1940, representatives from the American Association of University Professors (AAUP) and the Association of American Colleges, now the

Association of American Colleges and Universities, restated principles of academic freedom that were set forth in the 1925 Conference Statement on Academic Freedom and Tenure. This 1940 Statement of Principles on Academic Freedom and Tenure clearly articulated the meaning and limitations of academic freedom. This document states that teachers (faculty), including full- and part-time faculty and teaching assistants working within the scope of their job responsibilities, are entitled to (a) full freedom in research and publication of the research results, (b) freedom in the classroom in discussing their subject, and (c) freedom from censorship when they speak or write as citizens.

Although the widely accepted 1940 statement affords faculty a large amount of academic freedom in the completion of their professional duties, it does clearly define certain limitations. Faculty are encouraged to seek an agreement with their institution when engaging in research for financial gain and are cautioned not to introduce controversial subject matter into their teaching that is not in relation to the subject that is being taught. Additionally, when speaking as citizens, faculty are encouraged to be accurate, respect others’ opinions, exercise restraint, and plainly indicate that they are not speaking on behalf of their academic institution.

Academic freedom is supported by many different sources including state law, institutional custom and policy, and the First Amendment. Throughout the years, the United States Supreme Court has held that academic freedom is a First Amendment right protected by the United States Constitution. As stated in the Supreme Court ruling of *Keyishian v. Board of Regents* (1967), “Our Nation is deeply committed to safe-guarding academic freedom, which is of transcendent value to all of us and not merely to the teachers concerned. That freedom is therefore a special concern of the First Amendment, which does not tolerate laws that cast a pall of orthodoxy over the classroom.” Also in *Sweezy v. New Hampshire* (1957), Supreme Court Justice Frankfurter outlined four essential functions of a university, which are “to determine for itself on academic grounds who may teach, who may be taught, how it shall be taught, and who may be admitted to study.” Although the First Amendment does not apply to private colleges and universities, most private institutions, including religiously affiliated ones, fully embrace the concept of academic freedom.

Besides being supported by the Supreme Court, there have been a number of legal cases that have supported and/or clarified the concept of academic freedom. In *Greene v. Howard University* (1969), it was determined that a legally binding contract sometimes occurs when academic freedom rights are explicitly stated in faculty handbooks and other institutional documents such as institutional rules and regulations and letters of appointment. In *Axson-Flynn v. Johnson* (2001), a federal appeals court stated that courts should defer to the professional judgment of faculty with respect to teaching and curriculum. Even though the large amount of court cases have addressed academic freedom, it is still not absolute because it must be balanced against other concerns.

Critique and Response

Some critics of academic freedom have accused the higher-education system of abuse of the classroom in many ways, including (a) indoctrinating instead of educating; (b) failing to provide balance and equity when discussing conflicting views of various subject matter; (c) creating hostile environments for students by not tolerating their political, socio-economic, and religious views; and (d) discussing subject matter that is irrelevant to the subject that is being taught.

The AAUP responded to each of these concerns in a document titled “Freedom in the Classroom.” The document states that indoctrination does not occur when faculty expect students to learn and understand subject matter that is accepted within the particular discipline, even when that subject matter is controversial. The document does state that indoctrination occurs when faculty promote truth without giving students the opportunity to appropriately challenge what is being presented.

In response to the assertion that faculty should present balance when discussing conflicting views of subject matter, the AAUP states that faculty are required to present all aspects of a subject matter that professional standards require. The AAUP continues by stating that while following established curricular guidelines, faculty have the latitude to use professional judgment when presenting materials and should not be required to spend equal time on every view point, theory, thought, or belief that is relevant to the subject matter being taught.

In recent years, there has been some legislation presented at the state and federal levels that many believe to be an intrusion on academic freedom. An example is the “Academic Bill of Rights” proposals, which aimed to increase the political diversity among faculty and to expand supervision over the teaching of faculty and the ability for students to challenge teaching that they may disagree with. In all instances, this type of legislation has been unsuccessful in regard to being instituted as law.

“ACTING WHITE”

In the school context, African American adolescents generally verbalize their definitions of “acting White” in behavioral terms: speaking standard English; studying hard; going to museums or the opera; sailing, camping, or hiking; or having a party with no music or dancing to the lyrics rather than to the beat. African American youths see engaging in these practices as “performing Whiteness.” Sanctions against acting White occur

outside, as well as inside, schools. This entry explores the concept and its significance in the African American and White communities.

What It Means

An operational definition of *acting White* includes the collective strategies that African Americans deploy to resolve the dual, often contradictory, demands of the African American community and the dominant White society. To be perceived as a citizen in good standing within the African American community, a person is expected to honor collective ideals and to value the group over the individual. Group members who perform Blackness in highly visible arenas, such as entertainment, are encouraged not only within the African American community, but by the power-brokers in the larger society to remain within the confines of what is acceptably African American. People are rewarded and obtain status by pursuing goals and engaging in practices that the fictive kin group perceives as elevating the group.

Performing Blackness is manifested in gender-specific ways. Among African American males, athletes are appreciated for their service to the school community—making the institution attractive to others—and for giving up a myopic preoccupation with academic achievement. In the hegemonic society, African American males are rewarded for avoiding academic competition with White males. African American females are also compelled to honor the ideals of womanhood promoted within the group. In the school context and beyond, service to others—as mediators, enforcers, and caregivers—becomes the female password. Those who attempt to venture outside this racially appropriate space are compelled to cope with the burden of acting White.

In striking contrast, within the dominant society, individualism is valorized and meritocracy reigns, at least ideally. Each individual is dropped into a vortex of competitors who vie for dominance. At least officially, status is awarded to those members who are able to stand alone, without the overt support of others with whom they are identified or have some social, cultural, or economic connection.

Within the African American community, then, acting White is a signifier of bodies out of place.

Generally used as an epithet to convey the resistance of African Americans to the institutionalization of norms and cultural practices that are imposed by the dominant society, performing Whiteness indiscriminately—especially in the presence of a predominantly African American audience—is widely perceived by U.S. citizens whose ancestors were enslaved in this country as a violation of the community’s value system. Ironically, this transgression is a prerequisite for success in the institutions of the dominant society and in interactions with people who are other than African American.

At the core of acting White is the idea of behaving as if one were entitled to what is considered integral to being a U.S. citizen: living in any neighborhood one desires, matriculating at the school of one’s choice, being able to obtain the job that one desires and that meshes with one’s skills, marrying the person of one’s choice without regard for his or her racial identity, and voting without any additional qualifications beyond residence and citizenship. In the context of U.S. racial stratification, acting White is an act of collective self-assertion, claiming as rights what have previously been reserved as privileges for Whites only. For African Americans, it means unconditionally embracing the institutions and practices that were treated as the prerogative of White Americans and declared off-limits to enslaved Africans and their descendants.

Contrasting Views

Acting White epitomizes the strangeness of being concurrently erased and embraced, displaced and calcified, perceived in both instances as bodies out of place. Regrettably, most people erroneously perceive the problem of acting White as being only a school-based phenomenon. Consequently, researchers predictably blame the victim, holding low-achieving African American students responsible for burdening their more successful peers. They fail to acknowledge that for African American students, academic achievement is particularly challenging because, despite their historical exclusion from the one remaining obligatory institution in the United States, they are compelled to be indistinguishable from their White peers in academic achievement and performance, norms, values, behavior, and practices. Among African Americans, acting White is the third rail of duplicity, the sociocultural space

where a racialized performance is mandated. Here, the individual feels at risk of losing his or her African American identity and becoming, inadvertently, a raceless exile in both the African American and White communities.

Acting White is a scripted, even racialized performance, the goal of which is—perhaps unconsciously—something approximating attempted identity theft, not in the ordinary sense of stealing someone's credit card or bank account information, but more critically, the wholesale appropriation of a society's hegemonic social and cultural personae—its identity—by another group. African Americans may take on the burden of acting White not because they reject their own social group, but because this is the embodiment of what U.S. culture has historically defined as success. To put it bluntly: Whiteness is a synonym for social capital and power.

ADAMS V. RICHARDSON

Adams v. Richardson (1973) is a celebrated case related to the dismantling of dual systems of public higher education. It required the federal government to enforce Title VI of the Civil Rights Act of 1964 in a more aggressive manner. For African Americans and other minorities, education is key to full participation in politics, economic opportunities, and all other social institutions. This case and several others played a role in breaking down the barriers that prevented African Americans from claiming their rights as full citizens of the United States. This entry provides the historical background, case facts and impact on historically Black colleges and universities (HBCUs) of the *Adams v. Richardson* case.

Historical Background

One of the greatest victories of the civil right movement of the 1960s was the passage of the Civil Rights Act of 1964. Prior to the act, African Americans did not have a federal law that addressed the widespread discrimination throughout the country. The Civil Rights Act had a broad mandate: from voting rights and discrimination in public accommodations to public education. The act was written in several titles. Each title protected against discrimination in voting, public facilities, education, or employment. Title VI prohibited on the basis of race, color, or national origin anyone from being excluded, denied benefits, or subjected to discrimination in federally financially assisted programs or activities.

This meant that if a recipient of federal assistance is found to have discriminated and voluntary compliance cannot be achieved, the federal agency providing the assistance should either initiate fund termination proceedings or refer the matter to the Department of Justice for appropriate legal action. Relief for violation of a person's constitutional rights became available through the administrative apparatus created by the Civil Rights Act of 1964. Moreover, the federal government bore the financial burden of pursuing these constitutional violations: an enforcement vehicle of significant proportions. Aggrieved individuals could file administrative complaints with the federal agency

that provides funds to a recipient, or the individuals could file suit for appropriate relief in federal court.

From January 1969 until February 1970, the Department of Health Education and Welfare (HEW) found that 10 states had segregated higher-education systems that were deemed to be segregated. These states included Louisiana, Mississippi, Oklahoma, North Carolina, Florida, Arkansas, Pennsylvania, Georgia, Maryland, and Virginia. HEW required each state to provide a desegregation plan. Of the 10 states, only 5 submitted plans, and none of the plans were found to be acceptable. The other 5 states totally disregarded the request from HEW.

By 1973, none of the 10 states was in compliance, nothing had been done by the states, and HEW had neither instituted an enforcement proceeding nor referred any of the cases to the Department of Justice. HEW claimed that they were in negotiations with all 10 states. A group of African Americans brought a lawsuit against the director of HEW to force him to follow the congressional mandate to enforce Title VI in these 10 states.

The district court agreed that the director was derelict of his duties and ordered HEW to (a) institute compliance procedures against the 10 states, (b) commence enforcement against 74 secondary and primary school districts found to either have reneged on previously approved desegregation plans, (c) commence enforcement proceedings against 42 districts previously deemed by HEW to have violated a Supreme Court ruling, (d) demand of 85 other secondary and primary school districts explanation of racial disproportion in apparent violation of the Supreme Court's ruling, (e) implement an enforcement program to secure Title VI in vocational and special education, (f) monitor all the school districts under court desegregation order, and (g) report to the African American groups that had enjoined the lawsuit about HEW's activities.

The director of HEW made several arguments as to why he should not be required to follow this order and appealed his case to the U.S. Court of Appeals for the District of Columbia Circuit.

Facts of the Case

The appellants—the Secretary of Health, HEW, and the director of the HEW of Civil Rights—appealed

the district court declaratory judgment and injunction, ordering them, pursuant to Title VI, to institute compliance procedures and enforcement proceedings against states and educational institutions violating the Title VI of the Civil Rights Act of 1964.

The appellees were African American students, taxpayers, and citizens who sought injunctive relief and a declaratory judgment against the appellants in the district court because the appellants had deliberately adopted a general policy of negating their statutory enforcement duties under Title VI. The appellees alleged that the appellants had an affirmative duty to enforce Title VI against public schools receiving federal funding and claimed that the appellants failed to act properly to regulate and enforce Title VI against segregated public schools. The appellants argued that their enforcement obligations and the means used to enforce the statute were within their absolute discretion. The district court found that the appellants performance was subpar and directed the appellants to institute compliance procedures and enforcement proceedings as required under Title VI against segregated public schools receiving federal funding.

On appeal, the U.S. Court of Appeals for the District of Columbia affirmed the district court order and modified the injunction to give the director and HEW additional time to develop measures to address segregation in higher education. The court of appeals found that under Title VI the appellants were required to enforce the statute, require compliance, and to institute and maintain policies consistent with its duties under the statute. However, the court of appeals determined that the issue of segregation in postsecondary schools presented new issues for the appellants that required the formulation of new guidelines for enforcement and compliance.

Impact on Black Colleges and Universities

The parties who pursued the case against HEW were concerned about what the ruling would mean for historically Black colleges and universities. The National Association for Equal Opportunity in Higher Education, a voluntary association of the presidents of 110 predominantly African American colleges and universities, both public and private,

submitted a brief, stating that “these Black institutions currently fulfill a crucial need and will continue to play an important role in Black higher education.”

Jean Fairfax, a strategist in the case, says that the opposing sides had to come to a compromise about how to go forward with the lawsuit. They decided that the goal of enlarging opportunities for African Americans throughout the state could be advanced both by the statewide integration of a system of public higher education and by the enhancement of its traditionally Black public institutions. The states were not required to ensure that all institutions were alike in their racial composition and academic programs. As a result, the effect of *Adams v. Richardson* was not only to end discrimination in higher education but also to underscore the need for historically Black institutions.

ADULT EDUCATION

The first formally recognized adult education endeavor in the United States that was designed for African Americans was the schooling of African Americans through the post–Civil War

Bureau of Refugees, Freedmen, and Abandoned Lands (Freedmen's Bureau), and adult education has continued to serve African Americans both by fostering literacy and by promoting civil rights.

The generic field of adult education began in the early 1920s, setting forth as its primary mission helping adults, especially those lacking basic skills. Also embedded in the early writings is an understanding that the education of all adult citizens will contribute to the true democratization of the United States. Overall, adult education can be segmented into four areas: literacy education, community education, continuing education–workplace education, and academic or degree-granting adult education preparatory programs.

This entry is focused specifically on adult education as it has served the interests of African Americans. Such efforts can be divided into distinct periods: post–Civil War (Reconstruction), Harlem Renaissance, and adult education in the 20th and 21st centuries.

The Reconstruction Era

During the period of enslavement, from 1619 to 1868, there were legally sanctioned bans against the education of African Americans. Following the Civil War, the federal government made cursory efforts to educate the newly freed and newly recognized African Americans citizens. Joining the Freedmen's Bureau in this effort were the American Missionary Association and the Quakers. Following the demise of the Freedmen's Bureau and other post-Reconstruction educational programs, African American adult educational efforts have largely been self-governed and self-initiated.

Most notable of the enterprises that were organized by African Americans were programs backed by the Universal Negro Improvement Association, Tuskegee University (summer institutes), the National Colored Women's Clubs, and sororities (Alpha Kappa Alpha and Delta Sigma Theta) and fraternities (Omega Psi Phi and Alpha Phi Alpha). The attempt to “Lift as We Climb” (the famous motto of the National Association of Colored Women) was indicative of the early efforts to educate African American adults. African Americans who were educated were involved in the earliest teaching (including the northern schoolmarm who came south after the Civil War to open one-room

schools) and were continuously present during the height of adult education endeavors during the Harlem Renaissance.

Famous volunteer literacy programs of the early 1900s include the YMCA's Three R League and the Institute on Adult Education of Negroes, which was sponsored by U.S. Office of Education, the American Association for Adult Education, and the National Conference on Adult Education and the Negro. Most of these programs would now be viewed as paternalistic in nature since the programs' creators posited that the "Negro" should be educated so as not to be a burden on the United States. Examples of this verbiage are expressed in an early Hampton-Tuskegee promotional brochure and in an early YMCA pamphlet series.

A large part of African American adult education in the early decades after enslavement involved literacy, but the early 1930s saw the emergence of a different sort: Alain Locke's historical preservation project. Locke, a prominent adult educator and Howard University professor, was the founding force behind the creation of the *Bronze Booklets*, a series of small books that catalogued a rich and developing culture of music, art, and literature. Locke, a Harvard-trained intellectual and the first African American Rhodes scholar, would continue to be at the forefront of African American adult education for several decades.

Locke and Mary McLeod Bethune led a charge to disseminate culturally based scholarship to African Americans. They helped to found the Associates in Negro Folk Education, and this group, with funding from the Carnegie Foundation, is responsible for the creation of nine *Bronze Booklets*. Two booklets on art and music were written by Locke, and others were penned by prominent African Americans scholars of the day, including Ira Reid's *Adult Education Among Negroes* and Sterling Brown's *The Negro in American Drama*.

Locke would go on to become the first African American president of the American Association for Adult Education, an organization that continues to exist as the American Association for Adult and Continuing Education. It was under his leadership that national African American adult education efforts were chronicled in the 1948 yearbook issues of *The Journal of Negro Education* and that several national conferences were held in 1938,

1940, 1941, and 1942. However, the promise and momentum from the conferences waned, and writings and research by and about African American adult education dwindled.

The premier journal of the field, *Adult Education Quarterly*, and the definitive voice of discipline, the *Handbook of Adult and Continuing Education*, intermittently mentioned race in their early years. For example, the handbook included race as a topic in its 1934, 1936, and 1948 editions but neglected to address race during the height of the civil rights movement in its 1960, 1970, and 1980 editions.

Civil Rights and Contemporary Times

For the most part, generic adult education programs have been critiqued as serving middle-class Whites who are searching for self-actualization by adding new languages and learning new skills, such as mastering Italian cuisine, brick masonry, upholstery, and calligraphy. Also, formal adult education programs serve the White middle class through continuing education for the professions. However, the connection between African Americans and adult education has solid anchors in community activism and workforce education.

The Civil Rights Movement

The greatest social movements of modern history, the union labor movement and the civil rights movement, have their roots in adult education and the Highlander Folk School, now the Highlander Research and Education Center in Tennessee. The Highlander School, founded by White Southerner Myles Horton, focused on school desegregation and voter education and also provided a meeting place for civil rights activists who were members of the Student Nonviolent Coordinating Committee (SNCC) and the Southern Christian Leadership Conference (SCLC).

The Citizenship Schools were conceived by Highlander Education Director Septima Clark and administered by Highlander alumni Esau Jenkins and Bernice Robinson. Septima Clark went on to become an important member of Martin Luther King Jr.'s inner circle. However, by Myles Horton's own admission, Clark has not received the credit or attention she deserves as an important adult educator or civil rights organizer.

The Citizenship Schools helped Southern citizens prepare for and pass literacy tests so they could vote. The concept was embraced by the SCLC and spread throughout the South and was partially responsible for the successful push to voting empowerment. In addition to training scores of Southern ministers who became unsung community leaders, civil rights legends such as Rosa Parks also attended Highlander to become schooled in principles of nonviolent resistance and civil disobedience. Perhaps one of the most significant contributions of the Highlander Folk School was that it provided adaptations of songs that became the civil rights movement's staples, "We Shall Overcome" and "Eyes on the Prize."

1980s and Beyond

The contemporary field of adult education, especially since the 1980s, has consistently addressed issues of race and social justice through its focus on these topics in the field's journals and literature. Notable texts include the 1985 *Education of the Black Adult in the United States: An Annotated Bibliography* by Leo McGee and Harvey Neufeldt and Beverly Cassara's 1990 text, *Adult Education in a Multicultural Society*. These books were followed by *Freedom Road: Adult Education of African Americans* (Elizabeth Peterson, 1996), *Education of African American Adult: An Historical Overview* (Leo McGee and Harvey Neufeldt, 1990), and *Booker T. Washington and the Adult Education Movement* (Virginia Lantz Denton, 1993).

Another indication of the attention to African American adult education issues is the robust presence in 1990 through 2006 of African American topics at the field's national and international conferences, the Adult Education Research Conference, the American Association of Adult and Continuing Educators, and the Standing Conference on University Teaching and Research in the Education of Adults. An additional signal of the significance of an African American presence is the African Diaspora Adult Education Research Conference, which was attached to the Adult Education Research Conference as a dedicated preconference in 1993.

ADVANCED PLACEMENT

The Advanced Placement (AP) Program offers high school students an opportunity to take specially designed and rigorous courses, complete an examination based on the content of the course, and receive college credit. Although the AP Program was developed in the 1950s, African American students did not benefit until the 1980s. This entry provides a brief summary of how the program was initiated and then turns to participation among African Americans.

Historical Context

The development of the AP Program began in the 1950s, a period in educational history characterized by efforts to improve educational excellence of schools in the United States. The launching of *Sputnik I* by the Russians led to increased emphasis on the teaching of mathematics and science and the upgrading of every level of education both public and private.

In 1951, faculty from Kenyon College began discussing the idea of allowing advanced-level high school students to receive college credit prior to college enrollment. In the same year, educators from Andover, Exeter, Lawrenceville, Harvard, Princeton, and Yale came together to support the idea of colleges giving college credit to high school students who had taken and passed examinations of content expected of students at the college level.

The Committee on Admission with Advanced Standing, later the Central Committee of the School and College Study, was formed and funded through a grant from the Ford Foundation's Fund for the Advancement of Education; its members were 12 college representatives and 12 secondary school educators. The work of this committee encouraged communication between high school and college faculty and was published in *General Education in School and College*.

The Education Testing Service (ETS) developed and administered the AP pilot tests during the 1953 to 1954 school year. By May 1956, the College Board had been asked to assume leadership and had given the first AP examinations officially.

The AP Program succeeded in providing rigor and challenge to the high school curriculum. High school students who take AP courses benefit from studying college preparatory coursework and may be better prepared for success in college whether they take the exam or not. College-level course credit received while students are in high school is economical. After taking the courses, students who choose to take the examinations pay less than \$100 per course to take the AP examination needed in order for colleges to consider offering students course credit. The overall cost of a college degree can be significantly less when offset by AP exam course credit, and the time spent in college can be less. Finally, some college admissions directors have been known to offer college applicants extra points for having taken AP courses.

When the AP Program was created in the 1950s, African American students were in segregated schools. The decision regarding the desegregation of schools in *Brown v. Board of Education, Topeka, Kansas* (1954) was handed down on May 17, 1954. Today, the College Board encourages the inclusion of ethnic, racial, and socioeconomic groups that have been underrepresented in the AP Program. The College Board believes that equity is

achieved when the demographics of AP participation and performance on the AP exam are identical to the demographics of the school.

AP and African Americans

African American students accounted for 14% of the overall high school student population in 2007; over 7% (7.4%) of those taking AP examinations were African American in 2007. A 5-point scale is used in scoring of the AP exam, from 5 = *extremely well qualified* to 1 = *no recommendation*. Over 3% (3.3%) of those who made a score of 3 or higher were African American. The AP Report to the Nation defines a score of 3 as "predictive of college success and college graduation." By comparison, the the 4th Annual College Board Report to the Nation indicates that Latino students are 14.6% of the high school student population, and 13.6% of the Latino students scored 3 or higher. Overall, the percentage of all students taking AP exams and scoring a 3+ has increased over the years. In 2002, 11.7% of those taking AP exams made a score of 3 or higher, and in 2006, 14.7% of the students who took AP exams made a score of 3+. In 2008, 15.2% of those taking AP exams made an AP exam grade of 3+.

States are working to eliminate the equity and achievement gap that exists between the percentage of students who take an AP exam, the percentage of students who make a score of 3 or higher, and the percentage of students who are members of a particular cohort group. Only Hawaii eliminated the African American equity gap in the data for the class of 2007; no other state with a sizable number of African American students has been successful in eliminating the equity gap.

Various initiatives have been put into place by state departments of education and individual schools to increase the number and diversity of students taking AP classes and the AP examinations. In Florida, state funding has been used for AP training, professional development, and rewards for achieving a score of 3 or higher. Florida has invested in the use of predictive scores to identify and encourage those students who have potential to perform well on AP exams. Because of these efforts, the Latino achievement gap in Florida has been eliminated. Genuine, aggressive encouragement by teachers and a culturally responsive

curriculum and learning environment appear to be key factors that determine whether or not African American students will enroll, remain in AP courses, and take AP exams.

Financial incentives and support are available through states, the federal government, and the AP Incentive Program. Exam fee subsidies for low-income students and reimbursement of AP exam fees after a student has enrolled in college and received AP college course credit are available. In 1999, the federal government made available grants to states to support exam fee subsidies for low-income students.

Middle school academic preparation is another factor that impacts the AP Program participation of African American students. The AP Program has expanded its program goals to include Building Success workshops, Pre-AP classes, and AP Vertical Teams where middle school teachers and high school teachers address the scope and sequence of the curriculum. In addition, the AP Program continues to publicize the program to help parents become aware of the value of the program and to create televised courses so that the program becomes increasingly accessible to schools where AP courses may not be offered. Free Web resources, released exams, and CD-ROMs are preparation resources that are available to students who have access to computer technology. Other teacher preparation resources and initiatives that are available through the AP Program include the Pre-AP and AP Summer Institutes for teaching training, the College Board AP Fellows Program, annual competitive grant opportunities, and the AP Start Up Grant Program. The African American Student Achievement Initiative, the National AP Equity Colloquium, AP Start Up Grants, and the AP Fellows Program were specifically created to address the underserved.

In 2007, of the 37 AP exams, those taken by the greatest number of African American students include English Literature and Composition (7.4%), where they have a mean score of 2; English Language and Composition (7.1%), with a mean score of 1.9; and U.S. History (6.4%), with a mean score 1.83. The fourth exam taken most frequently by African American students is Calculus AB (4.5%), with a mean score of 2.61.

School districts faced with the need to meet college readiness goals have suggested that an AP African American History exam may connect the

African American student with a tradition of scholarship not usually included in the school's curriculum.

AFFIRMATIVE ACTION

Affirmative action is a cornerstone of efforts to increase opportunities for African Americans in the United States. It has played a major role in dismantling discriminatory and racist practices in education and in the workforce. By definition, affirmative action requires positive and confirmatory actions to increase the number of African Americans in public and private institutions. Affirmative action relies on outreach, recruitment, job training, employment, and admissions in

order to increase the number of women and racial minorities. Such policies serve as an instructive catalyst for moving beyond legal and theoretical jargon of desegregation and laws that simply ban discrimination. This entry explores affirmative action: its historical background, related legal decisions, attendant debates, and its impact on higher education.

Historical Background

Although now applied to education and to employment, affirmative action was first used to address workplace and labor issues. In 1935, the National Labor Relations Act required employers to take affirmative action to eliminate unfair labor practices. Among these actions was the reinstatement of employees who had been fired because of discrimination. President John F. Kennedy then used the term in 1961 to further delineate anti-discriminatory methods in government hiring and contracting. Kennedy's Executive Order No. 10925 asserted that affirmative action must be taken to ensure that applicants are hired without regard to color, creed, race, or national origin and that contractors and subcontractors not discriminate on the basis of color, creed, race, or national origin. The executive order enforcing affirmative action absorbed previous orders by Roosevelt (Executive Order No. 8802 prohibiting government contractors from engaging in employment discrimination based on race, color, or national origin) and by Truman (Executive Order No. 9981 desegregating of the Armed Forces).

In addition, President Kennedy created the Committee on Equal Employment Opportunity to police institutions and address complaints. Through Executive Order No. 10925, any federal institutions, contractors, and subcontractors were required to provide opportunities to minority groups who experienced adversity because of discrimination. This meant that any contractor or subcontractor hoping to win bids of government jobs had to openly advertise, recruit, and employ minorities who were equally qualified for positions.

With Executive Order No. 11246 (1965), President Lyndon B. Johnson expanded Kennedy's Executive Order No. 10925 by requiring departments to establish and maintain programs that demonstrated affirmative action efforts. Furthermore,

Johnson's executive order now included upgrading, demotion, transfer, recruitment, pay or other forms of compensation, training, and apprenticeship. In 1967, Johnson amended Executive Order No. 11246 to include antibiased practices on the basis of gender and religion. The Office of Civil Rights, part of the 1964 Civil Rights Act, became another policing agency to ensure institutions had plans to provide equal opportunities for underrepresented groups.

Finally, education was made explicit in the 1972 version of Executive Order No. 11246 outlining responsibilities of employers and educational institutions to provide equal opportunities for admissions in higher education and in employment. Following Johnson's Executive Order No. 11246, African American enrollment in college rose from 4.9% in 1965 to 9.1% by 1980. During the period from 1960 to 1970, African American faculty grew from 0 to 2% and finally to 4.3% in 1979.

Legal Decisions

Since the 1960s, the Supreme Court has made a number of rulings weakening affirmative action. Its first important ruling came in the *Regents of the University of California v. Bakke* (1978) decision. Between 1973 and 1974, Allan Bakke was denied admissions to all 12 medical schools to which he applied. He brought suit against the University of California Regents because he had been rejected from University of California, Davis medical school admission. He predicated his suit on the claim that a special admissions program allotted slots to less qualified underrepresented minorities, which prevented him from being accepted into medical school.

In *Regents of the University of California v. Bakke*, the U.S. Supreme Court partially affirmed his claim. It ruled that the University of California had in fact used a quota system for admissions, which was unconstitutional. Although 16 other White applicants who had scored higher than Bakke and presumably would have been admitted before him had there been no special admissions program, the university could not prove that Bakke would not have been admitted if quotas for minorities had not existed. University of California, Davis, was required to admit him. The court's decision allowed affirmative action, but prohibited racially

defined separate admissions programs or quotas. Minority students had to be considered for admission along with the general pool of applicants.

In *University of Texas v. Hopwood* (1996), Cheryl Hopwood, a White woman, claimed similarly that minority students faced less stringent admission criteria than she had when she applied in 1992. The required scores on the LSAT and grade point average (GPA) for African Americans and Hispanic students were 158 and 3.30 and 157 and 3.24, respectively, whereas the scores of Whites were on average 162 and 3.56. Hopwood alleged numeric discrepancy in scores and GPA and demonstrated that she had been denied her rightful admissions. Even though Texas provided evidence that Hopwood's application packet was incomplete, the Fifth Circuit Court ruled that the university's admissions policy did not hold up to strict scrutiny and that it had not proved a need for affirmative action. Hopwood was allowed to reapply and have her application reviewed with all applicants. University of Texas restructured their admissions process and eliminated race as a factor.

In *Grutter v. Bollinger* (2003) and the sister case *Gratz v. Bollinger* (2003), the plaintiffs alleged that University of Michigan's law school and undergraduate programs provided point distinctions for minority status, which conferred an advantage to minorities over Whites in admissions. In both cases, the Supreme Court ruled that the university's undergraduate admission procedure of affixing 20 points for racial classification out of a possible 150 points did not meet the Court's narrow tailoring standard. The use of a strict numeric value was unconstitutional, but that the use of race as a factor for admissions was a compelling interest and met strict scrutiny to provide diversity. Therefore, the university was justified in using race-conscious admissions practices, but it was required to consider race with a variety of other factors. Although this allowed the preservation of affirmative action in graduate education, it made it much more difficult in large undergraduate programs where admission is more formulaic and routine. Therefore, challenges to affirmative action in admission continue.

In addition to court cases, a number of state laws and referenda have overturned affirmative action. In 1996, 54% of Californians voted in favor of Proposition 209 to dismantle affirmative

action. In 1998, Initiative 200 abolished Washington's affirmative action policies in higher education, public contracting, and hiring. Michigan followed in 2006, banning affirmative action based on race, gender, and ethnicity.

The Debate

Historically, affirmative action has been viewed through two different lenses, both of which evoke equal protection of the Fourteenth Amendment. Conservative Whites view affirmative action as a system of reverse discrimination and a regressive move away from a race-neutral, color-blind society. Liberals, on the other hand, view it as a system for ensuring equity to counterbalance injustices still embedded in social institutions. Ratified July 9, 1868, the Fourteenth Amendment granted citizenship to all persons born or naturalized in the United States, including the formerly enslaved who had been recently freed. In addition, it forbade states from denying any person life, liberty, or property without due process of law or from denying any person within its jurisdiction the equal protection of its laws. Conservatives claim that affirmative action discriminates against Whites, while liberals assert that agencies and educational institution that do not have strict policies for hiring and admitting African Americans and other minorities violate equal protection. They often see attacks on affirmative action as evidence of the continuing existence of White supremacist ideology and practices.

Affirmative action has engendered major debates. Many conservatives claim that affirmative action is reverse discrimination, that affirmative action stigmatizes women and minorities who are its purported beneficiaries, that standardized tests and GPAs are adequate measures of merit, and that affirmative action moves society away from equality. Critics of affirmative action frequently assert that it constitutes reverse discrimination aimed at denying Whites admission and jobs for which they are qualified. Though race-conscious political and social policies and laws enjoyed wide support among White Americans during segregation, race-conscious remedies to discrimination are now often portrayed as discriminatory and were a hindrance to equality.

Whereas conservatives charge that society cannot correct the past ills of discrimination by

discriminating, supporters of affirmative action contend that such policies are needed to correct past and present discrimination against racial minorities and women. Affirmative action forces institutions and employment agencies to recruit minorities and to assure that they are represented in educational programs and in public and private workplaces.

Critics also argue that affirmative action stigmatizes minorities once they are admitted in to colleges or are hired. They maintain that targets of affirmative action feel that they do not belong or that they are not as qualified as their White and Asian counterparts. This sets minorities up for failure once they are admitted. Conservatives claim that increased graduation rates following Proposition 209 (even though admission of minorities had declined) does no favor to students admitted under such programs.

Proponents of affirmative action, however, hold that microaggressions that push students from underrepresented groups from the universities actually indicate the need for affirmative action. Studies on microaggression have found it to be a persistent system of racial discrimination that hinders students from underrepresented groups in undergraduate and graduate school programs. Subtle verbal and nonverbal acts aim to denigrate minorities and remind them of their inferior status. Such microaggression is linked to minority student dropout rates at predominantly White institutions.

Opponents who have challenged affirmative action practices on the grounds of reverse discrimination and equal protection believe that the standardized tests scores and GPA requirements should be the staunch criteria for admission. However, studies in the past have shown that GPA scores do not highly correlate with graduation rates. Additionally, critics charge that standardized tests have both academic and cultural biases embedded. Finally, the experiences of minority students in urban schools do not allow access to courses or teaching methods that would foster competitiveness on standardized tests. Their ability cannot be determined by their seeming lack of qualifications. Supporters of affirmative action argue standardized tests typically value the experiences of the White middle class. Therefore, determination of merit that rely on those tests are reliable only for that population.

Affirmative Action in the University

Affirmative action in the university has the potential to have a profound effect on African American students and faculty. When correctly practiced, affirmative action redresses damage of past discrimination suffered by Africans and other minorities, and it provides a diverse learning and working environment. Its beneficiaries are better educated, more economically stable than African Americans who had not attended college.

In addition to benefiting the victims of discrimination, affirmative action benefits others. A major academic interest of universities is to provide different perspectives and points of view as part of well-rounded education. Affirmative action admissions policies that consider race also have the potential to improve the university experience by providing structural diversity. This applies not only to admissions but also to policies that aim to increase representation of African Americans as faculty members. Currently, more African American males than females are employed as faculty members, but together they only make up 5% of faculty in U.S. colleges and universities. The majority of those teach at historically Black colleges and universities. Employing African American faculty members offers diversity and provides different perspectives.

In 1998 after the Proposition 209 ban on affirmative action went into effect, University of California, Berkeley, experienced a 61% drop in enrollment of African American students, and other universities saw similar drops in enrollment. Parents involved in *Community Schools v. Seattle Public School District* (2007), which was combined with *Meredith V. Jefferson County Public Schools* (2007), is a more recent U.S. Supreme Court case addressing the constitutionality of race-conscious admissions plans. The court struck down both plans in a plurality opinion in a consolidated appeal.

The drastic decline in minority admits following bans on affirmative action points to the continuing need for such a policy. Whether U.S. citizens will be convinced that discrimination persists and that affirmative action is still needed remains uncertain.

AFRICAN AMERICAN CHILDREN'S BOOKS

Children's books that are written and illustrated by African Americans are labeled African American children's literature. Before the 20th century, children's books that included African American characters generally reflected an oppressive depiction of the lifestyle of the African American while White characters were seen as superior in the story. These books did not have the African American child in mind as the reader, but in many libraries, these were the only books African American children had an opportunity to read. Over the course of the 20th century, however, African American artists and writers have contributed to a growing literature, summarized in this entry.

Early Publications

One of the first books written for African American children was published in 1905 by a scholar, the Reverend Silas X. Floyd, DD, and illustrated by John Henry Adams. *Floyd's Flowers: Or, Duty and Beauty for Colored Children* comprised 326 pages of text and illustration that provided lessons on manners, moral stories, verses, and biographies of famous African Americans all for the delight of African American children. After *Floyd's Flowers*, it was not until the 1920s that others recognized

the importance of planting positive images into the minds of African American children through books. W. E. B. Du Bois and Jessie Fauset produced *The Brownies' Book*, a youth magazine that was inspired by the youth section found inside *The Crisis*, the magazine that was formulated for the National Association for the Advancement of Colored People (NAACP). Renowned African American writers contributed stories, poetry, history and geographical essays to *The Brownies' Book*. This magazine contained photographs of African American children from all across the United States that detailed their achievements. Even though this magazine was published for only 2 years, it became the model for other magazines and it inspired African American authors to write positive books for African American children.

Few African American writers in the 1930s were given the opportunity to publish children's books through mainstream publishing houses, but in 1932, Arna Bontemps and Langston Hughes, both successful writers from the Harlem Renaissance era, collaborated to write *Popo and Fifina*. This book was about the everyday life of two Haitian children. It was received well and started both writers on the path of writing many other books for children.

Bontemps continued to dedicate his writing to children with *You Can't Pet a Possum* in 1934, and in 1937 under a grant from the Julius Rosenwald Fund, he wrote *The Sad-Faced Boy*. One of Bontemps most popular books for youth was *The History of the Negro* (1948), which received many awards including the Jane Addams Children's Book Award; it was also a runner-up for the Newbery Award.

Educator and father of five children, Bontemps was aware of the importance of good-quality books that would reflect positive African American images. He omitted in his books the heavy dialect that supposedly represented the speech of African American people. Bontemps took it upon himself, a writer, not only to create stories for his children's enjoyment but also to produce books that would entertain and build up the self-esteem of young African American readers throughout the United States.

The same year *Popo and Fifina* was published, Hughes published his first children's poetry collection, *Dream Keeper*. Throughout Hughes's literary career, he wrote numerous poems for African

American children along with an abundance of nonfiction books that included *The First Book of Negroes* (1952), *The First Book of Rhythms* (1954), *The First Book of Jazz* (1955), and *Famous Negro Music Makers* (1955).

Creating Criteria

By the 1930s, many African American authors, scholars, and librarians recognized the lack of proper children's picture books for African American children to use to build a firm understanding of their culture. Augusta Baker, an African American librarian in the Children's Department at the 135th Street Branch of the New York Public Library, noticed the problem of negative images of African American characters in children's books and decided to make a change. Baker removed from the shelves books that depicted African American characters as impoverished, lazy, happy plantation dwellers with exaggerated facial features that spoke in such a difficult-to-read dialect that it caused these books to be uninviting for African American children visiting her library to process.

Baker joined with Arthur Schomburg, James Weldon Johnson, and community organizations in Harlem to improve the children's section of the 135th Street Branch Library. The group's desire was to acquire material that would positively inspire children and they proceeded to make a difference in children's book selection policies. They also gave the library a financial gift dedicated to the purchase of 40 books that could meet three specific criteria. The most important element in the criteria concerned insulting caricatures of African Americans and inappropriate representations for the young "New Negro."

The next important criterion focused on language that covered the problem of dialect. This criterion also included the rejection of derogatory names such as *darkie*, *nigger*, and *pickaninny*. The imbalanced imagery within the literature and the constant use of dialect showed the blatant evidence of White supremacy.

The last criterion that needed attention was that the themes of the story not include a helpless African American character being saved by a White person. Many of the books prior to this displayed the African American as somewhat childlike, always in need of assistance.

Influential Writers

By 1938, 40 books were selected for the 135th Street Branch Library children's section that reflected at least positive imagery or theme or cleaned up the dialect in the text. By the time the books were collected, two of the main supporters had died: Arthur Schomburg and James Weldon Johnson both passed away earlier that year. The collection dedicated to African American children was named the James Weldon Johnson Memorial Collection for Children. Very few books could meet all three requirements in the late 1930s and early 1940s, but the group did the best that they could with the material available.

By the 1940s, more African American voices were raised to push for the publishing of books about African American life even though there was an economic boycott by most Southern booksellers and schools. Charlemae Rollins, an African American librarian in charge of the Children's Department at the George C. Hall Branch, Chicago Public Library (1932 to 1963), contributed to the uplifting of African American children's books by writing her first book, *We Build Together* (1941), published by the National Council of Teachers of English, which was a list of appropriate books for African American children. Rollins recommended 30 books that she found appropriate for African American children to read.

During this early stage of African American children's literature, African American writers such as Shirley Graham, Bontemps, and Carter G. Woodson wrote many biographies on famous African Americans. Woodson's publishing company, Associated Publishers, produced many educational books for African American children to be placed in African American schools throughout the segregated United States. Woodson's books included biographies, history, and folklore so that children would be informed about their cultural origins. Mainstream publishers strayed away from African American children's fiction due to fear of offensive illustrations during the World War II era. The strong dedication by African Americans who fought for their country caused an awakening throughout the country that assisted in getting more African American authors published by mainstream publishers.

The Civil Rights Era

By the late 1950s, many picture books that included African American images were done with photographs instead of drawn illustrations. The country was slowly changing; the 1954 Supreme Court school desegregation decision helped to make a large difference in the world of African American children's literature. Although libraries were forced to open their doors to African American patrons, publishing companies began to feel the pressure of the civil rights movement. The fear of fiction lessened while author Lorenz Bell Graham and truant officer turned children's author Jesse Jackson began to write new African American junior novels that did not shy away from racist issues, but faced them by conveying true-to-life images of African American life during an era still filled with many restrictions because of race.

The 1960s was a time of fast advancement for African American children's books when the first children's book that contained an African American protagonist won a Caldecott Medal. *The Snowy Day*, written and illustrated by Ezra Jack Keats, was published in 1962. Because Keats was White, this book caused controversy about the image of Peter, his protagonist. Many suggested that Peter was just a brown-shaded White boy. Keats did not degrade Peter, but gave him freedom to be a little boy without racial conflict, but the story was missing the voice of the African American child.

This book lit a fire underneath African American artist John Steptoe, who at the age of 16 sat down and wrote and illustrated *Stevie* (1969). Steptoe became one of the pioneers of African American children picture books in the late 1960s through his illustrations and writings that reflected the new era of African American identity. *Stevie* is one of the most monumental African American children's books still in print today. Steptoe caused controversy with the "Black baby talk" used to narrate several of his books. The language was not degrading, but an amusing and enjoyable narrative from the voice of a African American child, a voice that had never been heard before in literature. Steptoe captured the true essence of the language that many African American children use. He was able to create difference while at the same time expose children to experiences from African American

culture that were very similar to those of children of any race.

The civil rights movement brought forth the Black arts movement and many African American writers and illustrators of children's books. These books were saturated with positive words and imagery to continue to uplift African American children and to expose other children to the African American culture. Artists such as Steptoe, Tom Feelings, Jerry Pinkney, George Ford, Ashley Bryan, and Cheryl Byard brought forth images of African American characters and settings that reflected a variety of cultural experiences spanning historical, folkloric, poetic, and contemporary topics; they were able to expand the African American child's imagination. These artists celebrated the beauty of their culture through the visual by complying strongly with the illustrated criteria in the beginning. These books enlightened many African American children who were confused or ashamed because of the open hatred reflected through media coverage across the nation of riots, restrictions, and racial demonstrations. Literary and visual artists showed African American children how beautiful they were and how proud they should be of their heritage.

Family Themes

African American children's books have always included the history, folklore, and creativity of African American culture. Many authors include their own family stories to develop books that provide children with a more expansive view of life in the United States. Virginia Hamilton's *Zeely* (1967) linked African American culture to African culture through a coming-of-age story of a young girl who identifies African beauty and royalty within a young woman that the protagonist meets while visiting her uncle's farm for the summer. Hamilton did not include a European description to model this character by, but brought forth an African presence to weave together the folklore and culture of Africans and African Americans.

Mildred D. Taylor created a historical saga of the Logans, an African American family's generational journey dealing with U.S. life beginning with *Song of the Trees* in 1975 to the prequel *The Land* in 2001. Taylor's award winning books are some of the first African American children's books to

become a part of the U.S literary canon, being read in classrooms throughout the United States.

The work of Feelings spans over four decades of dedication to African American children's books. His art has been accompanied by the words of many poets including Maya Angelou, Eloise Greenfield, Nikki Grimes, and Kwame Dawes. From *Bola and the Oba's Drummers* (1967) to *I Saw Your Face* (2004), the imagery of children in the work of Feelings crossed continents and emotions while celebrating the visual imagery of African American children around the world.

Faith Ringgold created from her own memories into a fictional story that brings in African American myth and tradition through the hopes and dreams of Cassie Lightfoot, an African American girl living in New York. Ringgold used a traditional medium of the quilt to display her story, *Tar Beach* (1991). Upon the rooftop of the apartment building, Cassie lies while dreaming of the day when she will be able to fly over the city and own the building that has denied her father union rights and steady employment because of racism.

Giving Honor and Awards

The number and recognition of African American children's books have grown over the past 40 years. Awards have been given in recognition of the artistry of many of these books, and many awards have been created to recognize their artistic cultural existence; the Coretta Scott King Award is one of the most renowned awards given to an African American writer and African American illustrator each year for a children's book. The John Steptoe Award for New Talent follows the same criteria as the Coretta Scott King Award, and both are given through the American Library Association.

Many publishing companies across the United States heard the call of Baker, Rollins, and others and have produced many books throughout the years by African American writers and illustrators, but many of these books go out of print quickly. There is still a huge imbalance between the large quantity of yearly publications of children's books compared to the very small amount that is created by African Americans. Publishing companies dedicated only to the production of multicultural children's books or African American children's books

contribute to the growth each year of more African American children's books, yet there are only a few of these publishing companies. Just Us Books, a publishing company that publishes only African American children's books, has proven their dedication to the literature by producing innovative books for the past 20 years.

The field of African American children's literature is still progressing through the dedication of African American authors and illustrators who heard the call, took pen or the paintbrush in hand, and produced literature that contained strong positive messages to celebrate the existence of African American children.

AFRICAN AMERICAN STUDIES

African American studies are academic units that focus on the systematic investigation of people of African descent in their contacts with Europeans, their dispersal throughout the diaspora, and the subsequent institutionalization of racism and oppression as means of economic, political, and social subordination. From the outset, these studies had both an academic and a social mission.

Although there is a lengthy history of individuals advocating a relevant education for African Americans—with various perspectives on what was

relevant—it was not until the 1960s that there was a large outcry for relevancy in the universities by a generation of African Americans who participated in the civil rights movement and Black power movement eras. That outcry, in the midst of pervasive campus unrest, led to the initiation of African American studies, alternatively called Africana studies, Black studies, Pan African, Afro-American studies, Africology, Pan African studies, Afro-Caribbean studies, and African world studies.

The variety of identifying labels generally reflects different geographic areas concentration such as African, African American, and African Caribbean studies. Diaspora studies is sometimes used to describe studies of populations of acknowledged African descent not located on the African continent. The term *acknowledged* African descent is deliberately chosen to avoid unnecessary controversy about lines of human descent, as there is solid anthropological and genetic evidence that the roots of humanity are common and African. Although African American studies is the name that has been commonly used, Africana studies and Black studies are the terms increasingly used interchangeably by those who identify with the new or emerging discipline. Because of the new and evolving nature of African American studies as an intellectual enterprise, there is a debate about whether African American studies is a distinct discipline in the traditional sense as sociology or psychology or an area of inquiry to which one brings tools from selected disciplines and applies them to a particular subject matter.

Although this discussion continues, there has been a move to institutionalize African American, Africana studies and Black studies in higher education over the last 4 decades, and as such, these efforts and struggles paved the way for inclusiveness of other formerly invisible groups who seek incorporation into academia. This entry looks at the historical roots of African American studies, its emergence as a field, its characteristics as a research and teaching enterprise, and its mainstream impact.

Historical Background

Although contemporary African American studies as an interdisciplinary curriculum is a product of the 1960s, it draws much of its academic content from earlier times. The origins of the study of the Africana experience can be traced back to ancient

Africa and to ancient African universities. The formal emergence of the field, however, is anchored in the 19th century among thinkers and writers such as Anna Julia Cooper, Maria Stewart, Ida B. Wells-Barnett, George Washington Williams, Henry McNeal Turner, and Martin Delany.

In the early to mid-20th century, many of the forerunners of contemporary African American studies functioned largely outside the academy, including W. E. B. Du Bois, J. A. Rodgers, Arthur A. Schomburg, Zora Neale Hurston, Amy Jacques Garvey, Carter G. Woodson, Lorraine Hansberry, Jacob Lawrence, Charles S. Johnson, and Alain Locke. The formal introduction of the African American experience within and across disciplines in the academy can be linked to the work of Du Bois at Atlanta University, Johnson at Fisk University, and Woodson with the Association for the Study of Negro Life and History (presently ASALH), the *Journal of Negro History* and the Annual Negro History Week Celebration, currently the annual Black History Month celebration.

The activities of all of the aforementioned set the stage for the institutionalization as a distinct field in the 1960s through the efforts of those who are the pioneers of contemporary African American studies in higher education. The earlier advocates prior to the 1960s demonstrated a commitment to the integration of scholarship with a commitment to fostering constructive social change, which is one of the fundamental values of contemporary African American studies. Understanding the historical underpinnings is important because many inquiries into the emergence and status of African American studies have interpreted the field simply as an outgrowth of the Black liberation movement of the 1960s without recognizing or acknowledging the field's historical roots.

An Emerging Field

There was substantial overlap in visions among the contemporary pioneers of African American studies to position it as a systematic field of inquiry. At least four distinct views about the nature of African American studies were espoused in the 1960s:

1. An academic conception, whereby the mission of African American studies is to research African American history and illuminate the contributions of African Americans

2. An ideological political conception, whereby African American studies is seen as an instrument of cultural nationalism that promotes models of African values and beliefs
3. An instrumental political conception, whereby African American studies is considered a vehicle for social change with a functional relationship to the African American community
4. A Marxist approach or explanation of conflict in human society as based upon economic inequities and class struggles

African American students of the 1960s were confronted with an absence or distortion of the African American experience in the higher-education curriculum and a sense of cultural alienation generated by the predominantly White colleges and universities they entered. They demanded recognition in the form of an increase in African American faculty and staff, African American academic programs, African American students, necessary financial aid, and African American history courses. It quickly became clear, however, that African American history was simply a beginning and that a broader demand would and did emerge for a comprehensive interdisciplinary curriculum with history at its center.

Intellectual Perspectives

As in any dynamic field, there are schools of thought or intellectual perspectives in African American studies. Although some schools of thought or intellectual perspectives within the field may be more or less intent on counterbalancing the traditional Eurocentric bias characteristic of traditional U.S. scholarship in the field, the central tendency of African American studies is to investigate, illuminate, and celebrate the African world experience in its own right. That is, it places that experience at the center of study and analysis rather than as an appendage or add-on feature of longer-established fields or disciplines.

It is commonly agreed that the diversity of perspectives or ways of approaching an understanding in the field is critical to its vitality and creativity. Some scholars declare African American studies a discipline in which, like sociology, scholars look at different areas of the human experience—be it history, politics, or family—through the same lens.

Such advocates call the discipline Africology. Some scholars consider African American studies to be an interdisciplinary field of focused study to which, like the field of education, scholars bring a variety of disciplinary lenses—be they anthropological, psychological, or historical—to study the African world experience. Still others would argue for a multidisciplinary or nondisciplinary label.

African American studies is more than a territory to which scholars bring disciplinary lenses. It rather describes an evolving intellectual enterprise carefully observing traditional, traditionally ignored, contemporary, and future ways of knowing. For example, one characteristic of the field's approach is the recognition of indigenous cultural knowledge that lies outside the traditional boundaries of humanistic and scientific discourse, such as that attainable through visual and oral accounts.

As previously stated, all academic disciplines have different schools of thought that contribute various perspectives to the collective enterprise. There is, however, always an overarching worldview and a set of values that includes theories and research methods, for example, that are shared among schools of thought. One value that links different schools of thought within African American studies is the commitment to producing a perspective that reflects the beliefs, values, culture, and interests of peoples of African descent. The terms *African centered* (or *Afrocentric* or *Africentric*) are used in contemporary discourse to convey this value.

Critics of African American studies have attempted to denigrate the field by attaching specific interpretations of this value expressed by some particular authors. Such specific formulations are confused with the generalized and fundamental value for the discipline. These terms are used in a general rather than limited sense. African-centered thought is grounded within a historical tradition that can be understood by recognizing internal dialectics and contradictions that have persisted over time within the field and the society. Accordingly, it may be argued that, far from being an ideological position, African-centered thought exists regardless of whether or not it is called African centered.

Each school of thought within African American studies has its own particular interpretation of what constitutes African-centered thought and

how that thought should be linked to other intellectual traditions. Within each school of thought, there are subtle, but important distinctions. At the same time, it is possible to compare the treatment of core theoretical constructs and approaches to social change across different schools of thought.

Core Theoretical Constructs

The marginalization of peoples of acknowledged African descent and other similarly situated groups spurred the development of a school of thought that is heavily influenced by Marxist thought and practice. The collective of scholars associated with this school of thought were, in fact, responsible for institutionalizing the commitment of the National Council for Black Studies to the linkage between scholarship and activism as expressed by the organizational adoption of the motto "Academic Excellence and Social Responsibility."

As there is varying emphasis on social responsibility by institutions, there is also an emphasis for focus upon the female gender. Accordingly, the treatment of gender within African American studies has precipitated increasing examination and debate. Though the African American studies movement addressed some very real shortcomings such as paucity of African American faculty and omission and distortion of curricular content and programmatic resources in the academy, only in the last decade has it begun to be sensitive to the unique experiences of women of African descent in the United States, on the continent, or throughout the diaspora. Throughout the United States, African American men and women speak to the existence of racism in women's studies and sexism in African American studies in courses on campuses, in professional organizations, and in scholarly publications. It is important to note, however, that African American women do have a rich legacy in these areas, though they have been numerically smaller as well as reluctant to voice their own accomplishments. African American women have been actively involved in the initiation, continuity, and development of African American studies.

Women's Perspective

African American women students and African American women faculty, along with African

American women community activists, joined with their male peers in those protests and other efforts that contributed to the establishment of what is now emerging as a distinct discipline of African American studies. Those women, like their male copartners, understood the difficult task of creating a meaningful area of African American studies with strong academic foundations within higher education. There are two distinct tendencies within this movement for appropriate inclusion of women, and both have been instrumental in exposing and countering the sexist tendencies of some nationalist ideologies that have positioned women into inferior roles to those of males. Some scholars have called for the application of feminist constructs for the analysis of the experiences of African American women and have critiqued cultural nationalism as a belief system that is inherently antiliberating because of what are perceived as inescapable sexist tendencies. In contrast, many African American womanist scholars urge the redefinition of the partnership between African American men and women in pursuit of intellectual and political objectives. Proponents of this view generally identify with and contribute to the overall effort to establish African American studies as a discipline.

Although in a distinct minority, numerous women were founders of African American studies units at their institutions, and like men, they have provided leadership as program directors or as department chairpersons and are doing so in even greater numbers in the new millennium. African American women have also been significant as leaders in efforts to professionalize the discipline. They are among those persons who have served in the top leadership positions of the major organizations for African American studies including National Council for Black Studies, ASALH, and the African Heritage Studies Association. Such names as Bertha Maxwell Roddey, Carlene Young, Delores P. Aldridge, and Charshee McIntyre are to be recognized along with those of William Nelson, James B. Stewart, James Turner, John Henrik Clarke, and Leonard Jeffries for their strong leadership initiatives in national organizations. In fact, it was during the administrations of Young and Aldridge in the 1980s that much debate occurred over the uniformity of a name for this new discipline. They advocated for the usage of Africana studies.

The Intellectual Enterprise

As relevant as leadership is to the development of a discipline, perhaps, as important if not more so, is the scholarship of its members. Of course, much of this research has reflected traditional methods and has been published in traditional organs. But a distinct body of knowledge has been generated that is associated uniquely with African American studies as a self-standing intellectual enterprise. Some of this work has been published in professional journals that have been created to serve scholars in the field including publications such as *The Journal of Black Studies*, *The Western Journal of Black Studies*, and *The International Journal of Africana Studies* (the official organ of the National Council for Black Studies). Special issues or sections of other periodicals have also served as publication outlets such as *The Black Scholar*, *Phylon: Review of Race and Culture*, *The Journal of Negro Education*, and *The Journal of Black Psychology*.

Both women and men have contributed significantly, although the men have been more visible with scholarship involving theoretical models and paradigms that were not gender specific. Though much of the work of the women has not been gender specific either, it has tended to be more specific in conceptualizing and analyzing issues. And as a result, the work of women, with the exception of a few, has enjoyed less prominence.

Noteworthy is the fact that the character of the research published has changed as the academic training background of faculty has changed. The first generation of faculty in African American studies units were trained solely in traditional disciplines, and they tended to approach the study of the African American experience through their various disciplinary lenses. Those who have developed other African American ways of seeing have had to do so through self-development at professional meetings, symposiums, and institutes. Such scholars tend to publish both in traditional and specialized African American studies publications. However, as more graduate programs have recently produced new faculty trained specifically in the field, alternative methodologies are being introduced both in the classrooms and in the journals.

Some of this new scholarship introduces ways of knowing and methods of analysis that either fail to meet, challenge, or transcend the expectations

of traditional journals. Thus, while bringing fresh and new energy and vision, these scholars run the risk of not meeting traditional standards when measured by traditional criteria. Both the journals that would publish their works and the units in which they reside in the university remain not fully convinced. This dilemma speaks to the need for African American studies units to retain or attain, whether through achieving departmental status or another arrangement, the right to be significantly involved in tenure and promotion decisions that allow scholars to continue in their positions.

Different ways of knowing and approaching knowledge are critical to the development of the distinct enterprise of African American studies. This contributes to the widespread agreement that there are many forms of cultural knowledge necessary to understand the complexity of the African American experience. In the sense that thought precedes speech, which precedes literature, indigenous knowledge sometimes precedes scientific acceptance. For example, many so-called folk cures for illness have subsequently been found to have a foundation in science and are then declared acceptable in medical practice. Similarly, African American studies is open to other ways of knowing.

Another central tendency in the field is the rejection of the notion of pure objectivity as an attainable neutral space from which scholars might analyze the human experience without bias. Although recognizing the value of the scientific method as a tool useful for minimizing bias, African American scholars deem it dangerous to make claims of pure objectivity. The illustration of the danger is akin to looking through a pair of binoculars from the wrong side and getting the illusion of distance. In sum, this tendency maintains that the use of the longer standing traditionally recognized disciplinary tools along with other ways of knowing—such as oral communications, spirituality, and intuition—may generate richer and fuller descriptions of many phenomena.

Existing within the field is a positive creative tension, both within and among the units even as African American studies scholars share the pursuit of scholarly knowledge and social responsibility. Admittedly, there is great variation in the means by which these dual goals of academic excellence and social responsibility are pursued. However, the ends are important and usually justifiable. Given

the change-agent mission characteristic of many African American studies units, this tension is perhaps inevitable. The paradox may have been best expressed by Martin Luther King Jr. when he asserted that no change is possible without creative tension.

Furthermore, because of the unique cluster of methodological approaches and emphasis on service to students and community espoused by and expected of scholars in the field, African American studies challenges the traditional elite model of scholarship, which often advocates scholarship for scholarship's sake. In contrast, African American studies generally seeks praxis in advocating what might be called applied scholarship. Thus, performance evaluations for tenure and promotion, when controlled by the units themselves, reflect this centrality of service to students and community. This difference in performance expectations and subsequent method of faculty evaluation has been a source of friction between the units and higher university evaluation bodies over the differing criteria, especially when the African American studies unit has not acquired the autonomous rights that come with departmental status.

The Teaching Role

Some universities have recently announced a new commitment to teaching and mentoring students and have committed to making such activity more central and commensurately rewarded in faculty assessment and promotion decisions. African American studies scholars have always been student centered. Such dually committed scholars have often found that the time and energy spent on student- and/or community-centered activity has reduced the kind of scholarly production traditionally valued within universities. However, these experiences position the discipline, by example, to provide leadership in facilitating the development of student centeredness in universities.

Pedagogical or teaching approaches associated with African American studies instruction at the undergraduate level are designed to expose students to the ideas, philosophical orientations, and benefits of the variety of schools of thought. Instructional strategies are designed to transmit critical analytical skills that allow students to make their own sense of the world. Instruction is generally delivered

through organized units, usually departments, programs, centers, or institutes using faculty with various types of affiliations within the institution. The range and orientation of instruction generally reflect the mission, faculty expertise, and general focus of the academic unit, for example, African American or diasporic studies.

African American studies courses are often included in general education curricula, increasing the numbers and variety of students in classes. Among opportunities offered in African American studies for students, in addition to classroom exposure to a variety of professors and perspectives, are learning activities conducted away from campus. Study abroad opportunities in Africa and the Caribbean and field experiences in local community agencies are offered.

Unique teaching models and strategies have been employed to provide students in African American studies with a wide range of intellectual and personal experiences at home and abroad. Additionally, there is a growth of graduate programs. And increasingly, there is concern for initiating guidelines for institutions of higher education for outreach activities, particularly to traditionally ignored underserved populations not only locally, but also regionally, nationally, and internationally.

Mainstream Impact

Although the academy has been the center of African American studies, there is no question that what can be described as popular African-centeredness has permeated various popular culture media, most notably film and music. However, this phenomenon has virtually no relationship to formal efforts to develop African American studies into a disciplinary matrix-driven enterprise. Popular African-centeredness draws heavily on self-published works produced by people largely outside the academy. Although, as discussed previously, there is a long history of African-centered thought generated outside the academy, during the current period, the locus of development has been and remains solidly inside the academy.

In the first decade of the 21st century, the United States can be characterized by a great number of individuals with different cultural origins. This changed demographic makeup, particularly with the numerical explosion of Spanish-speaking people

(Hispanics or Latinos) and growing visibility of women, demands a new look at the academic marketplace. As the trailblazer for advocacy of the inclusion of many different kinds of experiences into the educational landscape, African American studies has a pivotal role in culturally democratic education.

There is little question that women, minorities, and the disabled need to be represented in all institutions and reward systems of this country. They deserve their representation since they have also been excluded from the narration of a complete history of this country. Their entry in significant numbers to the university came as a result of the civil rights struggle, but was a more welcomed inclusion than African American studies, which served as a trailblazer. These groups and programs were generally sustained with less formal resistance or acrimony and often were provided greater allocation of resources.

Nonetheless, at some point in time, a critical analysis of the involvement of these groups, as a presence in the university and voice in the sociopolitical arena, must include acknowledgment of a debt owed to African Americans, who led the change and opened the doors of the university to those who had not previously been allowed entry.

The future has roots in the past as the present serves to prepare for it. Responses to current issues and challenges create the stage for ensuring the survival and continuation of relevant African American studies in academia. There is no strong future without a strong present.

AFRICAN-CENTERED EDUCATION

African-centered education is the process by which the characteristics of African culture are developed and advanced along with the knowledge and skills needed to maintain and continue it. African-centered education contributes to the education of African Americans by providing for the development of their sense of history, pride, and collective belonging through a reinforcement of their culture. African-centered education is a process dependent upon human perception and interpretation; therefore, it can be facilitated only by

people who are consciously engaged in African-centered personal transformation. Following the same thought, a curriculum cannot be African-centered independent of an educator's capacity to perceive and interpret it in an African-centered manner. Both complex and straightforward, African-centered education facilitates recognition of the continuity of African cultural history, commitment, personal transformation, and recognition of the future of African people. It facilitates preparation for African life, self-determination, a link between spirituality and liberation, a bond connecting family and nation, and an acknowledgment of cultural artifacts and their meanings.

Foundations of African-Centered Education

Several major assumptions underlie the principles of African-centered education. First, it acknowledges that African spirituality is an essential aspect of African American's uniqueness as a people and makes it an instrument of liberation. Second, it emphasizes the fundamental relationship between the strength of African American families and the strength of their communities and nations. Third, it ensures that the historical role and the function of the customs, traditions, rituals, and ceremonies that have protected and preserved African American culture are maintained and perpetuated. Fourth, it facilitates African American spiritual expression. Fifth, it ensures harmony in social relations between African Americans and others. Finally, it prepares African American youth to meet their responsibilities as adults.

African-Centeredness and the African Worldview

The philosophy of African-centered education is founded in two schools of thought—African-centeredness and miseducation. African-centeredness is the interpretation of reality from perspectives that are centered by and within the processes that maintain and perpetuate the life and culture of people of African descent. African-centered education is part of the same process of cultural restoration and promulgation that is inherent to African-centeredness. African-centered education is the outcome of the *African worldview*, a term coined by Senegalese anthropologist Cheikh Anta Diop.

Diop's thesis is that European and African cultures represent opposing worldviews. Instead of a universal hierarchy of cultures in which Western European culture represents the epitome, Diop suggested that African and European cultures developed within two obvious and divergent cradles of civilization. The environmental harshness of Europe gave rise to individualism, possessiveness, and forms of social organization reflective of the scarcity of natural resources within the European environment. Conversely, the warmth and fertility of Africa and the absence of moral and material misery produced a sense of collectivism and benevolence among precolonial Africans. African worldview literature identifies the following attributes of precolonial Africans:

1. An emphasis on the family as a source of personal identity and reference
2. A far-reaching and abiding spirituality
3. A respect for elders and ancestral figures
4. A preference for communal and societal arrangements
5. A live-and-let-live philosophy of coexistence and cooperation among individuals, communities, and cultures
6. An optimistic and holistic disposition toward life

It is important to mention that African-centeredness differs from earlier worldview constructions such as negritude, Black nationalism, and early Pan Africanism. Although they all share an emphasis on the need for people of African descent to resist the Western cultural hegemony, African-centeredness sets its focus on the recovery and restoration of the African worldview as a means of locating and centering present conceptions of reality and analyses of phenomena.

Miseducation

Miseducation can be defined as an educational process that methodically socializes African Americans to adopt and value Eurocentric beliefs, customs, behaviors, and knowledge base. Carter G. Woodson coined the phrase in his classic 1933 text, *The Mis-Education of the Negro*. According to Woodson, schools are among the institutions through which the process of cultural assault upon

African Americans has been facilitated. Miseducation dually forces African American students to accept the inferior status assigned to them in larger society and to accept a second-class socioeconomic rank in the very communities that they have been taught to despise, condemn, and reject.

African-Centered Schools and the Council of Independent Black Institutions

African-centered education has the ability to eliminate the patterns of rejection and alienation that engulf so many African American school children, especially African American males. The ultimate realization of this theory is the creation of independently operated and funded schools by African Americans for African American students that utilizes African-centered curricula.

Community Control

A common thread in desegregation and African-centered literature is the conflict between the equalization of educational opportunities and community control. It has been argued that the fundamental flaw of integration was that it allowed the same authorities that managed school segregation the power to manage school desegregation. That same segregationist authority made the decisions about which schools would be closed, which teachers would be fired, what schools children would attend, and the pace at which that changes would be made. The community control of public schools movement was an attempt by African Americans in large urban cities to gain control over schools in African American communities. Community control refers to authority over a school's staff, curriculum, and administration by groups or individuals in the community.

Council of Independent Black Institutions (CIBI)

In the late 1960s and 1970s, several independent Black institutions (IBIs) were created out of the concept that school desegregation was ineffective in changing the balance of power relationships of schooling and education. Over a course of several Black power conferences, these IBIs would form CIBI. An umbrella organization for independent African-centered educational institutions, CIBI uses the African-centered institutional-building model to

seek power over education and schooling. CIBI member schools incorporate a Pan African philosophy of education based on a cultural value system (i.e., the *Nguzo Saba*). In addition, CIBI schools represent organized partnerships of parents, educators, and community residents who are collectively engaged in building and maintaining institutions of learning. CIBI has maintained standards of self-governance and self-reliance and has addressed education as a cultural imperative that cannot be divorced from family, community, and national contexts.

AFRICAN FREE SCHOOL

The New York African Free School, founded in 1787 to serve the city's growing free African

American population, was among the first non-denominational charity schools in U.S. cities. The African Free School provided a valuable route to formal education for a generation of leaders that included Henry Highland Garnett, James McCune Smith, and Alexander Crummel, among others. The struggles over control that swirled around the school were a foreshadowing of the challenges that would face African American education in the future. But the resolve exhibited by the city's early African American community was a demonstration of the attitude that would make schooling a focal point for social equality in generations to come. The African Free School grew into a system functioning at seven locations at its high point of influence in the early 19th century. In the 1840s, the schools became part of the newly established New York Public Schools, even though they were supervised by an independent African American board of visitors. This entry looks at the history of this important institution.

Early Years

The New York African Free School was established by the New York Manumission Society to divert African American children from the slippery paths of vice. Throughout its history, the school's trustees were dedicated to teaching free African Americans industry and sobriety, virtues calculated to make them more orderly and tractable as they emerged from enslavement. But the African Free School did more than teach African American children their place in society. Unlike White charity schools, which were reserved for the poor exclusively, the African Free School became a focal point of African American community aspirations for a better future.

The African Free School expanded steadily through the opening decades of the 19th century. In 1809, the trustees hired Charles Andrews, an Englishman, to adapt the school to a Lancastrian system of education. This method used student monitors to supervise large classes under the direction of a single master, providing an inexpensive means for schooling large numbers of children. The school expanded quickly, enrolling hundreds of students in the 1820s.

As New York's African American population grew, schooling became a matter of controversy. In

the late 1820s, New York's African American community leaders demanded a say in the determination of educational policies at the African Free School. The conflict that resulted may have been the nation's first struggle for community control of urban public schools. Like countless others that followed, this effort to win a voice in African American children's future met with only limited success, but it presaged conflicts that would mark the progress of African Americans in education for decades to come.

African Americans in New York had long taken a close interest in the African Free School. The earliest public examinations were attended by interested parents and various leaders of the African American community. In addition, African Americans also attended examinations staged for city officials and foreign dignitaries, even though they were required to sit in the rear. In 1827, the school's trustees approached leaders of the African American community to garner support for expanding the schools and improving attendance. Samuel Cornish resigned as editor of *Freedom's Journal*, the nation's first African American newspaper, to serve as agent for the Manumission Society, visiting homes to promote support for the schools. A group of women, African Dorcas Society, was formed to supply winter clothes to needy African American school children.

Changing Leadership

Freedom's Journal became an enthusiastic source of support for the schools. Articles urging African American families to send their children to school appeared regularly. The Manumission Society began placing advertisements for the schools in the paper and continued them on a regular basis up to the closing issue in 1829. African American support for the schools, however, was far from unequivocal. Keenly conscious of political issues facing the nation's free African Americans, community leaders kept a close watch on the content of the curriculum.

In January 1832, the Manumission Society suddenly announced Andrews's resignation. Andrews, who had long expressed disappointment with the plight of free African Americans, apparently drew the ire of community leaders by suggesting that African Americans leave the United States under

the auspices of the colonization movement. The trustees were urged by the leadership of the African American community to dismiss him. There also had been a precipitous decline in enrollments. The level of community interest in the African Free School was great enough to force the resignation of their most prominent teacher. Moreover, upon the advice of African American leaders, Andrews was replaced by James Adams, an African American teacher, and within 3 months, enrollment soared past 600.

This started a period of remarkable expansion in the schools. Under African American teachers, combined attendance at the African Free School climbed above 500 in 1832 for the first time, while enrollment passed 1,000. African American assistant teachers, all graduates of the schools, were hired to help, and by early 1833, registration stood at more than 1,400, while attendance approached 600. If the magnitude of this turnabout is any indication, concern over the content of education and the importance of African American teachers was widespread among community members.

The following year, the Manumission Society decided to transfer the schools to the Public School Society, which operated charity schools for White children. A fresh conflict erupted when the new management discharged most of the African American teachers, leading to another drop in enrollment. This time negotiations between White school leaders and the African American community proved difficult, as the Public School Society was considerably less willing to heed the advice of African American leaders. As a consequence, African American private schools drew enrollments away from the Public School Society's institutions. Following 2 years of continuing enrollment declines, the Public School Society finally agreed to rehire the African American teachers, and enrollments started back up. Eventually, responsibility for managing the schools would pass to a committee of African American trustees, including many former students of the African Free School. This would be yet another chapter in the history of segregated African American schooling in New York.

AFRICAN METHODIST EPISCOPAL (AME) CHURCH

The educational ministry of the African Methodist Episcopal (AME) Church should be viewed in several larger contexts. These include the earliest organizing of nominally free Africans in the United States in both the secular and sacred realms, the reason there are African American and White churches in the country, debates around anti-intellectualism in the African American church and African American life generally, debates about the nature of the best education for African American people, Methodist Episcopal polity and leadership, and tensions between education for assimilation versus education for liberation. This entry explores the origins of organized religion for African Americans in the United States and the relationship between the church and education in the this context, including African American colleges.

Foundations of Religion

If the importation of nearly two dozen Africans as indentured servants in Jamestown, Virginia, in 1619, that was the point of origination for 246 years of chattel enslavement is taken into account, most Africans began as non-Christians and unfree. There was no serious proselytization or conversion of Africans to Christianity until the second great awakening of the latter 18th century.

However, in the late 1700s, a spiritual revival among Whites emphasized a more personal, emotional, and direct spiritual connection to Christ as opposed to a staid, liturgical, overly intellectual

worship. Africans saw connections between their African spiritual heritage and a more egalitarian status before God in the second great awakening. As they began to convert, they went to the same churches with Whites and at the same time. They may have been seated in the rear or in the balcony, which was commonly called “nigger heaven.”

To understand why there are African American and White churches in the United States and why 11 o’clock Sunday morning is the most segregated hour in U.S. public life, one must realize it is not simply or mostly a matter of cultural worship differences. Distinctively African American and White churches in this country grew out of specific historic acts of White supremacist racism (the only effectual racism there is) in the White church. Most precisely, it was an incident at the Stebeurger Methodist Episcopal Church in Philadelphia, Pennsylvania, in 1792. The most prominent leaders of the African American community in Philadelphia were Richard Allen, later to become the founding bishop of the AME Church, and Absalom Jones, who became the first ordained Episcopalian African American priest in the United States. In most Methodist churches, it is standard operating procedure to have individual silent prayer at a long altar rail at the front of the sanctuary. African Americans were told this was the “non-Negro” time to pray. According to Allen,

We had not been long on our knees before I heard considerable scuffling and loud talking. I raised my head and saw one of the trustees, H — M —, having hold of the Rev. Absalom Jones, pulling him off his knees and saying, “You must get up, you must not kneel here.” Mr. Jones replied, “Wait until prayer is over.” Mr. H — M — said, “No, you must get up now, or I will call for aid and force you away.” Mr. Jones said, “Wait until prayer is over, and I will get up and trouble you no more.” With that (H — M —) beckoned to one of the trustees, Mr. L — S —, to come to his assistance. He came and went to William White to pull him up. By this time, prayer was over, and we all went out of the church in a body, and they were plagued no more by us in the church. (Handy, 1902 p. 101)

This became the founding incident of the AME Church. All over the nation, African American

congregations, and eventually denominations, came into existence because African American people grew weary of racism in White churches.

Education and the Church

Paul R. Griffin’s significant book, *The Struggle for a Black Theology of Education: Pioneering Efforts of Post Civil War Clergy*, outlines a serious strand of anti-intellectualism in the African American community at large and within the African American Church in particular.

Griffin highlights the work of the education paragons in each of the historically African American Methodist Churches: Daniel Alexander Payne for the AME, Joseph Price for the African Methodist Episcopal Zion (AMEZ), and Isaac Lane for the Colored Methodist Episcopal (later named Christian Methodist Episcopal; CME). Payne is the founder of Wilberforce University in Ohio for the AME, Price is the founder of Livingston College in North Carolina for the AMEZ, and Lane is the founder of Lane College in Tennessee for the CME. All three of these clergymen encountered substantive opposition to their work in each of their respective denominations.

Of course, many of the early preachers in each branch of African American Methodism had no access to early education. Most Southern states had outlawed African American education. Even though sales of the *Book of Discipline* were going very slowly in 1833, by 1834, the African Methodist Episcopal Church made clear a pro-education mandate:

The subject of education is one of high importance to the colored population of the country; it shall be the duty of a every minister to establish schools . . . and to insist upon parents of children that they send them to school; and that a sermon should occasionally be preached expressly upon that subject . . . every preacher who neglects to do so to be subject to the censure of the (General) Conference. (Payne, 1891, p. 100)

This is a policy, at the highest level of the church, that reflects the leadership of Reverend Payne, who became a Bishop in 1852. Three years later, in 1937, the General Conference, again led by

Payne, issued this dictum, which sought to close the piety-learning gap:

Education is the only sure means of creating in the mind those noble feelings which prompt . . . piety, virtue and temperance and elevate us above the condition of brutes by assimilating us to the image of our Maker. (Payne, 1891, p. 115)

Four years later, in 1841, Payne and the African Methodists turned their attention to the education of clergy:

We recommend to all our elders and deacons, licensed preachers and exhorters, the diligent and indefatigable study of the following branches of useful knowledge. English Grammar, Geography, Arithmetic, Rollins' ancient History, Modern History, Ecclesiastical History, Natural and Revealed Theology. (Payne, 1891, p. 141)

This level of academic rigor was vigorously resisted by the anti-intellectual folk preachers who claimed a calling from God was all sufficient without interference by worldly learning. These debates raged on at every level of the church for years; some would say they are still going on in the first decade of the new millennium. Bishop Paul Quinn, after whom an African Methodist college in Waco, Texas, is named (1885), held that the ambassador of the Cross was a most intelligent man because he held such an important position with significant responsibility.

The Church and Black Colleges

The AME Church, under the leadership of now-Bishop Payne, established the first African American owned and operated institution of higher learning, Wilberforce University in Ohio, in 1856. White Presbyterians had established the first college for African American people, Lincoln University in Pennsylvania, a couple of years earlier. These are two of the very few historically Black colleges founded in the enslavement era.

Most Black colleges were established by African American and White churches after the Civil War ended in 1865 and before the turn of the 20th century (1900). The Christian Educational Department of the African Methodist Church was inaugurated in 1876.

Among the AME colleges established during this period were Morris Brown College; Allen University was founded in Columbia, South Carolina, in 1880; and Kittrell College in North Carolina, founded in 1887; Edward Waters College, Jacksonville, Florida, in 1883; Western University, Quindaro, Kansas, in 1887; Shorter College, Little Rock, Arkansas, in 1886; Campbell College, Jackson, Mississippi; Daniel Payne College, Birmingham, Alabama, in 1889; Turner Normal College, Shelbyville, Tennessee, in 1885; Payne Institute, Macon, Georgia, in 1888; Lampton College, Alexandria, Louisiana, in 1889; Bethel College, Montgomery, Alabama; and Payne Theological Seminary, Wilberforce, Ohio, in 1891. Some institutions were established after 1900, including Flipper-Key-Davis College in Tallahassee, Oklahoma, in 1917.

The AME Church also established international educational missions. These included schools in Port-au-Prince, Haiti; Collyman Rock, Barbados; Georgetown, British Guyana; Paramibo, Dutch Guiana; Evaton, South Africa; Sierra Leone; and Liberia.

The Role of Education

During the post-Reconstruction period (1880–1920), AME educator G. M. Elliot, who was principal of a normal school in Selma, Alabama, in 1885, argued for education and good stewardship of money. Elliot wrote in the AME *Christian Recorder* that delayed gratification would lead to eventual success, self-reliance, self-respect, and self-control. Elliot believed that Black unity, inclusion in mainstream United States, and true understanding of Christianity all come through education.

Richard R. Wright, also writing in the *Christian Recorder*, observed that neither the federal nor the state government would protect the lives of African American people, so education would be the key to self-reliance. In 1899, Wright stated that African Americans need both industrial and higher education. He believed that emigration out of the country or migration out of the South would not work, so African American civil rights would have to be protected by education. Young African American men, in particular, must develop their full intellectual potential to secure full participation in U.S. life, including developing potential in business, Christian ministry, medicine, and agriculture.

In the debate between Booker T. Washington, who advocated industrial education, and W. E. B. Du Bois, a supporter of liberal arts education, Will M. Jackson wrote in the *Christian Recorder* in 1888 to 1889 that African Americans needed industrial education because not everyone can become a minister, lawyer, or other professional. Jackson also believed that civil and human rights would come via industrial and technical skills. He saw skilled workers as perhaps lower in status or prestige than professionals, but significantly higher than common laborers.

Jackson's pro-Washington views were counter-balanced in the AME *Christian Recorder* by Charles Cook, who wrote in 1909. Cook said African American people needed classical (liberal arts, humanities, social and natural science, and higher mathematics) education the most. He claimed classical education as the most rigorous and, echoing Du Bois, observed some of the industrial education was already obsolete. Cook also suggested that ultimately the market place would determine the type of education most needed. He was gracious enough to remark that Washington was not creating this educational dichotomy and prescient enough to conclude that there would be a convergence of the views of Washington and Du Bois.

Beyond this Washington–Du Bois debate, the AME Church engaged in educational conversations on the need to seek excellence, to combat anti-intellectualism, to include character education, to be concerned for the education of women, to debate separate versus integrated education, to include global education, and to include African and African American people in all history curricula.

Led by Bishop Payne, who abhorred Negro spirituals and called them cornfield ditties, the AME Church has wrestled with notions of education, race, and culture. Payne clearly loved African American people and loved education, but eschewed much of most African-based Black culture. In the postbellum era, a major African religious practice was called the ring shout, written about by Sterling Stuckey of Northwestern University and loosely portrayed in the movie *Glory*. Payne sought to eliminate this practice in the AME church. An old, illiterate African American man got up to say to Bishop Payne that he was a great man and a great educator. Both the AME Church and African Americans in general have to

resolve a tension of education for assimilation and education for holistic (sociocultural, political-economic, and religious) liberation.

AGRICULTURAL EDUCATION

Agricultural education in the United States started with the establishment of agricultural institutions 145 years ago. With the passage of the Morrill Act in 1862, making public universities open even to students without means, agricultural education became significantly more common. An expansion of the Morrill Act in 1890 provided separate, but equal land grant institutions for African Americans, also with an emphasis on agriculture as well as mechanical arts. The United States presently has 104 land grant universities, colleges, and technical institutions, of which 53 are historically White institutions established as a result of the original Morrill Act of 1862, 18 are historically Black institutions founded as a result of the 1890 legislation, and 33 are Native American tribal land grant institutions established under the extension to the

Morrill Act passed in 1890. As the result of systematic work by the land grant institutions in agricultural teaching, research, and extension activities, agricultural productivity in the United States has become the envy of the world. This entry provides an overview of the Morrill Act and its impact on African Americans.

The Morrill Act

On July 2, 1862, the U.S. Congress passed legislation drafted by a Vermont Representative, Justin Smith Morrill, to create at least one higher education agricultural institution in every state of the Union. Morrill was interested in higher-education institutions because he was financially unable to afford college study and instead spent most of his adult life as a shopkeeper until he was first elected to the U.S. House of Representatives in 1854 and to the Senate in 1866.

These new educational institutions were mandated to be accessible to the common person and were required to teach agriculture, military science, and mechanical arts—not to the exclusion of classical studies—so that members of the working class might obtain a practical education. These institutions are now known as land grant institutions.

In the South, under the premise of legal separation of the races, people of African descent were not allowed to attend most institutions established under the first Morrill Act of 1862. By actions of state legislatures, however, the current Alcorn State University, Lincoln University, Prairie View A&M University, and South Carolina State University were established under the provision of the first 1862 Morrill Act for the benefit of African American youth. These institutions were not classified as land grant institutions and did not receive sufficient financial state support to initiate agricultural, home economics, mechanical arts, or military tactics curricula. Also, most of them were not awarded public lands equivalent to the acreage provided to the 1862 land grant institutions.

Twenty-eight years later, the original Morrill Act was amended to initiate separate, but equal land grant institutions in southern and border states, and these institutions were relegated exclusively toward education of people of African descent who were unable to attend the 1862 land grant institutions at the time. The amended 1890 act further clarified the

language in the 1862 bill by adding the following statement to the 1890 amended bill: “The appropriated funds could be applied only to instructions in agriculture and mechanical arts, the English language and various branches of mathematical, physical, natural, and economics science, with special reference to their application in the industries of life, and to the facilities for such instruction.”

Impact on African Americans

Although the law provided for separate but equal facilities, the 16 institutions for African Americans that were established by the 1890 legislation did not receive sufficient resources to initiate effective vocational agriculture, teacher training, research, or extension programs until 1967. In that year, they received the first Cooperative State Research, Extension, and Education Services of the United States of Department of Agriculture’s (CSREES/USDA) research appropriation of \$283,000. This amount was divided among the 16 land grant institutions of 1890, each receiving \$10,000 basic allocation plus additional resources ranging from \$2,413 for Delaware State University to \$12,424 allocated to North Carolina A&T University.

At the time, Tuskegee University was a private non-land-grant institution, and West Virginia State University did not have its land grant designation. Presidents of the 16 1890 institutions later voted unanimously to include the then-Tuskegee Institute to share in CSREES/USDA research allocation starting with the 1972 appropriation.

Known today as the 1890 land grant universities, most of these institutions started out as vocational schools teaching practical agriculture. When more African Americans started to attend segregated primary and secondary schools, most of the institutions were mandated to train African American teachers and were designated as normal schools. And as a large number of African Americans begun completing high school, the 1890 institutions were permitted to develop a 4-year college curricula, eventually evolving into full-fledged colleges and universities. Today, these 18 land grant institutions graduate 52% of the nation’s African American agricultural degree recipients.

ALEXANDER V. HOLMES COUNTY BOARD OF EDUCATION

Alexander v. Holmes County Board of Education (1969) was one in a series of cases that followed on the historic *Brown v. Board of Education, Topeka, Kansas* (1954) ruling that declared segregated schools unconstitutional. More than a decade after that ruling, several Southern states had yet to take any meaningful steps toward ending segregation. In *Alexander*, the Supreme Court ordered one Mississippi school system to stop its delaying tactics and dismantle its dual school system for White and African American students immediately. The justices said that there was no longer any justification for postponing the achievement of unitary schools where no students were barred on the basis of race or color. This entry looks at the context of the case, the actual case, and its components.

Historical Context

After the Civil War, Mississippi had to face the mandate of free African Americans. The emancipation revitalized the issue of education of African Americans. Freedom and the losing of the Civil War undermined the long social relations between African Americans and Whites. The newly freed African Americans knew the key to a better life was education. Almost every African American in

Mississippi wanted to learn to read and write. They clamored for schools; once the war ended, the desire for education intensified.

Post–Civil War

African Americans would take great pains and render any service to people willing to assist them in education. Even though the newly freed African Americans had little, they pooled their resources to pay for teachers and schools. This effort, combined with the newly established Freedman’s Bureau and northern religious societies by the summer of 1867, built 61 African American schools in 50 Mississippi communities. Although African Americans believed education was the cornerstone to a successful transition to freedom, White Mississippians did not see the benefit of African American education.

Whites offered two reasons why educating African Americans would be a waste of time and money. One reason was that Whites believed that African Americans did not have the capacity to learn. Other Whites reasoned that an educated African American would not want to work in the fields and therefore educating African Americans would not be profitable. Although the majority of White Mississippians opposed educating African Americans, there were few delegates to the Constitutional Convention of 1868 who held this view. The convention was set up to establish a post-Confederate government for the state. There were 16 African American delegates to the convention.

The most controversial article in the constitution was Article VIII, which called for public education. Most delegates supported some form of public education. It was how the students would be educated that caused the controversy. The African American delegates supported two proposals. The first required that all public schools would be integrated. The second called for compulsory education for every child. These two proposals were defeated along with the proposal to have segregated schools. In the end, the convention agreed to let the legislature decide the specifics of the educational system.

In 1870, the first postwar legislative session took place. The legislative group was similar to the constitutional convention group. This group consisting of African Americans and Whites created a

system of free public schools for all children ages 5 to 21 years old. The legislature left the question of desegregation to the local districts. Neither the African American nor the White legislators mentioned interracial schools. The African American legislators did not mention desegregated schools because they knew that the alternative to desegregated schools meant no schools for African Americans. Left to the local districts, there were two schools in Mississippi that were desegregated in 1871. In 1872, all schools were one race only.

As Mississippi was recovering from the Civil War, property values that were the basis for tax collection had fallen dramatically. With public funding shrinking, counties struggled to raise money for teacher's salaries. White taxpayers did not support the notion of public schools and certainly did not support educating the newly freed African Americans. Whites resented the idea that their tax dollars were going to educate African Americans.

In 1878, a more conservative legislature was elected. They introduced a new public education system. Laws were passed separating the races. Not only was segregation of public schools the new law, but the African American school buildings also had to be 2 miles away from the White school buildings. In the decades that followed, White supremacy was established through public education. As African Americans had less control over their schools, funding for African American education decreased.

The Civil Rights Era

After World War II, the civil rights movement emerged. The South, which had only denied African Americans equality, embraced inequality. The separation of the races was so complete White Mississippians had no idea as to the level of inequality of schools. From the salaries of the classroom teachers, number of days in the school years, the difference in attendance and enrollment, the number of volumes in the library, or the condition of the building—the schools were unequal in every category.

In June of 1954, Mississippi Governor Hugh White and his all-White Legal Education Advisory Committee (LEAC) met with a small group of African American leaders to discuss school segregation in

light of the *Brown* decision. Governor White was attempting to garner support for his plan to equalize the segregated school system. The governor's yet to be funded plan was to increase the spending on the African American schools. Before the governor would commit to a spending increase, he wanted assurance from these African American leaders that they would agree to keep the schools segregated. While not denouncing the *Brown* decision, the leaders would welcome increased funding for the schools.

On July 30, 1954, the governor met with 85 to 100 African American leaders to convince them that his equalization plan would work. Prior to this meeting with the governor, the African American leaders met to come to consensus and present a united front. As the meeting began, the African American leaders realized they were seriously divided; there were leaders who supported the *Brown* decision but who wanted more money for African American schools. There were leaders who wanted total desegregation. After several hours, the group came up with a compromise statement that called for a firm commitment to the *Brown* decision and a plan for a nominally desegregated school system. This plan would keep most schools segregated, yet equalized. Once presented to the governor, the plan was wholeheartedly rejected.

Governor White and the LEAC moved on plans to resist the *Brown* decision using every method at their disposal. Although the *Brown* decision was meant to end dual public school systems, White Mississippians made it clear that no attempts to abandon the dual system would be tolerated. In blocking attempts to desegregate the schools, Mississippi resorted to private and state sanctioned economic and physical intimidation. From 1954 to 1964, Mississippi ignored the *Brown* decision by promoting its equalization plan and intimidation of African Americans.

In 1963, President John F. Kennedy realized that while the federal courts were instrumental in desegregation cases, counting on the federal courts to achieve desegregation would not work. President Kennedy first authorized the attorney general to bring lawsuits on behalf of the complaints. This led to complainants being intimidated and was not an efficient way to achieve desegregation.

In 1964, the federal government took a more active role in desegregation of the public schools.

The Civil Rights Act of 1964 barred racial discrimination in any activity or program receiving federal funds. The act was controversial and an unprecedented federal enforcement measure. The act also authorized the withholding of funds to schools that did not comply with the federal guidelines.

The Case and Ruling

After 16 years of fighting with the federal government and token desegregation, a steady stream of legal action finally toppled Mississippi's dual education system. African American parents and federal intervention brought to an end 95 years of segregation in the school system. In *Alexander*, these African American parents set out to end segregation in the school system once and for all. The suit was against all 33 Mississippi school districts.

The U.S. Fifth Circuit Court of Appeals had determined that 16 years of deliberate speed was enough, and Mississippi must begin desegregation of the public schools immediately. The Department of Justice and the Department of Health Education and Welfare under President Richard M. Nixon asked the Fifth Circuit Court to reconsider its ruling. The Court of Appeals for the Fifth Circuit suspended its own order and postponed the date for submission of a plan to desegregation. The African American parents appealed, and the U.S. Supreme Court granted certiorari.

The U.S. Supreme Court in essence ruled that enough was enough and vacated the order of the appeals court. The court remanded the case back to the court of appeals for the issuance of an order immediately desegregating the schools in Mississippi. The Supreme Court required every school district to end the dual system at once and to operate one school system. In its per curium decision, the Court in a unanimous opinion held that all motions for additional delays should be denied. The Court further ruled that all deliberate speed is no longer acceptable.

After the *Alexander* decision, White Mississippians still refused to desegregate the public schools. In January of 1970, Governor John Bell Williams held a television news conference in which he told parents that it was totally understandable if they chose to withdraw their children from public schools. Other White leaders kept the

promise of segregated schools by promoting the freedom of choice plan in spite of the Supreme Court decision. The White leaders still held rallies promoting this plan.

Some White Mississippians believed in the idea of public schools and joined with African Americans to establish organizations to promote public education. Still others started all White private schools as a way to keep the dual system. These private schools would receive a tax exemption; 61 such schools were formed after the *Alexander* decision that were private and White only.

Holmes County African American parents again petitioned the federal courts, arguing that giving all White private schools tax-exempt status defeated the purpose of *Alexander*. The Internal Revenue Service agreed and required all private schools to present a statement of nondiscrimination before receiving tax-exempt status.

With the tax-exempt status only available to schools that did not discriminate, the benefits of trying to exclude African Americans lost its appeal. White Mississippians were forced back to public schools.

ALSTON V. SCHOOL BOARD OF CITY OF NORFOLK

In *Alston v. School Board of City of Norfolk* (1940), an African American teacher and the Norfolk

Teachers Association challenged a pay system that provided greater compensation to White teachers than to African Americans. In a 1940 decision, the U.S. Court of Appeals struck down the disparate salary schedules, setting off substantial protest and ongoing legal action. This entry explores the historical backdrop, the facts, and the significance of the case.

Historical Context

By the mid-1930s, the National Association for the Advancement of Colored People (NAACP) had initiated a campaign for dismantling government sanctioned racial disparities in the area of primary and secondary education. Rather than mount a direct assault upon the doctrine of separate, but equal enunciated in *Plessy v. Ferguson* (1896), NAACP lawyers first challenged inequalities based upon race in teacher salaries, school facilities, and per pupil expenditures.

In the year before the *Alston* case was heard, two cases with similar facts were decided: *Mills v. Lowndes* (1939) and *Mills v. Board of Education of Anne Arundel County* (1939). In the rulings on these lawsuits, a Maryland statute prescribing separate salary scales for persons teaching in White schools and for those teaching in African American schools was declared unconstitutional. The plaintiff in the *Mills* cases was the African American principal of an African American school who had 10 years of teaching experience. Yet he was paid less than the lowest salary paid to principals of White schools. The issue was whether a qualified teacher has the right to pursue his occupation or calling free from the imposition of discriminatory legislation on account of his race. The judge reasoned that there was likely no difference in the pedagogical qualifications of teachers since for some years state schools had trained African American teachers under the direction of Maryland's board of education.

Because the plaintiff in the first *Mills* case failed to sue the county's board of education, which was responsible for implementing the state's statute, the district court dismissed the complaint but permitted the plaintiff to amend it to include the necessary defendants. Following a hearing in the second *Mills* case, the district court found a violation of plaintiff's civil rights on account of race and

enjoined the local board of education from continuing the discriminating practice. As Maryland had a system that permitted local boards to supplement those salaries provided pursuant to the state's pay schedule, this scheme could be utilized to remedy the salary inequity, and the court in *Mills*, therefore, saw no need to strike down the Maryland pay statute.

Facts of the Case

Melvin O. Alston had been employed as a teacher since 1935 and was in his 5th year at Booker T. Washington High School. He was a graduate of Virginia State College, which the court described as "an accredited college maintained and operated by the State of Virginia for the instruction and preparation of Negroes as teachers in the public schools for the State" (112 F.2d at 994). He held a collegiate professional certificate, the highest certificate issued to teachers by Virginia. Yet, while under the schedules, White male high school teachers with the same qualifications and duties were paid a starting salary of \$1,200 per year, Alston was receiving an annual salary of \$921, the pay fixed for male African American high school teachers in their 5th year of teaching.

Alston and the Norfolk Teachers Association brought suit against the Norfolk School Board and the Norfolk's Superintendent of Schools, challenging the city's policy of maintaining one salary schedule for White teachers and a separate, lower salary schedule for African American teachers. The plaintiffs alleged that over a long period of years, defendants maintained a policy and custom of paying African American teachers and principals less than their White counterparts in violation of the due process and equal protection clauses of the Fourteenth Amendment to the United States Constitution. Judge Luther B. Way of the U.S. District Court, for the Eastern District of Virginia, dismissed the lawsuit on the ground that Alston and the School Board were the only real parties with an interest in the action and that Alston had forfeited these constitutional claims when he entered into a written contract with the school board to teach at the scheduled rate.

On appeal, however, the U.S. Court of Appeals for the Fourth Circuit determined that the fixing of salary schedules for teachers involved action by the

State of Virginia and thus was subject to limitations prescribed by the Fourteenth Amendment. In this regard, the court noted that the Virginia Constitution required that its legislature create and maintain a statewide system of free public schools. The Virginia Assembly, therefore, adopted the Virginia Code of 1936, Chapters 33 and 35, pursuant to which the City of Norfolk's school system was established and authorized to pay the salaries of its teachers. Although the code also provided for separate schools for White and African American persons, all teachers were required to hold teaching certificates. African American and White teachers met the same qualifications for certification by the Virginia Board of Education and, upon qualifying, were issued identical certificates.

In striking down this system of disparate salary schedules, the U.S. Court of Appeals announced that this was "as clear a discrimination on the ground of race as could well be imagined" and "falls squarely within the inhibition of both the due process and the equal protection clauses of the Fourteenth Amendment." In its opinion, the Court quoted *Gibson v. Mississippi* (1896), a case in which the U.S. Supreme Court held that the government's exclusion of African Americans from grand jury service in the trial of an African American solely on account of race violates the Fourteenth Amendment. In *Gibson*, Justice John Marshall Harlan wrote,

The United States, in its present form, forbids, so far as civil and political rights are concerned, discrimination by the general government, or by the states, against any citizen because of his race. All citizens are equal before the law. The guarantees of life, liberty, and property are for all persons, within the jurisdiction of the United States, or of any state, without discrimination against any because of their race. Those guarantees, when their violation is properly presented in the regular course of proceedings, must be enforced in the courts, both of the nation and of the state, without reference to considerations based upon race.

The plaintiff in *Gibson* had alleged that for a number of years no African Americans had ever served on a grand jury despite the fact that 7,000 African Americans were eligible for jury service in Washington County, Mississippi, compared with

only 1,500 Whites. Notwithstanding its due process and equal protection language, the *Gibson* court invoked a procedural irregularity to affirm the state court's denial of *Gibson's* petition. Rather than moving to quash the indictment, *Gibson*, instead, had improperly sought to transfer his case from the Mississippi court to federal court.

The Fourth Circuit, echoing the *Mills* rulings, concluded that teachers holding certificates issued by the State of Virginia acquired professional status and, once selected for employment by school authorities, were entitled to have their compensation fixed without discrimination on account of race. The Court of Appeals, in *Alston*, reversed and remanded the case to the district court, directing that if discrimination is established, an injunction be issued restraining school authorities from discriminating on the basis of race in the fixing of teachers' salaries.

Impact of the Ruling

School districts throughout the State of Virginia ignored the Fourth Circuit's ruling in *Alston*. As a consequence, the NAACP brought actions in Newport News, Chesterfield, and other jurisdictions to enforce the law. A number of African American teachers and principals who were activists in the Negro Teachers' Association and the Virginia Teachers Association were fired during the struggle to equalize teachers' salaries.

Also, in response to *Alston* and similar decisions, Southern states replaced race-based pay schedules with educational attainment and ostensibly neutral, standardized tests, such as the National Teachers Examination, to maintain salary disputes.

AMERICAN BAPTIST HOME MISSION SOCIETY

The American Baptist Home Mission Society, established by northern Baptists in 1832 to conduct missionary activities on the U.S. frontier, made outstanding contributions to the drive for literacy among African Americans in the wake of the Civil War and played a continuing role in their education. This entry looks at the history of the society's educational work with and for African American people.

After the Civil War

In 1832, the American Baptist Home Mission Society was organized. Between 1839 and 1842, the Southern Baptist Home Mission Society was organized. Before or during the Civil War (1861–1865), several U.S. Protestant denominations split into northern and southern factions with the primary issue of contention being the enslavement of African American people.

The American Baptist Home Mission Society's educational work with African Americans took off after the Civil War. The society played an important role in improving the literacy rate among the African American population from 10% in 1865 to 70% by 1910. This was one of the great literacy movements of any people. Booker T. Washington, in his autobiography *Up From Slavery*, noted that at the time, it seemed like the whole race was being educated. Anyone who could read was teaching someone who could not, regardless of the age of the instructor or the instructed.

White involvement in this process was an amalgam of genuine altruistic Christian idealism and brotherhood-sisterhood, guilt, and paternalistic-maternalistic White supremacist racism. No matter

where any individual White educator fell along this spectrum, the positive contributions of New England school marms coming South to teach African American people are undeniable. Dr. William Edward Burghardt Du Bois, in both *Souls of Black Folk* and *Black Reconstruction*, gives due deference to these heroines.

Just as in the political-commercial realms where White northerners coming South were called carpetbaggers, there was tremendous White Southern resentment and resistance to White Northern educational missionaries coming South and African American self-help educational efforts. Southern Baptists and the American Baptist Home Mission Society, however, agreed to cooperate on building and maintaining schools for freed persons at the primary, secondary, and collegiate levels.

At the higher-education level, the American Baptist Home Mission society was the primary founder of the following schools for African Americans: Richmond Theological Seminary (Richmond, Virginia, 1867), Shaw University (Raleigh, North Carolina, 1865), Atlanta Seminary (1867, originally in Augusta, Georgia), Roger Williams University (Nashville, Tennessee, 1864, which was later absorbed by Lemoyne-Owens College in Memphis), Leland College (New Orleans, Louisiana, 1870), Benedict College (Columbia, South Carolina, 1887), Bishop College (Marshall, Texas, 1881), Selma University (Selma, Alabama 1878), State University (Louisville, Kentucky, 1873), Hartshorn Memorial College (Richmond, Virginia, 1884), Florida Institute (Live Oak, Florida, 1873), Spelman Seminary (Atlanta, Georgia, 1881), Arkansas Baptist College (Little Rock, 1887), Home Institute (New Iberia, Louisiana, 1888), Mather School (Beaufort, South Carolina, 1868), and the Bible and Normal Institute (Memphis, Tennessee, 1888).

Some of the schools are now defunct; for example, Leland and Bishop College lost accreditation in the late 1980s. The most famous American Baptist Home Mission Society colleges are Morehouse and Spelman in Atlanta. Morehouse College is the only all-men's historically African American college in the country, and Spelman College is one of two (along with Bennett in Greensboro, North Carolina) all-women's historically African American colleges. Dr. Henry Lyman Morehouse was field secretary of the American

Baptist Home Mission Society from 1893 to 1917. He had worked closely with John D. Rockefeller's wife, Laura Spelman. Rockefeller significantly increased his charitable giving in 1914. The Rockefeller Foundation received \$100 million, and \$50 million went to the General Education Board, supporting Baptist colleges. Two new buildings went up at Spelman. John D. Rockefeller Jr. dedicated the chapel at Spelman in 1927.

The General Education Board was interdenominational and included Presbyterians, Methodists, Episcopalians, and Baptists. Between 1908 and 1928, the board gave the American Baptist Home Mission Society about \$2.5 million for African American schools. By 1950, out of 100,000 African Americans attending American Baptist Home Mission Society schools, there were 10,677 academic graduates (high school); 2,436 college graduates; 860 theological graduates; 4,015 ministers; 422 college professors, administrators, and presidents; 20,135 elementary and secondary school teachers; 197 dentists; 212 lawyers; 914 physicians; 255 pharmacists; 74 editors; 26 authors and other Christian workers in Black communities, North and South, among the 3 million African American Baptists in thousands of churches.

Independent Black Baptist Schools

The first attempt at a national denomination of African American Baptists ended up as a regional grouping of African American Southerners called the Consolidated American Baptist Missionary Convention. This group had an educational association that supported elementary and secondary schools in the former Confederate states from 1866 to 1879.

By 1895, the National Baptist Convention, USA, emerged as the largest African American organization in the world. There have been two other major national African American Baptist denominations that have split off from the National Baptist Convention, USA. They are the National Baptist Convention of America (1915) and the Progressive National Baptist Convention (1961).

Independent African American Baptist schools began with Guadalupe College in 1884. Then came Houston College (Houston, Texas, 1885), Virginia Theological Seminary and College (Lynchburg, 1888), Walker Baptist Institute (Augusta, Georgia,

1888), Western College at Independence, Missouri (1890), Friendship Baptist College (Rock Hill, South Carolina, 1891), Meridian Baptist Seminary (Meridian, Mississippi, 1897), Central City College (Macon, Georgia, 1899), Central Texas College (Waco, 1905), East Texas Normal and Industrial Academy (Tyler, 1905, but renamed Butler College in 1924), Morris College (Sumter, South Carolina, 1905), Lee and Hager University (Baltimore, Maryland, 1914), Williams and Jones University (Baltimore, Maryland, 1928), and Maryland Baptist Center and School of Religion (Baltimore, 1942).

Eventually African American Baptists negotiated shared governance and then predominant takeovers of the American Baptist Home Mission Society schools. These included Shaw University in Raleigh, North Carolina; Roger Williams University in Nashville, Tennessee; Leland University in New Orleans, Louisiana; Benedict College in Columbia, South Carolina; Bishop College in Marshall, Texas; State University of Louisville in Louisville, Kentucky; Selma University in Selma, Alabama; Butler College in Tyler, Texas. African Americans and Southern Baptists ran the American Baptist Theological Seminary in Nashville, Tennessee (1924).

AMERICAN MISSIONARY ASSOCIATION

The American Missionary Association (AMA) was a leading interdenominational and abolitionist society organized in 1846. Most noteworthy was that its members founded and/or supported more than 245 churches and 500 institutions for primary, secondary-normal, and higher education and commissioned 45 ministers in the United States. The AMA was restructured along with the United Church of Christ in 1999. Its influences are still seen in Black higher education today; however, historically Black colleges and universities it founded have received other forms of philanthropy from other societies, organizations, and corporations.

Historical Background

Primarily supported by White New England mission workers and churches, the AMA grew out of the Amistad Committee, which fought to defend enslaved African Americans who mutinied against the crew of the Spanish vessel *Amistad* in 1839. It later aligned itself with the Congregational Church (now the United Church of Christ). Its initial purpose was to establish missions for the previously enslaved overseas; however, after 1850, it focused on antislavery activity using religious, political, and educational mediums.

As Union forces defeated Confederate troops during the Civil War, the AMA missionaries and teachers followed, founding churches and schools for freedmen when the military situation permitted. Most of the teachers hailed from New England, yet some came from New York, Michigan, and Ohio. A few teachers were African American, educated at Oberlin College, an institution that educated a significant number of Blacks in the North. In the South, AMA teachers were ostracized or assaulted by Southern White communities. They endured violence because they taught Northern social ideas where African Americans and Whites were equal, a far cry from the former old South culture that viewed African Americans as chattel.

As the South recovered from ruin brought on by the Civil War and established public school systems, the AMA turned over its primary and

secondary-normal schools to Southern public systems and focused on enhancing Black higher education. The AMA's educational process was continuous, from ABCs to PhDs. It is difficult to surmise the number of secondary-normal schools as well as colleges founded by the AMA. Many schools are defunct; however, evidence indicates that the AMA founded approximately nine Black colleges and 12 secondary-normal schools for teaching.

Secondary normal schools founded were Avery Institute, Charleston, South Carolina; Ballard Normal, Macon, Georgia; Washburn Normal, Beaufort, North Carolina; Trinity School, Athens, Alabama; and Gregory Normal, Wilmington, Delaware in the 1865 to 1866 academic year; Emerson Institute, Mobile, Alabama; Storrs School, Atlanta, Georgia; and the Beach Institute, Savannah, Georgia, in 1867; Burrell Normal, Florence, Alabama, and Eli Normal, Louisville, Kentucky, in 1868; Lincoln School, Marion, Alabama, in 1869; and the Albany Normal, Albany, Georgia, in 1890.

Colleges founded were Atlanta University, Atlanta, Georgia, in 1865; Fisk University, Nashville, Tennessee, and Talladega College, Talladega, Alabama, in 1866; Howard University in 1867; Hampton Institute, Hampton, Virginia, in 1868; LeMoyne College (later LeMoyne-Owen College), Memphis, Tennessee; Straight University (later part of Dillard University), New Orleans, Louisiana, and Tugaloo School and College, Jackson, Mississippi, in 1869; and Tillotson College (later part of Huston-Tillotson College), Austin, Texas.

Achievements and Criticisms

The AMA promoted liberal arts and professional education for the purpose of training African American intellectuals, lawyers, physicians, dentists, and storekeepers. It was convinced that liberal arts education was necessary for building an autonomous Black community. Unlike industrial education, the AMA, as well as some Black leaders of the time, believed that liberal arts curriculum would produce the much-needed leaders for Black communities.

The AMA's mission seemed to be a liberal one; however, many White Southern leaders at the end of Reconstruction supported Black disenfranchisement and anticipated African Americans' position on the lower stratum of the South's occupational

ladder. Although most White Southerners felt that education would ruin Blacks, some believed in the importance of universal education and held deep faith in the powerful capacity of moral and industrial education to socialize Blacks to understand and accept their disenfranchisement and to make them more productive laborers. In exchange for universal schooling, industrial education became part of a continuing new South ideology that sacrificed Black social and political interest to the need for Black workers in an economy based on agriculture. This model of Black industrial education was on a collision course with the AMA institutions of Black higher education whose philosophy was just the opposite. However, there were numerous critiques of the AMA's philanthropy and its agenda.

The first and least influential of these critiques was that the Reconstruction South deemed the AMA and other philanthropic societies as agitators. As such, the issue over African American education dealt heavily with the influence of Northern Yankee missionaries upon Southern Blacks, from which Southern lawmakers made sinister claims charging Northerners with fostering jealousies and hatred towards Whites. Southern Whites frowned upon the practice of social equality between AMA White teachers and Black pupils.

The second critique presented the AMA as paternalistic entity with no regard for African American culture. This critique asserts that successful AMA teachers tended to become too influential on Black pupils, setting White, New England, middle-class culture as the standard of success. New Englanders considered themselves to be culturally superior to Southerners, and for African American pupils at AMA institutions, students were trained to be more alienated from African American community and culture and, with it, from African American identity and self-esteem.

Finally and most importantly, with the establishment of educational institutions, the AMA's overall goal of securing educational access for African American communities and training teachers was manifested. AMA schools provided a solid educational foundation for religion and citizenship for Black school children, while AMA trained teachers who subsequently staffed schools in the South. For example, in the city of Atlanta alone, it was estimated that at least 75% of the city's teachers were Atlanta University graduates. The AMA's

educational institutions provided Black elites with a shared social experience that established and continually reinforce the importance social connections that were central in the formation of an upper class among select families, churches, and schools.

With this, tensions based on class within African American communities brewed surrounding access to private education versus public education. This tension suggests that Reconstruction legislatures that supported public higher education set a course for Black servitude in the political economy of the new South, whereas private education sustained by Northern philanthropic organizations promoted an autonomous community. As such, Black elites and middle classes were drawn to private institutions because of their wealth, the institutions' exclusivity, and New England puritanical teachings, for which they felt to be more acceptable in the presence of White social stratum.

Archival materials for the AMA are housed at the Amistad Research Center at Tulane University in New Orleans, Louisiana.

AMERICAN NEGRO ACADEMY

The American Negro Academy (ANA), the first learned society for African Americans, was founded in Washington, D.C., on March 5, 1897, by several prominent Black male leaders, including Rev. Alexander Crummell, its first president. Born in New York City and educated at London's Cambridge University, he was an Episcopalian minister, educator, writer, and one of the most prominent 19th-century Black intellectuals. Limited to 50 members, the ANA remained an all-male organization during its 31-year existence.

According to its constitution, it is "an organization of authors, scholars, artists, and those distinguished in other walks of life, men of African descent, for the promotion of Letters, Science, and Art." Its objectives were to eradicate racism, publish scholarship about the Black experience by Black authors, foster higher education and intellectual projects, and create a Black intellectual elite, which W. E. B. Du Bois, its second president, would later conceptualize as "The Talented Tenth."

Historical Context

Although the 1890s are characterized by historians as the Progressive Era, African Americans experienced a different reality. Although the 19th century was a period of struggle for human rights on a variety of fronts, including the anti-enslavement and women's suffrage movements, the late 19th and early 20th centuries were disillusioning and demoralizing years for Blacks in the United States. The South, home for the majority of African Americans, had been devastated by the Civil War, embittered by the demands of Reconstruction, and plagued by the fate of 4 million former slaves still in its midst. The obstacles facing them only 20 years out of bondage were tremendous, for the majority were impoverished, landless, and illiterate.

The last decade of the 19th century and the opening decades of the 20th marked the nadir in the history of African Americans, according to historian Rayford W. Logan. The notion of the inherent inferiority of Blacks was accepted broadly as their political, legal, and social rights continued to erode. The 1890s was an especially dismal decade as Blacks witnessed the defeat of the Blair Bill for

federal aid to public education and the Lodge Bill for federal supervision of federal elections. In addition, the Southern states amended their constitutions, starting with Mississippi in 1890, and the disenfranchisement of Blacks was accomplished by 1910.

The Supreme Court in the famous 1896 *Plessy v. Ferguson* case gave legal sanction to the already widespread practice of Jim Crow when it ruled that separate, but equal public facilities were constitutional. African Americans, concentrated in the rural South, were being lynched in record numbers, and between 1900 and 1910, six major race riots occurred throughout the nation, which signaled growing racial hostility in the North and South.

Founding Years

This is the sociopolitical backdrop during which the first Black think tank emerged whose membership included some of the most influential middle-class Black male intellectuals, ministers, lawyers, and activists. They included, in addition to Crummell, W. E. B. Du Bois, William Croghan, Paul Laurence Dunbar, James Weldon Johnson, Carter B. Woodson, Alain Locke, Arthur Schomburg, John W. Cromwell, Kelly Miller, and Archibald and Frances Grimke. Additional racial uplift organizations emerged during the same period, organizations which included the Colored Press Association, the Bethel Literary and Historical Association, the National Medical Association, and the National Association of Colored Women.

Since the ANA was conceptualized as an elite research institute for the Black intelligentsia in the United States and around the world, a major goal was the production of scholarly works that would assist in the global struggle for racial equality. Twenty-two occasional papers would be published between 1897 and 1928. Members met annually in Washington, D.C., usually in late December, to hear papers they had generated. The wider public was also invited. Howard University Professor Kelly Miller produced the first paper, "A Review of Hoffman's Race Traits and Tendencies of the American Negro." The second paper was produced by Du Bois, "The Conservation of Races," followed by Crummell's, "Civilization, the Primal Need of the Race." Archibald Grimke, the most prolific member, produced seven publications, including "The Sex Question and Race Segregation."

Despite its commitment to eradicating racial inequalities, the ANA reflected prevailing gender attitudes. At the first organization meeting, a member argued that women should be admitted and was assured by other founding members that women could join, but no efforts were ever made to recruit African American women. At the second annual meeting in 1898, Crummell invited Brooklyn teacher Maritcha Lyons to present a paper, but she was unable to attend, so another woman was invited to read “Afro-American Literature.” Despite the contributions of many Black women intellectuals and reformers—among them Anna Julia Cooper, Mary Church Terrell, Frances E. W. Harper, and Josephine St. Pierre Ruffin—none was invited again to present a paper or become a member.

Forty years later, the Black Academy of Arts and Letters (BAAL) was chartered in Boston on June 12, 1969, by a group of scholars, historians, artists, journalists, musicians, actors, and writers, though their headquarters would later move to New York City. They included educators Dr. C. Eric Lincoln, chair; Dr. Benjamin Quarles; Dr. Martin Kilson Jr.; and Dr. Vivian W. Henderson; artists and writers Julian “Cannonball” Adderly; John Oliver Killins; John A. Williams; Romare Bearden; and Arthur Mitchell; Dr. Oliver Cromwell Cox; Floyd Coleman; Dr. Adelaide Cromwell Hill; Doris Sanders; Robert Hooks; Dr. Alvin Poussaint; and Chuck Stone. Though BAAL has been touted as a successor to ANA, there was no direct link between the two organizations.

Although the ANA and BAAL had a relatively short life span, their histories and missions underscore the importance of sustaining Black organizations committed to documenting and preserving the rich intellectual and educational traditions of people of African descent.

ANNA T. JEANES FOUNDATION

The Anna T. Jeanes Foundation, also known as The Fund for Rudimentary Schools for Southern Negroes or the Negro Rural School Fund, was founded in 1907 by Anna Thomas Jeanes (1822–1907), a wealthy Philadelphia Quaker who had a keen interest in the small rural schools of the South. It gave birth to and supported the Jeanes teacher movement, which was developed and directed by Virginia E. Randolph, a veteran African American teacher in a one-room schoolhouse. The teachers and supervisors, most of whom were women, helped to improve the educational environments and programs for the South’s African American children and teachers. Eventually, the Jeanes Foundation was merged with other foundations that had similar purposes. During the period from 1908 to 1937, it had achieved the purpose its founder had envisioned. This entry discusses its founding, implementation, and growth.

Laying a Foundation

In early 20th-century United States, Jeanes was one of a number of insightful men, women, and organization leaders who became increasingly conscious of the South’s great need for educational reform for its African American residents. Jeanes had given \$200,000 to support extension programs at Hampton Institute (now Hampton University) in Virginia and Tuskegee Institute (now Tuskegee University) in Alabama, both of which aided small rural schools for African Americans.

The cabin-type, one-teacher schools for African Americans prevalent in the South distressed Jeanes. In 1907, she set aside \$1 million to aid and promote rudimentary education in such schools. She proposed a board of trustees comprised of Booker T. Washington, Andrew Carnegie, Hollis Burke Frissell, George Foster Peabody, and William

Howard Taft (who was not yet president of the United States). Jeanes signed a deed of trust on April 22, 1907, establishing the Anna T. Jeanes Foundation and then declared that the newly established fund was to be known as The Fund for Rudimentary Schools for Southern Negroes or the Negro Rural School Fund. The certificate of incorporation was signed on November 20, 1907. Although the proposed board held several informal meetings, it was not until February 29, 1908, that the 17-member board met and declared its own character. This was also the only foundation of its kind that placed African American leaders on its board of trustees.

The endowment that Jeanes had established would be used solely for rural, community, or country schools for African Americans in the South and not for large institutions. The aim was to support rudimentary education and to promote peace and good will among men, which Jeanes believed would come through moral influence and social refinement.

During the first years of its existence, the funds were used for salaries of industrial teachers, to extend school terms in particular areas, to support travel, to underwrite conferences, and to maintain summer schools for teachers. In a few cases, however, funds were used to erect buildings and to provide equipment. Between April 1907 and June 1922, those states that benefited from the Rural School Fund were Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, Missouri, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia.

The Jeanes Plan

The inventors of the real Jeanes plan were Jackson Davis, superintendent of schools in Henrico County, Virginia (near Richmond), and Virginia E. Randolph. On October 26, 1908, Davis hired Randolph, a 12-year veteran teacher who worked at Mountain Road School, a one-room rural school in Henrico County, Virginia. Randolph (1874–1958) became the first real Jeanes teacher. Davis had observed Randolph as a devoted, patient, and humble teacher and recommended that the county school district hire her as a county-wide industrial Jeanes supervisor. Later, she supervised Jeanes teachers, as they came to be known,

in Virginia, North Carolina, and Georgia, becoming the first supervisor of African American public education in the South.

Jeanes teachers were influential and powerful educators who built local support for the schools, raised funds for school projects and buildings, held countywide field days activities, organized commencement programs, visited homes, taught Sunday school in local churches, organized improvement leagues and mothers' clubs, and sponsored a number of activities that brought together the community, community leaders, families, students, and teachers.

By 1912, philanthropist Julius Rosenwald, president of Sears, Roebuck Company and Tuskegee Institute founder and educator Washington began a rural school building program for African Americans in the South that would further enhance education. Administered through Tuskegee Institute, the school's officials would encourage communities to match funds that Rosenwald provided. Monies from both Jeanes and Rosenwald were used to hire field agents to help communities organize for new buildings. Later, grants from Rosenwald replaced the Jeanes construction funds.

As the Rosenwald Rural Negro Schools Program expanded, Jeanes teachers were supplied to aid the school programs. The results of the Rosenwald Fund were seen in the erection of 5,358 rural schoolhouses, shops, teachers' homes, and other buildings for African Americans, some due to the efforts of the Jeanes teachers. Appropriations from other philanthropies—such as the Phelps-Stokes Fund, the General Education Board, and the Slater Fund, and church and missionary boards—also contributed to the improvement of education for rural African American youth through efforts such as paying teachers' salaries, building county training schools, and so on. The cooperation of these agencies was due in great measure to James Hardy Dillard, at one time president and director of the Jeanes Foundation.

Growth and Evolution

The Jeanes Fund extended its Visiting Teacher Plan abroad, reaching countries in Africa, Asia, and Latin America. A prominent feature of that plan was an administrative method that allowed

the Jeanes teachers to help local teachers by friendly visitation to their schools. Their teaching methods either supplemented or displaced existing methods. Next, the Jeanes teachers abroad stimulated and assisted teachers to adapt their educational activities to the needs of the students and the community, often resulting in transforming education from academic information to education for life.

By the mid-1930s, the educational programs and services of the original Jeanes Foundation were expanded significantly when the organization merged with a number of well-known and successful educational funds. One of these was the Virginia Randolph Fund—founded on December 17, 1936, to honor Randolph, the first Jeanes teacher. Another, the George Foster Peabody Fund, established on February 7, 1867, focused on industrial, intellectual, and moral education in destitute portions of the southern and southwestern states. The John F. Slater fund was founded on April 25, 1882, to uplift and emancipate residents of the southern states.

Thus, on July 1, 1937, these funds merged to become the Southern Education Foundation (SEF) based in Atlanta, Georgia. SEF continues to foster programs to improve education and living conditions in the South, working through public and private schools and their officials. It also has a special interest in the needs of African American people. For her success in making education for rural African Americans in the South a reality through the foundation that she established, the South has honored Jeanes by naming schools, colleges, and office buildings in her honor.

ARTHUR V. NYQUIST

Arthur v. Nyquist (1983), a school desegregation case that arose in Buffalo, New York, is significant in the education story of African Americans because it was one of the earliest cases to be upheld on appeal in which the court ordered a systemwide plan to desegregate the public schools. Notably, this desegregation plan included aspects of suburban-urban student reassignment, staff-faculty layoffs, busing, and court monitoring to address de facto and de jure segregation. This desegregation plan was later called into question as an acceptable remedy going forward because most courts have pronounced school systems as unitary despite serious remnants of segregation. This entry discusses the historical backdrop and the court rulings, appeals, and significance of the *Arthur v. Nyquist* case.

Historical Background

Like so many other cases (e.g., in Georgia, Kentucky, and Ohio), this one began early in the 19th century. African American parents in Buffalo sought better education for their children by petitioning for desegregated schools as early as 1840. The unsuccessful petitions eventually resulted in superintendent-decreed desegregated schools in Buffalo by 1872 that were not, however, executed by the school board. A number of schools had been desegregated after the Civil War in the South and North. These included Phillips School, the first in Boston, which was desegregated by legislation passed in 1855; some schools in Georgia in 1865; many in Alton, Illinois, from 1873 through 1897; some in Ohio in 1890; some in Kentucky in 1898; and some in Tennessee in 1901.

In cities where school systems had been desegregated or integrated, these schools resegregated under The Black Codes, the ending of Reconstruction, Jim Crow, and legalized second-class citizenship of African Americans (including housing covenants to promote segregated public schools became the tools for resegregation in the North and South).

In New York State, efforts to desegregate the public school system became official policy in 1947. That is, New York had state laws by which the New York State Department of Education and the State Board of Regents mandated desegregated public schools throughout the state. The ineffectiveness of the mandates was obvious when, almost 20 years later, in 1965, African American parents appealed to the State Commissioner of Education, claiming Buffalo maintained segregated schools. These parents pointed to the school system's factual segregation realities, demonstrated at the elementary school level and in the system's discriminatory policies in recruiting and placing African American teachers. Notwithstanding the commissioner's ruling in favor of the African American parent plaintiffs in 1966, the assigning of teachers based on race never changed in Buffalo.

Shortly after this ruling, the Buffalo school system began a voluntary desegregated program of one-way busing. The school board initiated a policy of busing African American junior high school students to White schools, but not a policy of busing White students to African American schools. By 1968, Buffalo schools were still not desegregated because less than 10% of the 27,000 students were in desegregated schools. The impact of that 10%, or 2,700 African Americans in desegregated schools, was nullified when the Buffalo Board of Education essentially allowed the same number of White students to transfer from desegregated schools to White schools. Then, in 1972, some 7 years after the state commissioner of education officially ordered the Buffalo schools to desegregate, the commissioner acknowledged that these schools were more segregated than they had been in 1968. In fact, out of 96 schools, 20 were 90% African American and 29 were 90% White. The Buffalo Board of Education ignored the state commissioner's request for a revised desegregation plan because of the findings of more segregation in the Buffalo public school system. Within 2 months,

the Buffalo Board of Education replied that it could not comply. The state commissioner then sent a special task force to Buffalo with the goal of creating a plan that was submitted to the board in 1973; the plan was summarily rejected.

All earlier efforts—legal, legislative, and otherwise—provided a plethora of documentation of the persistent denial of equal education to African Americans in the Buffalo Public School System, as guaranteed by law and mandated under various state policies.

In 1972, African American parents, White parents, the National Association for the Advancement of Colored People (NAACP), and the Citizen Council on Human Relations joined in bringing a lawsuit alleging both de facto and de jure segregation in the Buffalo Public School System. The filings asserted a violation of the Constitution based on the Supreme Court ruling in the 1954 case *Brown v. Board of Education, Topeka, Kansas* (1954). Defendants included the Buffalo Board of Education, The Superintendent of Schools, the Buffalo Common Council, the New York State Commissioner of Education, and the New York State Board of Regents.

Court Rulings

In a series of rulings stemming from the initial filing, the district court, under John T. Curtin, laboriously documented the systemic and systematic segregation in the Buffalo Public School System, ruled on its unconstitutionality, and monitored equitable relief through recurrent appeals with a goal of avoiding the chaos of Boston's school desegregation process. Curtin also aimed to harness the involvement of all stakeholders in refashioning the city's public school system to a model constitutional one. Every ruling by Curtin that was appealed acted as a retardant on the remedial power of the court to legally achieve the educational entitlements and expectations of African American public school children and their parents. Of the seven major decisions in the case, the first ruling, which is the case at hand, found for the parents.

The First Decision

District court Judge Curtin ruled in *Arthur v. Nyquist* (1976) that the defendants had intentionally

created and maintained a persistent segregated public school system. In this first *Nyquist* case, the district court determined, after a complex and fervently contested 4-year-long case, that the Buffalo Public School System had deliberately segregated the public school system along racial lines. The court found this to be true in spite of the fact that the system was never legally mandated (i.e., *de jure*) to operate as a segregated public school system even though it operated as a *de facto* one. The evidence of a segregated public school system was overwhelming and had persisted for a long time.

The district court came to its decision in this case by narrowly focusing the question it would consider and address in the lawsuit. It based its reasoning for such a narrow focus on its judicial duty under the Fourteenth Amendment's equal protection clause to guarantee all residents equal protection under the law citing a Kansas decision in *Stapleton v. Mitchell* (1945), which acknowledged the federal courts' special role to always adjudicate human rights issues. In the *Nyquist* lawsuit, this meant rendering a decision after deciding the facts using the evidence submitted to the court and applying the existing law from the U.S. Supreme Court and from the Second Circuit.

Judge Curtin recognized there to be but one question before his district court, namely, whether any of the defendants in the lawsuit behaved in a way so as to segregate the Buffalo Public School System. By focusing on just this one question in the lawsuit, the district court also declared that it would not address any questions not presently before it such as any issues of remedy or what would constitute appropriate action if the Buffalo Public School System was found to be segregated.

Thus, by a straightforward review of the system, and by connecting the applicable law to the presented facts, the court found sufficient intent to segregate where defendants' acts created an organic methodology causing the unconstitutional result, regardless of supposed neutral neighborhood school policies. He ordered the system desegregated and then directed defendants to submit a desegregation plan.

The Buffalo desegregation plan occurred in several phases. Phase I lasted from 1976 to 1977, and the plan submitted and approved by the court closed 10 schools and opened two magnet schools in the city. Phase II covered 1977 to 1978 when

eight more magnet schools were scheduled to open. The next phase was in two parts: Phase III mandated a systemwide percentage for each race in the schools, and Phase IIIX revised the earlier plan and added a variety of programs to enhance the desirability of desegregation.

The First Appeal

Curtin's decision, a landmark in the scope and breadth of findings included in the record, was appealed. The case was affirmed in the decision *Arthur v. Nyquist* (1978) in a decision that also ruled—due to insufficiency of evidence—that neither the New York State Education Commissioner nor members of the Board of Regents were liable as defendants. Both of these defendants were subsequently removed from the case.

The decision handed down by the Second Circuit confirmed Judge Curtin's finding that deliberate segregation had occurred in the Buffalo Public School System. The Second Circuit also confirmed the district court's authority to order desegregation of the school system. The Buffalo Teacher's Union's appeal had argued that the district court was exercising excessive equitable powers in this case. The union asserted that in so doing, the district court was impinging on the New York state statutory and contractual rights of teachers who had not determined the segregation policies of the school system.

The Second Circuit Appeals Court did not find the union's state law argument persuasive. Rather, the appeals court ruled that the district court, as the trial court, did indeed have the authority to enforce the Constitution. This ability was especially so where—as in this set of facts—segregation of a public educational system had persisted due to both intentional and documented discriminatory staffing practices. Here, where fundamental Constitutional rights protected under the equal protection clause were at risk, state law could not trump federal law. Further, the Second Circuit ruled that such a Constitutional violation could not be overruled by state law.

Subsequent Action

Then followed a number of specific rulings that together composed the remedial desegregation

plan for the Buffalo school system, along with appeals. Two significant appeals, essentially companion cases, were argued (April 6, 1983) and decided (July 22, 1983) on the same day before the court of appeals—Circuit Judges Newman, Kaufman and Timbers.

The first of these later appeals was *Arthur v. Nyquist* (Nyquist, 1983a), which concerned the Buffalo Board of Education (whose basic appropriation came from the Mayor and Common Council of Buffalo) lawsuit in support of its annual budget request for 1982 to 1983. The budget request essentially appealing an earlier decision (*Arthur v. Nyquist*, 1982) by the Buffalo Board of Education was for an additional \$7.4 million increase over the previous year's budget allocation of \$150.6 million in order to implement the Phase IIIX plan. Failing to reach a compromise agreement, the board of education initiated this routine litigation that was a last effort in the fiscal year to fund its desegregation mandate.

Since the authority of the district court to order implementation of a remedial plan was recognized for this case as well as to require the commensurate expenditures to support it, the appeals court addressed two narrow and less defined issues. Initially, it considered whether the additional funds requested were necessary to implement the remedial plan or impermissibly went further and used the remedial plan to justify general improvements desired by the board of education architects responsible for voluntarily desegregating the Buffalo citywide public school system.

The appeals court ruled, on this question, that the district court was entitled to mandate funding for programs that materially accrued as a benefit to the overall success of the desegregation effort because a program that redresses an aspect of unconstitutional segregation is not disqualified simply because it also improves the quality of education available in the entire school system. Assessing whether the board of education is really (because it can) suing for additional funds as a revenue stream for programs upgrading the education system, but not closely related to remedial desegregation, or whether the funds requested are central to the desegregation effort requires some good faith deference by the court to the board of education.

The final issue considered by the court of appeals in this appeals case was whether there was

an adequate basis provided by the district court's factual findings upon which it could rule that the additional funds, requested and subsequently granted, were permissible. It found that District Court Judge Curtin was entitled to credit the board of education testimony with respect to how the cuts in funding would impact the desegregation effort without requiring the board of education to indicate (say by line-item budget detail) how the appropriated funding would be used. This was not problematic because Judge Curtin was using caution to preclude the city defendants from micro-managing the educational system any more than warranted under state law. Therefore, the appeals court, in upholding the district court's order, indicated that in future disputes of this nature the record would be best helped by including a detail of proposed expenditures without the funds requested. A neutral third party with school budgetary expertise was required.

The second of these later appeals was *Arthur v. Nyquist* (1983b) concerning the Buffalo Teacher's Federation challenge to the treatment of laid-off permanent teachers in the latest plan. The district court had already mandated a systemwide desegregation remedy in *Arthur v. Nyquist* (1979). In this appeal, what was specifically questioned was the district court's authority to overrule seniority rights of teachers as it fashioned a plan for ending vestiges of racial segregation in the faculty ranks of the public school to provide desegregated education to the students. Although these issues had been raised in an earlier case, both concerns were not addressed because only the federally protected right to equal education was reviewed. This time, the Second Circuit Court of Appeals ruled that the desegregation Plan IIIX was unnecessarily harsh in its treatment of these two groups.

The original plan devised by the district court addressed the three types of teachers in the system: tenured, probationary, and temporary. In addition, the plan addressed the mechanism by which they advanced through the ranks. Both probationary and permanent teachers were on the tenure track, and openings on the tenure track system under the collective bargaining agreement required that probationary teachers be appointed for 3 years before becoming a permanent faculty member. Further, the probationary appointees were selected from a list of eligible applicants and ranked according to

their passing and numerical score on a board-administered examination.

The third type of teacher, the temporary (and long-term temporary), was hired from year to year filling vacant, sabbatical, and sick leave positions. Temporary teachers were typically ineligible for the permanent or probationary list because they had not passed the board-administered exam or had failed to score high enough. However, in hiring replacement teachers each year, past temporary teachers were the first to be considered if the eligibility lists of qualified teachers failed to fill the vacancy.

Under New York law, seniority guided all reductions in tenured positions. Essentially, the last or junior teacher hired in an academic area became the first teacher laid off. Such excess teachers were placed on a super or preferred eligibility list and became the first to be reinstated for permanent positions and also had the right of first refusal for temporary positions. Although temporary teachers had no job guarantees, layoffs affected them because of the preferred eligibility lists created and the increased likelihood that they would not be rehired when the Board downsized the tenured faculty in the system.

The district court plan from March 1979 ordered one-to-one hiring of African American teachers until the threshold of 21% in the system had been reached. Plan details required three applicant lists: a preferred eligibility list, a current eligibility list, and a qualified applicant list (including candidates who had not passed the board examination). Filling tenure track vacancies required the board to first determine whether it should be a White or African American hire and then select the highest ranked candidate from the preferred eligibility list; second, the current eligibility list; and third, the qualified applicant list. No probationary appointments were permitted under the Court mandate, although temporary appointments were made.

The remedial plan required temporary appointments to follow the same scenario plus an added step. Under the remedial plan, the district court tried to prevent a repeat of the 1978 to 1979 layoffs and the corresponding reduction of the African American teacher ratio. Many of the excess teachers ranked high on the various eligibility lists, and rehiring them reduced the African American ratio in the system.

The remedial plan attempted to prevent this from occurring again by tying layoffs to the ratio of White teachers to African American teachers in each tenured area. Further, the board was required to determine the percentage of the African American teachers with probationary positions in the tenured area subject to layoffs and in permanent positions, which if below the 21% threshold amount signaled that layoffs could occur. Of course, these layoffs would be from first probationary positions and then from permanent positions.

The appeals court supported the percentage layoffs formula despite its impact on the contractual and statutory seniority systems during force reduction periods because they agreed with the district court that it was necessary as stated in *Green v. Country School Board* (1968), to eliminate root and branch of the old Buffalo segregated school system. However, the appeals court, this time, did not approve of the remedial plan treatment of probationary and permanent teachers who were laid off. Therefore, the appeals court reversed with respect to the plan's focus on granting instantaneous relief to African American teachers where it had not been mandated nor explicitly demonstrated.

Further, the appeals court, in its remand, detailed how the district court should modify the remedial plan it had approved. Specifically, "excessed" teachers were to be placed on the preferred eligibility list as had been done in the 1978 to 1979 forced reductions. The appeals court would not permit even for a short period, the right of laid-off teachers to get new temporary permanent positions under the collective bargaining agreement to be eliminated even though they recognized that this would reduce desegregation by putting White teachers back in positions vacated and at higher percentages than African American teachers.

Impact on Schools

The district court defined a complete systemwide desegregation as each school in the Buffalo Public School System having no less than 30% and up to 55% of either race. The phase IIIX plan that was implemented was a systemwide plan that contained a variety of programs to achieve desegregation, including magnet schools, early childhood centers, special schools, pairing and clustering of schools, and upgrading of the entire school system.

It was an important strategy to help parents become invested in the desegregation of the Buffalo Public School System.

The update of the school system contained in the phase IIIX plan was critical because the historical fact and legacy of racially segregated schools translated into a legacy of unequal funding for schools for resources within the system based on their racial composition. Unequal funding over the years created very dated facilities and very old materials and resources that served African American public school students. Discriminatory funding was also reflected in the lower salaries African American teachers and staff had been forced to accept. Yet this case demonstrates that when the desegregation remedy, like under the phase IIIX plan here, required improved facilities, salaries, and other resources, a recalcitrant school board or whatever entity funded the school system would find it impossible to provide sufficient funding. Funding any systemic remedy of unconstitutional segregation was a challenge that always seemed to end up back in court.

The various programs submitted by the school board as part of the plan were approved by the court but required funding. Securing the necessary funding often required extraordinary intervention into the budgetary allocations of the city and state.

Later cases addressing the issue of segregated public schools have mostly failed to support such a broad-based, wide-ranging, complex, districtwide plan to desegregate a school system. Moreover, the fact that most courts monitoring public school systems for compliance with a court-ordered desegregation plan are now ruling that the school systems are in compliance or are unitary so that the court's involvement can end regardless of whether the system provides for its students the promised educational opportunity. Judicial or legal responsibility in fashioning a constitutional remedy to school desegregation since 1954 has been inconsistent and will continue to be so. It remains to be seen what other methods will be employed by the courts and other entities in the United States to continue to support equal educational opportunities throughout the public school system.

ASSOCIATION FOR THE STUDY OF AFRICAN AMERICAN LIFE AND HISTORY (ASALH)

The Association for the Study of African American Life and History (ASALH) was born in Chicago, Illinois, early in the 20th century as the Association for the Study of Negro Life and History. The purpose of the organization was to collect historical and sociological data on people of African descent with the goal of publishing books and magazines on various topics related to African Americans. It became the means by which founding Director of Research and Editor Carter G. Woodson created an African American history movement that earned him lasting eminence and went far to achieve the group's goal of enhancing the image of African Americans. Black History Month is part of his and the organization's legacy. This entry looks at the group's record, with special attention to Woodson's contributions, and notes its ongoing influence.

The Founding Years

Five men were instrumental in the establishment of this organization: Woodson, Dr. George C. Hall, J. E. Stamps, W. B. Hartgrove, and Alexander L.

Jackson. Their initial meeting took place in the office of the executive secretary of the Wabash Avenue Department of the Chicago Young Men's Christian Association (YMCA). Based on their conversations and discussions, the Association for the Study of Negro Life and History was founded on October 9, 1915. These men—all of them leaders in the African American community—believed that their efforts to highlight the significant contributions of African Americans would lead to improved race relations by humanizing individuals who had long been overlooked and negated in society.

At the time that the Association for Negro Life and History was founded, African Americans were still suffering under abject conditions due to oppression and racism within the United States. Lynching of African American men was prevalent, and Jim Crow segregation ruled the South. The idea that African Americans had something to offer the world was a crucial element in their development of the organization. Hall, a local physician and prominent activist involved in the Chicago Chapter of the National Association for the Advancement of Colored People (NAACP) and the vice president of the National Urban League, was elected as the first chairman and president. The first secretary-treasurer was Jesse E. Moorland, a minister and former president of the Washington, D.C., chapter of the NAACP. A well-known bibliophile, Moorland would later donate his collection of papers on African American history to Howard University and spearhead what would later become the Moorland-Spingarn Research Center at that institution.

The enduring legacy of the association, however, has always been intricately tied to that of its first director of research and editor of its major publications, Woodson. His story is an important part of the history of the organization.

Woodson's Role

Woodson was a historian and educator whose direction of the association would make him one of the most influential African Americans of the 20th century. Due in large part to his affiliation with the association, to books that he authored, and to his work during his 35-year tenure as the major editor and researcher of ASNLH publications, he has

often been referred to as the father of African American history. Woodson was the first African American born to enslaved Africans to earn a doctorate in the United States. He was born in New Canton, Virginia, on December 19, 1875, to James Henry and Anne Eliza Riddle Woodson.

Woodson attended various schools, including Berea College and Lincoln University. He completed both his bachelor's and master's degrees in European history at the University of Chicago. He later enrolled at Harvard University and was the second African American to complete a PhD at this institution in 1912. (W. E. B. Du Bois was the first African American to receive a PhD from Harvard University in 1897.)

During the early part of his career, Woodson taught in the Philippines and in the United States. Based on these experiences, he came to believe that one way to improve relations between the races was by educating each group about the contributions of the other. A lofty goal from the start, it was one that was rooted in a mission that Woodson believed to be extremely important: to highlight the many ways that African Americans had been misinformed about their own history in the world. Moreover, he and the others also hoped that by educating African Americans in this regard, they could help train future scholars to disseminate these truths to others.

As Woodson engaged young scholars in the process of collecting data and in disseminating truth, he also sought to find ways to provide substantive evidence of these truths through a variety of means. Under the guidance of this audacious leader, the ASNLH would become known as simply the association for many years. In January of 1916, Woodson set out to broaden the reach of the association through the publication of the *Journal of Negro History*. The journal existed to meet the original objectives with a broad dissemination and distribution throughout the United States.

Woodson published this journal without the approval of the other members of the executive council and caused tension among the group. He financed this initial endeavor and many others out of his own pocket by selling his own life insurance policies and using his salary as a teacher in his early days. After he quit his teaching position to work full-time with the association, he worked hard to raise money from a variety of sources to be

sure that the publication continued. This dogmatic approach often raised the ire of many of his contemporaries, although Woodson did not seem to care much about these challenges.

The Organization Grows

Annual meetings of the association began to take place in 1920, with the first one held in Washington, D.C. Around the country, clubs were established to educate African Americans about their own history and importance. These clubs operated through numerous associations, churches, social welfare agencies, and existing societies. In some cases, they were organized by men and women in small towns who had heard of the work of the association and wanted to be sure to familiarize their children and peers with it.

After the first meeting in Washington, D.C., the association continued to meet nationally in the following years. Those first meetings were held in cities throughout the Southeast, but later expanded to other cities as the organization became better known. Lynchburg, Virginia, was the site in 1921; Louisville, Kentucky, followed in 1922; Atlanta, Georgia, in 1923; Richmond, Virginia, in 1924; Washington, D.C., in 1925; Baltimore, Maryland, in 1926; Pittsburgh, Pennsylvania, in 1927; St. Louis, Missouri, in 1928; Washington, D.C., in 1929; Cleveland, Ohio, in 1930; New York City in 1931; Atlanta, Georgia, in 1932; Washington, D.C., in 1933; Houston, Texas, in 1934; and Chicago for its 20th anniversary in 1935. One scholar pointed out that in just 20 years, the association had made its way around the country for its annual meetings. The association also held spring conferences each year in many eastern cities.

Early meetings were attended by young academicians and historians who would go on to become leading historical figures and well-known scholars. Presenters included members of the association such as Mary McLeod Bethune, Lorenzo Greene, Charles H. Wesley, and Rayford W. Logan. White scholars also attended and presented at these meetings. Arthur M. Schlesinger, a historian and former president of the American Historical Association, once noted that the presentations represented some of the best work that he had seen by scholars in the field of history. Other presenters at meetings during the early days of the association included

Sadie T. M. Alexander, John Hope Franklin, and Zora Neale Hurston.

Many African Americans viewed the association as a source of important and pertinent information to improve the conditions of their race. In 1935, the highly esteemed educator and activist Bethune spoke at the 20th anniversary celebration of the association. She lauded the organization for its persistent efforts to highlight the truth and equality of African Americans through the documentation of facts and systematic dissemination of research on the omission of African Americans from history. An endorsement such as this one from Bethune was one that intimated the importance of this particular organization. She would become president of the association for the next 15 years.

National History Week

Woodson has most often been credited with being the founder of what is now known as Black History Month. Although this fact is not disputable, what is rarely understood is how integral his work with the association was to the evolution and advancement of this cause. This organization became the vehicle by which Woodson would spread the message of African American history.

Woodson began to generate the notion of a Negro History Week in the journal and convinced his fraternity, Omega Psi Phi, to host the first Negro History and Literature Week. Woodson had previously worked with Mary Church Terrell through two organizations that she was affiliated with—the National Association of Colored Women and her sorority, Delta Sigma Theta Sorority Incorporated. Her sorority had previously paid tribute to celebrated abolitionist Frederick Douglass on the day that he marked his birthday, February 14.

Woodson chose the initial celebration of Negro Achievement Week in February to coincide with the birthdays of celebrated abolitionist Frederick Douglass and former President Abraham Lincoln. He hoped that this would generate interest among interracial audiences. Omega Psi Phi members celebrated the first Negro Achievement Week in 1924. Two years later, Woodson sent word out via circulars to advertise the national celebration of Negro History Week in 1926.

As word spread of this new celebration, many responses came into the ASNLH offices.

Educators and librarians sought out information from the association to share. New chapters of the association were quickly started to meet the demand. Members of the association in chapters around the country were instrumental in hosting events rooted in African American history. For many years, the Negro History Week celebrations were most popular in colleges and urban high schools, but this began to change as the association began to spread its reach farther around the country through its publications of the *Journal of Negro History* and later through Woodson's creation of the *Negro History Bulletin* first published in 1937.

Other Achievements

Woodson worked tirelessly to get the journal and the bulletin out to numerous people through a variety of young researchers and vanguards for the publications and the association throughout the 1930s. One such person was Greene, whose diaries revealed the various distances he traveled and efforts he exhausted to get the publications out and increase membership in the association. The young men who toured through states such as Virginia, North Carolina, South Carolina, Tennessee, Georgia, Alabama, and Mississippi traveled through the heart of the South to spread the word and the publication at a time when it was not safe for young African American men to travel the country touting the cause of African American historical awareness. The Howard University students sold books supported by the association to schools and vendors in areas around the Southeast in spite of threats to their safety.

These men were instrumental in the establishment of new African American history study clubs and often found support from African Americans in the cities that they ventured to for this purpose. The role of African American women in promoting the activities of the association was also particularly important because of the numerous female teachers, club women, and librarians who championed the cause of African American history. One educator, Nannie Helen Burroughs, required her students to study African American history and more importantly, to pass examinations based on their studies to meet the requirements for graduation.

Much of the early work of the association was financed by Woodson and later supported by White philanthropists, including Julius Rosenwald, who were impressed by his commitment. Woodson also secured funding from the Carnegie Foundation, the General Education Board, and the Laura Spelman Rockefeller Foundation. Their support created more tension for Woodson since he refused to be swayed by their influence and was undaunted by their disapproval of some of his research.

The foundations wanted Woodson to link his publications to a historically Black college, and his refusal to do so frustrated foundation leaders. Woodson's book, *The Mis-Education of the Negro*, was unapologetic and no doubt garnered more concerns from White philanthropists about his unwillingness to change his message. Foundation support for the association began to wane in the 1930s and 1940s as Woodson consistently rejected any attempts to control the publications he edited. White philanthropists argued that Woodson's work had become less scholarly and more propagandist. Although, these criticisms were found to be untrue, this still presented a financial challenge for Woodson.

Fortunately, African American support for the association never wavered, and Woodson continued to be considered a well-respected leader. Meanwhile, the association's presidents included many of the leading historical figures of the time. Besides Hall, early presidents included Robert E. Park, John R. Hawkins, Hope, Bethune, Wesley, and Greene. When Woodson passed away suddenly in April of 1950, Howard University Professor Logan, who had worked under Woodson as a researcher and who had published in the journals, assumed the position of executive director of the association.

After Woodson

The organization continued to grow and maintained the vibrancy of the original leadership by consistently attracting charismatic and involved leaders. By the 1950s, mayors in cities across the country were issuing proclamations in honor of Negro History Week. The 1960s were also a pivotal time in African American history, and as the consciousness movement arose and the historic legacy of Woodson became more fully actualized

by young and old, the association continued to thrive.

In 1972, the association changed its name officially from the Association for the Study of Negro Life and History to the Association for the Study of Afro-American Life and History and later the Association for the Study of African American Life and History. ASALH still holds national academic meetings each fall in October. Scholars from around the world attend and present at the conference.

The association officially moved from celebrating Negro History Week to honoring Black History Month in 1976. At this same time, Woodson's home was designated a national historic landmark. Black History Month has been a nationally recognized holiday since this time. Each year, presidents of the United States issue proclamations for this month-long celebration. The association continues to meet, and both the *Journal of Negro History* (now known as the *Journal of African American History*) and the *Negro History Bulletin* are still published. Through the visionary leadership of one man, an organization was created that literally transformed African American education, and through the support of countless African Americans, this organization remains important today.

ASSOCIATION OF COLLEGES AND SECONDARY SCHOOLS FOR NEGROES

The Association of Colleges and Secondary Schools for Negroes (ACSSN) was founded in 1934 in Atlanta, Georgia. From 1934 to 1965, the ACSSN played a significant role in attaining regional accreditation for African American colleges and secondary schools located in the South. By 1945, its membership included more than 500 African American colleges and secondary schools in Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, and Virginia that were denied membership in the all-White regional accrediting body, the Southern Association of Colleges and Schools (SACS). This entry looks at the organization's history and achievements.

Historical Background

The ACSSN's predecessor, the Association of Colleges for Negro Youth (ACNY), was founded in 1913 at Knoxville College. The ACNY focused on raising entrance requirements, improving standards for graduation, and controlling the transferring of dismissed students to other institutions. In 1925, long dismayed by SACS's neglect of African American schools, the ACNY petitioned SACS to rate African American colleges and secondary schools.

In 1929, funded by a \$35,000 grant from the General Education Board (GEB) and the Rosenwald Fund, SACS adopted a process to evaluate and rate African American schools. At its annual meeting that year, SACS appointed a committee known as the Committee on the Approval of Negro Schools, to inspect and rate African American schools. This committee was responsible for visiting African American colleges, reviewing supportive documents submitted by school administrators, and making rating recommendations to the SACS executive committee.

In 1930, SACS issued its first listing of regionally approved Black colleges. One college, Fisk University, received the highest rating of A. Six colleges were given a B rating: Johnson C. Smith University, Morehouse College, Spelman College,

Talladega College, Virginia State University, and Virginia Union University. The list of approved colleges was published annually in SACS's organ, *The Southern Association Quarterly*.

Secondary schools were channeled through a different process with state committees assuming the responsibility of recommending them for approval. The first listing of approved African American secondary schools appeared in 1931.

Though rated by SACS African American schools could not hold membership in the organization. African American schools that met SACS' standards were approved rather than accredited. Because accreditation qualified schools for SACS membership, only White schools were granted that designation.

In 1934, the GEB announced its intention to discontinue its funding of SACS Negro Approval Process. Unwilling to assume the costs, SACS announced that it would no longer inspect and rate African American colleges and secondary schools. In response, the ACNY reorganized as the ACSSN and considered developing a plan to accredit its member institutions. At the time of reorganization, 37 African American colleges and 60 secondary schools had been approved by SACS. Concerned that other regions did not have segregated accrediting bodies and that self-accreditation would not move its members toward membership in the nationally recognized regional accreditation body, the ACSSN again petitioned SACS to continue its approval of African American schools. The ACSSN would serve as the representative organization for African American colleges and secondary schools seeking SACS approval, assume costs of the SACS approval process through its membership fees, and manage the logistics associated with coordinating the approval process. Membership in the ACSSN would be limited to schools with approved status by SACS.

Despite the initial scare, the GEB and the Rosenwald Fund continued to fund the SACS Committee on the Approval of Negro Schools until 1938. Upon expiration of the philanthropic funding, the ACSSN paid from \$1,500 in 1938 to \$6,000 by 1950 to SACS for providing the rating service.

Achievements

From 1929 to 1965, the ACSSN worked closely with SACS to coordinate the regional inspection

and rating of African American colleges and secondary schools serving as an advocate organization for its membership and their constituencies. The ACSSN's organizational structure mirrored SACS. Its work was carried out by a Commission on Colleges and a Commission on Secondary Schools. It sponsored studies on issues relevant to African American education. It published proceedings of its annual meetings that were usually held on the same date and in the same city as the SACS annual meetings.

Although the pending cessation of approval by SACS was the impetus for its founding, the ACSSN not only provided a vehicle through which regional approval was gained, but also provided support to its member institutions by assisting them in preparing and successfully negotiating through the approval process.

In 1957, SACS voted to accept African American educational institutions as members. All ACSSN member schools were required to be reinspected, including schools that had been previously approved as well as schools seeking initial approval.

In 1961, SACS unanimously voted to accept 18 African American colleges as full members. Although 59 colleges had been previously approved by SACS, only 18 African American colleges were identified as having met all accreditation standards and were accepted as SACS members. From 1961 until it disbanded in 1965, the ACSSN continued to assist its members in gaining regional accreditation.

AYERS v. FORDICE

Ayers and the United States v. Fordice (1992) represents the first time the U.S. Supreme Court ruled on the question of precisely what remedial measures were required to eliminate the vestiges of de jure racial segregation in public higher education. Previous higher-education desegregation lawsuits decided by the nation's highest court focused only on the question of the rights of African Americans as individuals to attend previously all-White state universities. *Ayers v. Fordice* promised to answer long-standing questions about the implications of *Brown v. Board of Education, Topeka, Kansas* (1954) for higher education, including the constitutionality of historically Black colleges and universities.

Facts of the Case

In 1975, a group of African American Mississippians filed a class action lawsuit against the state of Mississippi in federal district court. The suit accused the state of maintaining a racially separate and unequal system of higher education in Mississippi in violation of Title VI of the Civil Rights Act of 1964 and the equal protection clause of the Fourteenth Amendment. In particular, the plaintiffs complained that the state had systematically discriminated against the state's public Black universities (Jackson State University, Alcorn State University, and Mississippi State University) in terms of funding, the breadth of their academic programs, and the quality of their physical plants. They sought a judicial order compelling the state to make substantial improvements on the state's Black campuses. Their leading plaintiff, Jake Ayers Sr., was a longtime civil rights activist who had been a member of the Mississippi Freedom Democratic Party. Although he died in 1986, the suit still bears his name.

The state of Mississippi conceded that it, like other Southern states, had established and maintained legal segregation in higher education. However, it maintained that it had broken with its segregated past, and its current policies in higher education had been promulgated on a nondiscriminatory basis. The U.S. Justice Department intervened in the case on the side of plaintiffs.

After 12 years of negotiation failed to end the impasse, the case went to trial. The district court ruled for the state, finding that racially neutral hiring and admission policies constituted sufficient compliance with its duty to eliminate the effects of legal segregation in higher education.

A three-judge panel of the U.S. Fifth Circuit reversed the district court's ruling, holding that significant remnants of the former de jure system of racial segregation still persisted in Mississippi higher education. Subsequently, the full Fifth Circuit reversed the judgment of the three-judge panel, upholding the district court's original judgment. The African American plaintiffs and the U.S. Justice Department appealed the case to the U.S. Supreme Court.

Lower federal courts had issued conflicting rulings with respect to the remedial measures states were required to make to eliminate the vestiges of legal racial segregation. For example, in *Alabama State Teachers Association v. Alabama Public School and College Authority* (1968), the district court held that "as long as the State and a particular institution are dealing with admissions, faculty, and staff in good faith," its constitutional duty to remedy the effects of past discrimination is satisfied. This ruling contrasts sharply with *Norris v. State Council of Higher Education* (1971) in which the district court, borrowing from the public school context, declared that there should be no "White schools or Negro schools, just schools." In a third case, a district court in *Adams v. Richardson* (1972) admonished states to take into consideration the unique role of historically Black colleges when crafting remedies to address decades of discrimination in higher education. Given these conflicting precedents, it was unclear how the Supreme Court would rule in *Ayers v. Fordice*.

Lawyers, educators, scholars, and laypeople across the nation eagerly anticipated the Supreme Court's ruling in this case. Its implications extended far beyond the future of higher education in Mississippi. At stake in *Ayers* was the legality or permissibility of remedies and proposals that other states with similar desegregation dilemmas had either considered or adopted. Consider, for example, the potential ramifications of a Supreme Court ruling that agreed with the state of Mississippi that the enactment of nondiscriminatory admissions and higher education and race-neutral missions

designations for universities were the extent of the state's affirmative duty to desegregate. The Court was not obligated to stop there: The justices could have also struck down the enhancements of Black colleges as unconstitutional because they are no different from the discredited separate, but equal doctrine in *Plessy v. Ferguson* (1896). Such a ruling would have direct consequences for states such as Louisiana, Tennessee, and North Carolina, where courts had ordered increased funding, new programs, and new capital outlay projects on their historically neglected Black college campuses. Such a ruling would deal a serious blow to public Black colleges and universities. Although not calling for their outright closure, if the Supreme Court outlawed special compensatory measures to enhance Black colleges, such a decision would place many of them on perilous footing.

A Separate Issue

Always lurking beneath the surface in higher-education desegregation cases is a less overt, but nevertheless significant challenge to the constitutional status of publicly financed historically Black colleges and universities. When the Supreme Court held in *Brown v. Board of Education* that separate educational facilities are inherently unequal, its ruling may have called into question the constitutional status of publicly funded historically Black colleges and universities. For the first time in their history, public Black colleges were forced to justify their right to exist. As public school desegregation orders began to be implemented in the late 1960s and early 1970s, the issue of precisely what steps would be required to integrate dual systems of higher education in the states became unavoidable.

To complicate matters, this issue had to be addressed during the peak of the Black power era. During this period, many African Americans were having second thoughts about the virtues of desegregation. After more than a decade of struggle to realize the hope of *Brown*, the reality of desegregation left much to be desired for many African Americans. Black students confronted calcified White resistance to their very presence on campus. In places where they were successfully admitted, they were forced to endure racist treatment on the part of teachers, their classmates, and other members of the community. Many had difficulty

keeping up academically, and Black students were disproportionately labeled as disciplinary problems or were assigned to special education classes. Too often, desegregation orders in the public school context resulted in the closing of Black schools and the firing and demotion of Black teachers and principals. Supporters of historically Black universities feared that their institutions, as well as the constituencies who depended on them, would suffer the same fate if desegregation only strategies were implemented in higher education. They worried that unless policymakers took into account the consequences of discrimination that Black students had experienced in K-12 education, the desegregation process might actually serve to reduce higher educational opportunity for African Americans.

At the crux of the controversy is a basic question: Are historically Black colleges and universities needed to ensure that African Americans have equal educational opportunity, or are they the unfortunate sacrificial lambs that will be required to put the nation's record of racial discrimination in the past? Moreover, if public Black colleges can continue to exist, does an equitable desegregation remedy require that states be mandated to enhance them to compensate for a century of underfunding and neglect?

The Court's Ruling

In *Ayers v. Fordice*, the Supreme Court ruled in favor of the plaintiffs by an 8 to 1 vote. The Court held that a state does not satisfy its burden to eliminate the vestiges of legal segregation in higher education until it eradicates all policies traceable to de jure segregation that (a) continue to have segregative effects, (b) can be practically eliminated, and (c) lack sound educational justification. The Court concluded that the admissions standards at Mississippi's state universities as well as the mission designations assigned in 1981 to its higher-educational institutions, while giving the appearance of being racially neutral, were in fact traceable to the state's racially segregated past.

In particular, the Court found fault with the state's insistence on ACT scores as the sole criterion for automatic admissions to its universities, given the fact that African Americans on average scored lower on the ACT than their White counterparts. The majority also determined that the mission designations of the state's universities too

closely followed the historical patterns of differential financial and programmatic endowment that particularly favored the University of Mississippi, Mississippi State University, and University of Southern Mississippi.

The Court, however, refused to order the upgrading of the state's Black campuses; rather, it remanded that issue to the district court. The Court worried that ordering the upgrading of the state's Black campuses would be a resurrection of the discredited doctrine of separate, but equal issued in *Plessy v. Ferguson*. It remanded the question of whether enhancement of Black universities is a necessary component to an equitable desegregation decree to the lower courts.

Justices Sandra Day O'Connor and Clarence Thomas wrote separate concurring opinions. Justice O'Connor argued that the lower courts had been too willing to accept at face value the state of Mississippi's assurances that its current policies in higher education were race neutral and had been enacted in good faith. Given the state's history of racial discrimination, the burden should be on the state to show that its current policies were no longer out of compliance with Title VI. In an additional concurring opinion, Justice Thomas, citing the distinction between *Ayers v. Fordice* and earlier decisions by the Court involving grade schools rather than universities, wrote that while the Constitution does not compel the states to enhance Black universities, it does not prevent them from doing so if they choose. He further asserted that because of the important roles that historically Black colleges and universities (HBCUs) have traditionally played in Black life, it would be an ironic consequence of the desegregation process if the very institutions that sustained African Americans during the Jim Crow era were themselves eliminated in the struggle to eliminate its vestiges.

Justice Antonin Scalia, in dissent, argued that the standard announced in *Fordice* resembles the Court's doctrine in K-12 desegregation requiring states and school districts to eliminate dual systems "root and branch" so that there are no "White schools or Negro schools, just schools." However, the principles applied to desegregation in K-12 desegregation do not apply to higher education, he said.

For the *Ayers* plaintiffs, the ruling represented a partial victory. The Supreme Court overturned the

lower court decisions in *Fordice* that ruled that Mississippi's so-called facially neutral, nondiscriminatory admissions, hiring, and governance policies were sufficient to meet their mandate to dismantle the vestiges of segregation in higher education. Yet the ruling made it unclear what policies would satisfy that mandate, thereby providing an invitation for further litigation.

The Court flatly refused to consider the principal goal of the litigation: to force the state of Mississippi to financially and programmatically compensate for more than a century of underfunding and neglecting its Black colleges. The justices' majority opinion appeared preoccupied with the fear that by ordering the desired enhancement, they would be agreeing with the principles of *Plessy v. Ferguson*. The failure of the Court to address the issue of enhancement of Black universities not only served to prolong the *Ayers* litigation for another decade but also left in doubt the legal standing of existing or future higher education desegregation settlements in other states that included plans for the upgrading of Black schools. Furthermore, under the *Fordice* standard, the very existence of public historically Black colleges could be interpreted as a policy traceable to the period of de jure segregation, which continues to foster segregation and therefore, should be eliminated. Thus, it does not foreclose the possibility of future attempts to merge Black colleges with other institutions or to close them. In 2008, for example, a Georgia lawmaker cited the state's budgetary constraints and the *Fordice* standard as justification for his call for the merger of Albany State University and Savannah State University with nearby White schools. In summary, *Fordice* raised almost as many questions as it answered about desegregation in public higher education.

The *Ayers* lawsuit finally came to an end in 2004 after the state and the parties agreed to a settlement, and the appeals from disgruntled members of the plaintiff class were finally exhausted. The plan calls for Mississippi to commit \$503 million over a 17-year period to upgrade Black institutions. Specifically, the state will allocate \$246 million toward adding and strengthening programs at its HBCUs, appropriate \$75 million for facilities at the Black campuses, and create endowment funds for these institutions. The plan specifically stipulates that these funds are to be additional

revenues. In other words, the state of Mississippi should not use the settlement dollars as a justification for allocating a smaller share of the normal appropriations that the state's Black universities are entitled to receive.

B

BENNETT COLLEGE FOR WOMEN

Bennett College for Women is a small liberal arts college, one of the two historically Black colleges and universities (HBCUs) for women in the United States. Bennett is located on 55 acres in Greensboro, North Carolina. The college boasts a proud heritage of producing well-educated women with a commitment to spirituality, to professionalism, to activism, to community service, and to Bennett that lasts a lifetime. It offers 24 areas of study in the natural and behavioral sciences, education, the social sciences, the humanities, and mathematics. In addition, Bennett collaborates with North Carolina Agricultural and Technical University (A&T) to offer degree programs in chemical, electrical, and mechanical engineering and with Howard University to offer a degree in nursing.

Home to an average student body of 600 or more women yearly, Bennett has produced more than 5,000 female scholars since 1930, many of whom are renowned leaders in their respective fields. The first African American mayor of Greensboro, the first African American woman to serve as president of the Young Women's Christian Association (YWCA), the first African American woman to serve as a television news director in the United States, and the first African American district attorney in North Carolina are all Bennett College alumnae. Bennett's instructional programs are accredited by the Commission on Colleges of the Southern Association of Colleges and Schools, the National Council for the Accreditation of

Teacher Education, and the Council on Social Work Education. The college is affiliated with the United Methodist Church, The College Fund, and the Women's College Coalition as well. Today, Bennett is ranked 21st among HBCUs by *U.S. News & World Report*. This entry explores the historical development of Bennett College, its involvement in the civil rights movement, and its contemporary reality.

Historical Background

Bennett College offered its first classes in the basement of Warnersville Methodist Episcopal Church (now named St. Matthews Methodist Church), and 70 African American male and female students received elementary and secondary level instruction in 1873. Within the first 5 years, previously enslaved Africans purchased property at Bennett's present site. New York businessman, Lyman Bennett, for whom the college is named, provided the necessary capital to build a permanent campus.

The Freedmen's Aid Society of the Methodist Episcopal Church assumed responsibility for the school in 1874 and continued to oversee the programs at Bennett for the next 50 years. In 1889, under the leadership of the first African American president, Rev. Charles Grandison, Bennett received its charter as a 4-year college. Student enrollment in the college rose from the initial 11 undergraduates to approximately 300 in the first 20 years.

Eight individuals led Bennett from 1874 to 1926:

W. J. Parker, Principal (1874–1877)

Rev. Edward O. Thayer (1877–1881)

Rev. Wilbur F. Steele (1881–1889)

Rev. Charles N. Grandison (1889–1892)

Dr. Jordan Chavis (1892–1905)

Rev. Silas A. Peeler (1905–1913)

Professor James E. Wallace (1913–1915)

Rev. Frank Trigg (1915–1926)

The aftermath of World War I ultimately influenced Bennett in that options for women were greatly expanded. In 1926, the Women's Home Missionary Society in partnership with the board of education of the church made the decision to make Bennett a women's college. Since its inception, the college has supported women and encouraged and nurtured independent thought and social consciousness, and with new opportunities available for women, the transition to a women's college was simplified.

Dr. David Dallas Jones, the first president of the new women's college, led Bennett through the Depression and retains the record for the longest tenure, 29 years. Under the leadership of Jones, the college discontinued its high school course offerings and enhanced both its academic curriculum and its cultural consciousness. Jones established many traditions at the college and partnered with close friend and colleague, Dr. Benjamin E. Mays, to maintain relationships between Bennett and Morehouse College. The interactions between the two presidents established Bennett as the sister college to Morehouse. Each year for more than 60 years, the Morehouse College choir performed at Bennett around Thanksgiving, and Bennett's choir journeyed to Morehouse. The brother-sister relationship continues today in a variety of venues. When Jones died, Dr. Willa B. Player became the 10th president of Bennett in 1956.

Civil Rights and Beyond

Player was the first African American woman to lead a 4-year college or university. The historic appointment proved to be an excellent decision. During her tenure, Bennett became one of 15 HBCUs to be admitted to the Southern Association

of Colleges and Schools. Dr. Martin Luther King Jr. accepted Player's invitation to speak at Bennett in 1958. Player fully supported the civil rights movement and the Bennett women who participated in civil rights protests. When Bennett students were beaten and arrested with their counterparts from North Carolina Agricultural and Technical University (North Carolina A&T), Player took the students' assignments to jail to prevent the incarcerations from inhibiting their studies. Plans for the famous sit-in by the A&T Four were conceived at Bennett and fully supported by Bennett women. North Carolina A & T students Ezell Blair, David Richmond, Franklin McCain, and Joseph McNeil staged a sit-in at the Woolworths in downtown Greensboro, North Carolina, an act which combined with similar demonstrations in major cities across the United States resulted in Woolworths being desegregated by July 1960 and heralded into law the Civil Rights Bill of 1960.

Player's influence was positive in other venues as well. Author Linda B. Brown in her book *The Story of the Presidency of Willa B. Player at Bennett College* noted Player's activism and her determination to combine functional skills with values and to empower the students. Bennett belles were taught to be assertive while simultaneously presenting their ideas with etiquette and femininity. Because the college practiced symbolism, ritual, and tradition and because people were often charmed by the women, people called it the Vassar of the South, a finishing school, and elitist; thus, Bennett earned its reputation. The activist president was indeed a lady, a scholar, and a renowned leader. Player left Bennett in 1966, and Bennett welcomed its 11th president, Dr. Isaac H. Miller. Maintaining the Bennett ideal in the midst of the social revolution of the 1960s was no easy task for Miller. During the 1967 to 1968 school year, freshman students organized a walk-out, which required each class to leave dormitories 1 minute after curfew. The students took over the student union to demand changes in Bennett's discipline policies and curfews. Miller responded to the student protest by surrounding the building with campus security guards, bringing family and sleeping bags to the student union, and ordering hot chocolate and doughnuts for the protesters. Unlike similar protests at other institutions that resulted in student deaths and injuries, the Miller response turned the protest into a sleepover.

Miller's 21-year tenure at Bennett continued to prove that his scholarship, administrative skills, and dignity added value to the college's unique history. His collaborations with neighboring A&T and the historically White colleges and universities in Greensboro resulted in the addition and implementation of a six-college consortium that expanded Bennett's program offerings. The Bio-Medical Research and Interdisciplinary Studies Programs were added during his administration, along with a bridge program in conjunction with Meharry Medical College. Working with other HBCUs presidents, Miller aided in the development of the National Association for Equal Opportunity in Higher Education and served on its first board of directors.

His vision and plan for growth included the formal organization of Bennett alumnae as both a material and fiscal resource. While upholding Bennett's traditions, some social aspects of the college changed under Miller's leadership. In 1969, Bennett hosted step shows as Delta Sigma Theta, Alpha Kappa Alpha, and Zeta Phi Beta inducted the first on-site sorority members. Bennett's endowment grew 327%, and four new buildings were added to the campus during his tenure. The man who had come to Bennett with the promise to move the college forth in excellence would leave having accomplished his mission. Upon Miller's retirement in 1987, Dr. Gloria Randall Scott, the 12th president, became the second woman to head the institution.

Scott embraced many aspects of the Bennett ideal and broadened the spectrum of the traditional college circle. Scott's inclusive approach involved the active recruitment of nontraditional Bennett women and advanced the notion of the phenomenal woman as the true Bennett belle. Her international collaborations with African counterparts served to broaden Bennett's existing connections and to create new venues within which African American women could function together. During Scott's tenure, the main campus was declared a national historic site and was placed in the National Registry. In addition, during her presidency, former First Lady Barbara Bush, Senator Carol Moseley Braun, and Dr. Maya Angelou took part in campus activities.

The mass communications major was added to the course offerings and the Sociology and Social

Work Departments were fully accredited during the Scott years. Two new buildings were erected to house the new technology and support instruction, a telecommunications center and a service center. In addition, major renovations to two buildings were completed, and the college endowment increased as well. In 2001, Scott resigned her position, and for 7 months, Dr. Althia P. Collins assumed the role of college president. When Collins resigned, an interim president, Dr. Charles Fuget, led the college while a search began for a new leader. The college was in dire financial straits with tremendous debt and critical infrastructure problems.

A Fiscal Crisis Overcome

The leader credited with bringing Bennett out of its worst crisis and back from the brink of closure was Dr. Johnnetta B. Cole, the 15th president of Bennett. Previously, she had served as president of the only other historically African American women's college in the United States, Spelman College in Atlanta. Under her leadership, Spelman's endowment grew to become the largest endowment of all HBCUs. The Cole appointment was welcomed by faculty, alumnae, parents, and students. Cole, sister president (as she was often called), had the ability to organize, raise funds, enhance instruction, and establish positive relationships with students, parents, faculty, businesses, and politicians. Cole had already established herself as a world leader in education prior to her arrival at Bennett, and she was able to use her established celebrity to help the struggling institution in a variety of ways.

When Cole was appointed in 2002, the market value of Bennett's endowment was a little over \$7 million. In 2007, when Cole retired, the market value of the endowment had been raised to more than \$12 million. Cole brought former President Bill Clinton and former Senator Bob Dole in to lead fund-raising efforts as well. Oprah Winfrey, Bill Cosby, Tom Joyner, and other celebrities joined Cole in fundraising. The 1926 Society (alumnae and friends who give \$1,926 or more per year to Bennett) was established, and Bennett alumnae rallied in support of the effort, providing millions of dollars for the college. Cole brought her unique personality and boundless energy to Bennett and raised income, awareness, and a commitment to excellence back to the college.

In 2007, Julianne Malveaux was named the 16th president of Bennett. The college continues its heritage of providing the highest level of undergraduate education in an environment that supports, according to its mission statement, “open inquiry where teachers and students are immersed in educational processes that build community, foster authentic research, create knowledge, and advance scholarship” (<http://www.bennett.edu/mission.htm>).

BEREA COLLEGE V. COMMONWEALTH OF KENTUCKY

Berea College v. Commonwealth of Kentucky (1908) was significant because the U.S. Supreme Court came down on the side of states rights in upholding the state of Kentucky's right to prohibit a private educational institution, incorporated under state law, from admitting and educating both African American and White students at the same time in the same place. After reviewing the historical context, this entry discusses the facts of the case, the Supreme Court ruling, and its long-term impact.

Historical Background

Berea College was a private educational institution founded in 1855 in Madison County, Berea,

Kentucky. It was an outgrowth of the Southern abolition movement and anti-enslavement churches throughout the country. Rev. John G. Fee, a native Kentuckian from a slave-holding family, attended Lane Seminary in Cincinnati, Ohio, where he was transformed into a leader in the anti-enslavement church movement.

Accepting an invitation from General Cassius M. Clay to relocate, he established an antienslavement church in Berea, Kentucky. He soon secured annual funding from the American Missionary Association that enabled him to establish 20 more anti-enslavement churches. Next, he helped establish an educational institution that was nonsectarian, nonracial, and open to both male and female students. It listed as part of its mission serving local young, promising, poor students, in particular those from Appalachia.

Initially, the school consisted only of primary grades. Then normal (high school), academy (high school with a trade, technical, and apprentice focus), and college-level studies were added. The student body, however, was almost exclusively White students and included many offspring of enslavers.

Berea College had a difficult time accomplishing its mission. The faculty and students were run out of the county at least twice, coinciding with the anti-African American sentiment prevalent in a period when John Brown mounted an insurrection at Harper's Ferry and later Edmund Kirby Smith's command of Confederate troops in the Kentucky area resulted in major setbacks and deaths of many Confederate soldiers. Berea College faculty and students were also run out of the county because they were viewed as Whites who loved African Americans. However, despite repeated interruptions, they always resumed operations.

Then following the Civil War, Berea College reopened with a revamped admission policy, enrolling all African American students who qualified for admission. Initially, many White students withdrew to protest this policy, but most returned quickly. Berea College enrolled both White and African American students, eventually attaining a population of almost 300, with two thirds of them African American. The philosophy with respect to race and the provision of educational skill sets had a significant impact, evidenced by Berea College graduates and attendees who became leaders in the state of Kentucky and the surrounding region.

They spread the mission and philosophy of the college back to their home communities and states.

Proponents of the Civil War and enslavement deeply opposed the Thirteenth and Fourteenth Amendments and Reconstruction (1865–1877) and supporters of the civil rights of African Americans. Rejection of those rights took the form of reenslavement of African Americans through a series of legislative rules and judicial decisions designed to replicate those in the colonial United States that systematically designated African American citizens inferior, disenfranchised them, and declared them not entitled to the basic rights of citizenship. In the Black Codes, enacted from 1800 to 1866, legislation was used to exploit African American labor and dehumanize African Americans. In addition, Jim Crow laws were enacted that mandated racial segregation at every level until the 1960s. Moreover, such laws were approved by the courts and conclusively supported by most of the Supreme Court decisions during this period, decisions which always found in favor of a states rights prerogative.

The Berea College case was no exception where states rights were concerned. The case represented the tension between former Confederate supporters—sometimes called royalists by the anti-enslavement Christians—and Christian supporters of the Union and represented the tension between state's rights advocates and federalists or Union supporters. The compromise presidential election of 1877 placed Rutherford B. Hayes in office; his administration officially ended federal military enforcement of Reconstruction and disenfranchised African Americans by ensuring a resurgence of Southern political power.

By 1896, the Reconstruction promise to African Americans of full participation and services in the U.S. society was in complete retreat. Citizenship rights and privileges were denied with renewed vengeance throughout the South and its border states under both Jim Crow laws and the Black Codes. Kentucky exhibited the same trends; the Ku Klux Klan had been organized in neighboring Tennessee by Confederate Army veterans to resist Reconstruction in 1866 and along with the White Citizens Council boasted of membership and support from most Southern city and state legislatures. This resulted in lower funding of African American education by underfunding existing schools set up for African Americans and by closing others.

Increasingly, states adopted laws against educating African American and Whites in the same school, resegregating school systems, and ceasing funding for high schools for African Americans in favor of elementary institutions (only rudimentary education was needed for African Americans to be good laborers).

Facts of the Case

In 1904, the State of Kentucky passed a statute called the Day School Law, which prohibited any individual, corporation, or association from educating Whites and African Americans together at the same in the same place in Kentucky. A later amendment to the statute permitted instruction in separate facilities that were at least 25 miles apart. The penalty for violation was an institutional fine of \$1,000 per day plus \$100 per day of operation upon conviction. It was specifically aimed at the one private educational institution, Berea College, that educated Whites and African Americans simultaneously. Both the federal district court and the court of appeals (Tenth Circuit) ruled in support of the state. This case was an appeal of the lower court rulings.

Berea College's appeal of its conviction of violating the statute asserted three reasons why the statute should be struck down as unconstitutional. First, its lawyers argued the statute violated the privileges and immunities guaranteed under the Fourteenth Amendment for the college's trustees to direct the private money and labor to build and maintain a private institution engaged in the worthy goal of educating others, the teachers to engage in their profession of teaching in the state, and the citizens of the country to engage in being educated as a character-building exercise and a method of self-improvement and elevation. Second, the college maintained that Kentucky was depriving trustees, teachers, and citizens of past and future property rights without due process of law: The trustees would have to use their money to pay fines rather than maintain the institution, the teachers were being denied their legal livelihood of teaching, and all students were prevented from seeking education and a learned status. Finally, Berea College stated that by enacting such a statute—which was selectively aimed at private educational institutions and did not apply to churches, factories, and common gathering on the street—the state denied it the equal protection of the laws.

The trial and appeals court agreed with the state that the statute was an appropriate exercise of state police powers in valuing the greater right of the collective and its welfare over individual liberty and individual rights. The statute was, according to the attorney general, a clear statement of Kentucky's public policy of racial purity to prevent racial amalgamation, a policy supported in various other Kentucky statutes and the Kentucky constitution. The attorney general also pointed to the plethora of laws in Kentucky and other states prohibiting such joint racial activities—the separate-but-equal rule handed down in the *Plessy v. Ferguson* (1896) case had been applied to public transportation and public schools and had been repeatedly upheld as not only reasonable, but also not violating the privileges and immunities of the Fourteenth Amendment. The court found no violation of the Fourteenth Amendment either under the equal protection clause or the due process clause protection of life, liberty, or property.

The Supreme Court Ruling

The Supreme Court supported the state attorney general's position in a seven to two opinion written by Justice David Josiah Brewer (1837–1910) that addressed the single question of whether the Kentucky statute violated the U.S. Constitution. He found that it did not.

First, Justice Brewer addressed the severability of the statute by noting the power of Kentucky to regulate its corporations in ways that violate individual federal rights of citizens under the U.S. Constitution. The Supreme Court ruled that because the state creates a corporation, it does not have to guarantee or extend to corporations the same rights as its citizens enjoy. In fact, the Court ruled that the state legislature can limit the rights of its corporations if it deems those rights are not in the best interest of the state. Thus, the Supreme Court continued to favor states' rights and ensure White supremacy in Southern states whose subjugation of African Americans was legally codified using the states' rights rubric.

The Court was endorsing (as *Plessy* did) a conflict to the U.S. Constitution by saying that a state law was valid even when part of it conflicted with the constitutional protection of individual rights by validly making illegal the same

rights of a corporate entity created by the state. Thus, the U.S. Constitution was deemed valid for one class, but invalid for another. In discounting the argument by Berea College that the statute either stands or falls as a whole, Judge Brewer found that even if the statute is invalid to individuals, it could be upheld as valid regarding the artificial corporate entity created by the state. The Court ruled that the change in the statute by amendment to the original act, which placed further time and place limitations of 25 miles distance and required that Whites and African Americans cannot be educated under the same roof—resulted in the statute being invalid. In fact, the Court provided blatant evidence of its desire to embolden the unity of the South after it lost the Civil War. It said that if any part of a statute could be interpreted as valid, then the Court would save it.

Justice John Marshall Harlan wrote an elegantly clear dissent. He first noted that the state legislature clearly intended to bar the teaching of African American and White students in the same institution at the same time by the institution's instructors. The goal was to preclude the association of Whites and African Americans. Justice Harlan thought the Court should address the larger question of whether the Kentucky statute as a whole was constitutional or unconstitutional. To act only against private educational institutions where White and African American students are instructed simultaneously violated the property and liberty rights of Berea College under the Fourteenth Amendment, he said.

Impact of the Ruling

The impact of the Supreme Court decision was immediate. Other states now recognized they had a court-sanctioned right to limit biracial education of African Americans in private institutions as well as in public schools. Thus, following the Supreme Court ruling, state legislatures moved to re-segregate, close, or severely reduce resources allocated to schools educating African Americans. Some 40 years later, in 1950, the Day School Law in Kentucky was amended to permit (voluntary) integration. This predated by 3 years the Supreme Court's 1953 landmark decision in *Brown v. Board of Education, Topeka, Kansas* (1954),

which would strike down racial segregation in public schools as unconstitutional.

BETHUNE, MARY MCLEOD (1875–1955)

Mary McLeod Bethune, an African American educational leader and stateswoman, had the ear of five U.S. Presidents (Calvin Coolidge, Herbert Hoover, Franklin D. Roosevelt, Harry S. Truman, and Dwight D. Eisenhower) and inspired African Americans during her heyday to dub her first lady of the race, mother of the race, and the female Booker T. Washington.

With early roots as a schoolteacher, Bethune is the first and only woman to both found and serve as president of a historically African American college, Bethune-Cookman, which continues to thrive in Florida one century since its inception as the Daytona Educational and Industrial Training School for Negro Girls. A primary contribution of Bethune-Cookman College to African American education was its production of African American teachers in what were then the mostly segregated school systems of Florida.

As the first woman president of the National Association of Teachers in Colored Schools, the forerunner of the African American-established American Teachers Association, Bethune led initiatives to professionalize the African American teaching force and raise academic standards in African American schools. Her appointment in

1936 under President Franklin D. Roosevelt as the director of Negro Affairs of the National Youth Administration catapulted her influence to a national level, resulting in noteworthy increases in resources to historically Black colleges and universities (HBCUs).

Her stature and legacy are outstanding among educators of her time and our own. This entry emphasizes Bethune's far-reaching influence on African American education, particularly among African American girls; on African American higher education; and on teacher education.

Early Life

Born on July 10, 1875, in Mayesville, South Carolina, to poor, but upwardly mobile ex-enslaved Africans, Samuel and Patsy McLeod, Bethune was the 15th of 17 children. Her dual privilege as a latter-born sibling in a large family and as a child of the liberating and promising era of Reconstruction foreshadowed a life of magnanimous firsts. Bethune was the first of her family to be free-born and the first to be literate.

Her parents valued education for their children, but the public schools in their town did not admit African American children. Although Bethune's family was Methodist, her parents sent their daughter to Trinity Presbyterian Mission School for Negroes, the only school in their vicinity that would admit African Americans. Bethune's talents in music and oratory captured the attention of school founder Emma Wilson, who put her in touch with a benefactor, Mary Crissmon.

A teacher by profession, Crissmon supported Bethune as she matriculated through Scotia Seminary in Concord, North Carolina, long before the two ever met face-to-face. Devoutly religious in nature, Bethune believed that God's grace afforded her the opportunity to attend the alma mater of her first mentor, Wilson. Following her graduation from Scotia and 1 year at the Moody Bible Institute in Chicago, Bethune aspired to become a missionary in Africa, but no church was willing to sponsor her. Never one to be defeated, Bethune resolved that her life work was in her own country and turned her missionary zeal to the education of African Americans.

Several individuals influenced Bethune to devote her life's work to education. Her formative

experiences with Wilson at Scotia Seminary, with its integrated curriculum of academic and vocational training and its philosophy of African American female uplift purposed to educate girls in community leadership, became a model in the establishment of her own schools. Lucy Craft Laney, the founder of Haines Institute in Augusta, Georgia, with whom Bethune apprenticed from 1896 to 1897, was also influential. Bethune and Laney were kindred spirits in their belief that African American women should bear the burden of family and racial uplift by providing moral Christian leadership at home and in their communities. But Bethune believed that the boundaries of African American women's influence should extend well beyond the home and into the realm of national politics and policy through their empowerment as activists in their own right.

Institutional Building

After marrying Albertus Bethune in 1898 and giving birth to her only son, Albert, in 1899, Bethune tried her hand at establishing a school. Following a stint as an insurance agent, Bethune opened a mission school in Palatka, Florida. The pursuit of better economic prospects lured her to Daytona, Florida, in 1904, where at age 29 she founded the Daytona Educational and Industrial School for Negro Girls.

The Daytona School

During that time, African American men were being exploited as cheap labor on a new railroad. The railroad men and their families were living in conditions that were comparable to and in some instances, worse than enslavement. Determined to follow the path of her educational mentors Wilson and Laney, Bethune rented a run-down two-story frame house in this community and furnished the new school with hand-me-down furniture she rummaged from trash dumps and door-to-door solicitations.

Bethune's spouse supported the school initially and was documented as a member of the trustee board in 1906. Bethune's untiring devotion to her school at a time when women were relegated to second-class citizenship both in the public and

private spheres, no doubt, strained the marriage. Albertus abandoned the family in 1907 and returned to South Carolina. The couple remained estranged, but never legally divorced. Albertus died in 1918.

Bethune's first class at Daytona included five female pupils and her young son. Her pupils' parents could pay little or nothing for their education, but Bethune managed to make do with what she had. Her students studied at makeshift desks and used ink made of elderberry juice. Two years after its inception, the number of pupils in the school had increased to 250. Bethune enlarged the building, hired two teachers—although she could barely pay them—and solicited the support of numerous volunteers.

Requiring more space, Bethune purchased a town dump for \$200 with only a \$5 down payment. This acquisition set in motion her long-term effort to acquire suitable buildings, furnishings, and school supplies. Committed to keeping their school open, Bethune's industrious pupils sold homegrown vegetables and homemade ice cream and sweet potato pies and sang spirituals to Whites in upscale resort hotels. Bethune also solicited donations for the school by giving speeches at White churches and women's meetings.

Growing Support

Her efforts galvanized strong support from both the White and African American communities. She organized an interracial board of trustees and solicited support from wealthy Whites who vacationed or wintered at Daytona Beach. Among these donors were prominent businessmen such as James Gamble of Proctor and Gamble, John D. Rockefeller, and Thomas H. White, the president of White Sewing Machines. Some wealthy donors left money for the school in their wills. Even with generous donations, Bethune was not too proud to ride her bicycle through Daytona Beach to solicit donations for her financially struggling school.

The school continued to grow. By 1915, high school courses were being offered at the school. The increasing need for people who could teach a more advanced curriculum prompted Bethune to concentrate on teacher education. She renamed the school Daytona Normal and Industrial School and served as its principal until 1923. In a desperate

effort to stabilize the school financially, the Daytona School merged with the all African American and male Cookman Institute of Jacksonville, Florida, in 1923.

Now falling under the auspices of the Methodist Episcopal Church, the new institution, which changed names several times, evolved into what is now known as the 4-year coeducational Bethune-Cookman College. Bethune served as president until 1942. She resumed the presidency for 1 year, from 1946 to 1947, when Richard V. Moore became the institution's third president. Even under the aegis of the Methodist Episcopal Church, lack of money remained a perennial problem for Bethune. Her greatest financial achievement for the school was a donation from Rockefeller in 1935 in the amount of \$62,000.

Educational Philosophy

Bethune's educational philosophy must be considered within the context of her biography, historical location, and social milieu. As the daughter of previously enslaved Africans who toiled to acquire property from White landowners, Bethune believed strongly in the principles of self-help and industry. Her devout religiosity and deferred dream to become a missionary in Africa explain the centrality of Christian and moral education in her curriculum. Furthermore, she was influenced by the industrial educational philosophy of her older and prominent contemporary, Booker T. Washington, who had established the thriving and successful Tuskegee Institute. In fact, she used their similarities to her advantage as she made written financial appeals to both Washington and his wife, whom she was known to address in her correspondence as "My dear Big Sister."

Like Washington, Bethune had to walk a tight-rope between, on the one hand, Southern White racists who did not want to see African Americans emancipated through education and, on the other hand, paternalistic Northern White philanthropists who wanted a skilled, but not necessarily an empowered workforce. In turn, both Bethune and Washington had to keep a pulse on the cacophony of voices and competing interests of members of their own race who wanted freedom now. Bethune and Washington both had critics who were put off by their emphasis on vocational versus professional

careers. Some critics were also chagrined by the two leaders' craftiness at hobnobbing with wealthy Whites to garner support for their respective institutions.

Bethune's primary goal to educate African American girls and young women was inspired by her early schooling experience at Scotia Seminary, which emphasized the African American female's unique burden to uplift the race. The curriculum of the Daytona Beach school emphasized the unique needs of African American girls in the early 20th century. Bethune was convinced that book learning must be complemented with solid vocational training. To fulfill their prescribed roles as future wives and mothers, Bethune believed it was crucial for young women to learn the skills necessary to become good homemakers, workers, and citizens. These skills included problem solving, creativity, a strong work ethic, and high standards for domestic duties. Her students were expected to excel not only academically, but also at cooking meals, house cleaning, dressmaking, planting and harvesting vegetables, and other "female" life skills. The curriculum focused on the three streams of English, Biblical, and industrial education; a 1910 to 1911 course catalogue exemplifies the school's industrial aim to guarantee women leaders well trained in homemaking skills and in the Christian faith.

Bethune's Legacy

Bethune died of a heart attack on May 18, 1955, at age 79, in Daytona Beach. She is entombed on the grounds of Bethune-Cookman College. Her son, one grandchild, and 11 great-grandchildren survived her. One of her most revered writings is "My Last Will and Testament." In this document, Bethune described her philosophy of living and serving her people.

Among Bethune's many legacies grounded in love, hope, and faith, she leaves two charges expressly related to African American education: a thirst for education and a responsibility to young people. Bethune believed that a thirst for education was the sine qua non for the advancement of the African American race. Bethune also saw African American adults as stewards of a world that belongs to young people. Thus, adults are charged with the awesome responsibility of inspiring youth to work to build a better world.

Bethune believed that young people should be encouraged to aspire to greatness while humbly acknowledging and addressing the plight of those who are less fortunate. Older alumni of Bethune-Cookman College recalled her references to them as beautiful African American boys and girls, as very uplifting and instilling great pride in both their heritage and identity as African Americans. Today, the college continues to bear out her legacy to educate young African Americans to build a better world.

BLACK CODES

The Black Codes originated from Slave Codes and were analogous to Jim Crow laws. They hindered the social, economic, political, and educational

progress of African Americans. Black Codes' purpose was to define the civil status of free African Americans throughout the United States. Black Codes undermined African American civil protection and excluded African Americans from public institutions including churches, theaters, and even cemeteries. Most significant, they excluded or limited African Americans' participation in equal educational opportunity.

Although many people in the United States comprehend the meaning of Jim Crow, the Black Codes are less known. Even fewer people in the United States know of Slave Codes. All three of these legal practices proscribed the civil status of enslaved Africans and free African Americans prior to and after the Civil War. Depending on the historical era or geography, African Americans were subjected to these discriminatory measures that limited their rights as U.S. citizens and as human beings. These racially discriminatory practices impacted African Americans' access to equal educational opportunity. This entry looks at the historical context of Black Codes and their impact on education.

Historical Context

During the colonial period, enslavement existed in all colonies. Slave Codes determined how enslaved Africans lived among White citizens and protected Whites' rights while relegating enslaved Africans to subordinate positions of control and discipline relative to their enslavers and to the White population in general. Slave Codes addressed every aspect of enslaved Africans' lives, including their rights in court, their interaction with free African Americans, and their ownership of property. The codes prohibited their ownership of firearms and limited or banned their education. They evolved into Black Codes, which ensured the inferior status of newly freed African Americans.

Black Codes restricted the civil status of African Americans, they existed in all states, and their depth of discrimination and implementation varied. In the South, they inhibited free African Americans' rights pertaining to the ownership of property, voting, jury duty, militia duty, and education. In the North, East, and West, they curtailed African American migration, access to churches, jury duty, voting, assembly, militia duty, housing,

theatre entrance, lecture halls, restaurants, cemeteries, employment, and education. Black Codes truncated African American civil rights and advancement. As the common school movement spread during the antebellum period, a key element for African Americans and all citizens' advancement was education.

Impact on Education

The earliest Black Code related to education was established in the state of South Carolina and addressed the education of free African Americans. Before the Civil War, all states ascribed to African Americans' educational disenfranchisement through Black Codes. Black Codes were added to state constitutions or instituted in the beginning regarding African American access to education. Free African Americans, however, deemed education as a means to advancement. One of the most important avenues for progress was access to education. African Americans found themselves excluded from the free tax-supported public developing school system or relegated to segregated education by state statute.

The implementation of Black Codes created four possible educational outcomes for African Americans. First, they were relegated to segregated education by law; second, they had access to mixed schools depending on locale; third, they were excluded from schools; and fourth, they created their own private educational institutions with or without the support of tax dollars and often through the support of philanthropic or religious White institutions. The particular outcome varied from state to state and even within states as local dynamics quickly determined African American opportunities for education.

Beginning in the late 18th century and continuing into the 19th century, states such as New York, Massachusetts, Connecticut, Pennsylvania, Ohio, Iowa, Kansas, and California either provided segregated education or no education at all for African Americans. Because a wide range of educational opportunities existed, many enslaved Africans and free African Americans secured an education. Consequently, many African Americans challenged the Black Codes.

The first legal suit to seek to dismantle de jure segregated education was *Roberts v. City of Boston*

(1849). Benjamin Roberts sued Boston's Board of Education over school segregation, which required his daughter, Sarah, to pass several White schools to get to the segregated African American school. Although the *Roberts* case failed to dismantle segregated schools, in 1855, the African American community succeeded in eradicating Massachusetts' segregated school law. Throughout the 19th century, African Americans challenged segregated education; as a result of their protests, many states, particularly after the Civil War (including Iowa, Indiana, Ohio, and Illinois), overturned de jure segregation in education.

Whereas African Americans valued education, divergent ideas in their communities concerning segregated or desegregated schools existed. The primary reason for disagreement within the African American community over what kind of educational context African American children should have, segregated or desegregated, ensued due to poor treatment of African American children in desegregated schools, the fears over the displacement of African American teachers, and the loss of control over the kind of curricular content offered in the schools. Many northern states outlawed de jure segregated schools in the late 19th and early 20th centuries. Desegregated education, however, did not last long because of some Whites' resentment and belief in White supremacy, which led to political and judicial chicanery. As a result, African American children were relegated to de facto segregated education through the primary vehicles of residential segregation, neighborhood school placement, and gerrymandering. In many states—particularly Massachusetts, Pennsylvania, Illinois, Indiana, and Ohio—the norm would become de facto segregated education. Consequently, in the 20th century, a dual system of de facto and de jure education existed across the United States.

Although there were no laws mandating segregated education, customary practices through de facto means became the norm in northern, western, and eastern states throughout the 20th century. While the National Association for the Advancement of Colored People (NAACP) mounted a legal campaign against de jure segregation in the South culminating in the *Brown v. Board of Education Topeka, Kansas* (1954) decision, de facto segregated education, the resultant discriminatory policies, was allowed to stand. After *Brown*, subsequent

legal decisions such as the *Swann v. Charlotte-Mecklenberg Board of Education* (1971), *Milliken v. Bradley* (1974), and the *Keyes v. School District No. 1, Denver, Colorado* (1973) decisions thwarted de facto segregation and implemented desegregated education. Today, many African American youth experience resegregated education.

BLACK COLLEGE REBELLIONS OF THE 1920s

During the 1920s, a wave of rebellion engulfed many of the leading African American colleges. The African American collegians of that era were in revolt against a vocational emphasis in the curriculum and against the paternalistic spirit that had characterized an earlier period in African American college education. Prompted by a larger ambition and a growing racial consciousness, they demanded a higher type of curriculum and a greater degree of control over their colleges. They turned their backs on the limited educational program of trade training and proposed to speak

for themselves and to be represented by leaders of their choice. This entry looks at the issues and outcomes of this rebellion.

Vocational Versus Academic Education

The upheaval began in 1922 at one of the most prominent vocational colleges, Florida A&M. It started as a protest against the governor of Florida, Cary Hardee, who was shifting the emphasis at the school from training teachers to training tradesmen. African American students regarded this as a plan to relegate African Americans to a subordinate status, and in response, they not only went on strike, but also burned down the Mechanical Arts Building. Similarly, at Lincoln Institute in Missouri, there was a decade-long struggle between a faction that emphasized the importance of traditional academic education and another group that stressed the need for vocational training. And at Hampton Institute, several hundred students were suspended in 1927 after demanding that more emphasis be given to academic subjects.

This aspect of the African American college rebellions was an outgrowth of a long-simmering protest against a major development in the history of African American education. Ever since the Era of Reconstruction, many White Southerners had feared that any education of African Americans beyond the vocational level would lead to increased dissatisfaction with the inferior status accorded to African Americans in the South. For this reason, many Whites in the South had bitterly opposed the academic education that northern churches had been providing for African Americans at colleges such as Fisk University, Howard University, and Atlanta University (founded 1865).

Secular philanthropists in the North recognized this; wishing to do something for African Americans, but not wishing to alienate the White South, they stressed the importance of vocational education. This was true of the Slater Fund, Anna T. Jeanes Foundation, Phelps Stokes Fund, and Rosenwald Fund, as well as true of the Southern Education Board and the Rockefeller General Education Board. It was also true of the county agents who were employed to administer the land grant programs that Congress established with the Smith-Lever and Smith-Hughes Acts of 1914 and 1917.

The secular philanthropists and county agents assumed responsibility for seeing that the recipients of their largess did not stray from the gospel of vocationalism, and in the process, they altered the course of the African American colleges and initiated a vocational phase in the history of African American higher education. In retrospect, it seems inevitable that college students, even those trained at vocational institutions, would eventually challenge this approach to subordinating their race.

Equity and Racial Pride

The African American college rebellions of the 1920s involved more than a protest against vocationalism. African American students at leading academic institutions were also in revolt. Having seen African American soldiers return from World War I, where they had been fighting to make the world safe for democracy, the African American collegians of the 1920s were determined to battle against the forces of discrimination in their own land. Many collegians were also children of the great migration. Their families had recently moved away from the rural South, and they sensed that they could now demand a more egalitarian form of education. Like many of the artists and writers associated with the Harlem Renaissance, the African American collegians also wished to foster a sense of racial identity, racial community, and racial pride.

The new spirit of protest was displayed at the nation's most prominent liberal arts college for African Americans, Fisk University in Nashville, where students took exception to the suspension of the student newspaper, *The Fisk Herald*, and to the denial of a request for a campus chapter of the National Association for the Advancement of Colored People (NAACP). They also complained about the university's sponsoring of segregated Jim Crow entertainment, and they protested against a code of student discipline that was far more stringent than the policy for White students who attended Vanderbilt University on the other side of town. To many of the students at Fisk, it seemed that their university had devised yet another plan that was intended to persuade African Americans to accept a subordinate status, to make them know "their place."

Thus, in February 1925, more than 100 men from Livingstone Hall ignored the 10 o'clock

curfew and instead sang, yelled, smashed windows, and told the faculty that they were going to keep it up "until the President's hair was white." (Scribner, 1925). According to the dean of women, "The disorderly students overturned chapel seats [and] broke windows . . . all the while keeping up a steady shouting of 'Du Bois! Du Bois!'" (Scribner, 1925). Police were called to the campus to restore order, but this precipitated a student strike of 10 weeks' duration. Eventually a new administration was inaugurated after the trustees conceded that it was impossible to operate a college without students.

Going beyond their brothers and sisters at Fisk, who demanded only that they be given a larger role in the management of their school, the faculty and alumni at Howard University insisted that an African American man should be appointed as president of Howard. This involved a break from a tradition that had led to the appointment of 11 White clergymen-presidents, but the disgruntled alumni and professors were convinced that, by the 1920s, there were several African Americans who were well qualified to lead their University. They also believed that the appointment of an African American president would combat with the impression that the African American race would never measure up, so they also demanded that the curriculum should place greater emphasis on the history of Africa and the experience of African Americans. Eventually, Mordecai W. Johnson was chosen in 1926 as the first African American president of Howard University. This choice marked a new milestone in the development of the race.

BLACK COLLEGIAN, THE

Starting out as a family publication founded in Baton Rouge, Louisiana, by a young college professor, *The Black Collegian* has become the central publication of a media company. The magazine focuses on career preparation and job seeking for African Americans. Since Hurricane Katrina damaged its New Orleans headquarters, the publication has reached its audience primarily through its Web site. This entry describes the historical circumstances leading up to the founding of *The Black Collegian* and the contemporary developments related to the publication.

Historical Background

In 1970, the civil rights movement was at its height; the arts community was enjoying wide support and growth. For many, the African American arts movement redefined what it meant to be African American. In cities like New York, Baton Rouge, and New Orleans, the arts and education communities helped to shape the leadership structure civil rights.

The African American arts movement of the 1960s paralleled the civil rights movement; whereas the civil rights movement empowered many marginalized groups, the African American arts movement empowered African American artists. LeRoi Jones (Amiri Baraka), the most vocal leader of the African American arts movement, believed that the voice, spirit, and expression of the artist was central to the African American power movement.

As the arts flourished, however, there was great unrest on college campuses: Jackson State University, Prairie View A&M University, and Kent State University demonstrations turned deadly. Resources for helping students with the fundamental skills needed for achieving success transitioning from college to career were limited. However, in New Orleans, Louisiana, a group of people active in various fields had a dream: to build a career and self-development publication that would reach African American college students and help them better prepare for finding and thriving in the careers of their choice. By focusing on their cultural and intellectual contributions, the publication would help to build stronger, healthier

communities. The group had \$3,500 to bring its dream to reality.

Leading the effort was Preston J. Edwards Sr., a young accounting professor teaching in the College of Business at Southern University in Baton Rouge, Louisiana. P. J. Edwards admits that he knew nothing then about publishing a magazine, but he had a vision that was shared by the other founders, and his brother, Lawrence Lucien Edwards, had a printing business. And in December 1970, *The Black Collegian* was first published.

Joining P. J. Edwards in building the vision for the magazine were Norbert Davidson, Edgar Edwards, Lawrence Lucien Edwards, Bill Rouselle, Benjamin M. Priestley, Kalamu ya Salaam, and Brenda Thornton.

Davidson was a successful playwright (*El Hajj Malik*—the drama about Malcolm X) and one of the founders of the Dashiki Project Theater, which formed at Dillard University in the mid-1960s. He served as the first editor. Salaam, a New Orleans native, cultural historian, and writer, was the second editor of *The Black Collegian*. He was a veteran of the civil rights movement and member of the Free Southern Theater, which was born in Jackson, Mississippi, in 1963 and through its advocates was intent on changing the political climate for African Americans in the South.

The company was founded as Black Collegiate Services, Inc. The Edwards family provided the finances for the startup; corporate recruitment advertising helped ensure the publishing schedule. During the first 20 years, the magazine grew to publish four times each year.

Contemporary Achievements

Since 1992, however, the publication has been affected by changes in society and the workforce that meant corporate downsizing: the role of affirmative action programs, the growth of the technology that has challenged media companies to embrace the Internet, and the need to develop a broader vision for an integrated media experience.

Black Collegiate Services, Inc. grew into a media company that also publishes the *NSBE Journal* for the National Society of African American Engineers, the *Journal of the National Black Student Law Association*, and *Journal of the NTA* for the

National Technical Association. It also published the *Black MBA Magazine* for P&L Publishing.

The Black Collegian is distributed on more than 800 college campuses through the career development office, student affairs, or human resource division. It is a controlled request publication; the Business Press Worldwide audits its circulation, which in 2007 was 122,000.

In 1993, P. J. Edwards attended the Stanford University Professional Publishing course and developed a plan to move the print publication to the Internet. By 1995, *The Black Collegian Online* was the first African American publication on the Internet. *The Black Collegian* controlled content and expanded its scope, frequency, and reach worldwide.

In 1997, the Minorities Job Bank, operating as I Minorities, Inc., was created as a means to provide access to many of the top corporate positions for African American college students and alumni. Twenty-seven percent of the company was sold to raise venture capital. The multicultural audience did not want to be labeled "minorities"; a conference call secured agreement to change the name to IMDiversity, Inc.

In 2005, *The Black Collegian* celebrated its 35th year. However, on August 29, 2005, the nation's worst natural disaster, Hurricane Katrina, hit New Orleans, causing damage to the offices of *The Black Collegian* and homes of staff members. Since then, the publication has been written and edited virtually using the Internet. Since Hurricane Katrina, two issues per year have been published; the staff is working to rebuild its publication schedule.

IMDiversity.com has expanded to include the Career Center and Multicultural Villages, *The Black Collegian*, and *The Black Collegian Online*. New content includes columns about transitioning from college to the real world, job searches, seasonal internships, and bloggers writing about a wide variety of career issues.

During its publishing history, *The Black Collegian* has featured articles on or written by Isaac Hayes, Nikki Giovanni, Julian Bond, Alice Walker, Ossie Davis, Gordon Parks, Sonia Sanchez, Bill Cosby, Jackie Robinson, Jesse Jackson, Arthur Ashe, Chuck Stone, Alex Haley, James Earl Jones, Barack Obama, and scores of others. Its focus has been on undergraduate,

graduate, and professional education, as well as on trade and technical education.

Edwards has continued to lead as the CEO of IMDiversity, Inc., which publishes *The Black Collegian* and operates two Web sites: IMDiversity.com and *The Black Collegian Online*. He earned his bachelor's degree at Dillard and his MBA at Atlanta University. Prior to teaching at the College of Business at Southern University, P. J. Edwards worked for Citibank in New York. While teaching, he started *The Black Collegian* and returned to New Orleans where he also did stints as vice president of the Interracial Council for Business Opportunity and regional manager of Affirmative Action for the Great Atlantic and Pacific Tea Company. He has had a long career of community service as a member of Xavier University's Business Advisory Council, Junior Achievement, the Urban League of Greater New Orleans, the Central Business District Landmark Commission, the Employment Management Association Foundation, and the Orleans Private Industry Council.

BLACK FEMALES IN COLLEGE

African American women are a heterogeneous group. They differ in ethnicity, nationality, religion, occupation, and sexuality. Their experiences in colleges, however, cannot be fully understood outside the marginalization of their gendered and racialized social locations as women who both experience and struggle against the dual oppressions of racism and sexism. Overall, African American females have consistently faced gender and racial barriers to social economic mobility. These barriers have persisted in various forms since the period of legal African enslavement, through post-Civil War Reconstruction, the civil rights era and into the early 21st century. This entry focuses on African American women's access to college in the United States and then on their experiences and status in college as undergraduate and graduate students, faculty members, and administrators.

Access to College: Race and Gender Barriers

In the context of the British colonies that would later become the United States, White males had access to college-level education by 1636. It would take 200 additional years before women, specifically White women, were permitted to enter a coeducational college-level institution. This would occur in 1837, when Oberlin College matriculated four White women for the regular college course. Three of the four graduated in 1841 and became the first women in the United States to receive AB (Artium Baccalaureatus) degrees, a degree signifying that the student did significant coursework in the European classics, including Greek, Latin, and European classical civilization.

Although there were so-called women's colleges such as Troy Female Seminary founded in 1821 and Hartford Female Seminary, which opened in 1823, none of these offered collegiate-level schooling. The first women's college to offer college-level courses for women was Elmira Female College in 1859. The confluence of race and gender barriers faced by African American women is evidenced by the fact that Alexander Lucius Twilight, who became the first African American man to earn an AB degree, graduated from Vermont's Middlebury

College in 1823. This was 27 years before Lucy Stanton Session's graduation from Oberlin in 1850 and 14 years before Oberlin became the first collegiate-level institution to admit women of any race in 1837.

Prior to the Civil War, various African American churches and organizations, including the Anti-Slavery Society, raised funds to send girls to such colleges as the New York Central College in Cortland, New York, and Myrtilla Miner's Colored Girls School in Washington, D.C., which was a secondary education school later renamed the Miner Normal School before becoming associated with Howard University and eventually, along with Wilson Teachers College, forming the District of Columbia Teachers College. Policies regarding college and university access for African Americans and for females varied from one region and state to another. Most institutions of higher learning could be found in northern or midwestern states, such as Hillsdale College in Michigan, founded in 1844. In addition, there were institutions such as Berea College, an integrated institution founded in 1855 in the southern state of Kentucky.

Historically Black Colleges and Universities (HBCUs)

The Higher Education Act of 1965, as amended, defines an HBCU as any historically African American college or university that was established prior to 1964, whose principal mission was, and is, the education of African Americans and that is accredited by a nationally recognized accrediting agency or association determined by the Secretary of Education to be a reliable authority as to the quality of training offered or is, according to such an agency or association, making reasonable progress toward accreditation.

The first three HBCUs were founded in the North: The Institute for Colored Youth (later Cheyney State College) was founded in Cheyney, Pennsylvania, in 1837; Lincoln University also in Pennsylvania was founded in 1854; and Wilberforce University in Ohio was founded in 1856. However, most HBCUs were established in Southern states during the post-Civil War period. It is during this period—due to segregation laws—that college and university access for African American females was overwhelmingly attained in Southern states.

Through the first three quarters of the 20th century, the majority of African American women and men who attended college, whether they lived in the South or the North, did so at HBCUs in the South, where the most were located, or at private HBCUs such as Lincoln University and Wilberforce Universities or public ones such as Cheyney State College (now Cheyney University of Pennsylvania).

The Impact of Legislation and Court Rulings

Legislation and court rulings significantly impacted access to postsecondary schooling for African Americans in general. The famous separate-but-equal U.S. Supreme Court ruling in the case of *Plessy v. Ferguson* (1896) affirmed the constitutionality of the officially imposed segregation based on skin color known as Jim Crow laws. When applied to higher education, schools that once were open to African American and White students succumbed to the prohibition of African Americans and Whites occupying common spaces or so-called race mixing.

The addition of graduate programs, mostly at public HBCUs, reflected three Supreme Court decisions in which the separate-but-equal principle of *Plessy* was applied to graduate and professional education. The decisions stipulated that (a) a state must offer schooling for African Americans as soon as it provided it for Whites, (b) African American students must receive the same treatment as White students, and (c) a state must provide facilities of comparable quality for African American and White students. African American students increasingly were admitted to traditionally White graduate and professional schools if their program of study was unavailable at HBCUs. In effect, desegregation in higher education began at the postbaccalaureate level.

In the 1960s, African Americans began making great strides in their entry to predominantly White institutions of higher education. In addition, as a result of the Supreme Court's decision in the *Adams v. Elliott Richardson* (1972) case, African American and White colleges in the South were required to increase their efforts of integration.

By the beginning of the 1970s, most legal barriers for the inclusion of African Americans and women in higher education—and other

areas—had been abolished. National and local governments instilled laws that ended most overt discrimination and racial segregation practices. However, these new antidiscrimination laws focused on preventing future discrimination and not on addressing the current practices that resulted from past discrimination practices. This resulted in an upsurge of more subtle demonstrations of discrimination—institutionalized racial prejudice in which actions, policies, or rules of an institution have a disproportionately negative impact on those with the least amount of economic or political power. Institutionalized discriminatory policies began to play a greater role affecting the access to higher education for African American women.

Affirmative Action

Affirmative action is purported to be one of the most effective programs used to address institutionalized racism and gender bias. It was developed as a way to level the playing field for groups that had been historically marginalized on the basis of gender or race from opportunities to develop, perform, achieve, and contribute to U.S. society. Much of the access gained by African Americans to enter predominantly White institutions was due to affirmative action admissions offices established at traditionally White colleges and universities.

In the late 1980s and into the 1990s, affirmative action came under attack. The first major challenge in higher education came in the case of *The Regents of the University of California v. Allan Bakke* (1978). Bakke was a White student who had been rejected for medical school admission. He believed that he had been discriminated against because of his skin color, although his scores were higher than those of non-Whites and females who had received admissions. In 1995, the Supreme Court reversed its legislation on affirmative action with a new policy stating that programs that gave preference to women or members of minority groups solely on the basis of race or gender were illegal and were to cease their practices.

The Undergraduate Context

The initial collegiate context in which African American females can be considered is that of

undergraduate student. Mary Jane Patterson, in 1862, became the first African American woman to earn a 4-year degree at Oberlin College.

By the end of the Civil War, over 140 African American women were enrolled as students at Oberlin College. Most of these were students in the Preparatory Department. Graduating from this department was equivalent to a high school degree, which was then a sufficient credential to become a grade school or high school teacher. By a large margin, the highest African American student graduation rate at a HBCU belongs to the all-women institution Spelman College in Atlanta, Georgia.

Some findings in the sociology of education, such as M. L. Carter's research of 2000, have reported findings that suggest that African American females who enroll in college have greater social interactions with their families, school peers, and community than those who do not. Involvement with neighborhood church services, making a connection with caring teachers, and having involved family members who steer them toward college enrollment have been identified as factors in academic persistence.

Several educational research findings of the 1990s and especially the 1980s stressed that, historically, there were and often continue to be, in some instances, factors that contributed to the lack of educational persistence for African American females in college. Overt barriers include, but are not limited to, violence based on culture and gender and discriminatory practices in the classroom that made African American women's experiences much more daunting. The experiences of African American female faculty members regularly mirror those of African American women collegians.

J. Fleming in the 1980s found that African American women on coeducational African American campuses often compromised their social assertiveness and exhibited what she described as stereotyped passive ways of gaining recognition and control. They were less likely to speak out in class or to assume leadership positions in campus organizations. Even women with excellent academic records tended to underestimate their academic abilities and downplay their professional aspirations. Fleming traced such self-degrading actions to the traditional view that it is all right for a woman to be intelligent as long as no practical

use is made of that intelligence. She concluded that African American female students achieved best at African American private colleges and experienced the fewest gender biases and racial barriers at the African American women's colleges: Spelman College and Bennett College for Women.

In contrast to Flemings's findings, W. Allen, during the 1990s, reported that African American women on HBCU campuses had higher retention rates, grades, graduate enrollment, and self-esteem than African American females attending predominantly White institutions (PWI)—despite the fact that they had poorer academic backgrounds and lower socioeconomic status than African American women attending PWIs. Allen suggests that African American females in college seem more concerned with traditional expectations of what was referred to as ladylike behavior than White females in college. Almost all felt that their families had high aspirations for them. They valued financial success and their perception of good job more highly than White men and women did, but they also had a strong sense of racial and social consciousness.

Some educational studies point to the impact of gender bias on the ways in which female students perceive their power over personal decisions. They found that regardless of their gender role attitudes, gender concentration of their academic major, or ethnicity, women who perceived a greater degree of gender bias in their undergraduate experiences also reported lower self-efficacy. Further, the researchers found that African American and other minority women at predominantly White institutions perceived a greater amount of gender bias than did White female students.

African American Female Graduate Students

A 1985 College Board study reported that women increased their share of degrees at all levels, except the master's. C. Carroll's analysis is that this imbalance of representation tends to lead toward African American women feeling isolated in higher education. This isolation begins during the undergraduate years and continues into professional experiences. She states that African American women in higher education are isolated, underutilized, and often demoralized. They note the efforts made to provide equal opportunities for African American men and White women in higher education, while they

somehow are left behind in the work of both the African American and feminist movement.

Twenty-two years after the College Board's study, the *Journal of African Americans in Higher Education* reported in 2007 that African American women were leading the way in earning master's degrees. In the 2004–2005 academic years, African American women earned 35,100 master's degrees compared to 13,965 for African American men. Thus, African American women accounted for 71.5% of all master's degrees awarded to African Americans. Overall, in 2006, female students made up 59% of graduate students and 65% of those at master's-level institutions. Among all females, African Americans represented 15% of this total; comparatively, non-Hispanic Whites were 71% of the total, Hispanic-Latinas 8%, Asian-Pacific Islanders 5%, and Native Americans-Alaskan Natives 1%.

The PhD is the primary credential for tenure-track faculty at higher-education institutions. The rate at which doctoral degrees are achieved is a good indicator of the pool of candidates who will be available to compete for faculty and administrative positions.

African American women face significant challenges in graduate school. The authors of a 1997 study that focused on the impact of race and gender on graduate study concluded that a student's gender and racial background influence his or her experiences in graduate school and that race appears to be more salient than gender in influencing whether students had positive or negative experiences. Mentoring, advising, and departmental environments were the top concerns among the study's participants. As a group, African American women appeared to be the most isolated and dissatisfied. Studies in the sociology of education suggest that African American women are generally found to be the most isolated group of students on predominantly White campuses. The results of this study suggest that this is true even for African American women at the doctoral level.

The so-called double-minority status, being both female and African American, may produce complexities that other students who were not African American women did not encounter. African American women were less likely than White women or African American or White men

who participated in the study to have mentors or advisers with whom they reported working closely during their doctoral study. As a cohort, these women were doing well academically—achieving good grades, passing their qualifying exams, and working on dissertation proposals and dissertations. Socially, however, they were more isolated than were the other students. The African American students, both female and male, often found individuals outside of their departments to fill the gaps that are traditionally filled by faculty members within academic units.

African American Females on College Faculties

Low academic status or rank is a persistent problem for African American women on college faculties. In addition to low faculty rank, African American women are far more likely to be found teaching undergraduate courses as opposed to graduate courses.

African American female college students outnumbered African American males on college campuses during the last quarter of the 20th century. The reverse was true for faculty appointments. African American men outnumbered African American women in the faculty ranks. African American women were also less likely to receive tenure and more likely to be assigned to nontenure track appointments. This pattern not only existed at historically White institutions, but also existed at some HBCUs. The Thurgood Marshall College Fund found that African American female faculty members at HBCUs, like their counterparts at traditionally White colleges and universities, dominate the lower ranks.

There are indicators to suggest that the educational experiences of African American female students are enhanced when they have more female teachers and administrators. Such relationships are important for the recruitment, enrollment, retention, and ultimately, graduation rates of African American female college students. African American female faculty members seem to fare better in terms of salary levels at schools with female presidents or chief academic officers. Eighty-three percent of the public HBCU faculty saw the need for leadership programs for female students at their institution.

African American Females as College Administrators

From their inception, most HBCUs were led by White males. Correspondingly, it took decades before even women's colleges—Bennett and Spelman—would welcome African American women as faculty members and administrators.

In the context of administrative professionals, the number of African American females has increased in the United States, but not proportionally with other cultural groups in the nation. Considerable research has been conducted related to social factors affecting African American female leadership aspirations in university settings. Included among these are studies of the psychological predictors of college women's leadership aspirations that report findings of the need for connectedness and affirmation.

Other studies suggest that women desire managerial roles less than do men. This is thought to be due to the multiple demands of family roles, church responsibilities, and other organizational duties. Debates in this area have argued that it is not that African American women desire managerial roles in the ivory tower to a lesser degree than do men; it is possible that there is a greater cultural focus on community service and family connectedness for females who place a priority on jobs for social uplift such as nursing and teaching. A lack of educational opportunities has resulted in segregated jobs that are traditionally low paying in areas such as service and clerical support. Less than 30% of these service and clerical support positions are in the higher-paying managerial positions.

Studies grounded in African American feminist thought that focus on African American women's work have pointed to emerging patterns illuminating race and gender inequality and occupational niches, such as the attention devoted to African American women domestic workers. Examining salary distribution for faculty and administrators at HBCUs, additional research by the Thurgood Marshall College Fund shows that among 20 HBCUs where male professors earned more than female professors, four had female presidents. Of the 15 institutions where female full professors earned more than male full professors, 12 (80%) had a female as president or chief academic officer.

When the overall rate of African American leadership of HBCUs is taken into consideration, the proportion of college presidencies held by African American females is only 10%. However, even 10% represents an increase over previous periods. These increases suggest that governing bodies of colleges and universities are increasing their efforts to expand their presidential applicant and candidate pools to include more qualified African American women and other minority male groups. However, other studies suggest that upon closer examination, the growth of African American female presidencies can mostly be found at 2-year colleges, with few being found in tier-one research universities.

In periodic studies on U.S. college presidents conducted by the American Council on Education, the 2007 findings state that the presidents of doctoral granting universities are predominantly White and male, hold a PhD, claim education or higher education as their field of study, ascended to the presidency from positions as chief academic officers or provosts, and did so at the same institution at which they served as provost. Four-year public college and university doctoral-granting institutions are recruiting and hiring new presidents who have not previously been university presidents; however, this recruitment is taking place slowly.

To address this matter, there exists a mentorship program for potential and new presidents aimed specifically to assist African Americans, women, and other minority male groups. The American Association of State Colleges and Universities, which represents over 400 public institutions, sponsors the Millennium Leadership Initiative. The Millennium Leadership Initiative is designed to help participants determine if the presidency is a realistic career goal and provides skill building and networking opportunities to assist in career advancement. Since its founding, 19 African Americans of the 181 prior participants have become presidents, and 18 others have become provosts and vice presidents for academic affairs as of March 2008.

Outlook

Gender studies are critical to the curriculum at HBCUs. Although there has been such a preoccupation with race, insufficient attention has been

paid to gender. There is limited theoretical information prior to the 1970s about African American women in education. Discussions mostly address African American males or White women. M. R. Howard-Vital provides a literature review of African American women in higher education during the 1980s that includes greater theoretical research to include—in addition to J. Fleming—L. M. Perkins, A. K. Burlew, and C. Carroll. In essence, African American women were encouraged to go to school to uplift the race.

Analysis of undergraduate schooling, caring, and self-esteem provides a platform on which to explore career choices in higher education for African American women. Several studies find that African American females are often underutilized and demoralized in academe and that such demonstration of under appreciation leads to feelings of isolation. Studies on gender differences and factors that influence outcomes in college indicate that while colleges and universities are called on to develop practices that foster a climate of mutual learning opportunities for male and female students—regardless of cultural difference—this has not been the case in the employment of such practices.

Suggestions for additional study include reviewing and compiling institutional data comparing the professional experiences of women and men—fully disclosing institutional salary data, creating productive venue for the telling and hearing of faculty stories, creating a joint center for the study of gender issues in the African American community, and examining the academic confidence and social assertiveness of African American women.

BLACK FEMALE TEACHERS

The contributions of African American female teachers have left an indelible mark on U.S. educational institutions, teaching philosophies, political activity, and larger educational agendas of African American communities. Negotiating the triple oppressions of race, gender, and class, African American female teachers developed distinct teaching strategies underscored by a mission of racial uplift, feminist stances, and commitment to social change. This entry details their historical and contemporary presence in U.S. education and African American communities, as well as their formidable leadership in social movements critical to collective African American empowerment. Several notable African American female teachers are highlighted within this entry as well.

The Colonial and Antebellum Period

The historical record on African American education documents how inequality and racial oppression fueled the greater pursuit of education within African American communities. It also demonstrates the underlying mission of racial uplift in the work of African American women teachers. This mission, as chronicled in first-person narratives and historical research and scholarship emphasizes the connection of education to African American

liberation. The pursuit of liberation was understood as incorporating elements of physical manumission, economic autonomy, the pursuit of sociopolitical freedom, and spiritual self-determination as education enabled one to read the biblical scriptures. Education was highly valued, and those who were educated, formally and informally, felt a deep and abiding duty to educate the race. Teaching, therefore, was understood as a responsibility and greater service to the race, with African American women bearing a large portion of the duties. Moreover, the focus on racial uplift through education motivated African American families to seek educational opportunities for their daughters as well as for their sons.

Before the Civil War

The antebellum period found African American women teachers working in a variety of capacities across the Northern free states, border states, and the South. The sociopolitical climate across these locations also dictated where and how African American female teachers could teach. For example, African American female teachers in Philadelphia taught African American children in schools founded by the Society of Friends and the Philadelphia Society for the Abolition of Slavery. African American women teachers, in some instances, established common schools for African American children, with some teaching White children as well. These schools were often in the homes of African American female teachers.

The presence of African American female teachers in classrooms across the North, however, was often contested by White-run school boards, as was the case in Boston and New York City. African American Bostonians, like African Americans in New York City and other northern cities, grew increasingly apprehensive about exposing children to teachers they deemed as racist and underqualified. African American parents in these communities launched concerted efforts to secure African American teachers for African American schools. The push for African American teachers served as a rallying point and strategy across African American communities seeking educational equity. Thus, the fight for African American teachers was more readily remedied than the larger fight for desegregated schools, and one continued into the

post-Reconstruction period. African American women teachers were among those selected to work in these schools.

Against the Codes

In the antebellum South, clandestine schools run by African American female teachers came into existence with the passage of legislation in the early 1830s that prohibited literacy instruction of enslaved Africans. In some urban locations such as Richmond, Charleston, and Savannah, African American women teachers who operated schools prior to the passage of Black Codes continued to teach both free and enslaved Africans. Although clandestine school instructors including a teacher known only as Miss Deaveaux, Julian Froumountaine, and Milla Granson are inscribed in the historical record, it is important to note that countless other African American females risked their lives secretly teaching by cover of darkness on Southern plantations. The proliferation of these African American female-headed clandestine schools, also termed *native schools*, as noted by historian James Anderson, remained virtually unknown to White authorities until after the Civil War.

Although common school education was difficult to obtain for Northern African Americans, pursuit of secondary and higher education goals was even more challenging. To some extent, African American nuns filled the demand for African American schooling in the pre-Civil War era. In Baltimore, African American nuns of the Oblate Order opened a secondary school for African American girls. The St. Frances Academy for Colored Girls was founded in 1829. Similarly, The Sisters of the Holy Family, a New-Orleans-based order, opened a school for girls in 1852.

A few notable African American women teachers received instruction at Oberlin College, which graduated the first African American female baccalaureate degree recipient, Mary Jane Patterson, in 1862. Patterson and other Oberlin alumnae, including Fanny Jackson Coppin and Lucy A. Stanton Day, were among a growing contingent of Northern African American female college and normal school graduates seeking teaching positions in the South during the period preceding and following emancipation. Despite their training, many African American female teachers faced

discrimination by agencies, both private and the federally funded Freedman's Bureau, which attempted to limit their presence. Among such agencies was the American Missionary Society, which as noted by historian Linda Perkins, orchestrated blatantly racist practices and policies targeting African American female teachers.

Northern Women Go South

Motivated by a collective mission of racial uplift, many Northern African American women teachers headed South to participate in the campaign for racial uplift and betterment. These teachers, however, were faced with a myriad of challenges across Southern locales. Many taught large, multi-age, and multiability groups of students in dilapidated schoolhouses and churches. Northern African American women teachers also encountered deplorable living conditions, to which people of their regional and class backgrounds were often unaccustomed. These teachers also encountered class and language differences between themselves and newly emancipated African Americans.

Charlotte Forten, for example, ventured from her comfortable middle-class surroundings in Philadelphia to the remote South Carolina Sea Islands. Forten was among many Northern-born and -raised African American women teachers who heeded the call to teach for purposes of racial uplift. Forten's narratives reveal some difficulty adjusting to the remote location, language, people, and customs, yet they detail a deeply ascribed commitment to her teaching mission. Her experiences also highlight that some class, cultural, and phenotypical distinctions existed and surfaced as points of tension between Northern African American female teachers and newly freed African American masses they sought to uplift.

Postwar Expansion of the Teaching Ranks

The years immediately following the Civil War were pivotal in the development of African American common and normal schools and institutions of higher education. The establishment of schools and eradication of illiteracy (that some scholars estimate included 95% of the Southern African American population) became a priority among newly freed African Americans across the

South. This time period also marked the mass exodus of Northern White women teachers, who by 1870 represented an unwanted Northern presence to Southern Whites.

Teacher Preparation

The growing need for teachers led to the growth and development of African American normal schools, county training schools, African American land grant colleges, and missionary colleges. The establishment of African American teacher training demonstrates the pivotal role African American female teachers played in African American educational agendas from within and outside African American communities. Constituencies exerting influence on African American teacher education understood that access to African American female teachers provided a powerful tool in African American liberation or African American subjugation.

Among Northern missionary societies and some African Americans, programs emphasizing classical traditions were needed to prepare African Americans for leadership, with another segment of African Americans critical of apolitical and culturally irrelevant educational models. For Northern industrial philanthropists and Southern planters, industrial education models supported the development of an apolitical labor force. Despite their ideological differences, the varying constituents all believed that the social, political, and economic fate of future generations rested in the work and training of African American female teachers.

African American female teachers were instrumental in establishing training to meet the needs of Southern African American populations. Although their missions were impacted by larger ideological factions, African American women teachers and school founders crafted curricula and schools with specific missions informed by the pragmatic needs of African American communities. With the motto of "heed life's demands," Fanny Jackson Coppin, for example, inspired a generation of African American teachers. Coppin began her teaching career while an Oberlin student, providing literacy instruction to newly freed African Americans in night school classes. Coppin relocated to Philadelphia, where she headed the Quaker-run Institute for Colored Youth (now Cheyney State University). The position made

Coppin the first African American woman to head an institute of higher education, for the school provided high school and normal school courses. A formidable presence in teacher education, Coppin emphasized principles of self-help, hard work, economic autonomy, and racial uplift through communal efforts. Coppin developed teacher training methods to prepare Northern African American female teachers for work in rural communities with limited economic resources, stressing aspects of hygiene, health, and preventive medicine.

Curricular Models

Although teacher preparation formed a large portion of her institutional agenda, Coppin established one of the first industrial education departments that trained students in trades that included secretarial sciences, masonry, tailoring, and domestic sciences. Coppin retired in 1902 and traveled extensively with her husband, the Reverend Levi Jenkins Coppin, working closely in missionary duties. In 1926, the Colored High School of Baltimore was renamed in her honor and is now known as Coppin State University. Coppin's work illuminates how African American women teachers integrated larger social and economic goals into their teaching missions.

The tremendous need for African American teachers highlights the complex underpinnings of African American educational agendas at the conclusion of the 19th and beginning of the 20th centuries. Educational institutions became the testing grounds in the fight to control African American masses through decidedly oppressive social, political, and economic strategies. The Hampton-Tuskegee model, supported by Northern industrial philanthropists and Southern planters, emphasized vocational training for teachers and students. The aims were further executed and extended through the establishment and management of Jeanes teachers and Jeanes supervisors whose training and education was funded by Anna T. Jeanes and later the Anna T. Jeanes Foundation, which existed from 1907 until 1968.

Modeled after Virginia E. Randolph, an African American female teacher from rural Henrico County, Virginia, Jeanes's teachers assisted in the supervision, establishment, and maintenance of rural Southern African American schools. Randolph

and hundreds of African American female teacher supervisors from Maryland to Texas traveled across rural locales performing a variety of duties including overseeing the implementation of industrial education curriculums and supporting local teachers in assisting students, families, and community members with issues of health, sanitation, cooking, canning, sewing, and gardening. Jeanes' teacher supervisors assisted in community fund-raising to support African American schools, including the collection of matching funds to supplement the Rosenwald Fund dollars supporting the building of rural African American school-houses. The work of the Jeanes teachers demonstrates how African American female teachers were instrumental in organizing parents in fund-raising efforts for school improvements.

Northern philanthropic contributions shaped not only the direction of teacher training but also the curricular orientations of African American schools. African American female teachers were thus challenged to strike a balance, a delicate one at best, as philanthropic dollars followed industrial education. Curricular orientations determined not only institutional aims but also institutional solvency. African American female teachers founded their own schools to supply African American teachers for Southern regions.

School Founders

Several African American women founded schools that eventually became teacher training institutes. Lucy Craft Laney opened a school in Augusta, Georgia, that, contrary to the emphasis on vocational training at most African American teacher training institutes, instructed students in a liberal arts curriculum. Her protégées, Mary McLeod Bethune and Charlotte Hawkins Brown, later founded their own teacher training schools. In 1904, Bethune founded Daytona Educational and Industrial Training School for Negro Girls, an industrial arts-based normal training school located in Daytona, Florida. The school later became a coed institution, Bethune-Cookman College.

Brown started Palmer Memorial Institute in North Carolina as an agricultural and vocational training school. Although funders emphasized such training, Brown intentionally provided students a rigorous academic program. The decision to do so

presented a constant challenge in securing funding sources. Throughout her 50-year presidency, the school evolved into well-respected elite preparatory boarding school, drawing African American middle-class students from across the United States. Under Brown's leadership, the school continued to offer a strong academic program with an emphasis on the arts and training in social propriety.

It is also important to note that the increased need for African American female teachers in the South coincided with the rapid feminization of the teaching profession across the United States. Based on widespread social constructs of gender, female teachers were thought to have dispositions suited toward work with children because of the belief that they were nurturers. Male teachers were ascribed qualities befitting of administrative roles as principals and school administrators. Feminization of teaching also occurred because female teachers were paid significantly less than their male counterparts. As female teachers across the country could not marry and hold their positions, school authorities paid women at substantially lower rates using the rationalization that single women were not responsible for dependents.

The 20th Century

For African American female teachers, the feminization of the profession translated into even lower wages due to racism and gender discrimination. By 1910, African American female teachers comprised two thirds of the African American teaching force. African American female teachers in the South fared even worse as their salaries were underfunded by White school boards and subsidized by economically strapped African American communities. By the 1940s, African American teachers in the state of North Carolina, for example, had credentials that exceeded that of White teachers. Yet, as was the case across the country, their salaries were substantially lower, with African American female teachers earning salaries one fourth to a half of White females and males. Some historians suggest that Southern districts colluded with developers of the National Teacher Exam as a means of ensuring that African American teachers would score lower and that scores could then be used as a measurement supporting teacher pay scales.

In the North, school districts were slow to grant African American teachers contracts or to offer high school placements. The majority of Northern African American female teachers taught in elementary schools in almost exclusively African American neighborhoods. These teachers' tenuous status was also demonstrated in their limited contracts, which were often granted on a yearly or probationary status. African American female teachers in western states faced discriminatory hiring practices as well. For example, the first African American female teacher in the Seattle Public Schools was not hired until 1948.

Despite these income disparities, African American female teachers comprised a substantial portion of the African American middle class by the 1950s. Court-mandated school desegregation efforts, however, proved a blessing and a curse as African American teachers were dismissed or displaced at rates disproportionate to White teachers. By the mid-1970s, it is estimated that the loss of African American teaching jobs resulted in a loss of over \$240 million from the African American community.

Involvement in Social Movements

African American female teachers, through their teaching missions and involvement in social movements, were forerunners in the development of African American feminist thought. Among African American female teachers who founded educational institutions, for example, curricula were often underscored by an awareness of African American women's precarious social, economic, and political positions. Thus, while their course offerings balanced industrial and classical models, African American female teachers often had the specific needs of working-class and poor African American women in mind.

Teaching Self-Sufficiency

Notable African American female educators such as Bethune, Nannie Helen Burroughs, and Anna Julia Cooper were outspoken supporters of education that taught self-sufficiency, hard work, modesty, and Christian principles. Burroughs, for example, opened the National Training School for Women and Girls in 1909 with the support of the

National Baptist Convention. The Washington, D.C., school offered a curriculum in domestic arts, sewing, cooking, secretarial sciences, cosmetology, and teaching. An ardent spokesperson for African American women's status, Burroughs used her status to lobby for livable wages for African American women, who were often the heads of households.

Her concern for African American women was far reaching, as Burroughs' school attracted girls from Africa and the Caribbean. Burroughs and her contemporaries—including African American educators Charlotte Hawkins Brown, Bethune, and Mary Church Terrell—incorporated a global concern for African American women into their missions through study groups and leadership in national and international African American women's clubs. Bethune headed both the National Association of Colored Women's Club and the National Council of Negro Women, both umbrella organizations for African American women involved in the club movement.

Cooper dedicated the majority of her 104 years to racial uplift in her roles as teacher, principal of Washington, D.C.'s, prestigious M Street School (later known as Dunbar High), and president of Frelinghuysen University (which was housed in Cooper's home). She was equally committed to the pursuit of her own educational goals, as she earned a doctorate degree at the age of 65 from the University of Paris. Cooper published *A Voice from the South: By a Black Woman of the South* in 1892, a collection of essays on African American women's social, economic, and political positions. The book also includes essays detailing African American women's need for vocational skills to control their economic destinies, a departure from the views of her male contemporaries who neglected the particularities of African American women's experiences.

Civil Rights

African American female teachers countered discriminatory practices of educational institutions and professional organizations by forming their own. When denied membership in the National Education Association (NEA), African American teachers established the National Association of Teachers of Colored Schools in 1907. The organization, which eventually merged with the NEA,

held annual conferences and regional meetings for professional development. These organizations provide yet another example of African American teachers creating professional niches to meet their professional needs and to impact the larger mission of educating African American students.

Although scholars debate the nature of African American women teachers' roles in social movements, most notably the civil rights movement, there are countless examples of African American women who took activist stances, both publicly and behind the scenes. By the late 1930s, African American female teachers actively participated in organized assaults on Jim Crow segregation, with salary disparities serving as a rallying point. The consequences for political activism among Southern African American female teachers were steep.

Districts across the South required African American teachers to sign loyalty oaths prohibiting membership in the NAACP. Southern school authorities were not above scanning NAACP membership rosters for names of African American teachers' offices and memberships. Aline Black (Norfolk, Virginia, 1939), Viola Louise Duvall (Charleston, South Carolina, 1944), and countless other African American female and male teachers were fired, physically threatened, and, in some instances, socially alienated for their willingness to be plaintiffs in landmark cases. Teacher Harriette Moore was killed in a bomb blast, alongside her husband, also a teacher and a leader in the Florida NAACP. In the decades following her dismissal from the Charleston Public Schools, Septima P. Clark sued and won back pay and compensation. Clark lost her position as a result of her leadership position in the Charleston NAACP.

Despite these threats, African American female teachers such as Clark participated in the foreground movement for civil rights as active protestors and organizers. Clark taught at the Highlander Folk School, teaching adult literacy for civic participation. Still others participated behind the scenes as teachers and supporters of African American youth in civil disobedience. African American female teachers contributed money to support African American teachers who had been fired for political activism. These actions demonstrate how African American female teachers extended teaching beyond the classroom.

Contemporary Times

African American female teachers still comprise the majority of the African American teaching force, which has been substantially decreased by retirement, increased educational and career opportunities for African American women outside of teaching, and an increase in teacher testing, which deters African Americans from entering teaching. Today, African American teachers comprise approximately 6% of the nation's public school teachers. African American women teachers work in a variety of contexts including K–12 urban, rural, and suburban settings, as well as in colleges and universities.

Their presence across teaching contexts, as highlighted in research and scholarship on African American female teachers, has been both welcomed and contested. African American female college and university faculty at PWIs continue to face acts of discrimination on the part of students, colleagues, and administrators. Despite their decreased numbers, research and scholarship on contemporary African American women teachers attest to their unique pedagogical approaches, including culturally relevant and responsive teaching, political activism, and active involvement in the evolution of multicultural education.

Although the promises of equitable educational opportunities for African American students remain woefully unfulfilled, contemporary African American women teachers, as their teaching foremothers, continue to seek improved educational opportunities for African American youth. For some African American female teachers, such as Marva Collins (founder of Chicago's Westside Preparatory School) and Dr. Lorraine Monroe (founding principal of Central Harlem's Frederick Douglass Academy), dissatisfaction with unchallenging curricula and low expectations for African American students have inspired them to found inner-city schools.

The impact of African American women teachers' pedagogical and leadership styles is also evident within school reform efforts. The methods of Houston-based teacher Harriet Ball, for example, became the model and inspiration for the Knowledge is Power Program. As such, Ball and Monroe, among countless other African American female teachers, have established professional development and leadership programs to further

their mission of improved educational opportunities for African American students.

Themes of racial uplift, community connections, activism, social justice, and leadership development around African American educational issues continue in the work of contemporary African American female teachers. As African American women and mothers, many contemporary African American female teachers are painfully aware of the continued legacy of racial injustice, economic oppression, and educational inequities imposed on African American students. Recent research on African American women teachers highlights the ways in which they connect school, community, and culture in their classroom instruction. For many of them, culturally relevant and responsive pedagogical approaches—as illuminated in the scholarship of Michele Foster, Geneva Gay, and Gloria Ladson-Billings, informed by their own cultural awareness—function as a basis for improving student performance, establishing high expectations, and raising social consciousness among youth. Teaching remains a vehicle for imparting culturally based ideas, communicative practices, values, and behaviors. As a result, African American women teachers continue to perform multiple roles of teacher, cultural mediators, activists, advocates, and leaders in schools and communities.

BLACK-JEWISH RELATIONS

Since the colonial period, and especially in the 20th century in the United States, African Americans and Jews have forged a strong political relationship grounded in the two community's common desire for equality in U.S. society. Most celebrated in the mid-20th century civil rights movement, the African American–Jewish alliance trumpeted democratic pluralism and

helped to define the United States as a nation committed to protecting its most marginalized citizens.

The relationship between African Americans and Jews suffered from essential differences between African Americans, denied even the most basic rights until Reconstruction, and Jewish Americans, who enjoyed rapid social mobility within a generation of their arrival in the United States. In the United States, Jews, at several times and places, embraced the dominant racial hierarchy that afforded them both power and privilege while African Americans, whether in the scripture of some church teachings or in the pronouncements of African American nationalists, advanced classic anti-Semitic epithets. This entry looks at the history of this relationship, a topic that has reflected themes in a variety of African American educational venues: in the religious teachings of the church, academic teaching within the higher-educational system, and perhaps most important, the informal educational venues created when African Americans and Jews engaged one another in various social protest movements.

The 19th Century

In the colonial era, no particular relationship existed between Africans and African Americans, who arrived in the British-controlled territories enslaved, and U.S. Jews, who numbered just 2,500 by the time of the Revolution. A few U.S. colonial Jews engaged in the trade of enslaved Africans, whether as owners and traders in the South or as wholesale merchants in enslavement-based economies of the North. Especially after the Nation of Islam published *The Secret Relationship Between African Americans and Jews* (1991), accusing Jews of complicity in U.S. enslavement, scholars of the U.S. Jewish experience have mined the primary sources and determined that Jewish involvement in the trade of enslaved Africans proved disproportionately small and that Jewish critics often used the enslavement argument to mask deeper anti-Semitic motives.

In the mid-19th century, about 100,000 central European Jews immigrated to the United States, with some creating Jewish communities in the South. Self-employed as owners of retail shops, these Southern Jews shared an ambivalent relationship

with African Americans in the decades after emancipation. At once, they demonstrated a desire to strengthen ties with the African American community just as they enjoyed White privilege and feared anti-Semitic backlash from a non-Jewish White community that far outnumbered them. Historians note that Jewish shopkeepers extended credit to African American customers in times and places where no other Whites did. Similarly, Southern Jewish mercantile owners permitted African American customers to try on clothing before they purchased, a courtesy rare among other White Southerners.

The 20th Century

The turn of the 20th century brought the high-water mark in both cooperation and alienation within the African American-Jewish relationship. In 1909, African American intellectual and civil rights pioneer W. E. B. Du Bois joined U.S. Jews Joel and Arthur Spingarn to form the National Association for the Advancement of Colored People (NAACP), which, along with its Legal Defense Fund, anchored the modern struggle for racial equality. By focusing largely on the U.S. judicial system, the NAACP could leverage the Jewish community's strong affection and experience in legal matters against a Jim Crow segregation system that challenged both African American and Jewish conceptions of U.S. democracy.

Civil Rights Movement

In the most celebrated moment in the history of the African American-Jewish relationship, Northern Jewish civil rights activists joined the modern civil rights struggle in disproportionate numbers, offering substantial political and financial support for the work of Dr. Martin Luther King Jr. and others. The Student Nonviolent Coordinating Committee (SNCC) enjoyed widespread Jewish support, especially during Freedom Summer when hundreds of Northern Jewish college students journeyed to the South in an impressive interracial movement for civil equality. Tragically, Jewish activists Andrew Goodman and Michael Schwerner and African American civil rights worker James Cheney were murdered in Mississippi as they began work registering African American voters.

Southern Jews, though, rarely joined the African American-Jewish alliance. Fearful of retribution from angry Whites, most pressed for a gradualist approach to racial equality. Jewish residents of small towns, who often owned local mercantile stores, faced boycott threats from both sides of the civil rights battle. In cities such as Atlanta, outspoken Jewish civil rights activists such as Rabbi Jacob Rothschild endured death threats and synagogue bombings.

The African American-Jewish alliance faced its greatest test in the mid-1960s, when Lyndon Johnson's signature on the landmark Civil Rights and Voting Rights Acts inspired a Jewish retreat from the movement's forefront as well as African American backlash against what some considered Jewish liberal paternalism and gradualism. The urban crises and civil uprisings pitted Jewish apartment and business owners against African Americans angry about the White and Jewish exodus from the cities.

Black Power

Ironically, the late-1960s political turmoil masked a powerful strengthening of the African American-Jewish alliance on entirely new terms. Even as most national Jewish organizations condemned the anti-Semitic undertones of the Black nationalist movements, many Jewish leaders advised against overreaction. Some empathized with African American frustration, while others believed it a temporary phase in the longer struggle for interracial cooperation. The Black power-inspired emphasis on strengthening ethnic identity could be seen in the growth of U.S. Zionism and of the Soviet Jewry movement, as well as a larger Jewish religious revival.

Attempts at interracial dialogue faltered in the last third of the 20th century as more African Americans identified Jews with the attitudes and political views of the White majority. U.S. Jews, for their part, took particular offense at the vitriolic anti-Semitism of Nation of Islam leader Louis Farrakhan and African-centered academics such as Leonard Jeffries. Conflicts over the nature and limits of affirmative action programs, as well as highly publicized comments made by former presidential candidate Jesse Jackson and former UN ambassador Andrew Young, extended

the era of African American–Jewish distrust into the 1980s.

In the early years of the 21st century, African Americans and Jews maintain a large measure of social isolation and only limited political cooperation. Expressions of African American anti-Semitism remain rather limited in an era defined more by ethnic separation than by the coalition-building of an earlier time.

BLACK MALE ACADEMIES

African American male academies—single-sex, single-race schools within the public system—were proposed in the late 1980s as a possible solution to the poor academic record of young African American males in many urban areas. Although the original wave of such schools foundered in legal action, modified versions have prospered, and revised laws have opened the door to a new debate about this option. This entry explores the history of these academies.

The Proposal and Its Rationale

Following *Brown v. Board of Education, Topeka, Kansas* (1954), African American activists and educators believed that desegregated schools would

increase the likelihood that African American children would have equal access to a quality education. But not all African American activists were in agreement with this assertion. With the emergence of the Black power movement, several educators and activists maintained that school desegregation had done little to improve the life chances of African Americans and in fact might have done more damage. Certainly, such debates have persisted, with African Americans still grappling with questions about the merits of desegregated versus segregated schooling. In the 1980s, similar tensions surfaced when several urban metropolitan school districts proposed to create schools specifically for African American males—also called Black male academies.

During the late 1980s, several urban school districts across the United States developed district and community-based task forces to analyze the educational conditions of African American males, as well as propose and implement interventions to address their specific needs. For example, Milwaukee Public Schools, one of the districts at the forefront of such an effort, developed a report that highlighted the dire statistics of African American male achievement. The report cited that 81% of Milwaukee's African American male population attained less than a C average, and 50% were suspended; from 1978 to 1985, African American males made up 94% of the districtwide expulsions. Several other districts such as Detroit and New York School City schools cited similar statistics.

The proposed solution by many districts for addressing such deleterious outcomes was to open Black male academies. The belief among advocates for Black male academies was that a specific curriculum, pedagogy, and school structure would best serve the unique needs of African American males. However, one of the more controversial aspects of the academies was that such schools would separate all of the African American male students within one setting. Opponents to Black academies cited gender exclusivity and segregation as the primary reason for not supporting the opening of these schools.

For example, proponents of school desegregation saw the opening of separate schools for Black male academies as a major setback to the political efforts of the civil rights movement to desegregate schools and society. Advocates for Black male academies

indicated that the failures of desegregation were apparent with the dire statistics of African American males and that schools and districts needed to actively seek solutions that would change the social and educational conditions of African American males. Some scholars and educators questioned whether the creation of this kind of school could effectively address African American male achievement challenges. They also maintained that there had not been much research to support the claims made by the proponents of Black male academies.

Other challenges came from the American Civil Liberties Union and from the National Organization for Women—who asserted that the opening of Black male academies was a violation of Title IX, the Educational Opportunities Act—due to the gender exclusivity of such schools. In fact, in 1991, when several Black male academies were close to opening their doors, the Detroit, Michigan, case of *Garrett v. Board of Education* (1991), the court concluded that Black male academies—if opened—would be in violation of state laws in Michigan, the Equal Opportunities Act, and the Fourteenth Amendment. The precedent of this case pushed several other school districts to refrain from opening single-sex schools.

Modified Approaches

Although these schools were forced to move to a coeducational model, they continued to implement policies and practices to specifically meet the needs of African American males. One of the more common practices was the hiring of African American male teachers and staff who could work with African American male students. The premise behind hiring African American male teachers was to provide African American male students with positive role models to help motivate them to succeed in school and society.

Another common feature of these schools was to implement a school curriculum that could address the unique cultural and historical backgrounds of African American males. In addition, such schools often provided programs during non-school hours to address various social needs of the African American male. Many of these schools are still in existence with varied degrees of success.

In recent years, the debate has surfaced once again about how best to educate African American

males. A number of school boards and districts have developed community-based task forces to target the educational and social needs of African American males. In addition, some of these districts have even worked to open all-male academies as a primary intervention. Such schools have not received as much legal backlash due to the U.S. Department of Education's recent amendments to the Education Opportunities Act—Title IX, which now provides certain contingencies and exemptions to allow single-sex schools to operate. The first contingency is that school districts provide a substantially equal school that is single sex or coeducational. The new regulations also make charter schools completely exempt—allowing for them to operate on a single-sex basis.

Several schools in New York City, Philadelphia, Detroit, and Chicago have taken advantage of these new regulations and have opened or are planning to open Black male academies. The public discourse surrounding the opening of such schools certainly has and will continue to help sustain debates and discussions about African American education. Although the resurgence of Black male academies has not and perhaps will never resolve the enduring debate of whether desegregated or segregated school settings will best serve African American students, the idea of Black academies has continued to offer the promise and possibility for substantive educational and social changes for African American males.

BLACK MALE TEACHERS

African American male teachers are the demographic most greatly affected by the nationwide teacher shortage revealed by recent data. This shortage is projected to increase in the coming decades. The teacher pool is shrinking due to population growth, demands for smaller class sizes, looming retirement for baby boomers, low pay, and a general decrease in the number of college students who plan to teach.

This trend is particularly serious in the case of African American male teachers. Numerous scholars have discussed both the dire need as well as the benefits of having African American men in U.S. classrooms. Typically, the benefits are associated with the opportunity for young African American men and adolescents to see positive mentors and role models. Further, research suggests that African American teachers in general communicate better with African American children; they are better at keeping their attention and more likely to hold them to higher standards. In an educational environment where statistics show that African American male students are more likely than any other group to flunk tests, be disciplined, and be placed in special education classes—and fewer than half graduate and barely a third go to college—the mentoring of African American male adolescents by African American men could reverse this trend. This entry explores aspects of the experiences of African American men in education

including demographics, history, selected African American educational leaders, effects of *Brown v. Board of Education, Topeka, Kansas* (1954) and future prospects.

Educational Demographics

White women comprise the overwhelming majority of U.S. teachers. Yet, data indicate that White teachers in general were the least likely to have had much experience with racial diversity and remain remarkably isolated. Not only did White teachers on average attend schools when they were elementary students that were over 91% White, they are currently teaching in schools where almost 90% of their faculty colleagues are White and 70% of the students are White. According to Erica Frankenberg and Gary Orfield (2007), 38% of public schools nationwide still do not have a single teacher from an underrepresented group.

Consequently, relative to their share of the U.S. population (13%) and their share of U.S. public school children (16%), African Americans were underrepresented among U.S. public school teachers (7%). Women comprise the majority of public school teachers (73% women vs. 27% men). This was true to an even greater extent among African Americans (80% women vs. 20% men), and there is an expected imminent decrease in the already meager number of African American male teachers (Nettles & Perna, 1997).

There are numerous reasons for the low number of African American male teachers. Chief among them is the relatively low pay and diminished professional prestige associated with teaching. The average starting salary for teachers ranges from roughly \$30,000 to \$36,000 per year. And where prestige is concerned, the widely viewed conception of teaching as women's work causes many college-educated African American men to seek better pay and a greater sense of professional status in other occupations.

Even in cases where school systems are successful at employing African American men, about 20% leave the profession within 3 years, and in some school systems, close to 50% leave in the first 5 years. In addition, the low number of African American men currently enrolled in teacher education programs suggests that this downward trend will continue in the foreseeable future.

Historical Context

Several key events in U.S. history help explain the current state of African American men in education. These events include the end of enslavement, contentious judicial battles associated with the *Brown v. Board of Education*, and subsequent challenges to race-based resegregation beginning in the late 20th century. Any discussion of African American people must at some point address the ongoing struggle for educational equality. From the clandestine Sabbath schools operated and attended exclusively by African Americans prior to their emancipation, to segregated schools during the Jim Crow era, and finally to the current post-*Brown* era of U.S. schooling—African Americans have been critically engaged with education.

As noted scholar W. E. B. Du Bois wrote, for all intents and purposes, the idea of free public schooling in the post-Civil War era South was a “Negro idea.” As a result of the tumultuous period in which legally sanctioned African American participation in education began, the gendered and hierarchal arrangements often found within schools for Whites at the time did not exist. As newly emancipated citizens, in most cases, African Americans did not have the resources to split schools along class, race, or gender lines. Therefore, out of necessity, African American men, women, and children, regardless of their class standing or ability to pay, flocked to any and all available schools.

A typical African American classroom during this period consisted of men and women studying together in rickety one-room schoolhouses in classes with students ranging from adolescence to adulthood. Regardless of any and all mediating factors, every segment of the African American community wanted to learn; as a result of limited resources, they literally could not afford to discriminate. There was a community-wide desire for education. Historian James Anderson documents this excitement about education stating that prior to the end of the Civil War less than 7% of the African American population was literate. However, by 1930 nearly 77% of the African American population was literate. Consequently, as the number of students increased, both the demand for more teachers and the pool of prospective teachers increased.

Despite these significant gains in educational achievement, segregationist laws significantly hindered the ability of African Americans to peruse a wide range of careers. Subsequently, the professional class within the African American community was primarily composed of teachers and preachers. In most cases, this meant that the men occupied church pulpits and administrative positions within schools. However, while women were primarily concentrated in the lower levels of schooling, there were several cases where these gendered roles were reversed and men served as teachers and women occupied principalships in African American schools.

The narrow range of careers for African Americans ran counter to national employment trends of the late 19th century. Professions associated with the industrialization of the nation garnered unparalleled popularity during this era as the United States evolved from an agrarian to a technologically driven society. Accordingly, White men sought careers in engineering, business, industry, and the hard sciences while teaching was left primarily to women. As Steven Tozer, Paul C. Violas, and Guy B. Senese note, historians often refer to this phenomenon starting in the late 19th century and still persisting today as the feminization of teaching. For African Americans, disenfranchisement from participation in the full range of employment opportunities meant the best and brightest men and women within the community typically occupied teaching positions.

Consequently, noted African American female educators such as Anna Julia Cooper, Ida B. Wells, and Mary McLeod Bethune were held in high acclaim for their work as teachers and stood shoulder to shoulder with their African American male contemporaries such as John H. Franklin, Carter G. Woodson, and Ernest E. Just.

Influential African American Educators

The reverence given to education and particularly to teachers in the African American community set the stage for two of the most influential African American male educators to lay the cornerstone for African American education. These two enormously important figures were Booker T. Washington and W. E. B. Du Bois. Their greatly chronicled debate addressed the best academic

preparation for the freedmen and women after the Civil War.

Washington, with the support of influential Northerners, believed that the best curriculum for African Americans of the period should consist of rudimentary literacy and mathematics training with an emphasis on vocational education. Du Bois, on the other hand, believed that African Americans should have access to a liberal arts curriculum reflective of the full range of educational opportunities offered at the best educational institutions in the country. At the center of their debate was an immensely important struggle concerning how to best prepare teachers for a community that was in dire need of education for social uplift.

The continued success and educational significance attributed to Washington's alma mater, Hampton University, and the school that he went onto establish, Tuskegee University, as well as Du Bois's beloved alma mater, Fisk University, are testament to the influence and lasting effect of both educators. The racially segregated environment in which the Washington and Dubois debates took place persisted in the United States until the middle of the 20th century when the Supreme Court in *Brown v. Board of Education* ruled that segregation was unconstitutional. Although the ruling opened up education, employment opportunities, public accommodations, and numerous other aspects of the United States that were once racially exclusive, there were several unexpected outcomes that have been particularly detrimental for African American education. Primary among them was the loss of several jobs for African American teachers and principals as a result of the closure of previously all African American schools across the southeastern region of the United States.

The Negative Impact of *Brown*

A key factor that the National Association for the Advancement of Colored People (NAACP) Legal Defense Fund used to argue for an end to segregation hinged on the belief that a lack of exposure to mainstream U.S. culture was detrimental to African American students. This argument was made with a pragmatic understanding that while they pushed for integration, what was most likely to occur was desegregation. The difference between the two has proved to be the single greatest hindrance to

improving the number of African American teachers generally speaking, and African American male teachers in particular.

Four decades after, *Brown* desegregation in the U.S. has come to mean the end of legally separating students by race, giving the bulk of academic and financial resources to White children. Although integration has come to be understood as providing certain features and arrangements that allow some people to access and participate in their environment in limited circumstances and in reaction to a stated need, the lion's share of the attention concerning integration and desegregation has historically focused on achieving a certain racial demographic among student populations while the outcomes on African American teachers after *Brown* have not been chronicled in the same manner. Therefore, even after the success attributed to *Brown*, the aim of ending racial prejudice and building bridges of mutual benefit between the African American and White communities is still in question.

Proof of this can be found by examining the number of African American teachers who lost their jobs after *Brown*. As early as the spring of 1953, when it appeared that the Supreme Court would rule on the side of ending race-based segregation, numerous school superintendents across the 21 states that practiced legally sanctioned segregation sent letters to their African American employees. These letters were meant to inform their African American employees that if segregation ended, so too would their employment as teachers and/or principals. These letters were premised on the belief that White parents would not want their children to sit in classrooms with African American children and would not want them taught by African American teachers. According to this train of thought, this mixing of the races would result in the mongrelization of the White race.

Educational researchers found that the firings during this era decimated the African American teaching force and subsequently set the stage for decades of poor educational performance by African American students. Consequently, although the significance of *Brown* as a barometer of the nation's improving attitude toward racial equality is apparent, African American students and educators are still paying the price for the substantial

level of teacher firings associated with *Brown*. In fact, educator Vanessa Siddle Walker (2001) argued that, by and large, the culture of African American teaching died with *Brown*, meaning a community that valued teachers as its leaders all but lost their leadership class and came to view education and teaching as a profession in a totally different light.

The resulting numbers speak to the severity of these trends. In 1954, about 82,000 African American teachers were responsible for teaching 2 million African American children. In the 11 years immediately following *Brown*, more than 38,000 African American teachers and administrators in 17 Southern and border states lost their jobs. African American principals (who represented a higher percentage of African American male educators) fared even worse. By some estimates, 90% lost their jobs in 11 Southern states. Even in instances where African American principals attempted to fight their dismissal, in most cases, they were demoted to assistant principal or to coaching or teaching jobs.

Looking Ahead

Today, experts say the United States will need more than 2 million new teachers in the next 10 years. And as more than 1 million public school teachers are close to retirement, schools will have to do more to get people to become teachers. African American men in particular are greatly needed, and educational researchers say the effects of racist employment practices still exist after *Brown*. For instance, from 1975 to 1985, the number of African American students majoring in education dropped by 66%. And even once African American men come into the profession, they are bunched in certain levels of education with only about 10% teaching in the lower grades compared to nearly 50% in the upper grades. In addition, the demand for African American male college graduates means these job seekers can often get other work that pays more.

BLACK ORAL HISTORY COLLECTION

The Black Oral History Collection consists of interviews conducted by scholars at Washington State University with 51 African American pioneers and their descendants throughout Washington, Oregon, Idaho, and Montana. It is important because it deepens the understanding of the social, political, and cultural history of African Americans in the Pacific Northwest. This entry describes the project and its significance.

Historian Quintard Taylor Jr. and two associates, Charles Ramsay and John Dawkins, created the project in the summer of 1972; their goal was to chronicle and catalogue the migration and experiences of African Americans who ventured and settled in the Pacific Northwest from the late 1800s to 1972. Using monies provided by the Black studies department to conduct preliminary research on African American history in the Pacific Northwest, Ramsay and Dawkins, of Washington State University, conducted the interviews between 1972 and 1974. They were able to collect information about the job opportunities, social and community life, education, living patterns, church relations, and political associations of African Americans in this region from the late 19th century through 1974.

What emerged from their efforts was the Black Oral History Collection, housed at Washington State University. It provides historians and scholars with the names and firsthand accounts of African Americans living in the Pacific Northwest. Each interview includes questions detailing where the participants are from; why they chose to move to the Pacific Northwest; the types of social activities, clubs, education, employment, and housing available for African Americans; the role of the African American church in the community; politics; and day-to-day life with others. In addition, the collection offers a new interpretation of African American history—one that focuses on the self-motivated activities of African Americans to remake themselves and their worlds. Their survival skills, efficient networks, and dynamic culture enabled them to thrive and spread and to be at the very core of the settlement and development of the United States. The hopeful journeys of African American settlers in the Pacific Northwest changed not only their world but also the fabric of the African diaspora.

The information obtained was used as source material for a television documentary series, *South by Northwest* (1975) and also served as primary source material for Taylor's doctoral dissertation, *A History of Blacks in the Pacific Northwest, 1788–1970*, completed at the University of Minnesota in 1977. Washington State University has since made The Black Oral History Collection interviews a part of its digital archives. Researchers, historians, and the general public can access abstracts of each interview or listen to each interview in its entirety.

The Black Oral History Collection is as invaluable to understanding the African American experience as other oral history archival collections such as the Works Progress Administration Slave Narratives (1936–1938) and William's H. Chafe's more recent Behind the Veil Project, which documents the life experiences of African Americans who lived during and endured the Jim Crow South (1896–1965). Each of these collections extends one's understanding of the experiences and contributions of African Americans past and present.

Oral history has played a crucial role in preserving African American history and culture. It has served a dual purpose of recovering history from the threats of racism, sexism, and class oppression and providing a tool to empower African Americans through a key aspect of education, the process of remembering and reinterpreting the past. Oral history is the interviewing of eyewitness participants in the events of the past for the purposes of historical reconstruction. Oral history interviews traditionally have been divided into three types: topical, biographical, and autobiographical. Although oral history, past and present, has been viewed with skepticism and can be flawed by humans and technology, it has been useful to the field of history and all disciplines concerned with human inquiry and to the construction and study of societies.

Through the resurgence of oral history in the mid-20th century, interviews with members of minority groups, the working class, women, and other marginalized groups have inscribed their experiences on the historical record and have offered their own interpretations of history. More specifically, interviews have documented aspects of historical experience, which tend to be missing from other sources, such as personal relations, domestic work, or family life, and they have resonated with the personal meanings of lived experience.

BLACK PANTHER PARTY LIBERATION SCHOOLS

In June 1969, the Black Panther Party launched its first liberation school in Berkeley, California. In the next few years, the Panthers opened additional liberation schools in African American communities across the United States from Seattle to San Francisco to Philadelphia to New York. Targeting African American elementary and middle school children, the schools epitomized Panther hopes of creating a new, revolutionary Black consciousness. The Panther liberation schools had an ephemeral existence, but embodied the most dynamic African American political and pedagogical tendency of their day.

The liberation schools arose directly out of the Black Panthers' early militant history, when the group exerted its most significant impact on the consciousness of African Americans. Like the organization that created them, the Panther schools offered African American youth an alternative to the ideologies of White racial supremacy and economic oppression that surrounded them. They conveyed a transcendent sense of possibility. This intransigent opposition to African American oppression and commitment to Black liberation, rather than any specific techniques that they employed, constitute the essential difference between the liberation schools and most education offered African American youth. This entry looks at their history.

Early Years

Founded in 1966, the Black Panther Party first achieved renown through public displays of weaponry and militant confrontations with the police. In addition to constituting a direct challenge to racist state power, Panther actions profoundly impacted the consciousness of African Americans. Whereas integrationist reformers had sought to eliminate barriers to full and equal participation in U.S. society and its schools, the Panthers charged that existing U.S. institutions were oppressive to their core. All the group's actions transmitted that revolutionary stance to African Americans whose psyches and ideologies had been warped by life in the United States.

The Black Panther Party's 1966 program aimed to provide education for African Americans that truly reflected U.S. society—good and bad. Panther educational activities included ideological training for members, the publication of a newspaper, adult political education events in the African American community, and liberation schools that prepared children and youth to join in the struggle to create a new society.

The liberation school curriculum sought to instill a clear and explicit ideology. Children played revolutionary games and marched to songs that told of police behaving in chaotic and violent ways while the Black Panther Party helped defend the people. They were taught the Black Panther Party platform and the Panther analysis of racism, capitalism, socialism, and the parallels between Black struggles in the United States and those of other oppressed peoples around the world.

The liberation schools built on well-known alternative educational institutions of the African American freedom struggle. Already, the citizenship schools, created under the aegis of the Southern Christian Leadership Conference, and the Freedom Schools, created by the Student Nonviolent Coordinating Committee (SNCC), had suggested the possibility of education that promoted African American self-awareness and activism. Both the citizenship and the freedom schools embraced the pedagogical methods and ideals of liberal U.S. progressivism. Just as the Panthers' politics repudiated mainstream U.S. liberal ideology, the group's liberation schools challenged the liberal, progressive pedagogy of self-direction and self-expression. The Panthers' commitment to teacher-centered inculcation galvanized Black activism rather than inhibited it.

Shifting Approaches

Within a few years of the party's founding, the Panthers' politics and approach to education began to shift. Activists supplemented revolutionary activity with community organizing, and as they swayed between revolution and reform, the Panthers were undecided as to whether the African American community had to depend on a vanguard to reveal the truth about its situation or whether it had the capacity to articulate its own demands. The initiation of community organizing

led to a transformation of the liberation school, marked by the 1971 establishment of the Intercommunal Youth Institute (IYI), an elementary school for the children of party members in Oakland, California. For a few years, the IYI mixed revolutionary ideological training with progressive educational approaches.

In 1974, the IYI was renamed the Oakland Community School (OCS), further distancing it from its revolutionary liberation school roots. The institution's mission shifted from the training of future Panthers to the establishment of a progressive school that could serve as a model of a positive and progressive educational program for poor urban youth. The OCS offered children much more individualized attention. Students' vocabularies grew through working on words commonly used at home and in the streets. They learned mathematics by going to the store and getting change. Teachers were to provide reference in the Socratic method, allowing students to arrive at conclusions on their own.

The Panthers' grassroots organizing in Oakland led to some limited influence in local politics, but it only temporarily slowed the Panther's decline as a militant and effective organization. Activists' embrace of mainstream progressivism proved to be as tenuous as their earlier effort to construct a revolutionary curriculum. By the end of the 1970s, OCS instructor handbooks eliminated all references to the Black Panthers while stressing the recitation of consonant blends, alphabetization, and other basic skills. As the radical hopes of the late 1960s faded, the school abandoned the idea that students could either make meaning of their world or be instructed so as to understand their oppression.

BLACK THEOLOGICAL EDUCATION

The history of Black theological education is one of the most significant, but neglected stories in higher education. Some of the nation's leading African American preachers, intellectuals, college presidents, politicians, church officials, and civic leaders—from Anna Julia Cooper and Howard Thurman to Marian Wright Edelman and Andrew Young—have come from the ranks of these institutions. The earliest scholarly investigations of African American religious life by W. E. B. Du Bois, Carter G. Woodson, Benjamin E. Mays, E. Franklin Frazier, and others all stressed the need for a more learned clergy in the African American community. The task of theological education is the transformation of competent and compassionate persons of conscience, committed to excellence in leadership and ministry in the church, community, and world.

This mandate is both particularized and expanded where the social location, culture, and heritage of African Americans is concerned. On the one hand, the African American seminary represents the accountability of African American churches to appropriately contextualize ministerial and lay preparation for the needs of the African American community. Simultaneously, it is also a celebration of the insurrection of knowledge about the African American church experience and the expansion of theological purviews that claim to be universal, inclusive, and normative. This entry

recounts the history of these organizations and their social impact.

Early Seminaries

The history of African American seminaries dates back to the founding of such institutions as Payne Seminary in Wilberforce, Ohio (1844); the Theological Department at Shaw University in Raleigh, North Carolina (1865); the Theological Department at Howard University in Washington, D.C. (1870); Atlanta Baptist Female Seminary, precursor to Spelman College (1881, 1924); Gammon Theological Seminary in Atlanta, Georgia (1883); Virginia Union School of Theology in Richmond, Virginia (1898); Hood Theological Seminary in Salisbury, North Carolina (1910); and the undergraduate American Baptist Theological Seminary in Nashville, Tennessee (1924). These institutions, most of which were started by African American denominations, pioneered in the preparation of clergy and laity for the increasingly complex demands of African American church culture and African American community life. They were also the first to establish the view that African American churches were eminently worthy of scholarly attention and examination. Howard and Gammon were particularly important in this regard as the first fully accredited predominantly African American graduate schools of theological education.

Efforts to strengthen African American theological education increased in the 1950s and 1960s, a period in which the African American church emerged to prominence as the African American church. The quest for civil rights and Black power in the second half of the 20th century, the rise of independent African nations, and the emergence of Black liberation theology highlighted the demand to further empower indigenous African American institutions.

Both as a response to the times and out of economic necessity, a consortium of African American graduate schools of theology, representing four denominations, agreed in 1958 to form the Interdenominational Theological Center (ITC) in Atlanta. They were Morehouse School of Religion, a Baptist school begun in 1867; Gammon Theological Seminary, founded by the United Methodists (1883); Turner Theological Seminary,

organized by the African Methodist Episcopal Church (1885); and a Tennessee school started by the Christian Methodist Episcopal Church, Philips School of Theology (1885). Two other schools joined the consortium in 1970: Johnson C. Smith Theological Seminary operated by the Presbyterians and Charles H. Mason Theological Seminary, a school of the Church of God in Christ. Commonly known as the ITC, this unique constellation of six schools is one of the most important centers of African American graduate theological studies existing today. It remains unsurpassed in higher education as a model of ecumenical and administrative cooperation.

A Response to Assassination

A new chapter in African American graduate theological education began with the assassination of Martin Luther King Jr. on April 4, 1968. In response to the tragedy and to the surging tide of Black consciousness, African American students and faculty in predominantly White seminaries, though small in number, also demanded that the institutional African American church and African American religion and culture be carefully included in their curriculum. However, certifying the professional and academic legitimacy of the African American church tradition was not perceived by White divinity schools and seminaries, no matter how liberal, to be in their own best interest.

An uprising by students in 1969 at Colgate-Rochester Divinity School/Bexley Hall/Crozer Theological Seminaries in Rochester, New York, led to the establishment of the Martin Luther King Program of Black Church Studies, the first program of its kind in a historically White seminary. Other programs soon followed, including the Center for Urban Black Studies at the Graduate Theological Union in Berkeley, California (1969, now defunct); the highly accomplished Church and the Black Experience at Garrett Theological Seminary in Evanston, Illinois (1970); the Office of Black Church Studies at Duke Divinity School in Durham, North Carolina (1972); and the African American Church Studies Program at Fuller Theological Seminary (1974). This embryonic or experimental stage in the development of programs of African American Black church studies was succeeded by the establishment of the Kelly Miller Smith Institute

on Black Church Studies at Vanderbilt Divinity School in Nashville, Tennessee (1985); the McCreary Center for African American Religious Studies at Ashland Theological Seminary (1989); and the Program of Black Church Studies at Candler School of Theology at Emory University (1990).

More than a dozen Black church studies programs now exist nationwide, and new programs continue to emerge even as some of the older programs are in decline. By most standards, the Black church studies programs with the highest profiles in the country today are at Vanderbilt and Candler School of Theology.

Future Agenda

A range of issues and concerns must be seriously addressed if historically African American theological schools and African American church studies programs are to be relevant, productive, and successful in the future. Two are mentioned in this entry. First, conceptual clarity must be gained where the meaning of the African American church and African American religion more broadly defined are concerned. Recent trends in African American religious life—from the rise of the mega-church phenomenon and Sunni Islam to African derived religious traditions and African and Caribbean diasporic churches—mean that there is powerful diversity as well as commonality in the religious experiences of African Americans. Second, adequate funding resources and commitments to African American theological education at the institutional level remain one of the looming challenges for the foreseeable future.

Tension points between White granting agencies and African American seminaries, and African American church studies programs require a renewed commitment on the part of African American faith communities to finance African American theological education if legitimacy and respectability are to be sustained. Today, as in the past, the defining relationship for African American theological education is the African American community and the African American church.

BLACK WOMEN ORAL HISTORY PROJECT (RADCLIFFE COLLEGE)

The Black Women Oral History Project of Radcliffe College consists of transcripts of 66 oral history interviews of African American women who made significant contributions to their communities through professional or volunteer work. Started by the Arthur and Elizabeth Schlesinger Library on the History of Women at Radcliffe College in Cambridge, Massachusetts, the interviews conducted from 1976 to 1985 record the memoirs of selected African American U.S. women age 70 and over. The project was initially funded by the Rockefeller Foundation, and later supplemental grants were received from the Blanchard Foundation, the Boston Safe Deposit and Trust Company, and the National Institute for the Aging. This entry considers the participants in and the significance of the Black women oral history project.

The participants of the Black Women Oral History Project of Radcliffe represent different areas of the United States, and the interviews capture each woman speaking openly about coming of age during the early years of the struggle for racial equality prior to the civil rights movement. Each interview includes, but is not limited to, a discussion of each participant's childhood; religious, educational, and cultural experiences and opportunities; and family genealogies, including stories passed from generation to generation. In addition to providing personal information about

their experiences, the participant's narratives give insight about various aspects of African American life within the historical moment, enhancing one's understanding of the impact of political leaders and organizations.

In several of the interviews, the women discuss prominent political figures including A. Philip Randolph, Jennie B. Moton, W. E. B. Du Bois, Mary Church Terrell, Mary McLeod Bethune, Richard Wright, Paul Robeson, and Langston Hughes. In addition to political figures, the participants discuss the economic opportunities that World War II created for African American women and men and discuss the organizations that broadened the public awareness of African American culture, such as the National Urban League, National Association for the Advancement of Colored People (NAACP), the Young Women's Christian Association (YWCA), and the National Council of Negro Women.

Oral histories are an important source for understanding history. In the case of the Black Women Oral History Project of Radcliffe, it provides a source for understanding personal aspects of African American female life. The Radcliffe project is powerful in that it recognizes the participants as trailblazers in social work, medicine, government, trade unions, business, and education and emphasizes the effect of race, class, and gender on the lives of the participants and on other individuals. The interviews are testimony to how African American women's motivation, styles of activism, and objectives have always played a major role in shaping, building, and sustaining the African American community. These oral histories enable scholars to continue to rescue African American women from their obscurity and invisibility in both African American history and women's history.

The ability to understand the complex ways in which race, gender, and class have shaped African American women's lives depends on intensive work in primary sources. Many of African American women's personal narratives and oral histories have been rescued by record keepers or archivists sensitive to preserving African American women's history. Otherwise, the African American woman's world has been peripheral to those who are most likely to keep records of any kind: men and White women. These circumstances continue

to make the collection of information on African American women essential to one's understanding of U.S. history.

BOARD OF MISSIONS FOR THE FREEDMEN OF THE PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA

The educational ministry of the Board of Missions for the Freedmen of the Presbyterian Church in the United States of America should be seen in several larger contexts. These include the general disposition of White people toward African American people, the antebellum and postbellum stances of White people in regard to the education of African American people, the attitudes and actions of Northern White Presbyterians during

and after enslavement, the attitudes and actions of Southern White Presbyterians during and after enslavement, and perhaps most important, the attitudes and actions of African American Presbyterians in the realm of educational self-help and self-empowerment. This entry examines these larger contexts.

Organizational Context

Presbyterianism is both a particular form of church government—ruled by Presbyter’s elders at the local, regional, and nation levels—and a theological embracing of John Calvin. Ruling elders are laypersons elected to represent the congregation. Ministers are simply elders of the word and sacrament. In contrast to other churches, the Presbyterian Church has no bishops; on the other hand, the congregation cannot hire and fire pastors or vote on a budget.

During the colonial period, there were more Presbyterians in the country than Baptists or Methodists. However, the mandatory educational requirements for Presbyterian clergy—4 years of college and 3 years of graduate theological education—disallowed quick church planting as the country extended westward. Baptists and Methodists had no such educational requirements, so they spread much more rapidly.

Presbyterians first organized in the colonies in 1706 and did not make an antienslavement statement until 1818. Even then it applied no sanction against members or ministers owning human beings. There was an elitist racism among many Presbyterian clergy.

Even though most Presbyterians were proenslavement, they did seek African Christian conversion through religious instruction. It was education that attracted African American people to this racist denomination. The First African Presbyterian Church of Philadelphia in 1807 had a day school supported by some of the richest White families in that city. The synod region of New York and New Jersey established an African school between 1816 and 1825. The earliest African American missionary, the Reverend John Chavis, organized a school for both African Americans and Whites in North Carolina despite laws throughout the South after the Nat Turner rebellion in 1831 that prohibited anyone from

teaching enslaved people to read and write. Nearly all African American Presbyterian pastors augmented their salaries by teaching.

The Presbyterian Church split over the Civil War in 1861. It reunited at the national level in 1983 and at the district and regional levels in 1989. About 95% of African American Presbyterians in the South belonged to the northern wing of the church. They had all African American Presbyteries and synods. The Board of Missions for the Freedmen was established after the Civil War by the northern wing of the denomination. It was an agency similar to the federal Freedman’s Bureau except that it was more singularly focused on education rather than on the transportation, labor, and medical emphases of the governmental agency.

After the Civil War

Following the Civil War, Northern Whites sent many teachers to work among the freed people. Black colleges started by Presbyterians’ Board included Lincoln University in Pennsylvania, Johnson C. Smith University and Barber-Scotia College in North Carolina, Knoxville College in Tennessee, and Mary Holmes College in Mississippi. Southern White Presbyterians founded Stillman College in Tuscaloosa, Alabama. Barber-Scotia and Johnson C. Smith Colleges are responsible for the critical mass of African American Presbyterians in the Carolinas.

Perhaps most important to African American education, Presbyterians established a series of African American elementary and secondary schools throughout the South, beginning in the late 19th through mid-20th centuries. These included Henderson Institute in North Carolina, 1891; St. James Parochial in South Carolina, 1921; Russell Grove School in Virginia, 1866; and many others. By 1870, there were 101 day school teachers, and by 1889, 165. The number of schools expanded in the 1870s and 1980s, began slowing down in the 1890s, expanded again from 1900 through the 1920s, and began to shut down in the 1930s. After *Brown v. Brown of Education, Topeka, Kansas* (1954), the church saw these as obsolete, and they have all been closed, the last one being Boggs Academy of Georgia in the late 1970s and early 1980s.

There was also an independent African American synod formed in the southern church in 1897, and African Americans started a school in Danville, Virginia. There were often political battles for control of these schools between African Americans and Whites.

African American Presbyterian schools had the same debate over the nature of the education offered as symbolized by the conflict between Booker T. Washington and vocational-agricultural and William Edward Burghardt Du Bois and liberal arts and sciences.

Lucy Craft Laney was a giant of African American Presbyterian education, founding the Haines Institute in 1883 in Augusta, Georgia. George Waldo Long founded Coulter Academy in Cheraw, South Carolina in 1908. In 1968, African American Presbyterians—including Dorothy Counts, Dr. Reginald Hawkins, Rev. Darius Swann, and Mrs. Vera Swann—were key figures in the desegregation of public schools in Charlotte-Mecklenburg County, North Carolina.

BODY IMAGE

For many researchers, *body image* is a term that has come to describe people's perceptions about

their own physicality. Specifically, body image includes all elements of that physicality including beauty, body size, emotions associated with these elements, and body sensitivities. These images are primarily subjective and do not necessarily equate with an outsider's view of the individual's body. Distortions of this type have been labeled as psychological disorders. Interestingly, body image is constructed not just through the individual's own ideas and constructions about the ideal physical form but also through societal and cultural norms governing such forms. Social experiences of the individual also help to shape his or her perceptions about his or her physical form. Students' cultural and ethnic backgrounds play a large role in their development of body image. This has particular implications for African Americans and for African American education, as discussed in this entry.

Society, the Media, and Self-Perceptions

In the United States and in other Western countries, the ideal body shape range continues to narrow as the media creates more and more images that are unlike the average citizen. For females, the standards of beauty are quite thin, while for males, the ideal physique is muscular, broad chested, and slim through the hips. Only relatively recently have researchers begun to focus on male body image. Such studies are beginning to suggest that the muscular ideal male form is based on Western notions of aggressiveness associated with masculinity.

Researchers tend to agree that the media is responsible for shaping many individuals' perceptions of their own physical form. Studies have indicated that more often than not, female body images on television and in print are represented as slim. Those magazines marketed to women, especially female adolescents, almost always depict the ideal form of beauty as a thin female. It has also been suggested that for African American adolescents, this problem has been somewhat neutralized by their culture's tendency to appreciate a fuller female form. In fact, it has been shown that African American females, both teens and adults, tend to have a healthier relationship with their body image than do individuals in other ethnic groups. This group tends to be less interested in dieting and less concerned about fatness compared to White females especially. However, the gap

between these two groups' images of themselves is lessening as media impact is growing among African American women and girls.

In the 20th century, the appearance of ideal male form in magazines and print materials increased. As a result, the media is beginning to play a greater role in this group's perception of their physical forms. However, African American male adolescents continue to exhibit the least amount of negativity about their body image among all ethnic groups and genders discussed in the body image literature.

Disconnections between one's self-perception of body image and physical reality are diagnosed as a number of disorders including, but not limited to, anorexia nervosa and bulimia. Anorexia results when people attempt to pursue thinness and begin to see themselves as obese despite their real physical image. The disorder is characterized by extreme weight loss, excessive dieting, hyperactivity, and loss of menstrual periods. Bulimia also results from a distorted body image and a fear of obesity, but includes a bingeing and purging cycle. This cycle involves individuals consuming large amounts of food only to induce vomiting or use laxatives to purge themselves of the meal. Symptoms of bulimia include, but are not limited to, uncontrollable food urges, self-induced vomiting, swollen glands, and dental decay.

Impact on Education

Although an increasing number of African Americans suffer from these ailments, they have the added pressure of a historical experience in the United States that conceals unhealthy body images from a strictly physical disorder to one that may negatively impact their academic performance. In addition to physical ailments, poor body image has also been linked to poor self-esteem, which negatively affects student performance. Teasing from students' peers is linked to increased suicide attempts, lowered self-esteem, and lower body image among children and adolescents.

Although African American children do not seem to suffer from teasing as much as children in other ethnic groups, they do have the added historical implications of being African in the United States, a history which affects their perceptions of

their own physicality. It has been argued that skin color, as a result of enslavement and colonization, has become part of a social hierarchy wherein one's proximity to the White standard of beauty becomes the standard against which African Americans are measured. In addition to skin color, hair length and texture, nose width, and lip size all have implications on the African American student's body image.

From 1939 until 1950, Kenneth and Mamie Clark conducted a series of studies to document the effects of racism and segregation on African American children. Using four plastic dolls and a series of drawings, children were asked to describe the dolls and to color the drawings the same color as themselves. These children tended to choose the White dolls over the African American dolls consistently while coloring the drawings in shades lighter than their own skin color. The findings caused the two Howard-trained psychologists to argue that African American children's preference for Whiteness was a mark of the child's awareness that African Americans were considered inferior in this country. Supporting cases in Virginia, Delaware, and South Carolina, these studies were used in the Supreme Court's decision in the *Brown v. Board of Education, Topeka, Kansas* (1954) case. Over 50 years later, a 17-year-old, Kira Davis, conducted her own version of the famous doll test. The results were virtually the same. The resulting documentary, *A Girl Like Me*, was videorecorded and became an online (and e-mail) phenomenon, sparking debate and renewed interest in African American self-perception.

Educators and counselors working with African American students on body image issues are encouraged to deal not only with matters of physical body size but also with the impact of racism, classism, sexism, physical attractiveness, and the historical and social implications involved in the shaping of the student's own body image. Factors shown to protect students against negative body image and associated disorders include, among others, a social context that offers a wide range of body images, family and community support, strong social and coping skills, and a culture that supports individuality while providing protection from negative experiences.

BOLLING V. SHARPE

In the case of *Bolling v. Sharpe* (1954), the U.S. Supreme Court found that racial segregation in the public schools of the District of Columbia was unconstitutional, holding the federal government, which operates district schools, to the same standard it had imposed on states in *Brown v. Board of Education, Topeka, Kansas* (1954). The decision was also a personal victory for James Nabrit, an African American civil rights lawyer who found in the case an opportunity to argue his own view of segregation before the highest court in the land. This entry explores the historical background, the substance, and the subsequent impact of the case.

Historical Background

James Nabrit was a minister's son who as a child witnessed an African American man who had been beaten to death by Whites, hog-tied, and dragged to an open lot in the African American section of town less than 200 yards from his house. The man's corpse was set on fire, and all night long, young Nabrit watched in horror as his fellow White citizens of Americus, Georgia, came to pick off pieces of the dead man's clothing and his corpse as souvenirs. The man was attacked by the Whites because he had gotten really excited when Jack

Johnson defeated Jim Jeffries, "The Great White Hope," in a heavyweight boxing match in 1910.

Nabrit painfully learned that to be African American was to be subject to the White man's worst whims. This event and others would cause Nabrit to decline to follow in his father's footsteps to become a minister, but to, instead, become a civil rights lawyer. Nabrit eventually became a well-respected professor of law at Howard University and served as an adviser to the National Association for the Advancement of Colored People's (NAACP's) Legal Defense team during the times it worked diligently to gain equal opportunities in education for African Americans. In this role, Nabrit worked hard to urge Thurgood Marshall to strike at segregation itself and directly attack the *Plessy v. Ferguson* (1896) separate-but-equal principle. Robert Carter and others on the team agreed, but Marshall stuck with his strategy, arguing that educational facilities and resources be equalized or opened so that African Americans could attend school with Whites. Marshall had used this strategy to win a line of victories culminating in winning the landmark cases of *Sweatt v. Painter* (1950) and *McLaurin v. Oklahoma Regents for Higher Education* (1950).

A barber named Gardner Bishop who, like Nabrit, had grown up in the South, but who moved to Washington, D.C., began to protest when his daughter Judine was getting reduced time at Browne Junior High School where the enrollment was twice the capacity of the school. Meanwhile, at nearby Elliot High School for Whites, there were several unoccupied spaces, especially since many White parents had already started what would be a 23-year pattern of fleeing to the suburbs. Bishop led a group called Consolidated Parents that operated outside of the school's parent-teacher association, which was dominated by middle-class African American parents, a group Gardner found to be pretentious and less accepting of his views and those of poor African Americans.

While the middle-class group retained a lawyer, Gardner sought his own counsel, quickly emerged as the leader of the Consolidated Parents, and staged a number of protests in the Washington, D.C., area that caused the school board to respond with some concessions, but never to agree to strategies that would integrate the African American and

White children. In 1948, Gardner met and befriended Charles Houston, a civil rights lawyer, who agreed to represent Gardner's group in a suit to equalize Washington, D.C., schools. Houston also helped him continue the protests across the District of Columbia. Late in 1949, Houston was hospitalized with a heart ailment. He never fully recovered, and 2 months later, he asked that Gardner seek out Nabrit. Gardner did, and Nabrit agreed to take the case but only if Gardner was interested in attacking segregation directly. He was.

Facts of the Case

The *Bolling v. Sharpe* case, filed in 1951, challenged the validity of segregation in the public schools of the District of Columbia. The plaintiffs were African American children who alleged that such segregation deprived them of due process under the Fifth Amendment. The school board refused to admit the African American students to a public school attended by White children solely because of their race. The students sought the aid of the district court to obtain admission.

In arguing their case, Nabrit did not include any equalization claims, but instead argued there was inherent inequity in segregation. Nabrit asserted that if the law treated groups differently based on their race, then the government had to have a compelling reason to do this, but there was none in this case. Some have noted that Nabrit was among the first to make this argument, which has become known as strict scrutiny. Regardless, the district court dismissed this well thought out approach, holding that segregation was permissible in Washington, D.C., noting that it had been shown in *Carr v. Corning* (1950), which had been brought by the middle-class African Americans that Gardner broke away from. On appeal, the Supreme Court granted a writ of certiorari before the court of appeals reached judgment because of the importance of the constitutional question presented.

The case was consolidated with *Brown v. Board of Education*. In *Brown*, the Supreme Court held that the equal protection clause of the Fourteenth Amendment prohibits the states from maintaining racially segregated public schools. However, in *Bolling*, the legal question in the District of Columbia was somewhat different as it is not a state. Specifically, the Fifth Amendment, which is

applicable in the District of Columbia, does not contain an equal protection clause as does the Fourteenth Amendment, which applies only to the states. But the *Bolling* Supreme Court decision noted that the concepts of equal protection and due process are not mutually exclusive as they both stem from the U.S. ideal of fairness. Although warning that these two phrases are not always interchangeable, the Court recognized, as it had before, that discrimination may be so unjustifiable as to be violative of due process.

The Supreme Court went further in *Bolling*, noting that "classifications based solely upon race must be scrutinized with particular care, since they are contrary to our traditions and hence constitutionally suspect" (347 U.S. at 497). The Court continued with a discussion pointing out that liberty cannot be restricted except for a proper governmental objective. Seeming to follow Nabrit's logic, it held that segregation in public education is not reasonably related to any proper governmental objective and thus imposed on the African American children of Washington, D.C., a burden that amounted to an arbitrary deprivation of their liberty in violation of the due process clause.

In view of its decision in *Brown*, the Supreme Court held that as the Constitution prohibits the states from maintaining racially segregated public schools, it would be unconscionable that the same document would impose a lesser duty on the federal government. Hence, the Supreme Court held that racial segregation in the public schools of the District of Columbia is a denial of the due process of law guaranteed by the Fifth Amendment to the Constitution.

Long-Term Impact

Finally, Nabrit got his opportunity to strike against segregation, and he eventually saw what he surely considered to be a more substantive victory as a result. In the process, he made popular strict scrutiny, a popular legal test that has been invoked in a number of affirmative action cases and others dealing with fundamental rights or classifications based on race or national origin.

BOYS & GIRLS CLUBS OF AMERICA

The mission of Boys & Girls Clubs of America (BGCA) is to inspire and enable all young people, especially those who are most in need, to realize their full potential as caring, responsible, and productive citizens. With its origin stretching back to the 1860s, BGCA throughout the United States are neighborhood-based, building-centered programs, led by a full-time professional staff that provides after-school and summer activities for all youth, but that specifically targets youth who are most at risk. With its focus on character development, the purpose of the organization is to shape the character of the next generation of citizens in this country through the array of national and local programs from sports to arts to education. This entry looks at the organization's overall history and contributions, with special attention to African Americans.

History of the Movement

The BGCA movement began in 1860 in the urban northeast of the United States. In Hartford, Connecticut, three White females, Elizabeth Hamersley and sisters Mary and Alice Goodwin, were concerned about the welfare of children and invited a group of street boys into their home for tea or coffee and cake. The boys' positive behavior

and obvious appreciation completely surprised these concerned females, so they extended their hospitality several more times with the same positive response. Along with several other supporters, the women resolved to find an available facility where the boys could come regularly. This facility, the Dashaway Club, became the first Boys' Club.

Building on this model, organizations in Providence, Rhode Island; New Haven, Connecticut; and New York City were initiated. In 1876, the Boys' Club of New York became the first organization to use the name Boys' Club. Beginning in the mid-1880s, the Boys' Club concept began to spread westward and southward, with the formation of the Milwaukee (Wisconsin) Boys' Club (1887); the Colorado Springs (Colorado) Boys' Club (1888); the Columbia Park Boys' Club in San Francisco, California (1891); and the Nashville (Tennessee) Boys' Club (1903).

In 1906, the national office was organized when a group representing 53 local Boys' Clubs met in Boston, Massachusetts, to establish the Federated Boys' Club and locate its office in Boston. By 1915, the organization had moved to New York and changed its name to the Boys' Club Federation. The name was revised to Boys' Clubs of America in 1931 and Boys & Girls Clubs of America in 1990. This final name change represented the movement's formal inclusion of service to both girls and boys.

History of Services to African Americans

Although in limited numbers, records from the earliest Boys' Clubs exhibit service to African American youth. The first club to serve African American boys exclusively, the Wissahickon Boys' Club in Philadelphia, Pennsylvania, opened in 1903. Between 1903 and 1920, similar clubs were organized in New York and in Savannah, Georgia. With the mass movements of African Americans to northeastern cities from 1910 to 1920 as a result of what is known as the great Black migration, the issues facing African American boys confronted youth agencies such as BGCA (then the Boys' Club Federation). From his New York office, the Boys' Club Federation's executive secretary, C. J. Atkinson, watched thousands of African Americans crowd into poverty-stricken communities. With poor schools and limited services to these communities,

he watched the illiteracy rates stagnate and delinquency rates rise.

In May 1926, Atkinson challenged Federation's Board of Directors to help underprivileged African American boys. Atkinson recommended the hiring of William T. Coleman as the field secretary, to work to lead the growth in the number of clubs serving African American males. Coleman, the first paid African American professional in the movement, served the national office for 5 years in this capacity. By 1931, there were 14 African American Boys' Clubs in 10 cities serving 6,000 boys.

Contemporary Service

As of 2004, BGCA served 4.6 million young people ages 6 to 18 years old. These young people were served in approximately 4,000 local clubs by 47,600 club professionals and 141,000 program volunteers in all 50 states, Puerto Rico, the Virgin Islands, and military bases in Europe and Asia. Sixty-four percent of these youth are from minority group families, 55% are male, and 45% are female. Sixty-seven percent of these youth are 12 years old or younger. Of the 4.6 million young people in 2004 served by the BGCA, African American youth represented approximately 32% of this total, or 1,472,000 African American youth.

Local BGCA are more than a collection of programs and activities during the afterschool and summer hours. Club-based activities are a platform for reaching young people and for developing their character. Structurally, local clubs provide daily activities for young people in five core areas: character and leadership development; education and career development; health and life skills; the arts; and sport, fitness, and recreation. With each of these five core program areas, BGCA has developed more than 40 national programs for its local clubs. These proven, national programs range from Project Learn (an afterschool education strategy) to Targeted Outreach (a gang prevention-intervention and reintegration program) to SMART Moves (an alcohol, tobacco, and pregnancy prevention program) and include external evaluations that demonstrate their effectiveness.

Coupled with these national programs, local club professionals have developed numerous local programs that capture the hearts and minds of the young people in their communities. Understanding

the needs of their surrounding neighborhoods, club professionals select the appropriate mix of programs to attract, engage, and meet the needs of their members. The initial emphasis is placed on attracting young people in the building. However, the programs are not the change agent; the club professionals are. Through building strong relationships with their members, club professionals create opportunities for young people not only to learn new things, but also to induce young people to want to grow and evolve as human beings. The BGCA has played a significant role in this regard for African American youth.

BRIGGS V. ELLIOTT

Briggs v. Elliott (1952) was one of the five school desegregation cases that formed the basis of the U.S. Supreme Court's landmark decision of *Brown v. Board of Education, Topeka, Kansas* (1954). The story of *Briggs* demonstrates how a small, rural, African American community in Clarendon County, South Carolina, played a pivotal role in abolishing legal segregation in public education. *Briggs* also served as one of the early indicators of states' future resistance to meaningful implementation of *Brown*. This entry explores the historical backdrop, the facts, the three related decisions, and the aftermath of the case.

Historical Context

The Fourteenth Amendment to the U.S. Constitution promised the previously enslaved Africans equal protection under the law. However, the Supreme Court, in *Plessy v. Ferguson* (1896) declared that a state could constitutionally segregate access to public facilities based on race, as long as the separate facilities were equal. Separate, but equal soon came to justify the racial segregation of public facilities throughout the South and to control virtually every aspect of social interaction between the races.

In public education, the effects were devastating. During much of the 20th century, Southern state laws and state constitutions either mandated or allowed racial segregation in public schools. Such schools, while universally separate, were rarely equal. Educational resources provided for African American children were most often substandard, if they were provided at all.

In the 1930s, the National Association for the Advancement of Colored People (NAACP) developed a deceptively simple legal strategy aimed at attacking racial segregation in public education. Because the Supreme Court in *Plessy v. Ferguson* held that separate facilities could be constitutional only if they were equal, the NAACP planned to bring lawsuits challenging the equality

of educational institutions provided for African Americans. Since African American schools were almost never equal to White schools, courts would be forced to find conditions in the substandard African American schools unconstitutional and order states to provide equal facilities. If providing equal facilities would be too expensive or otherwise impractical, states would have to allow African American students to attend White institutions or would have to close the White institutions. The separate-but-equal doctrine provided no other alternatives.

Charles Hamilton Houston, dean of Howard University Law School and an NAACP legal advisor in the early 1930s, determined that it would be best to begin implementing the strategy by challenging the equality of graduate school facilities. Most likely, courts would force states with substandard or nonexistent graduate school programs for African Americans to admit them into existing White programs. Then, using the legal principles established in the graduate school cases, the NAACP could go on to challenge the equality of separate programs in secondary and elementary schools.

In 1950, the NAACP secured important Supreme Court victories in two graduate school cases, *Sweatt v. Painter* (1950) and *McLaurin v. Oklahoma State Regents for Higher Education* (1950). In *Sweatt*, the Supreme Court confirmed that equal really did mean equal under the Fourteenth Amendment. In *McLaurin*, the Court held that once a White institution admitted African Americans, equality meant that the state could make no distinctions between African American and White students. However, in both cases, the Court refused to address directly the constitutionality of the separate-but-equal doctrine. It chose to enforce *Plessy* rather than to overturn it.

Therefore, despite the NAACP's victories in the graduate school cases, separate, but equal was still the law. Even as those cases proceeded through the courts; however, the NAACP began working on the next level in its strategy—attacking segregation in public elementary and secondary schools. *Briggs*, the first of the public school cases to be litigated, launched the assault.

Facts of the Case

The conditions in Clarendon County for African American schoolchildren reflected conditions

common to almost all legally segregated systems. By any measure, the education provided for African American children was substandard to that provided for White children. Just as important, conditions in Clarendon County had reached a crisis point. Typically, several grades were crammed together in dilapidated one- or two-room buildings with only one or two teachers and with inadequate sanitation and plumbing. During the 1949 to 1950 school year, Clarendon County spent \$43 to educate each African American child and \$179 to educate each White child. If they were to go to high school, African American children had to walk 9 miles because although the school system provided buses to transport White children, it refused to do so for African Americans.

In response to such conditions, the African American community recruited 20 plaintiffs to sue school officials. Represented by the NAACP, the plaintiffs asked for equalization of all of the conditions that affected their children's education. The case's name came from Harry Briggs, the plaintiff whose name came first alphabetically, and from Roderick W. Elliott, superintendent of one of the Clarendon County school districts, who was listed first among the defendant school officials.

The U.S. District Court for the Eastern District of South Carolina handed down three separate decisions in the course of deciding *Briggs*. The first two decisions reflected court rulings that preceded *Brown v. Board of Education*. The final district court decision presaged the resolute resistance that followed *Brown*.

The June 1951 Decision

During the *Briggs* trial in May 1951, the NAACP argued two main points. The first was the same argument advanced in the graduate school cases: Thurgood Marshall argued that schools for African Americans in Clarendon County were inferior to schools for Whites, violating the African Americans' Fourteenth Amendment right to equal protection. However, Marshall also argued that legal state public school segregation based on race in itself was a violation of equal protection and was therefore unconstitutional. In addition, the NAACP argued that legal segregation psychologically scarred African American children, based on social science evidence such as the doll study

Kenneth Clark conducted with Clarendon County children. Thus, *Briggs* marked the first time the NAACP directly attacked the constitutionality of *Plessy's* separate-but-equal doctrine.

The district court, however, refused to overturn legal segregation, finding that *Plessy v. Ferguson* was still the law even after the Supreme Court's decisions in *Sweatt* and *McLaurin*, especially because the Supreme Court explicitly refused to consider overruling *Plessy* when deciding those cases. Further, the district court saw the issues involved in the graduate school cases as categorically different from the issues involved in public school segregation.

Therefore, in the district court's view, because racially segregated public schools were constitutional as long as they were equal, each state had the right to decide whether to require racial segregation in its schools. The district court pointed out that 17 states had decided to do just that and that Congress had made that choice for the District of Columbia as well. Therefore, South Carolina's choice to segregate its schools based on race was not a violation of the Fourteenth Amendment, and *Plessy's* separate-but-equal doctrine still controlled.

However, the defendant South Carolina school officials admitted at the beginning of the trial that the African American schools in Clarendon County were not equal to the White schools and outlined the continuing steps the state was taking to equalize African American schools. Based on this admission, as well as on the evidence of inequality presented by the plaintiffs, the district court found that the school facilities in the district were unequal and ordered that the state act promptly to make them equal. The district court also required the defendants to report to the court within 6 months on the state's progress in complying with the court's equalization order.

District Court Judge Julius W. Waring, a native South Carolinian, issued a strongly worded dissent to the majority opinion. In Waring's view, the majority could and should have found that racial segregation in public schools violated equal protection. Unlike the majority, he saw the Supreme Court's reasoning in both *Sweatt* and *McLaurin* as establishing that racial segregation was a violation of equal protection. Further, he referred to the plaintiffs' social science evidence introduced at trial, evidence which he saw as establishing the

great harm segregation caused both White and African American children. Waring's dissent recognized unequivocally that segregation is the same as inequality.

The NAACP appealed the district court's failure to find a constitutional violation to the Supreme Court. The Supreme Court, however, instead of considering the appeal, sent the case back to the district court to allow it an opportunity to evaluate the defendants' 6-month report on their equalization efforts.

The March 1952 Decision

The district court reviewed the defendants' equalization progress reports and found that the school system had acted both promptly and in good faith. The defendants reported that new school facilities would be constructed and ready for use by the beginning of the next school year. They also reported equalization of the curricula, teacher salaries, bus transportation, and furniture and equipment. The NAACP once again argued that because some inequality still existed, the district court should find that segregation was unconstitutional. The court again denied that request. Instead, it ordered that the defendants equalize educational facilities and opportunities for African American students, noting that defendants were moving as quickly as humanly possible to do so.

The NAACP again appealed the district court's decision to the Supreme Court. The Supreme Court consolidated *Briggs* with the appeals of four other public school cases challenging the constitutionality of the separate-but-equal doctrine: Virginia's *Davis v. County School Board of Prince Edward County* (1952), Delaware's *Gebhart v. Belton* (1952), Washington, D.C.'s, *Bolling v. Sharpe* (1954), and Kansas' *Brown v. Board of Education*. The Supreme Court's decision, known as *Brown v. Board of Education*, resolved all the cases by finding that racial segregation in public education was inherently unequal and a violation of the Fourteenth Amendment's equal protection guarantee. The Court overruled *Plessy* and abolished the separate-but-equal doctrine.

Therefore, *Brown* reversed the 1952 district court decision in *Briggs* and sent the case back to the district court with a directive to the district court to see that the school district admitted

students to public schools without any racial discrimination and with all deliberate speed.

The July 1955 Decision

On remand, the district court followed the Supreme Court's ruling and found that the South Carolina laws and constitutional provision requiring racial segregation in public schools violated the Fourteenth Amendment and therefore were unenforceable. Rather than equalized, the schools had to be desegregated.

The district court then provided its interpretation of *Brown*. It observed that the Supreme Court merely prohibited segregation; it did not require school desegregation. Thus, the South Carolina schools were required only not to prohibit students based on their race from attending any school. The state was not required to desegregate schools or to prevent students from attending the school of their choice. The court proclaimed that children of different races had the same right to attend different schools as they did to attend different churches; the Constitution did nothing to alter that freedom of choice. The court went on to quote the Supreme Court at length regarding the flexibility and considerations district courts should give school systems in designing plans for desegregation.

But although the district court had in its earlier equalization decisions ordered the state to act promptly in carrying out the court's order and had required the state to report on its progress by a certain time, the court now neither set a timetable nor a deadline for school desegregation. It merely ordered that the defendants not refuse to admit any child to any school based on the child's race, beginning after the point when defendants arranged for admission to schools on a nondiscriminatory basis. In other words, the court's prohibition on race-based admissions would only take effect after the state made plans for nonracial admissions, and the only time constraint placed on making those plans was the Supreme Court's vague and imprecise all-deliberate-speed requirement.

The district court's final decision in *Briggs*, like the Supreme Court's decision in *Brown*, was unquestionably a victory for the NAACP and African American education. Unfortunately, the district court's narrow interpretation of *Brown* and failure to provide any real time constraints on

implementing the district court's order provided not only South Carolina but also other states and courts a justification and means to slow down and even prevent meaningful school desegregation during the years following *Brown*.

The Aftermath

In 1960, the district court formally terminated *Briggs v. Elliott*. Plaintiffs from Clarendon County filed a new lawsuit in district court, *Brunson v. Board of Trustees of School District No. 1* (1965) to continue their efforts to enforce their *Brown* victory.

Following *Briggs*'s narrow interpretation of *Brown*, Clarendon County officials continued operating racially separate schools. They claimed compliance with *Brown* because they offered both African American and White students the choice of attending a school designated for the other race. However, even though many African American children requested transfers to the White schools, school officials failed to act on the requests.

Finally, in February 1967, the district court set out desegregation guidelines that the local school district in Clarendon County had to follow. The court required an end to schools designated as White or African American. Students could request assignment to any school, and officials were to assign them without regard to race. Also, the court required nonracial assignments for teachers as well as for all other personnel and resources.

Although the district court's decision finally enforced *Brown*'s prohibition against separate-but-equal schools, it did not require school officials to desegregate the schools by assigning both White and African American children and personnel to every school in the district. In addition, by the time the Fourth Circuit Court of Appeals upheld the district court's decision in 1970, almost all White students in Clarendon County attended private schools established to avoid *Brown*'s feared impact on racial desegregation in public schools. School desegregation in Clarendon County became a numerical impossibility.

BROWN V. BOARD OF EDUCATION, TOPEKA, KANSAS (AND BROWN II)

Brown v. Board of Education, Topeka, Kansas (1954) was the first in a series of U.S. Supreme Court rulings on public school desegregation that have produced significant changes in U.S. society. The *Brown* decision documented that separate school facilities for children based on their race

were not equal, paving the way toward the creation of a more unified society. The lawyers in *Brown* argued that the separate-but-equal philosophy was a denial of equal education. The U.S. Supreme Court agreed that state-sanctioned segregation in public education was inherently unequal and that African American students needed the use of more advanced facilities that were provided only to White children. For many, school desegregation generated a victory over school system inequality based solely upon race. It became an opportunity for African American students to get a good education because they would no longer be forced under law to attend racially isolated schools that were inferior in quality. However, over the next 50 years, issues surrounding school quality still overloaded the U.S. Supreme Court system and school policy. This entry looks at the backdrop, the case, and its implications.

Historical Context

U.S. institutions once existed in a dual system of segregated White only and “Colored only” private and public facilities at all levels of daily life. Various forms of interaction and intermingling among races were prevented both by law (de jure segregation) and by social norms (de facto segregation). African Americans lived in a system where they were kept separate from Whites, but were supposed to have equal rights; this was the system of separate, but equal. Challenges to the separate-but-equal laws were initially handled within state courts, with the most prominent cases ultimately reaching the U.S. Supreme Court.

Early challenges to the separate-but-equal campaign upheld segregation in the country through Supreme Court decisions. *Plessy v. Ferguson* (1896) upheld a Louisiana statute that mandated separate-but-equal accommodations in railway trains for African Americans and Whites. In the area of education, *Cumming v. Richmond County Board of Education* (1899) established that a White school board could decide to close down an African American school in order to use the money for a White school. Evident in this ruling is the separate and unequal treatment of African American and White institutions. The rule of separate, but equal was reversed with *Brown v. Board of Education* when racial segregation was ended in U.S. public schools.

In legal decisions about a half a century after the *Cumming* decision, school desegregation was upheld on the basis that segregated schools resulted in an inferior education for African American students. These victories for desegregation used the rationale that separate schools were not equal and did not provide African American students with educational opportunities equal to those available to White students at White schools. The initial victory came when the attorneys for George McLaurin (an African American college student) argued that the adverse psychological detriment segregation inflicted on African Americans resulted in a denial of equal education. The ruling in *McLaurin v. Oklahoma State Regents for Higher Education* (1950) provided McLaurin (the defendant) with the same professor, books, and classroom instruction as White students, but with a separate seat set aside solely for his use in the classroom, library, and cafeteria. Though allowed to attend a White institution, McLaurin faced a system of internal segregation.

Though there were some initial victories in the area of higher education, there was still much work to be done with regards to public K–12 schools. African American parents challenged racial segregation in public schools as early as 1849 in the case of *Roberts v. City of Boston* (1849) where the Massachusetts Supreme Court declared that separate schools for African American and White students were legal. As early as 1881, cases were brought in Kansas (e.g., *Board of Education of Ottawa v. Elijah Tinnon*, 1881). It was not until the 1950s, however, that the National Association for the Advancement of Colored People (NAACP) was able to mount a concentrated attack on segregation.

During the 1950s, the NAACP, through its Legal Defense and Educational Fund, began to offer its legal services to the challenges to public school segregation. When cases were already underway, the NAACP would send their lawyers to assist with the trials. In areas where there may not have been cases pending, the NAACP would begin class action suits for the parents. As such, plaintiffs were sought by the NAACP to represent the cause that they had decided to pursue in court. The NAACP began one of those class action cases in Kansas.

Facts of the Case

In Topeka, Kansas, the NAACP was able to find 13 plaintiffs to be part of the class action suit filed against the Board of Education of the City of Topeka, Kansas. The case was named after Oliver Brown, the only male among the named plaintiffs (Oliver Brown, Darlene Brown, Lena Carper, Sadie Emmanuel, Marguerite Emerson, Shirley Fleming, Zelma Henderson, Shirley Hodison, Maude Lawton, Alma Lewis, Iona Richardson, and Lucinda Todd). Although he was not the first plaintiff alphabetically, the NAACP wanted a man to be the named plaintiff in the case. Apparently, the NAACP thought that the case would be better received if the first named plaintiff was a man with a stable family life.

The plaintiffs' argument in *Brown* was that school segregation deprived them of the equal protection of the laws under the Fourteenth Amendment because segregated public schools were not equal. The board of education argued that segregation in public education served the role to prepare African American children for the segregation that they would face everywhere in adulthood. The NAACP hoped that this test case would end the precedent for segregation that was set by *Plessy v. Ferguson* (1896).

In 1951, the district court ruled against the plaintiffs, citing the U.S. Supreme Court precedent of separate, but equal that was upheld in *Plessy v. Ferguson*. Fact-finding for the case led to expert witnesses, namely social scientists who endorsed the premise that segregation had a detrimental psychological effect on African American children. The district court judges did find that segregation in public education had a detrimental effect on African American children, but determined that the Fourteen Amendment was not violated because African American and White schools in Topeka were substantially equal with respect to buildings, transportation, curriculum, and the educational qualifications of teachers.

The lower court ruling was appealed to the U.S. Supreme Court. The U.S. Supreme Court agreed to hear the case and merged it with three other lower court appeals as well. *Brown v. Board of Education* included the cases of *Oliver Brown et al. v. Board of Education of Topeka, Shawnee County, Kansas, et al* (1951); *Briggs v. Elliott* (1952); *Dorothy E.*

Davis v. County School Board of Prince Edward County (1952); and *Gebhart v. Belton* (1952). *Briggs* and *Brown* were the first cases to reach the Supreme Court. All of these cases were gathered together under the name of one of them—*Brown v. Board of Education of Topeka, Kansas*. The significance of bundling the cases is that it took what could have appeared as local or regional issues and made school segregation, and eventually desegregation, a national concern.

Each of the lower courts upheld the separate-but-equal argument that was established under *Plessy v. Ferguson*. In *Briggs v. Elliott* and *Davis v. County School Board of Prince Edward County* the district courts found that the African American schools were grossly inadequate in terms of buildings, transportation, curricula, and teacher's salaries when compared to the schools provided for Whites. Each district was ordered to equalize the facilities; however, segregation was not set aside, and African American students were denied entry to White schools.

Gebhart v. Belton Delaware State Supreme Court affirming the Chancery Court decision was the only case where the plaintiffs won their argument. In the chancery court of equity, the plaintiffs argued that the separate facilities and educational opportunities offered to African American children were not equal to those furnished to White children. The court noted that the separate-but-equal legislation of *Plessy v. Ferguson* should stand. The court, however, also found that the separate colored facilities were not equal to the Whites-only facilities. Thus, the court ordered that African American students be immediately admitted to the White-only school with an understanding that if African American schools were fixed, the issue could be revisited. This ruling, however, only applied to the plaintiffs in the case, and the rest of the schools in Delaware continued to remain segregated. The court—and the Delaware Supreme Court, which affirmed the decision in *Gebhart v. Belton* (1952)—realized that it was not the position of a lower court to strike down *Plessy v. Ferguson* and the statute of separate, but equal. Instead, the rejection of separate, but equal should come from the U.S. Supreme Court. The lower courts also knew that school desegregation was an important issue that could only be resolved in the U.S. Supreme Court.

Bolling v. Sharpe (1954) went to the Supreme Court at the same time as the other cases. However, unlike the other cases, *Bolling v. Sharpe* was never heard in the district court because the district court dismissed the original claim. Because the District of Columbia was not a state and thus fell under federal jurisdiction, it was not included with the collection of cases that would be argued along with *Brown*. Instead, the case was heard concurrently with *Brown*. Because the District of Columbia was not a state, lawyers in *Bolling v. Sharpe* argued the due process clause of the Fifth Amendment, which guaranteed equal protection of the law.

U.S. Supreme Court Ruling

The refusal of the lower court rulings to grant widespread desegregation of schools in their district was based upon the precedent set in *Plessy v. Ferguson* ruling. The magnitude of the cases was undoubtedly understood by the U.S. Supreme Court. The U.S. Supreme Court bundled the cases together to be able to hear a collective argument. It was well known that the decision made regarding these cases would have a great impact on the social fabric of U.S. society as it had been. The U.S. Supreme Court decided to wait to hear the cases during the 1954 term to be sure to have ample time to hear the arguments of both sides of the interpretation of the Fourteenth Amendment and its application to public education.

The approach that separate but equal is denial of equal education was used by lawyers in *Brown*. In its 1954 ruling, the U.S. Supreme Court unanimously agreed that state-sanctioned segregation in public education was inherently unequal. The lawyers in the case again argued that students needed the use of more advanced facilities that were allocated to White children. As in the *McLaurin* case, the *Brown* ruling included a reference to the socioemotional experiences of segregated children. Excerpts from the *Brown* decision declared that the separation of African American children “from others of similar age solely because of their race generates a feeling of inferiority as to their status in the community that may affect their hearts and minds in ways unlikely to be undone” (347 U.S. at 494). The Court in *Brown* also quoted a finding in a lower court stating the following:

Segregation of white and colored children has a detrimental effect on the colored children. The policy of separating races is usually interpreted as denoting inferiority to the Negro group. A sense of inferiority affects motivation of children to learn. Segregation with sanction of laws, therefore, has a tendency to [retard] the educational and mental development of Negro children and deprives them of some of the benefits they would receive in a racial[ly] integrated school system. (347 U.S. at 494)

After review with the *Brown* case in 1954, the Supreme Court ruled in *Bolling v. Sharpe* that segregation in the District of Columbia public schools was a denial of the due process of law guaranteed by the Fifth Amendment, and the *Brown* case affirmed that segregation violated the equal protection clause of the Fourteenth Amendment. These victories meant that desegregation was necessary in order for African American students to have access to material opportunities afforded to White students and to preserve the socioemotional well-being of African American children. This decision also represented evidence that U.S. society was ready to move toward desegregation. This was a significant change in shaping future policies regarding the rights of U.S. citizens. The *Brown* decision overturned *Plessy v. Ferguson* and ended the era of separate, but equal.

With this desegregation ruling, it was assumed that African American students would receive educational as well as social and psychological benefits. This assumption, however, has often been called into question. There was nothing in *Brown* or in *Bolling* about the implementation of desegregation. *Brown* was the first court case to state that segregation should be eradicated; however, there was no stipulation on how to create racially integrated U.S. public schools. Thus, *Brown* was reargued in 1955 (*Brown II*) to determine how the violation of the Fourteenth and Fifth Amendments should be fixed.

Because the *Brown* decision involved several jurisdictions, the U.S. Supreme Court wanted time to establish what should be done in terms of relief. *Bolling v. Sharpe* was included as the fifth case in *Brown II* since all of the cases were concerned with the issue of relief. In *Brown II*, the Court required that the defendants make a prompt and reasonable start toward full compliance with the

desegregation process. In *Brown II*, the U.S. Supreme Court delegated the task of carrying out the desegregation to district courts. It set forth guidelines that placed the primary responsibility for evaluating and resolving any problem that could arise as the result of the implementation of the desegregation of public schools on the districts themselves. The district court was also charged with considering the adequacy of the desegregation plans and to stimulate the transition to a racially nondiscriminatory school system. During this period of transition, the courts retained jurisdiction of the cases. Thus, district courts were given the responsibility to determine whether districts were in fact making good faith efforts at school desegregation.

Postscript

Although the *Brown* and *Brown II* decisions stipulated that separate schools were not equal and that school districts were to desegregate, the ruling did not lead to immediate attempts at desegregation. *Brown* and *Brown II* did not stipulate the implementation of specific desegregation plans nor a time table in which these desegregation plans would be realized. Even though *Brown II* stipulated that schools were to be desegregated with all deliberate speed, it did not stipulate a date by which schools had to be desegregated and did not give any provisions for how this school desegregation would be achieved.

After *Brown II*, uncertainty about when and how to desegregate continued for many years. School desegregation did not come swiftly or easily. Eighteen southern states adopted resolutions of interposition declaring *Brown* illegitimate, denied the U.S. Supreme Court's power to outlaw segregation, and enacted legislation designed to thwart any efforts toward desegregation. Southern judges refused to enforce the law of *Brown* by upholding statutes that were clearly designed to evade *Brown*. As late as 1964, only 0.48% of African American elementary and secondary school students in the South (excluding Texas and Tennessee) attended schools with Whites. If the U.S. Supreme Court justices had known that there was such a lack of public support for desegregation, they might have added stipulations for enforcing desegregation to *Brown* and *Brown II*.

The *Brown* case ruled that desegregation was necessary for African American students to have access to material opportunities afforded to White students and to preserve the socioemotional well-being of African American children. However, it was not until almost 11 years after the original *Brown* decision that a dent was made in desegregation efforts. When Congress passed the Elementary and Secondary Education Act of 1965, billions of dollars became available for public school districts. This money was also available for desegregation efforts.

BUREAU OF REFUGEES, FREEDMEN, AND ABANDONED LANDS

Established on March 3, 1865, by the Freedmen's Bureau Act, The Bureau of Refugees, Freedmen, and Abandoned Lands, better known as the Freedmen's Bureau, was sanctioned as an agency to provide social uplift to approximately 4 million newly freed African Americans released from the bondage of enslavement. With the adoption of the

Thirteenth Amendment (1865), the Civil Rights Act of 1866, and the pending Fourteenth Amendment (1868), the Freedmen's Bureau had seven responsibilities: the relief of physical suffering, the overseeing of the beginnings of free labor, the buying and selling of land, the establishment of schools, the paying of bounties, the administration of justice, and the financing of all the activities. The education of African Americans was perhaps its greatest accomplishment. This entry provides an overview of the bureau's work, takes a closer look at its role in education, and assesses its other accomplishments.

Organizational Overview

The Freedmen's Bureau functioned fully from 1865 to 1868 and in part until the end of 1869. Its original commission was for 1 year, yet in 1866—and over a presidential veto—Congress extended the life of the agency and increased its powers.

Organized under the War Department, the Freedmen's Bureau divided former Confederate States into 10 military districts. It was headed by Major General Oliver Otis Howard, who was appointed by President Andrew Johnson at the behest of the Senate. Howard oversaw these districts and attempted to distribute the acres of abandoned and confiscated land to freedmen and women, but was met with great resistance. Howard, a gregarious and charitable commissioner, convinced Congress to divide former plantations into small parcels of 40-acre units that would be awarded to freed people, but President Johnson undermined the Freedmen's Bureau by pardoning former Confederate planters, restoring their land and status in 1866. At this point, freed people lost access to lands, and the Freedmen's Bureau lost access to its primary source of funding. With these events and the lack of funding, weak organization of the internal structure, and opposition from conservatives, the Freedmen's Bureau had very little impact on freed people during the era of Reconstruction (1865–1876).

Of the seven responsibilities of the bureau, some were fulfilled more completely than others. One of the more successful initiatives of the bureau was its ability to relieve the suffering of destitute African Americans and Whites. After the Civil War (1861–1865), many African American and White

Southerners found themselves homeless and/or without the ability to support themselves. The bureau, despite its limited funding, sought to alleviate some of the suffering of these Southerners by providing them with food rations, clothing, blankets, and temporary housing. Tens of thousands of rations were distributed across the South in the hopes of relieving the temporary hardships of African American and White Southerners following the Civil War.

Leadership in Education

The greatest success of the Freedmen's Bureau, however, was the establishing of schools for African Americans. In the South, establishing free schools for African Americans and free elementary education among all people faced great opposition. Although the agency never instructed a single freed person, its presence assisted in consolidating and furthering some of the earliest postbellum educational opportunities for freed people. The bureau gave the educational opportunities of freed people a greater degree of organization by consolidating—to the best of its ability—the school initiatives of the various benevolent associations, freed people, and assenting local Whites.

According to historian Clifford Ganus Jr., the bureau attempted to organize and support the multiple groups associated with African American schooling throughout the South. In early years, the bureau provided transportation for schoolteachers of freed people; paid for salaries, books, and other learning aids; and secured additional teaching space by buying or renting property from assenting landowning Whites. The bureau also provided financial incentives essential to expanding the number of schools that could be offered in both the immediate areas of Union occupation and the more rural and nonbureau and nonmilitary sanctioned areas of the state. Accordingly, the bureau's combined efforts established a consolidated system of tuition-free grassroots schooling opportunities for African Americans throughout the South. By 1870, more than 9,500 teachers, with the assistance of the Freedmen's Bureau, taught nearly 250,000 pupils in more than 4,300 schools.

Free schools for African Americans gained the attention of benevolent agencies such as the American Missionary Association, which built

schools and identified White philanthropists. Private freedmen's aid societies provided teachers and their salaries, buildings, and supplies. By the end of 1865, more than 90,000 freed people were enrolled as students in public schools. By 1871, 11 colleges and universities and 61 normal schools—for the training of teachers—had been founded. Universities such as Atlanta University, Hampton Institute, Howard University, Talladega College, and Fisk University were among these. According to W. E. B. Du Bois, \$6 million were expended in 5 years for educational work, \$750,000 of which came from formerly enslaved Africans themselves.

Nonetheless, White Southerners fought to keep African Americans ignorant and uneducated, deeming educated African Americans to be dangerous. In addition to opposing African American education directly, they fought to keep liberal White philanthropists and businessmen (who they called carpetbaggers) out of the South. These groups possessed the potential to undermine overt and subversive movements to reestablish the order of the Old South.

Other Efforts

The most confounding and least successful component of the Freedmen's Bureau's work was its ability to judicially protect the rights and livelihoods of formerly enslaved Africans. Former bondsmen were intimidated, beaten, raped, and killed by revengeful Whites. From this, a polemic dialectic was fostered. Although the bureau's courts were venues where Whites were punished because of the mistreatment of African Americans, state courts were institutions for perpetuating the order of the Old South. These courts sought to reduce African Americans to bondsmen once more while the bureau's court sought to put African Americans on equal grounds with Whites.

The Freedmen's Bureau initiated a system of free labor, established the African American peasant proprietor, secured the recognition of African American freemen in courts of law, and served as the founder, financier, and consolidator of the free public school in the South. On the other hand, it failed to address the debasing and mortifying White response to emancipation and the personal and professional advancements of freed people, and it did not establish good race relations between

the White Southern planter class and their former bondsmen and women.

Similarly, because it was ill equipped and understaffed, it failed to guard its work from paternalistic methods that discouraged autonomy and was unable to create African Americans landholders in any considerable numbers. Its good fortune was due to industriousness—Northern White liberals and dedicated African Americans. Any failures resulted from insufficient federal support, poor management, and the sheer difficulty of the tasks.

BUSING

Busing is the term used to describe a process in which school districts used altered school bus routes to facilitate the racial desegregation of public schools in the United States. Segregated housing patterns, whether de jure or de facto in older cities, made genuine attempts to implement court-ordered desegregation in neighborhood public schools difficult. In many cities (both northern and southern), African American and White children were displaced to accommodate desegregation. Whites, who were willing to tolerate the presence of African Americans, could not fathom the transporting of their children out of their segregated neighborhoods to make room for the influx of African American children. This entry looks first at the context of busing in terms of the landmark desegregation orders and the wave of opposition to them. Then, it examines busing programs in several key cities and concludes with court decisions that for all intents and purposes ended busing and led to the resegregation of schools.

Historical Context

Busing for school desegregation resulted from efforts to obey the U.S. Supreme Court decisions in *Brown v. Board of Education, Topeka, Kansas* (1954) and in *Brown II* (1955), which made separate schools for White students and African Americans within the same school district unlawful and ordered implementation of desegregation orders. School districts faced with designing plans to follow the laws met with passive and active resistance from external and internal sources, especially in areas where single-race configurations were most prominent.

One form of resistance to desegregation was the Southern Manifesto in which congressmen from the South argued that the Court had overstepped its bounds in making decisions that interfered with the states' rights to develop and implement segregation laws. Another was massive resistance: overt defiance of court-ordered desegregation by closing public schools to all students, selling the buildings to private interests, reopening buildings as private segregated schools, and providing vouchers for students to attend the private segregated schools. Several closings occurred in Virginia; however, two such closings were sustained. The first, in Prince Edward County, Virginia, lasted for more than 5 years. The second closing occurred in Norfolk, Virginia, and lasted about 6 months.

Busing Plans Begin

Opponents of *Brown* consistently argued that housing patterns could not be reversed, and their actions stalled substantive desegregation efforts until the early 1970s. The Charlotte-Mecklenburg, North Carolina, *Swann v. Charlotte-Mecklenburg Board of Education* (1971) decision paved the way for using structured school bus routes as a means to accomplish desegregation of public schools. The decision provided a model for cities throughout the South, and after years of fighting, Southern cities were forced to develop busing plans.

When busing became Norfolk's only option, complicated bus routes were developed that required the longest rides and primarily transported poor children, both African American and White. An entire section of the city where the most expensive real estate could be found was excluded

from the busing plan. The western portion of Norfolk, Virginia, had been set aside for a choice plan. Students from the other three regions could apply through a lottery. At this point in history, especially in the South, district plans were often not legally challenged. After all, the people for whom problems existed had neither the resources nor knowledge of how to work the system. Interestingly in Norfolk's case, the lottery was not monitored.

Other cities adopted magnet school plans, which involved a combination of the busing out of a percentage of youngsters from neighborhood schools and the busing in of applicants interested in taking part in programs that might emphasize special topics such as math, science, technology, foreign language, or the arts. Racial formulas for such plans were based primarily on population dynamics; a 65% to 35% formula of White to African American students was common for many districts implementing magnet plans.

Still other districts relied on unstructured choice plans. One such failed plan involved Green County, Virginia. The decision in the *Green v. County School Board of New Kent County* (1968) resulted in the establishment of requirements for desegregation that would be necessary for dual school systems (with separate African American and White schools in the same school district) to gain unitary status. The notion of unitary status would be a pivotal element in the deconstruction of desegregation laws. To obtain unitary status, districts had to achieve desegregation of the student body, faculty, and staff. In addition, facilities, transportation, and extracurricular opportunities had to be equal.

Reactions to busing were not limited to southern schools, and they were long term. Schools in older northern and midwestern cities, such as New York, Boston, and Detroit, were also segregated. Covert and overt reactions to desegregation orders in the cities involved juxtaposing district lines, violating fair housing law, and using scare tactics. In Boston, Massachusetts, the reaction to substantive efforts to desegregate schools with busing resulted in individuals chaining themselves to buses, burning school buses, and other violent acts. In New York, funding disparities evidenced discriminatory practices in schools.

In Detroit, the three *Milliken v. Bradley* (1973; the original ruling) decisions gained notoriety

when the decisions actually reversed one another. The court in *Milliken v. Bradley* indicated that the metropolitan busing plan, which included suburban school districts, could be used as a remedy for segregated schools. The judge in *Milliken I* (1974) ruled against busing students from suburban districts as part of a desegregation plan, supporting the belief that to do so would be punishing the suburbs by forcing children who lived there to be bused to the cities. When no progress on desegregation was made after *Milliken I*, another option was considered. In *Milliken II* (1977), the idea of compensatory education was offered in lieu of busing to right the wrongs of segregated schooling. U.S. District Court Judge Robert DeMascio determined that provisions for some method of compensation for African American students trapped in segregated, educationally inadequate facilities should be included when desegregation was not possible.

The End Comes

Busing was used to accomplish desegregation until 1986, when a little known case *Riddick v. School Board of the City of Norfolk* (1986) was used to begin the end of the practice and to initiate the resegregation process in other U.S. public schools. In this decision, the School Board of the City of Norfolk claimed that it had achieved unitary status and was released from federal court oversight. The achievement of unitary status left Norfolk, and the districts that followed the Norfolk model, to the practice of self-monitoring desegregation plans.

The scenario in Norfolk, Virginia, is critical in any discussion of busing because the *Riddick* decision laid the groundwork for similar decisions in courts throughout the United States. In 1986, the

Supreme Court refused to hear an appeal from *Riddick*, and the reversal of desegregation law accelerated. Although millions of public and private school children in the United States ride the bus to school every day, busing for the purpose of desegregation still retains a negative connotation.

CALHOUN V. LATIMER

Calhoun v. Latimer (1964) involved a long court battle between African American students and the Atlanta School Board over the process and timing of school desegregation. Responding to the landmark *Brown v. Board of Education, Topeka, Kansas* (1954) ruling, which said that laws denying school admission on the basis of race were unconstitutional, the Atlanta board had proposed a plan in which desegregation would have been implemented in only one class per year. While the district court and the court of appeals approved the plan, the U.S. Supreme Court said that a plan taking 12 years for full implementation did not meet its standard of compliance at “the earliest practicable date” and “with deliberate speed.”

Eight years after the landmark decision in *Brown*, many school districts throughout the country had yet to fully comply with its edict. This situation set the stage for a dramatic legal confrontation involving local, state, and federal branches of government. With these battle lines drawn, African American students vied for meaningful access to desegregated schools. However, these young people were consistently denied or stonewalled by local legislatures that vowed to maintain segregation through superficial compliance with court orders. Implementation delays were countenanced by proposals of seemingly reasonable school desegregation plans submitted by local school boards with approval from their federal district courts. Typically, these desegregation plans

avored regional interests, opting for a prolonged transition rather than student demands for expedient and comprehensive school desegregation.

The Atlanta School Board’s gradual desegregation plan was emblematic of this contentious situation. This plan proposed desegregation on an annual grade-by-grade approach, starting with the 12th grade and successive implementation through to the first grade, over a period of 12 years. Students would integrate on a voluntary school transfer system—where only “qualified” minority applicants would be allowed access to formerly all-White schools.

Now, with their plan confirmed, the lower federal courts applauded the work of the Atlanta School Board for their compliance with *Brown*. But, nearly 4 years after the passage of the Atlanta school desegregation plan, persistent student plaintiffs finally received relief when the U.S. Supreme Court rebuffed the board in *Calhoun v. Latimer*. The Court held that a plan that could not achieve complete desegregation until the late 1970s was simply unsupportable. The permissible timeline for school desegregation had evolved from the initial charge in *Brown* of implementation by the “earliest practicable date and deliberate speed,” and further delay in implementation was held to be unacceptable. This entry provides historical context for the *Calhoun v. Latimer* decision, the facts of the case, the appeal, and the U.S. Supreme Court decision.

Historical Context

The Fourteenth Amendment declares that no state shall make or enforce any law that shall abridge

the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws. However, prior to the passage of *Brown*, state laws allowing or mandating school segregation were permissible according to the mandate of *Plessy v. Ferguson* (1896). This case set the permissible application of the Fourteenth Amendment to be the “separate-but-equal doctrine”—meaning that as long as the state provided facilities on an equal level, then laws mandating separation by race were permissible.

The First Brown Case

Brown was a class action lawsuit by students from various states who sought and were denied admission to public schools on a desegregated basis because of state laws bolstered by *Plessy*. The student plaintiffs argued that segregated public schools were incapable of ever being considered equal, and thus students were denied the equal protection of the laws. The U.S. Supreme Court, under Chief Justice Earl Warren, held that in spite of the equality of school facilities provided, segregation still denied African American students equal protection of the laws against the charge of the Fourteenth Amendment. Warren’s reasoning relied heavily on prior cases that held that the Fourteenth Amendment was passed primarily for the protection of African Americans and was meant to eliminate any legislation that could create a bias on race alone.

For analytical purposes, the court assumed that the quality of school facilities and instruction were equal to those provided to Whites and analyzed the *Plessy* doctrine strictly in the context of the equality of African American education in a dual racial setting. Warren was able to navigate around any historical precedential confines in his reasoning due to the context of when these laws were passed. The Fourteenth Amendment was approved in 1868 and the *Plessy* doctrine was pronounced in 1896, both at a time when meaningful African American education was a moot point. But, now that the state had taken on the obligation to provide education to African Americans, it became a right that must be provided equally.

The court concluded that the real effect of segregated schools was the fostering of a sense of inferiority that was only magnified when condoned by the legitimacy of laws. Therefore, the court declared school segregation inherently unequal and contrary to the equal protection guarantees and thus invalidating *Plessy*.

Implementation of Desegregation: Brown II

While the first *Brown* decision was decisive on the illegality of a dual racial school system, it was vague on how to apply this decree. The second *Brown* decision (*Brown II*), handed down a year later, provided courts much-needed guidance on how to integrate this sweeping change nationally. This case held that school boards must effectuate a transition to a racially nondiscriminatory school system and provide “admission to public schools as soon as practicable on a nondiscriminatory basis.” However, the Court was cognizant of the obstacles facing various districts now ordered to desegregate. Some communities were vehemently opposed to change and the administrative complexities in eliminating and integrating entrenched dual school systems. Therefore, in its second opinion (*Brown II*), the Court directed the lower courts to consider issues related to

administration, arising from the physical condition of the schools, the transportation system, personnel, revision of school districts and attendance areas into compact units to achieve a system of determining admission to the public schools on a nonracial basis and a revision of local laws and regulations which may be necessary in solving the foregoing problems.

Individual cases were remanded back to the federal district courts in their respective states to fashion remedies with jurisdiction over the local school boards that were charged with implementation of individual school desegregation plans.

While the district courts were provided latitude and were permitted to take into consideration the local public interests in approving these plans, they were nonetheless still charged with the constitutional mandate of *Brown*. Their plan implementation timeline was not dictated, but they were required to “make a prompt and reasonable start

toward full compliance,” as ruled in the first *Brown* decision. *Brown II* placed the onus on districts needing more time to adjust to the transition to prove the necessity of an extension, which would only be permitted, if “consistent with good faith compliance at the earliest practicable date.” The ultimate goal of the *Brown II* mandate was to open the public schools on a racially neutral basis “with all deliberate speed.”

Facts of the Case

The legal battle for desegregation in Atlanta’s public school system began in 1958 when the National Association for the Advancement of Colored People (NAACP), on behalf of African American students and their parents, filed suit in *Calhoun v. Latimer*, which would remain in federal courts until its conclusion in 1964. The U.S. District Court for the Northern District of Georgia had agreed with the plaintiffs that the Atlanta school system was not in compliance with *Brown*. The Georgia legislature, like those in other states, had been passing laws to avoid the import of *Brown* and even threatened to cut off state funding to school boards that complied. The district court not only recognized the problems facing the school board but also recognized the charge it was given to ensure that school authorities preceded with all “deliberate speed.”

The court interpreted this to mean that a balanced approach was needed to harmonize the traditional school system, which realistically could not be transformed overnight. The court was well aware of the enormity of the task confronting the board of education. The Atlanta school system contained 46,400 African American pupils, and the plan proposed the transfer of qualified students annually. However, the proposed plan was challenged from inception as being incomplete, that it failed to meet the duty of desegregation, the proscribed delays were contrary to the charge of a “reasonable start,” that the plan lacked a compelling reason for the gradual implementation.

However, despite these objections, the Atlanta School Board’s plan was eventually approved in 1959, as the district court noted that *Brown* did not mandate desegregation or reshuffling of pupils, but only forbade admission standards on a racial basis. The court reminded the plaintiffs that the sweeping

changes that some had expected were not a prerequisite to the passage of a valid plan. However, some provisions of the plan had to be removed as unworkable restrictions. For example, the plan called for factors to be considered during the desegregation process was the “possibility of threat of friction or disorder among pupils or others and the possibilities of the breaches of peace or will, or economic retaliation within the community.” These factors, while seemingly reasonable on their face, were deemed irrelevant and subservient to the equal protections guarantees of the Fourteenth Amendment that would allow state laws to delay school desegregation. Therefore, the U.S. Supreme Court held that even the threat of civil disobedience was not to be considered as a valid excuse to delay implementation of school desegregation.

Soon after the plan was executed, lawsuits were filed to enjoin the continued operation of a segregated biracial school system even on this transitional basis. In *Calhoun v. Latimer*, the student plaintiffs repeated the same charges of discrimination leveled before the plan was adopted. The district court held that the approved plan was scheduled over time to provide for full desegregation. The plaintiffs’ proposed alternative desegregation plan provided for the accelerated desegregation at three grades a year, as opposed to the grade a year approach, which would mean full desegregation in 4 instead of the 12 years in the confirmed plan.

The court found no precedent for forcing acceleration of an established plan, especially with no change in conditions necessitating it. The court noted various factors that led to the gradualism of the approved plan, including the rapid influx of students in the city and the shortage of available facilities. The court held that the trial judges were given the authority to consider plans based on local conditions, and it considered the plan to be administered in good faith by the Atlanta Board of Education. The court also noted that transfer rates were increasing annually and justified remaining committed to the plan instead of the plaintiffs’ proposal based on the local public interest for continuity.

Appeal by the Plaintiffs

The plaintiffs then appealed to the U.S. Court of Appeals for the Fifth Circuit, which made some

additional observations and criticisms of the plan, but nonetheless affirmed the decision of the lower district court. Of note, although the plan permitted any child in the desegregated grade to seek out a transfer, in the 1961 school term, 150 African American students applied for transfers, and only 10 transfers were granted by the Atlanta School Board. And there was one transfer request from a White pupil, who wanted to leave his school only because of the approved African American student transfers; this application was subsequently denied. These 10 approved transfers reduced the number of formerly all-White high schools in Atlanta from 17 to 13. Admission tests were administered to transfer applicants; transfer students had to score at least equal to the average aptitude of the class in the new school. Additional admission criteria included the transferee's proximity to the new school, personality profile, and the stated reasons for transfer.

The plaintiffs did present some new issues on appeal that might have justified a reversal, since there were other decisions announced after the plan was approved that went in another direction. And the appeals court also was charged with determining whether the approved plan was being applied in a discriminatory manner. The appeals court said they were provided regional jurisdiction to consider plans on the basis of local conditions, but they were also aware that the constitutional mandate could not be slowed simply because localities politically disagreed with it. The pivotal question should be, Does the plan as proposed and administered follow the constitutional mandate? But, ultimately the appeals court found that gradualism was a typical and accepted method of "getting the job of transition done."

The appeals court noted that while the plaintiffs may not favor the plan methods, it still is projected to accomplish their desired end result. Moreover, according to the court, the Atlanta School Board has acted in good faith and the district court has successfully managed to balance the constitutional rights while maintaining the educational process. The court relied on other recent decisions to reinforce the idea that these plans and enforcement are matters of local concern and are void of a centralized formula for success, provided that good faith and progress are included. They agreed with the lower court that the approved plan was reasonable

and headed to the goal at "deliberate speed." The court explained that the plan is working and that progress is the requisite test. The court went on to commend local public and private officials who have cooperated to make the plan work.

The Supreme Court Steps In

In a realistic and prophetic dissent, one judge on the appeals court stated that the district court should have gone further in Atlanta's school desegregation. The dissent made several criticisms, including that the plan did not meet the "deliberate speed" criterion of 8 years earlier. Also, the African American students under this plan were required to take tests and pass personality screening that matriculating White students did not have to take. Moreover, even to qualify for a transfer, African Americans had to demonstrate aptitude greater than the average aptitude of White students who were in a superior system.

The dissent also pointed out that this circuit had approved plans in other cities that provide for a faster desegregation, essentially allowing an accommodation of the constitutional mandate here without any justification. Finally, the dissent stated that the proposal by the plaintiffs of a speedier implementation was reasonable and would be more closely aligned with other plans that this circuit had previously approved.

Certiorari was granted and the U.S. Supreme Court vacated the judgment and remanded this case back to the district court to hold hearings to reexamine the approved plan in light of other recent decisions that mandated more realistic and timely action. The Court said that it is aware and sympathetic of the local difficulties in administering the charge of *Brown*, but that was why it had judiciously chose the wording "deliberate speed." The Court made reference to *Watson v. City of Memphis* (1963), a similar desegregation case in which it held that perpetuation of the unconstitutional dual system can only have compounded the harm of such a system. The Court stated that continued delays were no longer acceptable, for "the governing constitutional principles no longer bear the imprint of newly enunciated doctrine" and that "the context in which we must interpret and apply this language . . . has been significantly altered." The courts were charged in 1954 with the goal of

effectuating the constitutional principle of protecting the interests of the plaintiffs in guaranteeing admission to public schools on a nondiscriminatory basis. With the passage of nearly a decade, the time for measured progress and accommodation was over.

CAREER AND TECHNICAL EDUCATION

Career and technical education, formerly called “vocational education,” is a large and diverse educational enterprise that includes both secondary and postsecondary education. Program areas in career and technical education are designed to prepare students for employment and often involve training and retraining adults. African Americans have had a long history and tradition of participating in career and technical education at the elementary, secondary, and postsecondary levels. Over the past decade, educational reform has reshaped the purpose of career and technical education to emphasize a broader preparation, including the development of academic and technical skills as well as vocational skills.

At the secondary level, career and technical education includes courses in seven program areas: agriculture, business, family and consumer sciences (formerly domestic science and then home economics), marketing (formerly distributive education), health, trade and industry, and technical education. Technology education, (formerly industrial arts), is

sometimes included as a service area of career and technical education as well as a vital part of general and academic education. At the postsecondary level, career and technical education is found in a limited number of 4-year institutions. These institutions with career and technical education are usually members of the University Council for Workforce and Human Resource Education (UCWHRE).

Career and technical education was originally known as “industrial education” and then “vocational education.” *Industrial education* was a generic term that included preparing students for work in agriculture, trades and industry, and domestic work (family and consumer sciences); these three are the oldest vocational education programs. Agriculture includes growing plants and raising animals. Family and consumer sciences includes child care, laundering, cooking, and sewing. Trade and industry is the career and technical education area with the widest range of occupations, consisting of many specialties ranging from cosmetology to construction to mechanics and repair skills.

Today, career and technical education includes the seven program areas listed. Both of the terms, *career and technical education* and *vocational education*, are used in this entry, which addresses the purpose of vocational education and provides a chronology of African Americans’ participation and experience in the profession.

Historical Context

Historically, the purpose of vocational education has been to prepare students for entry-level jobs in occupations requiring less than a baccalaureate degree. An important aspect of early vocational education was teaching students to work with their hands. African American men and women were taught to work with their hands through the age-old apprenticeship system.

In the early 1800s, African American schools were designed to impart a basic academic education and preparation for work. Skill training was thought to be the best hope for a better life. African Americans were taught to do skilled work in agriculture; farming, trade and industry; sawing, carpentry, masonry, blacksmithing, and home economics; cooking, sewing, child care, housework, basket making, and tailoring. African American

students developed a fair degree of skills in nearly all trade and industry and domestic areas. However, White artisans were feeling the competition from African American craftsmen and women and pressed for laws to restrict the apprenticing of African Americans in some trades.

The early history of education for African Americans in the South offers an example of the most extensive form of school segregation resulting from economic exploitation, racial prejudice, and the desire by many Whites to create a permanent underclass of workers. This latter factor—creation of a permanent underclass—would affect the enrollment of African American youth in both privately and publicly supported vocational education for years, until the 1954 U.S. Supreme Court decision outlawing segregation nationwide.

Racial prejudice also prevented African American workers from obtaining the same quality of work preparation and from securing satisfying employment. African Americans often occupied jobs with low status, low financial reward, little chance for upward mobility, and jobs that no one else would perform. For the most part, these jobs were in the program areas of agriculture and family and consumer sciences rather than trade and industry. Occupations in trade and industry such as auto mechanics, woodworking, and carpentry tend to require more training and skills, whereas agriculture and family and consumer sciences were less skilled and required less training.

After the Civil War

In the years following the Civil War, a work preparation form of education was favored for African Americans, particularly in the South, because of southern industrialists' hopes of a rapid industrial expansion and African Americans as a source of cheap labor. Advocates of industrial education helped to establish schools for African Americans in the North and South. In southern states, these schools would prepare African American students for their presumed roles in the southern economy as manual laborers and domestic servants. Thus, manual labor schools were established.

Nevertheless, the quality of education and training African Americans received did not adequately prepare them with the skills needed to become

competitive workers. The family and consumer sciences curricula were strongly emphasized in a number of early African American schools to prepare students for domestic service employment, primarily in White homes. African American women who completed industrial training programs were awarded diplomas of domestic science that certified them as cooks, laundresses, and seamstresses; working in an industry or factory was an alternative to domestic employment in White homes. Many of the graduates of manual labor and industrial training schools became teachers in African American schools instead of becoming industrial workers.

Armstrong's Plan

General Samuel Chapman Armstrong, an African American who had risen through the ranks of the Union Army, became very interested in the problems of African Americans. Armstrong knew that after gaining their freedom, African Americans would encounter serious difficulties unless they were trained into habits of industry and skills. He wanted African Americans to receive skilled artisan training like they had received through apprenticeship so that they would be equipped with the skills that were demanded of northern industrial workers and that were necessary to help rebuild the South.

To equip African Americans with the kind of skills General Armstrong anticipated, a different level of education was needed. Thus, industrial universities, colleges, and normal schools were envisioned and established. General Armstrong conceived of a school where African Americans would pay the expenses of their education by manual labor in trade as carpentry, housework, and gardening. These institutes were modeled after other manual labor schools in which boys did the farm and mechanical work and girls did housework or domestic work. In schools based on Armstrong's ideas, students would do manual work in the morning and attend classes in the afternoon and sometimes in the evening.

Hampton and Tuskegee

The most influential of these industrial schools for African Americans were the Hampton Normal

and Agricultural Institute and the Tuskegee Normal and Industrial Institute. Both were normal institutes for the training of teachers; in addition, one institute was devoted to agriculture, and the other to trade and industry. Hampton Institute served as a model of a successful manual labor school for many kindred schools established in the South. Tuskegee provided a model for how to fund industrial schools and colleges.

Until the 1920s and 1930s, courses at privately supported institutions that African Americans could attend were at the elementary and secondary level. A curriculum leading to a bachelor of science degree in private institutions was developed before it was in public institutions. Hampton awarded its first bachelor of science degree in 1922, and Tuskegee did so several years later.

Of the many industrial schools established, Hampton and Tuskegee were two of the few able to continue their industrial programs beyond World War II. Some of the privately supported industrial schools and colleges closed, and others changed their missions. A few of the industrial education programs were converted into engineering programs; today, some of these programs are the most noted engineering programs in the country.

Land Grant Institutions

Land grant colleges for African Americans were founded under the provisions of the Morrill Act of 1890. The Morrill Act of 1890, an amendment to the first Morrill Act of 1862, provided funds for the establishment and operation of higher education institutions for African Americans. Land grant institutions are significant to vocational education and African Americans; they provided instruction in agriculture and mechanic arts; trade and industry, craftsmanship, which are vocational education programs. By 1899, all of the southern states had used the provisions of the Land Grant Act to establish or to designate an existing institution as a land grant institution for African Americans.

Prior to 1930, African American land grant institutions were primarily secondary institutions. These institutions offered courses in academics, manual training, and subcollegiate trade and industrial training for occupations that were in harmony with the social and economic status of African Americans in the South. They offered

industrial education offerings confined to manual training; agriculture and domestic science; and a few trade courses such as woodworking and auto mechanics.

After 1933, land grant institutions elevated their programs to college-level work, and their primary function became vocational teacher preparation. This change was initiated as a result of the demand for teachers who possessed the necessary trade training and work experience to meet the certification requirements that had been enacted in every state. Early programs of teacher education in African American land grant institutions were extensions of vocational trade courses combined with clusters of general and professional education courses.

Secondary Schools

Prior to World War I, most African American students attended private secondary schools, many of which were founded as industrial schools that were patterned after the Hampton and Tuskegee Institutes. These began to degenerate as the nation approached World War I and as philanthropic aid for their support began to vanish. Furthermore, the death in 1915 of Booker T. Washington, the great champion of privately supported industrial schools and founder of Tuskegee Institute, was another factor that hastened the demise of industrial schools. Second, there was growing opposition among African Americans toward industrial education, based on the belief that Whites imposed industrial education on African Americans to confine them to industrial pursuits.

Although private secondary schools were founded to provide students with both a liberal education and preparation for work, these schools were mostly elementary schools with small secondary education departments. Many of them required students to prepare for work through manual labor or manual training courses. Graduates from the Hampton and Tuskegee Institutes were often teachers at these schools.

After the establishment of land grant institutions, public secondary schools in some southern states were located in the African American land grant institutions. Initially, the type of work preparation offered to African Americans at these schools was manual training, mostly in woodworking and

family and consumer sciences. However, some of these schools provided learning experiences in trade and industry areas such as mechanical drawing, metalworking, electrical work, auto mechanics, pipefitting, and shoe repair.

A National System

The establishment of a national system of publicly supported vocational education became a reality with the passage of the Smith-Hughes Act of 1917. This act made it possible for persons older than 14 years of age to receive vocational education in the areas of agriculture, home economics, and trade and industries. The growth of federally aided vocational education in southern African American schools, after the passage of the Smith-Hughes Act and before World War II, was not very rapid.

Inadequate financial support made it impossible for African American secondary schools to offer as many vocational courses as did White schools. Most African American students were most likely to be enrolled in agricultural programs and home economics programs, with few enrolled in trade and industrial programs; this reflected the tradition of African American students being excluded from these occupations.

Following World War II, enrollment of African Americans in vocational education programs, especially in trade and industrial programs, increased dramatically. As a result of the war, African Americans and Whites were forced to work together to meet the people needs of a country at war. African Americans were able to participate in industrial training and employment situations that had been closed to them. Many African Americans received adequate training for the first time in skilled or semiskilled occupations. This gave new hope to African Americans and helped change their negative views toward vocational education; they were able to compete for and participate in higher-paying jobs.

Vocational Education in Today's World

In public secondary schools, one or more courses identified as vocational education are offered in 93% of the nation's high schools with Grades 9–12. A large number of African American students live

in urban areas and attend schools that are composed of mostly African American students. While African American students do have access to career and technical education programs, some inner-city schools lack funding to offer an adequate number of career and technical education programs or to update the programs that they do offer.

African American students' participation in career and technical education programs parallels that of other racial groups. African American students who graduate from high school were about equally as likely to be vocational concentrators (three or more career and technical courses accumulated) as their White, non-Hispanic counterparts. For example, in 1982, approximately a third of African American high school graduates were vocational concentrators, compared to exactly a third of White graduates.

In 2006, the National Research Center for Career and Technical Education found that African American students had a higher participation rate in career-related programs than any other group of students; next were White students, and then Hispanic students. This represents students who have participated in a career-related program of study that includes grouping of courses, work-based learning activities, and/or cooperative education.

Traditionally, the concept behind vocational education was working with one's hands. In today's workplaces, both the head and hands are needed to satisfy the complexities of some jobs. Hence, the new vocational education is designed to prepare students for living as well as for higher education. The new vocational education is academically rigorous, career relevant, and combines academics and career applications. The new vocational education also teaches students about aspects of the industry and how to apply high-level academics (math, science, technology, and languages) in workplaces and communities. It prepares them with the education and technical skills they will need for successful employment in various careers or professions. The new vocational education is a broader preparation that develops the academic, vocational, and technical skills of students; it is very different from the traditional career and technical education.

Inasmuch as the new vocational education prepares one for lifelong learning, African American students would greatly benefit from participating

in a program area of their choice. Furthermore, the new vocational education may help to enhance General Samuel Armstrong's quest of preparedness for African Americans.

CATHOLIC CHURCH

The founding of St. Francis Academy in Baltimore, Maryland, in 1828, is recognized as the beginning of the Catholic Church's nearly two-century investment in the education of people of African descent in the United States. This participation in African American education prior to the Emancipation Proclamation and subsequent Thirteenth, Fourteenth, and Fifteenth Amendments is a significant part of the legacy of the relationship between the African American community and the Catholic Church. On the one hand, Catholicism in antebellum United States and particularly in the Old South (where the majority of African Americans lived) operated within the peculiar worlds that the enslavers made. Therefore, Catholicism's limited role as teacher and arbiter for African Americans during this era cannot be understood apart from this sordid context. However, the legacy of early Catholic religious orders dedicated to working with African Americans is realized today by the strong presence of Catholic schools in urban and

inner-city communities with large African American populations.

Over the course of their nearly 200 years of service, U.S. Catholic schools have helped millions of disadvantaged children. The positive impact of Catholic schools in the lives of African American students is measurable by higher graduation rates, academic performance, and college attendance for Black students who attend Catholic schools when compared to their public school counterparts. The high mark of U.S. participation in Catholic schools occurred in the 1960s and 1970s. While Catholic schools are experiencing a continual decline in overall student population, the number of non-Catholic African American inner-city students is increasing, foreshadowing the next chapter in an ongoing historically complex and mutually beneficial relationship between the African American community and Catholic schools. This entry explores the historical background of the relationship between the African American community and U.S. Catholic schools and the emergence of African American Catholic schools in the present day.

Historical Background

The earliest Catholic schools emerged in the Black community in the United States in the early 19th century. St. Francis Academy, established by Mother Mary Lange and the Oblate Sisters of Providence in Baltimore, Maryland, is recognized as the oldest continually operating African American educational institution in the United States. Another important matriarch in the founding of Catholic education for African Americans was Mother Katherine Mary Drexel. Her significant financial contributions, tireless work, and unending dedication allowed her to play a significant role in the establishment of schools for African Americans from Philadelphia to New Orleans. In 1915, Mother Drexel founded Xavier University in New Orleans, the only historically Black college established by the Catholic Church.

Although Mother Drexel and the women of her order were dedicated to eliminating racial discrimination, the people they encountered in their work were not always supportive of education for African Americans. In *Mother Katharine Mary Drexel: A Blessed Presence in the History of Philadelphia*, Jenny Vengalil recounted a story

concerning one such group, the Ku Klux Klan (KKK), who in 1922 threatened to assault the White priest at one of Drexel's schools and bomb the church in Beaumont, Texas. The nuns prayed, and days later, a tornado came and destroyed the headquarters of the KKK, killing two of its members. The sisters were never threatened again.

This turbulent era in which African American Catholic education began was profoundly influenced by a combination of sociopolitical and economic changes leading to the eventual end of enslavement, the Civil War, and the resulting rapid industrialization of the nation. As a result of these societal changes, education was a hotly debated topic across the nation and specifically for the newly emancipated, improved literacy was paramount. The services that the Catholic Church provided to the African American community during this era were greatly desired. However, despite their early investment in African American education, the Catholic Church's relationship with African Americans is a complex mix of both tragic and heroic events similar to the history of the U.S. relationship with its African American citizenry in general.

Moral Education

Christianity and education were closely linked in this era because many Whites felt that African Americans lacked the moral character and self-restraint to survive after emancipation. According to this line of reasoning, any form of education that African Americans received must be heavily influenced by Christian values to curtail their deterioration into savagery. As a result of the polarization around the type of education African Americans should receive, the close of the 19th century was marked by a contentious discussion across the United States about the significance of education for the newly emancipated.

While in the past, Christian ministries aimed at African Americans focused on evangelization, baptism, matrimony, and burial rites, upon emancipation, Christian philanthropy turned to providing education as a means to prepare the freedmen and women for new roles in U.S. society. Although the Catholic Church did contribute significant financial assistance to African American education during this era, the limited number of Catholics and their lack of political influence seriously hindered

the Catholic Church's ability to participate at the same level as the Protestant denominations.

Further, unlike Catholic communities in closer proximity to Europe and Rome in particular, Catholic communities in the United States were less structured. In an emerging nation founded in a spirit of Protestantism and a rejection of the Church and Crown that were powerbrokers in Europe, Catholicism did not have strong support or centralized roots in the early United States. Consequently, the parishes and specifically the schools associated with these parishes adjusted to fit the local norms of the regions in which they were founded.

For instance, in the case of influential southern cities like New Orleans, the Catholic Church did not abjure its obligation to African Americans; it simply ignored them. However, Black Sisterhoods—most notably the Ursuline Nuns who instructed African Americans from the 1720s to 1824 and the Carmelites who began a school for “colored” Creoles in the 19th century—and several individuals provided indispensable service to the African American community through their teaching. In fact, historians point out that the priests, nuns, and lay religious orders who taught for little or no compensation in African American Catholic schools in cities like New Orleans, Baltimore, and Charleston provided the inexpensive and highly dedicated workforce that afforded the foundation for Catholic schools to persist into the 21st century. Through the tenacious service of these dedicated individuals, Catholic schools for African Americans succeeded beyond anyone's wildest imaginations.

However, acknowledgment of the level of success experienced in New Orleans should be tempered by a recollection of the struggles associated with numerous stalled attempts to found African American Catholic schools throughout the nation. Among the primary cause of these failures was a relatively small Catholic community that chose to provide finite educational support to newly arriving Southern European immigrant groups as opposed to the freedmen and women. In the case of the Irish, Italians, and Polish, their preexisting Catholic and European heritage endeared them to the U.S. Catholic Church. And the competition between these groups and African Americans for jobs, housing, and ultimately a place in mainstream United States meant that sharing schools and churches was highly improbable.

Against this backdrop, African American Catholics in the South were left to themselves where education was concerned, and the aid that the church did provide was often disorganized. Individual priests attempted to establish schools for African Americans, but few prospered outside the cities. Consequently, the church catered to those in power, and in doing so ignored the powerless. In retrospect, the wonder is not that Catholic schools in particular and Catholicism in general declined among African Americans of the rural South but that it survived at all.

The Emergence of African American Catholic Schools Today

The increasing presence of African Americans in Catholic schools is a result of the higher quality of Catholic schools relative to public schools in the decaying urban cities that many African Americans occupy. African Americans are the majority in big cities with relatively low-quality public schools and relatively large public school systems. The seeds of this relationship between proximity to large cities and Catholic school racial and cultural demography are as old as the Catholic Church in the United States itself. Further, many Catholic schools (elementary, secondary, and postsecondary) were intentionally situated in close proximity to large urban centers due to the large number of Catholic immigrants that settled in these cities.

The racial composition of large U.S. cities changed from the 1930s to the late 20th century as a result of migration out of inner cities by the Italian, Polish, Irish, and Jewish immigrant population ("White flight") that once were the majority in these regions. However, Catholic parishes, defined by geography and not by congregation, often remained even after the original members had left. Catholic schools in these communities, much like the neighborhoods, became increasingly Hispanic and African American. To accommodate these changing racial demographics, the Catholic Church reached out to students who were non-Catholics. Recommended instructional classes focused on the rudiments of the faith to draw entire families into the new cultural and religious world of which the school was only one part. In short, structured and affordable education was the lure to increase Black Protestant converts. African American parents were

accepting in that they began to see parochial schools as a better option than public schools, offering a more thorough education with adequate discipline.

According to the *United States Catholic Elementary and Secondary Schools: 2004–2005* report, roughly 44% of all Catholic schools today are located in urban or inner-city communities. Cities such as Chicago, St. Louis, Baltimore, New Orleans, and Philadelphia have long traditions of African American Catholic schools.

The legacy of this relationship between urban African American communities and Catholic schools has been that African Americans have benefitted more than Whites from Catholic schooling, insofar as African Americans have significantly higher levels of academic achievement and educational attainment when they attend Catholic schools. Compared to African Americans in public schools, these parochial school students have higher graduation rates (98.1%) and a higher percentage go on to participate in higher education (80% attend 4-year institutions, 14% attend community colleges, and 3% attend technical schools).

Also, while the probability that Catholics will send their children to Catholic schools has declined markedly over the past few decades, non-Catholic and African American enrollment in Catholic schools has increased. Today, a quarter of all Catholic students are African American and other underrepresented groups, with Hispanic/Latino student population of 12 percent and African American student population of 8%.

These trends represent the hallmark of the 21st-century Catholic Church seeking to engage its African American membership in personalized and socially meaningful ways. From education and enrichment for African American Catholics to an appeal to African American Protestants, the U.S. Catholic Church appears dedicated to continuing this work for years to come and remaining responsive to the needs of an increasingly diverse nation.

CHARTER SCHOOLS

Charter schools are nonsectarian public schools that in theory allow for greater autonomy, flexibility, innovation, empowerment, and choice than currently exist within traditional public school systems. Many African American communities have embraced charter school reform—especially in U.S. cities. In addition, charter school founders of all racial and ethnic backgrounds have founded schools that specifically target African American and Latino students.

Since their creation in the early 1990s, charter schools have become one of the fastest-growing and controversial educational reforms. Charter schools have supporters with different political

persuasions and backgrounds. This is because the ideological origins of charter schools have roots in different philosophical orientations.

Community control advocates support charter schools because they offer the opportunity for grassroots groups to start schools that better meet the cultural and educational needs of poor children and children from underrepresented groups. Teachers and administrators favor charter schools because they welcome the radical decentralization they can provide, putting educational professionals who are closest to students in charge of educational decisions, including curricular and fiscal issues. These public school advocates also believe that charter schools can revitalize public education by becoming laboratories of innovation that will influence other schools' practices. Finally, market aficionados think charter schools will dismantle what they consider to be a public sector monopoly over the provision of education through choice, competition, and high-stakes accountability.

In exchange for autonomy from district and/or state regulations, charter school founders promise greater student accountability as measured by standardized assessments. Minnesota passed the first charter school law in 1991, and by 2007, all but nine states had passed charter schools legislation. This entry describes the background of charter schools, then looks more closely at issues of equity, access, and academic achievement.

Historical Background

Charter schools are the brainchild of education reformer Ray Budde, who as early as 1988 hoped that teachers would be in charge of starting and running the new schools and that from such efforts innovation would flow. Other advocates proposed that bureaucracy and regulation stymied the ability of teachers to experiment and called for deregulation in exchange for greater student achievement; the details of how schools would accomplish this pact were to be spelled out in the charter proposal.

The design of charter school laws and the implementation and adoption of charter schools across the United States, however, do not universally incorporate the vision of teacher-led schools and instead welcome the involvement of new players into public education—including private, for-profit, and nonprofit organizations known as

educational management organizations (EMOs) or charter management organizations (CMOs). Indeed, a key argument that advocates offer in support of charter schools is that private sector solutions to persistent educational problems are superior to traditional public school bureaucracies. In this vision, teacher unions are the main culprit impeding educational progress, and must be curtailed. Not surprisingly, the two national teachers unions (the American Federation of Teachers and the National Education Association) have been opponents of and/or lukewarm on charter schools. For these reasons, charter school reform draws political controversy.

From the beginning of the movement, advocates hailed charter schools as the saviors of public education, while critics vilified them as a threat to democratic schooling. Despite these divergent perspectives, in general, charter schools enjoy bipartisan support in Congress and in state capitals and broad appeal in local contexts. Charter school legislation tends to reflect the political values of the elected officials who enact it. For example, in state capitals dominated by conservatives, charter school laws tend to emphasize deregulation, competition, and multiple chartering authorities. In addition, the legislation tends to favor encouraging the quantity of charter schools so as to spur competition between charters and traditional public schools. The conservative, school choice advocacy organization, the Center for Educational Reform, has categorized such charter school legislation as “strong.” Conversely, “weak” legislation reflects liberal and progressive legislators’ tendency to enact more regulatory charter school laws that limit the number of charters, provide one or two chartering authorizers, and call for strict oversight of charter school implementation.

Although laws differ across the 41 states that had passed charter school legislation by 2007, they share a similar process by which schools become charters. Interested parties—usually a group of teachers or community members—write a charter in which they delineate the proposed school’s curriculum focus, potential student population, academic goals, assessment mechanisms, and governance and financial structures. Controversy has accompanied the reform, with critics concerned about equity, access, working conditions, and school quality. Meanwhile, advocates maintain

that chartering authorities have not granted true autonomy and that charters serve a disproportionate number of poor students and students from underrepresented groups. When looking at key issues related to charter schools—segregation, equity, and access and student achievement—a complicated picture emerges in which research is often as politicized as the advocacy surrounding charter schools.

Segregation, Equity, and Access

Charter school advocates propose that charter schools can be more equitable, diverse, and accessible than traditional public schools and school districts. The issue of school racial composition as it relates to charter schools and to other school choice policy is complicated. Most states permit charter schools, as autonomous schools of choice, to set their own admissions criteria provided they do not discriminate according to race, income, or religion. Yet, few states and local educational authorities have the capacity to enforce these guidelines, allowing for schools to employ a range of strategies to attract their desired students.

With pressure on charter schools to demonstrate improvement on standardized assessments, for example, some may counsel out students they consider likely to lower the school’s achievement level. Given the abundant data on the achievement gap between African American and Latino students and their White and Asian counterparts, it is evident that some charter schools simply do not want to enroll the lower-performing students. Conversely, some charter schools target those very same students—students of a particular racial or ethnic identity who are often from a disadvantaged background.

Research supports the fact that most charter school founders start their schools to realize a particular educational vision or mission. In these schools, such as an African-centered charter school or a charter school focused on the arts, school-level recruitment and enrollment is likely to be targeted to those specific populations. In charter school theory, these schools offer empowerment and freedom to parents and educators constrained by and marginalized by traditional public schools.

Because there are multiple reasons for charter schools to explicitly and implicitly seek out particular

students, the impact of school choice reforms on student diversity is one of the most commonly invoked concerns from charter school critics even as charter school advocates tout its positive relationship. Summarized, school choice and charter school critics predict that deregulated choice, in which parents can choose schools on the basis of individual preference, will privilege those students whose parents are most likely to be informed, involved, and savvy about negotiating the sometimes complicated process of enrolling their child in a specialized school. To the extent that this privilege correlates to race and socioeconomic status, there is the potential that charter schools could exacerbate or reflect existing social stratification and result in racially isolated or distinctive schools.

Charter school advocates counter these concerns with a number of arguments. They argue that racially distinctive neighborhoods are a reality across the United States and that charter schools and other choice plans can sever the relationship between residence and school assignment that could diversify schools. Some choice advocates argue that school desegregation efforts have placed costly educational, psychological, and social burdens too often on the backs of African American students, and that charter schools—whether they are racially homogenous or not—provide a preferable alternative to traditional public schools.

Research shows that there is stratification within the charter school sector and between charter schools and traditional schools. For example, evidence indicates that in many states, similar patterns of racial isolation emerge between charter schools, with many schools having almost exclusively White enrollments and others predominantly African American enrollments. What is less clear is if, in the aggregate, this stratification is markedly worse than what existed prior to charter school reform. Of greater concern are recent data that correlate high-poverty, majority African American and Latino charter schools with other indicators of educational equity. These indicators include fewer public and private resources that are critical to keeping a new school fiscally and educationally viable, fewer teachers with high-level or basic credentials, higher staff turnover rates, and more emphasis on “back-to-basics” curriculum.

Still, charter advocates argue that African American students in particular are served better

in racially homogenous charter schools than are African American students in urban public school districts, pointing to schools run by the Knowledge Is Power Program as exemplars. Other local grassroots charter schools that serve a particular racial or ethnic group have also showed promise.

The controversy about race, equity, and access in charter schools extends beyond traditional debates about the benefits and costs of segregated schools in comparison to more diverse ones. Federal, state, and local educational policies are often contradictory on issues of school choice and race. For example, the U.S. Supreme Court has issued rulings upholding the constitutionality of school vouchers in Cleveland—a ruling Justice Clarence Thomas likened to the landmark *Brown v. Board of Education, Topeka, Kansas* (1954) decision, although the voucher ruling (*Zelman v. Simmons-Harris*) is silent on issues of diversity. Similarly, the administrations of Presidents Bill Clinton and George W. Bush funded a number of school choice and school privatization initiatives, even as the ability of school district officials to use race in the affirmative assignment of pupils has been curtailed through a series of recent federal court rulings (for example, *Parents Involved in Community Schools v. Seattle School District*).

Academic Achievement and School Quality

Perhaps the most contentious issue concerning charter schools is the question of whether they better educate students than traditional public schools. A clear answer to this question is confounded by a myriad of factors. First, many states have changed their standardized assessments several times in the life of a charter school, making measurement of progress across years difficult. Second, it has been difficult to compare charter schools across states since individual states also employ different assessments.

Third, within a given state, there is not agreement about to whom researchers should compare the performance of charter school students. Should students in the neighboring school be a comparison group, even though a charter school could potentially draw enrollment statewide? Should it be a public school with similar racial-ethnic demographics even though charter school students are a self-selected group? Researchers have yet to reach consensus on these questions.

Fourth, since charter schools are different by design—vastly different from one another in almost every way conceivable—to aggregate their achievement data could be misleading. Fifth, self-selection bias is an issue in that charter schools draw students whose parents have been motivated to undergo an application and admissions process in schools that also exercise control over which student they admit, making charter school students different from students who attend local public schools.

Given these methodological issues, it is not surprising that school districts and charter authorizers are far more likely to revoke a charter for financial or legal malfeasance than for lackluster academic performance. Despite these difficult issues, there are data to provide a picture about charter school performance. It appears that across many state studies, most charter schools do about as well as traditional public schools, with some charter schools performing much better, and some performing much worse. Although it is difficult to conduct cross-state comparisons, several recent analyses of the performance of charter schools, traditional public schools, and private religious schools on the National Assessment of Educational Progress find that traditional public schools outperform the others.

The ways in which charter school performance is interpreted have much to do with the politics of the movement. Advocates claim that charter schools should be lauded and the movement expanded since they are doing just as well with fewer public resources. Critics counter that given the ability of charter schools to select their students and raise private funds, they should be performing at much higher levels.

Charter schools are likely to remain a popular educational reform. They are a key option under the federal education law No Child Left Behind for children whose schools consistently fail to make annual yearly progress. Reformers from a variety of political, pedagogical, and philosophical orientations continue to find favor in charter schools despite holding different visions for what charters should look like, how they should be governed, funded, and regulated. Perhaps most important, many African American parents consider charter schools to be a viable choice, especially in school districts where their children

have not been well served by traditional public schools.

CHILDREN'S DEFENSE FUND

The Children's Defense Fund (CDF) educates the nation about the needs of children, paying particular

attention to the needs of poor and underrepresented children and those with disabilities. CDF is the leading advocacy group in the United States for children and families. The Children's Defense Fund began in 1973 and grew out of the civil rights movement under the leadership of Marian Wright Edelman. CDF traces its heritage to Dr. Martin Luther King Jr., his Poor People's Campaign, and the Washington Research Project. This entry chronicles the progression of the Children's Defense Fund and the life of its founder and president, Marian Wright Edelman, looks at the mission and outreach work of the organization, and describes its research agenda.

Founder's Life

Marian Wright Edelman, born on June 6, 1939, was raised in Bennettsville, South Carolina, where she was the youngest of five children. Her father was a Baptist preacher, and her parents along with community elders and mentors stressed the value of education, excellence, and service to others. Edelman has been an advocate and social justice leader for her entire professional career. She has been quoted as saying that "service is the rent we pay for living. It is the very purpose of life and not something you do in your spare time."

Edelman graduated from Spelman College and Yale Law School. In the mid-1960s, she was the first Black woman admitted to the Mississippi Bar, and she directed the NAACP Legal Defense and Educational Fund office in Jackson, Mississippi. While in Mississippi, Edelman was involved with the civil rights movement and also helped establish a Head Start program in the community.

Edelman moved to Washington, D.C., to become counsel for the Poor People's Campaign organized by Dr. Martin Luther King Jr. Thereafter, she began to focus more on issues relating to children living in poverty. Edelman helped to found the Washington Research Project (WRP) in 1968, a public interest law firm and the predecessor to the Children's Defense Fund, which monitored federal programs for low-income families. Through the WRP, Edelman lobbied Congress for family and child nutrition programs and the expansion of Head Start. She also served as the director of the Center for Law and Education at Harvard University.

Edelman began CDF in 1973 as an advocacy organization with a voice for poor, minority, and

disabled children. Through CDF, she has served as a public speaker on behalf of children's issues in the United States and has become one of the nation's leading child advocates. CDF has not only served as an advocacy organization but also as a research and policy center, documenting the problems for children in need and suggesting possible solutions. As president of CDF, Edelman has worked to reduce teen pregnancy, increase medical coverage for poor children, and secure government funding for child care and early childhood programs. To keep the organization independent and maintain its integrity, Edelman has made sure that the Children's Defense Fund has never taken any government funding.

Edelman has received numerous awards and more than a hundred honorary degrees. She has published several books, including *The Measure of Our Success: A Letter to My Children and Yours* and *Lanterns: A Memoir of Mentors*. She also wrote the statement of purpose for Tavis Smiley's book, *The Covenant With Black America*. Marian Wright Edelman is married to Peter Edelman, a professor at Georgetown Law School. They have three sons, Joshua, Jonah, and Ezra; two granddaughters, Ellika and Zoe; and two grandsons, Elijah and Levi. Her birth house in Bennettsville, South Carolina, is now a Children's Defense Fund office.

Organizational Mission and Programs

CDF's mission identifies five program objectives that ensure all children a level playing field. The stated mission of the Children's Defense Fund is to Leave No Child Behind® and to ensure every child a Healthy Start, a Head Start, a Fair Start, a Safe Start, and a Moral Start in life and successful passage to adulthood with the help of caring families and communities. CDF provides a strong, effective voice for all the children of the United States who cannot vote, lobby, or speak for themselves. CDF pays particular attention to the needs of poor and underrepresented children and those with disabilities. CDF encourages preventive investment before these children get sick or into trouble, drop out of school, or suffer family breakdown.

CDF achieves these objectives by building a national conscience and movement for children, using and sharing a range of advocacy tools, including public awareness and education, leadership and

community development, and research and policy analysis. The authenticity and effectiveness of CDF's efforts rest on the persistent, strategic desegregation of information and action at the local, state, and federal levels on behalf of children.

While CDF is headquartered in Washington, D.C., it currently maintains state offices in nine states: California, Louisiana, Minnesota, Mississippi, New York, Ohio, Tennessee, Texas, and South Carolina. The state offices carry out the mission of CDF at a state level and compile statewide and county data on the well-being of children and families and make it readily assessable to the public; analyze state spending and budgeting in light of its commitment to children and families; and help frame state policy debates to consider the well-being of children in all policy decision making.

Signature Programs

The Children's Defense Fund has four signature programs: Beat the Odds® Program, SHOUT (Student Health Outreach Project), CDF SPROUT, and CDF Freedom Schools.

The Beat the Odds scholarship program was started to affirm the success of young people who are overcoming tremendous obstacles in their lives while working hard, demonstrating academic excellence, and giving back to their communities. The SHOUT program links college and high school students to local organizations to assist in enrolling uninsured children in the Children's Health Insurance Program (CHIP) or Medicaid. The program gives students an opportunity to develop effective leadership, time management, and coalition-building skills.

The SPROUT program organizes students to help families receive public health insurance and other benefits that can lift families out of poverty. The program aims to reach all eligible families and children and sign them up for benefits. Students partner with local groups and schools to help with outreach and enrollment efforts. The Freedom Schools provide critical summer and after-school enrichment through a model curriculum that supports children and families around five essential components: high-quality academic enrichment, parent and family involvement, civic engagement and social action, intergenerational leadership development, nutrition, health, and mental health.

The CDF Freedom Schools grew out of the CDF Black Community Crusade for Children (BCCC) initiative and are modeled after the 1964 Mississippi Freedom Schools. The BCCC seeks to weave and reweave the rich fabric of community that is the cornerstone for healthy development of African American children; to tap into and strengthen the strong African American community tradition of self-help; to rebuild the bridges between generations and between the African American middle class and poor; to assist and galvanize current African American leadership around specific goals for children; and to identify, train, nurture, link, mobilize, and empower a new generation of effective, young servant-leaders on behalf of children.

Other Initiatives

Other CDF programs and initiatives include the Cradle to Prison Pipeline Initiative, CDF Emerging Leaders Program, Tax and Benefits Outreach, and Katrina Relief. The Cradle to Prison Pipeline Initiative directs attention to an urgent national crisis at the intersection of poverty and race that positions African American boys to have a 1 in 3 lifetime risk and Latino boys a 1 in 6 lifetime risk of going to jail. The Cradle to Prison Pipeline report outlines the major factors behind the pipeline through statistics, stories, and long-term policy goals. The report calls for needed hard work and persistence to finish the work begun by the civil rights movement and Dr. King's Poor People's Campaign.

The CDF Emerging Leaders Project trains future advocates for early child care and development. The project sponsors institutes that bring together fellows and professionals providing direct services and working in the policy arena, as well as lobbyists for needed reforms at the national and state levels. A significant number of the project fellows now occupy senior policy and program positions.

The Tax Benefits and Outreach initiatives support state efforts in providing free tax assistance and information about existing federal and state benefits to improve living standards, health, and opportunities for poor and low-income families. The Katrina Relief initiative draws attention to the neglected needs of children affected by the devastation of Hurricane Katrina in 2005. CDF issued a report, *Katrina's Children: A Call to Conscience*

and Action, which urges immediate mental health and health services to children struggling to cope with Katrina's trauma. Action recommendations include an Emergency Children's Health and Mental Health Corps, Mobile Health Vans, School-Based Health Clinics, and Emergency Medicaid Relief to cut through 50 different state requirements and bureaucratic barriers.

Research Divisions

In addition to their signature programs, the CDF studies the lives of children in the United States and the challenges they face. Their research educates the nation about the needs of children. CDF's research and data collection is organized around five policy areas: child welfare and mental health, early childhood development, child health, youth development, and family income.

The Child Welfare and Mental Health Division works to give every child a Safe Start in a permanent nurturing family and community. The division promotes programs and policies that strengthen and support children and families, prevent crises in families, and help to promote safe, permanent families for children. The Child Welfare and Mental Health Division promotes federal policies that support the capacity of states and communities to provide the comprehensive supports children and families need, including prevention and early intervention, crisis services, quality foster care, specialized treatment for children and families, post-adoption and other post-permanency services, while ensuring essential crucial protections and accountability for children.

The Early Childhood Development Division promotes the idea that children need high-quality early learning experiences to help them succeed in school and in life, and families need child care services so parents can work. To best achieve these goals, CDF's Early Childhood Development Division focuses primarily on supporting and expanding Head Start, child care services, infant and toddler care, prekindergarten education, and after-school programs. In addition to education and lobbying by the staff, they work to organize and train early care and education advocates through the CDF Emerging Leaders® Program.

The Child Health Division works to ensure that all children in the United States have health insurance so

they can get health care and mental health services. To accomplish this goal, the division analyzes data and existing research to find out which children lack health insurance in the United States, identify the consequences for families without health insurance, and track federal and state policy developments. They then use the information gathered to help children by educating the public and congressional representatives about the costs of not having every child insured and supporting local organizers and advocates in the states. They also work to get health care for as many children as possible under current programs like the Children's Health Insurance Program and Medicaid.

The Youth Development division works to help youth from low-income families escape the Cradle to Prison Pipeline crisis. They promote positive youth development, work to protect children from violence, and help families and communities keep their youth out of trouble. Specifically, the Youth Development Division monitors and collaborates with community youth programs and systems; shares best practices among youth advocates, policymakers, and organizations with whom they work; tracks and analyzes youth-related legislation; and studies and proposes reforms and alternatives for the juvenile justice system. They support individuals, communities, and governments in their efforts to provide after-school care, gang violence prevention, reduce high school dropout, mentoring, substance abuse prevention, truancy, and tutoring.

The Family Income Division researches the causes and effects of poverty on children and their families. They use research and data to work with coalition partners, members of Congress, and federal agencies to promote policies that increase access to resources necessary to support a family. The division also connects families with tax credits and federal government benefits and supports local advocates with data and policy analysis to help them fight for children in their communities and nationally.

Many of the Children's Defense Fund's publications are available for free download as PDF files on their Web site (<http://www.childrensdefense.org>). A few of CDF's publications include *America's Cradle to Prison Pipeline Report*, *Katrina's Children: Still Waiting*, and *Katrina's Children: A Call to Conscious and Action*.

CHRISTIAN METHODIST EPISCOPAL (CME) CHURCH

African American members of the Methodist Episcopal Church South (which later became the United Methodist Church), a predominantly White denomination, established the Colored Methodist Episcopal (CME) Church in 1870. It would become the third-largest organization of Methodists of African descent, after the African Methodist Episcopal (AME) Church and the African Methodist Episcopal Zion (AMEZ) Church. With help from the White church, the CME founded schools in the South after the Civil War. Changing its name to *Christian* Methodist Episcopal Church in 1956, the church also produced several prominent leaders in the civil rights movement. This entry discusses its history and contributions.

Historical Background

What has been deemed the “invisible institution” by historians, the African American church has always been in existence, whether on the African continent, in the cabins of those enslaved, or in the woods away from sight of Whites in antebellum United States. However, emancipation not only freed African Americans from coerced servitude but also from the religious dominance of Whites. They formed various organizations of different religious denominational influence. The church also served as a haven for schools, social organizations, and community meetings. Historian John Hope Franklin acknowledged that religious and spiritual autonomy was one aspect of life many newly freed African Americans wanted. Freedom

from the institution of enslavement and Whites gave African American religious leaders a greater voice and their organizations were able to operate without the jurisdiction of Whites. Thus, African Americans began to separate themselves not only from the fields and plantations of their former masters but also from religious guidance.

The Colored Methodist Episcopal Church was founded in the aftermath of the Civil War. To gain some sovereignty over their church yet deny a complete break from the Methodist Episcopal Church (MEC), South, the CME agreed not to become involved politically in exchange for property that the MEC, South would provide for them. Ties with its parent White denomination were not completely severed, as members of the MEC, South board were able to decide who would represent the newly established church. So White and African American members were instrumental in the selection of their representatives. The first two bishops chosen were William H. Miles and Richard H. Vanderhorst, two formerly enslaved men, from the African Methodist Episcopal Zion Church and African Methodist Episcopal Church, respectively.

The interracial board chose Lucius H. Holsey as the third elected bishop of the CME Church. Holsey once described the history of the CME Church as “green from the fields of slavery, raw in the experiences of church tactics, in membership and ministry, without houses of worship or literature, with many of its organizing feats being performed out of doors and under trees, it overcame difficulties that make it more than an experiment.” In Holsey’s view, the Colored Methodist Episcopal Church had a unique history that exemplified a people who may not have had the traditional mechanisms of many churches but utilized what they did have.

Due to its connection to the Methodist Episcopal Church, South, the CME Church during Reconstruction became known by various names: the “rebel church,” the “Democrats’ church,” and “the old slavery church.” These descriptions demonstrate the accommodationist style that many African Americans associated with the CME Church, because in their eyes it still existed at the whim of Whites.

Building Schools

With the end of Reconstruction in 1877, and the federal government’s plans to assist southerners

coming to a halt, the CME began to fund educational institutions to better the plight of African Americans in the South. In the early 1880s, Lucius Holsey sought financial assistance from the Methodist Episcopal Church, South to create a school. In 1882, that goal was achieved with the creation of Paine Institute in Augusta, Georgia. It was formed with the idea of training African Americans for the ministry and for careers as teachers. The school was officially chartered in 1883 and in 1903 changed its name to Paine College. The school was named after Robert Paine, who helped establish the CME church and who was the Senior Bishop of the Methodist Episcopal Church, South. Although Paine College served as a demonstration of what the CME Church could do, the financial assistance of the MEC, South ensured that Whites would have influence in the school's matters.

Another institution founded by the CME was Lane College in Jackson, Tennessee. Lane was founded in 1882 as the Christian Methodist Episcopal High School. It officially became known as Lane College in 1896. The Tennessee school took its name from Isaac Lane, who served as the fourth Bishop of the CME Church.

Miles College was an outgrowth of Booker City High School, established in Booker City, Alabama, in 1902, by the CME church. It moved to Birmingham, Alabama, in 1907, taking on the name Miles Memorial College and later Miles College. The school was named after Bishop William H. Miles.

Texas College in Tyler, Texas, was established in 1894 by a group of ministers. The Phillips School of Theology in Atlanta, Georgia, was founded in 1944 by the Board of Trustees of Lane College with the purpose of training those for the ministry and promoting the Christian faith through the CME Church. An assessment of these five schools demonstrates the educational achievements of the denomination.

As the church created institutions of higher education, members also sought to expand their message outside of the United States. All CME members were not reliant upon Whites for religious instruction. Historian and theologian Gayraud Wilmore discusses early notions of religious Black nationalism within the CME Church in the latter part of the 1890s. During this time, he points out that African American religious leaders Edward W. Blyden,

Henry McNeal Turner, and Theodore Holly wanted to create a sense of Black nationalism grounded in the Christian faith, which could be promoted throughout the African Diaspora, particularly in the Caribbean and Africa. There was minimal success, but these efforts dwindled in the 20th century as many CME members did not fully embrace Black nationalist tenets. However, the church would not let the issues pertaining to African Americans in the United States go unnoticed.

Civil Rights

Many CME churches are located in the South, meaning that throughout the 20th century, White supremacy and racial prejudice reigned supreme. To counter racism, the CME recognized that they could not accomplish any greater good for African Americans without coalitions. Thus, they aligned with the AME and AMEZ denominations to form a General Conference, which was designed to form strategies that would help alleviate many of the problems and issues pertaining to African Americans and their rights as U.S. citizens.

In the early part of the 20th century, many CME leaders also aligned with the National Association for the Advancement of Colored People (NAACP). They formed numerous chapters in their communities, took leadership positions, formed rallies and protests, raised funds, and sought to ensure that African Americans were not being disenfranchised.

One of the most notable contributions many writers acknowledge is the role of the CME Church in the civil rights movement. According to historian Raymond R. Sommerville Jr., initially the CME was hesitant to fully endorse Martin Luther King Jr.'s "protest strategies," although numerous denominational ministers and leaders were critical players in King's organization, the Southern Christian Leadership Conference. Sommerville identifies three of the numerous CME members who were critical to the movement: Donald Hollowell, Ruby Doris Smith (later Ruby Doris Smith-Robinson), and Nathaniel Linsey.

Hollowell, a native of Wichita, Kansas, and graduate of Lane College, was an attorney from Atlanta, Georgia, where he was a member of the Butler Street CME Church. He also helped end racist admission practices in Athens, Georgia, at the University of Georgia, helping Hamilton E.

Holmes and Charlayne Hunter gain admission to the institution. Hollowell also served as an attorney for Martin Luther King Jr. and the Southern Christian Leadership Conference (SCLC) and was chosen by President Lyndon B. Johnson to serve as regional director of the Equal Employment Opportunity Commission (EEOC) in 1966. This latter role made him the first Black to serve in such a capacity for the federal government.

Ruby Doris Smith, a native of Atlanta, Georgia, and graduate of Spelman College, was influential with the Student Nonviolent Coordinating Committee (SNCC) and was the only woman to serve as the organization's executive secretary. With SNCC, Smith was instrumental organizing protests around Atlanta against segregation in public places and businesses. She was also influential with the organization's Black power campaigns, which focused on political rights and educational programs in the rural South.

Nathaniel Linsey served as pastor of the Thurgood Christian Methodist Episcopal Church in Birmingham, Alabama, in the 1960s, and was a leader with the SCLC and the Alabama Christian Movement for Human Rights (ACMHR)-sponsored Project C, or Project Confrontation. This platform was the code name for the 1963 campaign to desegregate Birmingham. Linsey would later become senior bishop of the Christian Methodist Episcopal Church. Hollowell, Smith, and Linsey are just three examples of the role CME Church and its members in the struggle for human rights and dignity.

Achievements and Changes

In 1954, the same year as *Brown v. Board of Education, Topeka, Kansas*, trial, which ended separate-but-equal public schooling, the Colored Methodist Episcopal Church voted to ordain women as ministers in the denomination. In 1966, women were given full clergy rights, but it was not until 1985, nearly 20 years later, that the first female presiding elder was elected. It is sanctioned by the bylaws of the CME Church that at least one woman must serve as member of the Judicial Council. Although women were not recognized to be official leaders until the mid-1950s, the role that they played must not be marginalized because their presence ensured the church's

success. Yet, the patriarchy within the church has yet to subside.

Another shift within the ideology of the CME occurred in 1956, when the Colored Methodist Episcopal Church changed its name to the Christian Methodist Episcopal Church. The transition from *Colored* to *Christian* came during a time when many religious leaders sought to eliminate segregation in the social context as well as through their own religious beliefs. To avoid discriminative practices on their part, leaders chose to incorporate *Christian* to fit the CME acronym and to emphasize the importance of universalism within a religious context, seeking to include all and excluding any racial elements.

In 1996, the CME aligned with other denominational churches to form the Revelation Corporation. This organization was formed by the leaders of five major African American churches with the goal of increasing the buying power of African American consumers. The five churches involved in the program were the National Baptist Convention of America, the AMEZ Church, the CME Church, the NBC USA, Inc., and the Progressive National Baptist Convention, Inc. E. Edward Jones of the National Baptist Convention of America, Inc., served as head of the organization, and John Lowery as vice president.

An examination of the growth of the CME Church from its inception and into the 20th century shows an increase in membership. By 1890, the church had a membership more than 100,000 people, most of them found in the southern states of Tennessee, Georgia, Alabama, and Mississippi. According to historian C. Eric Lincoln, in 1945 the CME had expanded to 18 states, a growth attributed to the number of African Americans leaving the South during the Great Migration and the job opportunities that were created with the onset of World War II. By 1989, the Christian Methodist Episcopal Church had a total of 900,000 members in the United States.

Today, the headquarters of the CME are located in Memphis, Tennessee, where the denomination's publishing house is also located. The CME also supports missions throughout the African Diaspora. With these particular overseas ventures, the church is fulfilling one of Lucius Holsey's earlier goals of utilizing a Black nationalism through spiritual conviction. The Christian Methodist Episcopal Church

has played and continues to serve an important role in the community of many.

CITIZENSHIP SCHOOLS

Throughout the mid- to late 1950s and during the early stages of the civil rights movement, citizenship schools were developed in rural and urban areas across the U.S. South. Citizenship schools taught literacy skills to African Americans; the schools' primary goal was to assist African Americans in passing unmerited voter registration requirements. This entry looks at the historical context and achievements of these schools.

Historical Background

The idea of education for citizenship and civic education can be seen from the 18th century, when a political education endorsed by Thomas Jefferson was hardly attainable by all non-White, poor, and female populations, to the early 21st century when the merits of U.S. education were strongly debated after a Republican majority Congress passed the No Child Left Behind Act (2001).

The idea of citizenship schools developed in 1955 from workshops at Highlander Folk School, a school founded by Myles Horton in Monteagle, Tennessee. The workshops were originally held to discuss the importance and function of the United Nations. However, since discussions did not progress past the race problem in the United States, it was decided that racism and segregation were more prominent issues to be tackled. Discussions then turned to what role the average citizen could play in advancing the civic rights of disfranchised African Americans and in upending legalized racial discrimination and segregation.

Two figures who emerged as leaders of the Citizenship School Movement were Esau Jenkins and Septima Clark. Jenkins, who was from John's Island, South Carolina, was a small landowner who supplemented his income by providing transportation for islanders who worked on the mainland. Acutely aware of the high illiteracy rate and limited political power of African Americans on John's Island, Jenkins made it a point to improve the standards of living for these African Americans. He started with teaching those willing to learn how to read and write. He used his bus as a mobile school to teach the rudiments of literacy to island inhabitants; however, this method proved to be a costly and inefficient way of reaching the masses.

Septima Clark, an activist and veteran public school teacher and activist of Charleston, South Carolina, who had also taught on the Sea Islands, came to Jenkins's aid. Clark suggested that Jenkins open an education center on John's Island and that fellow Highlander Folk School workshop participants assist Jenkins in developing this center. Having received encouragement, assistance, and feedback from Clark and the Highlander staff, Jenkins returned home to open an education center to teach local African Americans how to read and write.

The process of choosing a location, hiring a teacher, and recruiting students fell on Myles Horton and Septima Clark, who returned to the island to cultivate a connection with the local population. The first school was established in the back of a recently purchased grocery store, 14 students attended, and its first teacher was Clark's niece, Bernice Robinson, a beautician from the island. Its immediate goals were to teach African Americans how to read and write in order to successfully pass the voter registration requirements.

Still, organizers recognized that literacy was not an end in itself, but rather a means to become citizens and activists who would critically engage their respective environments and work for the causes of equality and democracy. Ironically, the only teaching materials at Robinson's disposal on the first day of class were pencils, paper, and the UN Declaration of Human Rights.

Growth and Achievements

Word of the first citizenship school at John's Island gradually spread, and others became interested in establishing their own schools. Prospective teachers would receive training from veteran citizenship school teachers at Highlander and would then start their own schools. These new teachers would then teach others in their community by applying a multiplicity of progressive teaching methods developed by the noted educators Septima Clark and Myles Horton in addition to a growing cadre of citizenship school teachers.

An inherent respect for students was demanded of teachers; teachers were expected to view instruction as a reciprocal process, meaning teachers should expect to learn from their students as much as students were expected to learn from teachers. And, teachers were expected to go beyond the call of duty and assist students in their struggle for social or capital gain. At the end of the 2- to 3-month sessions, students would be tested on what they had been taught. A common "test" was to apply their learning and attempt to register to vote at the local precinct. All and all, students and teachers learned there was no single way to lead or solve a problem, and that any person with the conviction to do what was in the best interest of society was suitable for leadership.

Those involved in the movement took note of the proliferation of citizenship schools and local

leaders across the South. Within days, 34 students (up from 14 students) were meeting at the original John's Island school, and another school had been established on a nearby island. In Magnolia, Mississippi, activist historian Howard Zinn noted similar developments. According to Zinn, days after six African American students went to register to vote at the county seat and passed the test, word spread and plans were being made for two new schools in and around Magnolia.

By 1965, ten years after the establishment of the first citizenship school, Septima Clark, then working with King's Southern Christian Leadership Conference (SCLC), reported that 897 schools with nearly 1,600 volunteers and teachers had registered more than 50,000 African Americans to vote. While leaders such as W. E. B. Du Bois, Stokely Carmichael, and Malcolm X questioned the integrative, civic, and nonviolent philosophy these schools espoused, the educational methods remain influential in democratic, progressive, and civic-minded educational circles today.

CIVIL RIGHTS ACT OF 1964

Instrumental in the educational advancement of African Americans in the South after the U.S. Supreme Court's 1954 decision in *Brown v. Board of Education, Topeka, Kansas (Brown I)*, the 1964 Civil Rights Act mandated the assigning of students to public schools "without regard to race, color, religion, or national origin"; school

districts that failed to comply would be subject to federal sanctions and intervention (Civil Rights Act of 1964, Title IV, Section 401, Subsection B, p. 20). This entry describes the historical background and content of the law.

Historical Context

Despite the high Court's declaration that school segregation according to race was unconstitutional in *Brown I*, and its "all deliberate speed" decree in *Brown v. Board of Education* 1955 (*Brown II*), public school pupil assignments remained consistent with de jure segregation practices in the South (that is, Jim Crow) and de facto segregation patterns in the northern and western regions of the United States.

For many African Americans, irrespective of geographic region, the racial segregation of schools was viewed as a central element of U.S. society that was designed to systematically disenfranchise them socially, politically, and economically. For the majority of Whites, however, *Brown I* challenged their self-ascribed supremacy over African Americans psychologically and materially. As a response to *Brown I*, White violence toward African Americans surged. According to historian J. T. Patterson, from 1954 to 1959, there were 210 recorded acts of White violence against Black in the South, including six murders, 29 assaults with firearms, 44 beatings, and 60 bombings.

By the early 1960s, however, Whites' resistance toward school desegregation became less violent and more evasive. In the South, for example, White school administrators typically circumvented court school desegregation orders by closing public schools, establishing private schools for White students, or implementing freedom of choice desegregation plans (see *Green v. County School Board of New Kent County*, 1968).

Intended to allow African American and White parents the opportunity to send their children to the school of their choice, freedom of choice plans produced very few integrated schools. White parents rarely chose to enroll their children in all-African American schools, while African American parents who sought to send their children to all-White schools were vulnerable to violence and economic reprisals. Additionally, individual African American families remained fearful of sending

their children to all White schools where they would be subject to harassment by classmates. Similarly, *Brown II* produced limited results because the Supreme Court did not order the immediate desegregation of public schools. As a result, lower federal district and state judges were responsible for initiating and monitoring a state's compliance with *Brown I*. Many southerners preferred this method of school desegregation, because southern federal and state judges typically required less desegregation than the U.S. Department of Health, Education, and Welfare (HEW). Thus, the pace of school desegregation after the *Brown* decisions was slow.

A New Law

Due to southern Whites' opposition toward school desegregation, the federal government under the administration of President Lyndon B. Johnson successfully lobbied Congress to pass the 1964 Civil Rights Act to increase the pace of school desegregation. Under the Civil Rights Act of 1964, the federal government was authorized to pursue school desegregation as a domestic policy. Title IV, the Desegregation of Public Education statute, permitted the U.S. Department of Justice to file lawsuits against school districts for refusing to comply with court desegregation orders (Civil Rights Act of 1964, Title IV, Section 403, Civil Rights Act of 1964, Title IV, Section 407). Additionally, Title IV authorized the U.S. Commissioner of Education to provide financial and technical assistance to districts, school boards, or state agencies responsible for administering public education system to address problems resulting from desegregation (Civil Rights Act of 1964, Title IV, Section 403).

Title IV represented a problems-based approach to school desegregation; among the services offered to states through Title IV were the use of consultants to assist in developing pupil transportation plans, establishing classroom assignments, and improving race relations in communities undergoing desegregation (U.S. Commission on Civil Rights, 1973). Under section 403, colleges and universities were contracted through the U.S. Office of Education vis-à-vis grants to establish desegregation centers to assist local school boards and state education agencies in preparing and implementing school desegregation plans. In

establishing partnerships with universities throughout the United States, proponents of Title IV sought to promote a national climate favorable to school desegregation by virtue of its relationship.

Conversely, Title VI, the Nondiscrimination in Federally Assisted Programs statute, prohibited discrimination in the allocation of benefits from any program or activity receiving federal assistance on the basis of race, color, or national origin (Civil Rights Act of 1964, Title VI, Section 601). With the anticipated passage of the Elementary and Secondary Education Act of 1965, state noncompliance with school desegregation orders meant refusing federal support for education.

By dismantling the legal basis for racial segregation and instituting policies to advance school desegregation, the Civil Rights Act of 1964 increased African Americans' access to previously all-White schools. Overall, the total number of students enrolled in highly segregated school districts fell from "14 million in 1968 to less than 5 million in 1972" (U.S. Commission on Civil Rights, 1977, p. 67). In the South, the percentage of African Americans attending previously all-White public schools decreased from 78% in 1968 to 24% in 1988 (Orfield & Lee, 2007). Conversely, the total number of African Americans attending all African American schools in metropolitan areas in the North increased (U.S. Commission on Civil Rights, 1967, 1977). In the Northeast, the percentage of African Americans attending all-African American schools rose from 43% in 1968 to 48% in 1988 (Orfield & Lee, 2007). The effects of the 1964 Civil Rights Act on the education of African Americans were immediate and long lasting. Responsible for establishing federal policies to promote social equality, the 1964 act more than anything embodies the hope of African Americans past, present, and future.

CLARA MUHAMMAD SCHOOLS

Clara Muhammad Schools evolved out of the love of a determined mother who took a stand in 1934, insisting that Muslim children be educated by teachers who will love, protect, and teach them about the greatness of their future and their Islamic and African heritage. Clara Muhammad refused to send her children to Chicago public schools, which were under the scourge of racial oppression known as Jim Crow. As a result of her courageous stand, tens of thousands of African American youngsters have experienced a Muslim education. That legacy continues in the curriculum offered at the 22 autonomous Clara Muhammad Schools throughout the continental United States and the island of Bermuda. These

schools provide elementary and secondary education to youngsters from kindergarten to the eighth grade and represent the first *association* of Islamic schools in the United States. This entry looks at the woman whose courage provided the inspiration and at the schools that resulted from her vision.

The Inspiration

Founded in 1975 by U.S. Muslim leader Imam W. Deen Mohammed, Clara Muhammad Schools were named by him to honor his mother and the wife of his father for 53 years, the late Nation of Islam leader Elijah Muhammad. From 1933 to 1972, Clara Muhammad committed herself to the cause of furthering education on behalf of the University of Islam, the then-signature schools of the Nation of Islam. Her immortal stand in 1934, in the doorway of her Chicago home, found her threatened by a Chicago policeman and a truant officer demanding that she cease homeschooling and put her children in public school or they would take her children from her and put her in jail.

Initially, the University of Islam met only 2 hours per day. Students were then homeschooled by Clara Muhammad in her home. She refused the demands of the officials. The officers were perplexed and repeated their threat. Clara Muhammad again refused, uttering her famous words, “I will die as dead as this door rail before I let you take my children and put them in your school.” The policeman commented, “She must be crazy,” but they quickly left her home and never returned. As a result of her courageous stand, the fledgling Muslim school—the University of Islam—survived, and the first home school for Muslim children in the United States, which was previously illegal, was established in 1934.

For nearly four decades, Clara Muhammad nurtured the University of Islam schools, which grew to 52 schools throughout the United States, Bermuda, and Belize. After the passing of Elijah Muhammad in 1975, his son, Imam W. Deen Mohammed, exercised his new leadership and restructured and renamed the Universities of Islam—Clara Muhammad Schools—in tribute to the extraordinary efforts of his mother. As the community of African American Muslims evolved in their knowledge of Al-Qur’an and Al-Islam

proper, the curricula of Clara Muhammad Schools also evolved; it remains a work in progress.

Philosophy and Practice

Clara Muhammad Schools are built on the philosophy of unity, that all knowledge is interrelated and interdependent, and that there is one human family sharing the physical creation and One Creator over everything and everyone. They are based on the belief that each student must be seen and taught as a total human being engaging the moral, spiritual, rational, physical, and social dimensions of each youngster. It further believes that no part of a youngster can be sacrificed or neglected. Clara Muhammad Schools are aware that they exist in a pluralistic society of many peoples, and their students participate in a shared awareness of tolerance and respect for the essential principles common to all religions and the inherent goodness of every human being. The schools endeavor to establish in their communities a balance of individual and social interests and responsibilities in accord with the purpose of advancing civilized life. Students, therefore, are engaged in the pursuit of community projects that enhance family life, neighborhoods, community, and global establishment.

As an Islamic school, the curriculum is developed from and guided by the Qur’an and the universal life examples of the prophets, especially Muhammad Ibn Abdullah, the last prophet who Muslims believe revealed the Qur’an to humanity. All conventional elementary and secondary school subjects are taught, including human development, which provides an illuminated insight into human identity and the “freedom struggle” of the African American experience. Clara Muhammad Schools believe that the issue of *human identity*—for all people—is of paramount importance, and teachers address the subject from the universal perspective of the Qur’an regardless of race, religion, or national origin. The schools also provide a confluence of Islamic, African, and African American cultural sensibilities. Students are uniquely prepared for global leadership through cultivation of moral character, academic excellence, cultural integrity, justice and fair dealing, and a commitment to the protection of the environment and all species, which is a central part of the Islamic faith.

Clara Muhammad Schools require affiliation with a Masjid (Mosque), and the director of education must be an Imam or a woman knowledgeable of Al-Islam in order to provide Islamic guidance. In addition, students wear school uniforms, and parental participation is required. The Qur'an and Arabic language is taught in all schools; some schools also teach Spanish and French. Schools are coeducational; however, in some schools, students are separated by gender in the upper grades. Each Clara Muhammad School is autonomous, but there exists a network of professional support for curricular development, accreditation, and academic competition among schools.

Clara Muhammad Schools are independently supported by the African American Muslim community. Although consistently challenged financially, the schools have been lauded by local, state, and federal education officials for their contributions to community service and to moral, human, and academic excellence.

To continue the tradition of academic excellence and further support the students of Clara Muhammad Schools, the Atlanta Masjid of Al-Islam in 1987 established the Clara Muhammad High School, which was renamed in 1988 the W. Deen Mohammed High School, after the son of Clara Muhammad; its graduates receive scholarships to the top universities in the country and abroad. The flagship W. Deen Mohammed High School originated and remains in Atlanta, Georgia.

CLARK, KENNETH B. (1914–2005)

Kenneth Bancroft Clark is regarded as one of the most influential and accomplished social scientists of the 20th century. Perhaps his most renowned studies, coauthored with his wife, Dr. Mamie Phipps-Clark, summarized the harmful psychological effects of segregation in schools on African American children. This work was instrumental in the 1954 U.S. Supreme Court decision *Brown vs. Board of Education, Topeka, Kansas* (1954), which ruled that segregation in schools was unequal and thusly unjust. This strong and timely research, fueled by various social factors concerning racism and previous research Clark did with Gunnar Myrdal, was collected from 1939 to 1950. When Clark summarized this monumental research, it brought concerns about segregation in schools to the attention of the National Association for the Advancement of Colored People (NAACP) and to the forefront of the civil rights movement. The Clarks' research helped overturn the "separate but equal" decree by proving that *separate* meant *unequal* for African Americans, including school-aged children. His ground-breaking record includes being the first African American to receive a PhD in psychology at Columbia University and the first African American president of the American Psychological Association. This entry looks at his life and contributions.

Early Years

Clark was born in the Panama Canal Zone on July 24, 1914, to West Indian parents, Miriam Hanson Clark and Arthur Bancroft Clark. His father possessed a keen awareness regarding the racism woven into the socioeconomic fabric of the United States, which eventually led to a split in the family. When Arthur Clark refused to resign from his respectable position with the United Fruit Company in Panama, his wife decided to move to the United

States with Kenneth's older sister, Beulah, believing that her family would have greater opportunities there. Kenneth remained in Panama with his father and grandmother, Beatrice Hanson, for a short time before joining his mother and sister in Harlem, New York, at age 4½.

Mrs. Clark took a job as a seamstress in the garment district of New York and eventually became an early shop steward with the International Ladies' Garment Workers Union (ILGWU), an organization that, at one time, was considered radical. It is credited with pioneering, establishing, and maintaining a pristine and extremely progressive health care program for its members. Determined to have the best for her children, Mrs. Clark consistently demonstrated her willingness to sacrifice without hesitation for the sake of her children, accepting all available opportunities.

During Kenneth Clark's childhood, Harlem was at its political and cultural peak, boasting of the great accomplishments accredited to the influential and creative genius of the Harlem Renaissance. Clark was a young child who was immensely and unquestionably influenced by the zeitgeist of the "New Negro Movement." He was in close proximity of and directly influenced by many Harlem Renaissance legends, including Countee Cullen (a teacher at his junior high school) and Marcus Garvey, who led an historic parade of 50,000 people through Harlem in 1920.

Clark's family resided in a series of tenement apartments in an ethnically, racially, and culturally diverse and integrated neighborhood. The Clarks continually moved from residence to residence in an attempt to avoid many of the social ills that come with being immigrants of African descent living in a crowded neighborhood alongside immigrants of European descent (Irish and Jewish). When reflecting on his early life in Harlem, Dr. Clark referred to his experiences in Harlem as that of a prisoner within the ghetto, wherein he learned about love, human nature (both good and bad), fear, courage, and delayed gratification, all the while staying in sync with the daily, up-tempo rhythm.

Education

Although Clark was an excellent student in junior high, his school counselor set him on a track to attend vocational school as opposed to an academically

focused high school. Holding true to her devotion, his mother once again stood firm in her idea of excellence for her children and refused to accept the suggestion of his counselor. Clark was subsequently enrolled in George Washington High School, where he excelled in economics, an interest that was fueled by the impact of the Great Depression on Harlem in 1929.

One of his teachers refused young Kenneth an economics award that he earned for his hard work and outstanding performance. In spite of this direct experience of discrimination, Clark continued to excel at his studies and graduated in 1931. This experience added fuel to his motivational fire, a fire that would burn steadily throughout his career. Up until this point, Clark had lived his life as an immigrant with noncitizen status. It was not until 1931, the same year of his high school graduation, that he was declared a naturalized citizen of the United States.

On graduating from high school, Kenneth Clark enrolled at Howard University, where he took two degrees, a BA in 1935 and an MS in 1936. His original intent was to study medicine; however, during his sophomore year, Clark encountered an individual who would influence him to change both his major and the course of his life. As a student of Francis Cecil Sumner, the first African American psychologist and chair of the psychology department at Howard University, Clark developed the standard by which he would measure himself and his work for the rest of his life. Clark's already growing interest in social problems was furthered by the method of psychological study provided by Professor Sumner.

Clark began to perceive the question of identity and social experience to be all important regarding the educational and developmental processes of children of African descent. He also began to understand more clearly the impact of racism and discrimination on the lives of both the victims and the perpetrators. This seed was planted and proved fruitful, as evidenced by Clark's contributions to psychology, education, child development, and research.

In addition to Dr. Sumner's influence, Clark also worked closely with Ralph Bunche, the first African American Nobel Prize-winner. It was through the guidance of Dr. Bunche that Clark was encouraged to participate in the development of legislation opposing Jim Crow. During his apprenticeship

with Professor Bunche, Clark also worked with Swedish scholar and economist Gunnar Myrdal, work that culminated in a book entitled *An American Dilemma: The Negro Problem and Modern Democracy*. This would be the first of many important books either authored or edited by Kenneth Clark.

Clark was a magnet for beneficial influence from persons who would provide him with the knowledge and guidance that enabled him to achieve so much later in life. In addition to his enriching academic experience, Clark's social activism demonstrated his sense of responsibility for oppressed communities and peoples. He was an exemplary model for "town and gown" united. He served as editor for Howard University newspaper *The Hilltop*, a venue through which he transmitted insightful thoughts opposing oppression in its multitude of form and expression. He would eventually be arrested, booked, released, and pardoned for his social activism and protests against segregation in public venues in the nation's capital.

Upon completion of an MS degree in psychology, Clark remained at Howard to teach in the psychology department. He remained close to Dr. Sumner, who encouraged him to pursue a PhD in psychology at Columbia University in New York. Clark followed the guidance of his mentor and returned to New York in pursuit of a PhD, but not before meeting and courting his student and life partner, Mamie Phipps, a freshman majoring in physics and mathematics from Hot Springs, Arkansas.

After changing her major at Clark's suggestion, Mamie Phipps began to work closely with Clark, and they were eventually engaged to marry. They maintained secrecy during her matriculation at Howard, and then she joined Kenneth in New York as a PhD student at Columbia. Ms. Phipps's parents were very determined regarding their daughter's life path and disapproved of her plans to marry Kenneth. Nonetheless, the two eloped in the spring of 1938.

The synchronicity of this couple is self-evident. Mamie Phipps-Clark followed in her husband's footsteps and became the second African American to receive a PhD in psychology from Columbia University; simultaneously, she also became the first woman to be awarded a PhD at Columbia University. Mamie Phipps-Clark was a woman of

great knowledge and insight; her ability to ask the "correct" question and systematically pursue answers complemented Kenneth Clark's passion and determination to resolve social injustice and to combat racism. Together, the two psychologists went on to provide the world with a compendium of quantitative data regarding what Dr. W. E. B. Du Bois would refer to as the problem of the 20th century: race.

A Pioneering Career

Dr. Clark received a PhD in 1940 and began an active professional career. He became the first African American tenured professor at City College of New York (CCNY) as well as an assistant professor at Hampton Institute (now Hampton University). Dr. Clark maintained several visiting professorships at prestigious universities such as Columbia University, University of California at Berkeley, Harvard University, and the Tuskegee Institute.

In addition to his role in academia, Clark took on many other professional endeavors, including a position studying the morale of African Americans for the Office of War Information. He founded many programs, including the Northside Center for Child Development in 1946, recognizing the need to improve the psychological and educational well-being of African American children in Harlem. The center eventually expanded services beyond African Americans, allowing Whites with special psychological needs and their families to receive services. Clark was the research director for the center until 1966. The center is still in operation today, has several locations in Harlem, New York, and serves more than 2,000 children and families.

After receiving a grant in 1962 from the President's Committee on Juvenile Delinquency, Clark also served as chief project consultant (1962–1966). In this position, Clark developed a blueprint for the Harlem Youth Opportunities Unlimited, Inc. (HARYOU), which was an important basis for President Lyndon Johnson's War on Poverty effort. HARYOU assessed the need for a thorough reorganization of the schools in Harlem. The program was directed at strongly encouraging Harlem residents to participate in implementing changes in desegregation, improving students' reading skills, and a more thorough review of

teacher performance. However, due to political maneuvering, these suggestions never came to fruition. Yet they provided foundation work for other programs in the War on Poverty effort.

Clark went on to become the first African American president of the American Psychological Association (APA; 1970–1971); while in this position, Dr. Clark challenged the racial discrimination of the APA and psychological practices in general. Prior to being elected president, Clark invited Dr. Martin Luther King Jr. to speak at the annual meeting in 1967. During his tenure as president of the APA, Dr. Clark was instrumental in the creation of the Board of Social and Ethical Responsibility for Psychology, the precursor to the Board for the Advancement of Psychology in the Public Interest.

He also served as president of both the Society for the Psychological Study of Social Issues and the Metropolitan Applied Research Center (MARC; 1967–1975), which advocated for the empowerment of disadvantaged people in education, housing, welfare rights, employment, and training programs. MARC provided the opportunity for Clark to implement his theories on education under optimal conditions. However, the teachers and superintendent of Washington, D.C., refused to cooperate with the MARC guidelines and suggestions, challenging Clark's previous research suggesting that all children are capable of equal academic performance. The superintendent countered Clark's research by suggesting that because the inner-city lifestyle was not normal, children from such a background could not be held to the same standards as children of other backgrounds. Despite these claims, Clark remained a strong advocate for racial desegregation.

Clark served as the director of the Social Dynamics Research Institute at CCNY, conducting research on various social issues, including effectiveness of foreign service officers, with the support of Presidential Life Insurance Company, Harper & Row Publishing, Lincoln Savings Bank, New York State Urban Development Corporation, U.S. Commission for the UN Educational, Scientific and Cultural Organization, the Woodrow Wilson International Center for Scholars, the Joint Center for Political Studies, and the Alfred Adler Mental Health Clinic.

Clark established a family-owned management consulting firm, Clark, Phipps, Clark, & Harris.

This firm worked in human relations, personnel administration, educational programs, equal employment opportunity, and affirmative action programs. The firm offered counsel to government agencies, financial and educational institutions, private corporations, and the government of Bermuda.

Accomplishments and Honors

Clark is the author or coauthor of 16 books, numerous journal articles, and countless interviews in national periodicals. Some of his works are *Prejudice and Your Child* (1955), *Dark Ghetto: Dilemmas of Social Power* (1965), *Pathos of Power* (1974), *A Relevant War Against Poverty* (coauthor, 1968), *The Negro American* (coeditor, 1968), *The Negro Protest* (1963), *A Possible Reality* (1972), *Social and Economic Implication of Integration in the Public Schools* (1965), *Racism and American Education: A Dialogue and Agenda for Action* (1970).

He was also the recipient of 27 honorary doctorates from colleges and universities, including Haverford College, Yeshiva University, Oberlin College, Johns Hopkins University, Amherst College, New York University, Columbia University, and University of Massachusetts. Dr. Clark was the first African American member of the New York State Board of Regents, a member of the Board of Trustees of the University of Chicago and of the New York Urban Development Corporation. He was also a member of Sigma Xi, Phi Beta Kappa, and the Society for the Psychological Study of Social Issues. Clark received many distinguished honors, including the Spingarn Medal by NAACP (1961), the Kurt Lewin Memorial Award by the Society for Psychological Study of Social Issues (1966), the Sidney Hillman Book Award (1965), and the Presidential Medal of Liberty (1986).

In addition to being a noted author, leader, researcher, academician, and scholar, Clark was also a family man. He and wife, Mamie, had two children, Kate Clark Harris and Hilton Bancroft Clark, and three grandchildren, Scott Harris, Natalie Thompson, and Andrea Harris. He passed away on May 1, 2005, in Hastings-on-Hudson, New York, at the age of 90.

CLARKE, JOHN HENRIK (1915–1998)

John Henrik Clarke enjoyed a prodigious career as a historian, lecturer, teacher, mentor, poet, and journalist. Clarke was compelled into serious study in search of the intellectual, cultural, political, and religious history of Africans before enslavement and colonialism. He called his work a project of restoration: to restore what existed before the systematic destruction of the true African historical past. Three intersecting themes in turn galvanized his conception of education for African Americans, which he referred to as “education for a new reality.” The aims and origins of African history, Pan Africanism, and African American studies form the core of his conception of what education should be and what end this education should serve.

More than perhaps any other historian, Clarke demonstrated that Africans had a past that preceded the “slavery curtain” and contact with Whites. Dr. Clarke is also a chief architect of the construction of a Pan African world. His work heralded, promoted, and legitimized the development of Black consciousness in the 1960s. He

began at a time when few U.S. citizens—including African Americans—took seriously the possibility that Africans could have produced civilization without Whites. His work thus constituted a challenge to psychological and political dependency.

Moreover, he was also an activist who played a significant role in the intellectual transformation of Harlem and the Black United States. Making clear that African America could only pursue its liberation by meticulous study of the African past was his enormous contribution to African American education today. Restoration for Clarke did not include a goal of gaining full access into the mainstream United States; rather, his work offers a decidedly different objective. His work argues that African Americans must determine their own images, beliefs, traditions, and knowledge systems in order to be a truly liberated people.

This entry outlines Clarke's induction into scholarly study, his conceptualization of African history, Pan Africanism, and African American studies, and his contribution to African American education.

Biographical Sketch

Clarke's commitment to the pursuit of a holistic education for African Americans began with his commitment to locating a truthful account of African history. This journey began when he confronted the absence of Africans within the historical trajectory in his southern schooling. Born in Union Springs, Alabama, in 1915 to John Clarke and Willie Ella Mays Clarke, Clarke spent his adolescence in Columbus, Georgia. His father and mother worked and raised their children in the Jim Crow South during a time when the education of African Americans remained a precarious and contentious issue. The senior Clarke labored as a sharecropper and had dreams that his son would one day fulfill the dream he could not: to own the land he worked. Willie Ella Clarke serviced Whites as a washerwoman.

The younger Clarke also had dreams of being connected to land (Africa), but it would be through intellectual labor that he would fulfill his father's dream. This would have to wait as the need to work to help support his family took precedence over his formal education. Although he initially advanced no further than the eighth grade in school, he developed an ethic of self-teaching that would later play a fundamental role in his intellectual and activist

career. Despite the fact that he later completed his formal education (in 1993, Clarke completed a doctorate of philosophy at Pacific Western University, Los Angeles (later called Miramar University in San Diego), and earned numerous honorary doctorates (among them is a 1993 honorary doctorate from Clark-Atlanta University), he often mused that his true university training occurred in public libraries and well-chosen secondhand bookstores. Despite his haphazard educational training, he found that the world around him provided the opportunity to become more than literate, but politically literate.

Clarke began his impassioned quest to uncover the historical past of his community after a White employer remarked to Clarke that African Americans had no historical past beyond enslavement. Clarke was convinced that this prevalent idea was in fact false. He owed this early revelation in part to the work of the historian Arthur Alfonso Schomburg. In 1931, Clarke came across Schomburg's essay, "The Negro Digs Up His Past," in Alain Locke's celebrated anthology, *The New Negro*. Schomburg confirmed Clarke's budding hypothesis that the African people did have a rich and glorious history. Clarke committed himself to meeting Schomburg.

Early Years in Harlem

Clarke left the South in 1933 at the age of 17. After stopping briefly in Chicago, he went to Harlem, where he met Schomburg and studied with him as part of the Harlem History Club. His apprenticeship with Schomburg sparked Clarke's dedication to the task of digging up the intellectual, cultural, and political past of the African in a global world and to engaging and organizing the Pan African community in its collective search for identity. Throughout his life, Clarke would credit Schomburg as having a profound influence on his understanding of the relationship of African history to world history and thus shaping his own conception of African American studies.

Clarke's initial and enduring relationship with Harlem also shaped his later work. Harlem became Clarke's living laboratory; he published or edited numerous texts and articles on the community. In the celebrated volume Clarke edited, *Harlem: A Community in Transition*, he pored over Harlem's central role in the launching of critical scholars and movements. He noted the dynamic nature of

Harlem as manifested in the "street speaker" culture, the momentum that engulfed the "Back to Africa" movement, the cultivation of the "Don't Buy Where You Can't Work" movement, as well as the warm reception of Black Nationalism.

Immediately after becoming acquainted with Harlem, Clarke began taking creative writing courses at the League of American Writers. Working in Harlem during the Depression years made it difficult for Clarke to avoid being attracted to the more radical social and political antagonisms that shaped his community and work space. Though Clarke claimed no formal allegiance to the Communist Party, he did become actively engaged with the Young Communist League (YCL). Clarke rejected some elements of Marxist doctrine, faulting Marx for ignoring African tribal societies, which were in Clarke's opinion socialist in nature and preceded the emergence of a European-based concept of socialism. Nevertheless, he worked as a street speaker and fund-raiser with the League.

Despite Clarke's involvement with the YCL, it was the Harlem History Club that served as the center of his work. Joining with other noted Pan African social thinkers such as Willis N. Huggins, John C. Jackson, and Kwame Nkrumah, Clarke received his methodological introduction to history. After serving in the U.S. Army Air Force from 1941 to 1945, Clarke returned to Harlem and attended New York University from 1948 until 1952. His arrival back in Harlem heralded a renewal in his search for identity rooted in scholarship, creative writing, and activism. Clarke cofounded and became associate editor of the *Harlem Quarterly* and published a book of poetry entitled *Rebellion in Rhyme*. By 1954, he also founded the movement magazine *Freedom Ways*. He returned as a student in the classroom at the New School for Social Research. After traveling to Ghana and reuniting with his friend Kwame Nkrumah, the first president of the independent Ghana, Clarke returned back to Harlem and in 1962 founded the National Council of Black studies.

Career in Education

Clarke then began teaching history in community centers across Harlem and became director of the Heritage Teaching Program at HARYOU-ACT, which was founded in 1964 and served as the leading antipoverty agency in Harlem. The creation of

this agency also marked a turning point in Harlem's political consciousness, as the agency's programs advocated for social action rather than reliance on social services. Clarke asserted that HARYOU-ACT illustrated how knowledge could foster mass action and force the government to address the concerns and needs of Harlem and its youth. Clarke demonstrated his talent for developing in others a deep appreciation for historical study and knowledge as emancipatory tools. While at HARYOU-ACT, Clarke published a curriculum guide for the instruction of African American history.

At the same time as he began his work with HARYOU-ACT, Clarke collaborated closely with Malcolm X. When Malcolm left the Nation of Islam and formed the Organization of Afro-American Unity (OAAU), Clarke assisted in the writing of the organization's charter and organizing the curriculum of the OAAU's liberation school. (Clarke would recall this collaboration in his edited volume entitled *Malcolm X: The Man and His Times*.) Clarke's work with HARYOU-ACT and the OAAU led him to redefine his concept of a school; for him the entirety of Harlem was his classroom. Moreover, much as Clark was indebted to the work of W. E. B. Du Bois, Carter J. Woodson, Schomburg, and Marcus Garvey, the scholars and activists who emerged in the 1960s turn to "Black power" were beholden to Clarke's role in pioneering rigorous Black studies scholarship that corrected the many misconceptions pertaining to African Americans and the greater Pan African people. The fostering of African consciousness and historical knowledge as a liberating force was manifest in not only Malcolm's Organization of Afro-American Unity but also in such groups as the Black Panther Party and Detroit's League of Revolutionary Black Workers.

After serving as director of the Heritage Teaching Program from 1964 to 1969, Clarke began his long tenure at Hunter College, where he became chair of the Black and Puerto Rican Studies Center. Clarke remained at Hunter College until he retired in 1985 and became a professor emeritus. He continued to write, contribute to, or edit more than 30 books and countless conference papers. In 1985, Cornell University renamed its Africana studies and Research Center's library the John Henrik Clarke Africana Library. In 1995, Clarke received the highest honor bestowed by the Association for

the Study of African American Life and History, the Carter G. Woodson Medallion. Clarke was also honored in 2000 when New York City renamed 137th Street in Harlem as Dr. John Henrik Clarke Place. Clarke was indeed a vibrant and formidable historian whose commitment to truth remains an enduring and unrivaled lesson.

Views of African History

In the 1996 film documentary titled *John Henrik Clarke: A Great and Mighty Warrior*, Clarke insisted that "History is a clock that people use to tell their political and cultural time of day; it also serves as a compass that a people use to find themselves on the map of human geography." For Clarke and his allies, the urgent endeavor to resurrect a historical past and present enable Africans to traverse the map of human geography. Clarke feared that the distorted popular vision of Africans had tainted the ability of African people to see themselves as a unified people with a historical past free from colonialism or enslavement. In pursuit of a flourish, honest African American history, he was committed to resurrecting a conception of African American history that began with the story of African history, its richness, glory, conquest, and decline. To help bring clarity to the historical record, in 1968, he published the edited volume *William Styron's Nat Turner: Ten Black Writers Respond*.

Clarke maintained that the tradition of storytelling was a timeless African custom and served as the root of African history. His "Origin and Growth of Afro-American Literature" examines this historical legacy on African American life. The decision to begin with Africa was and remains a contentious issue among those who maintain that the history of African Americans began with enslavement and on a larger scale that African world history began with contact with Europe. Yet, Clarke displayed an unyielding determination that in order for an African American historical tradition to come to fruition, the epic record of the continent of Africa would need to be restored to the pages of world history.

Pan African Perspective

Pan Africanism is not a concept that began with Clarke, but it is one that he supported with great intensity. The concept and movement were indebted

the West Indian lawyer, H. Sylvester Williams, who called together the first Pan-African Conference held in London in 1900, and W. E. B. Du Bois, who led the first U.S. delegation to the inaugural conference. Clarke acknowledged that the idea of a “Pan” movement had been used historically in other ethnic groups’ struggles to reclaim their national or historical identity after forced or migratory displacement. As a concept, it represents a movement to profess the proper African role in world history and to also assert a definition of Africans as a people. His text *Pan Africanism: A Brief History of An Idea in the African World* explores this theme at length.

Exceedingly important in Clarke’s work is how he defined African people and how this related to his conception of Pan Africanism as necessary and urgent. His was a vision of a united people, including both the people who lived in Africa and those who claim African ancestry throughout the world. Among the greatest influences on Clarke’s views on Pan Africanism were W. E. B. Du Bois and Marcus Garvey. Clarke published works on both Du Bois and Garvey, the latter entitled *Marcus Garvey and the Vision of Africa*. Garvey’s work served as an important point of strategic departure and provided the necessary impetus to guide Clarke’s work toward a synthesis of Black Nationalism and Pan Africanism that he asserted in “The New Afro-American Nationalism.”

In 1958, Clarke traveled to Ghana, where he worked as a journalist for the *Ghana Evening News* in Accra. At the same time, Clarke looked for insight to other third world nations that were tainted by a colonial past and were home to diaspora. In 1961, he traveled to Cuba to witness and join in the first anniversary of the Cuban Revolution. In 1974, he wrote an introduction for and translated the distinguished African historian Cheik Anta Diop’s text, *African Origins of Civilization: Myth or Reality*. In this way, Clarke continuously looked to the Pan African world for guidance and support in building a unified Pan African intellectual and activist tradition.

Concept of African American/Black Studies

Clarke’s conception of education for African Americans understandably began with a purpose-driven and dutiful study of African world history. His

work fostered and built on the enthusiasm for African American studies as a method of cultivating a new identity that arose in wake of the “Freedom Now” and subsequent “Black power” movements. Clarke embraced and advocated a turn to African American studies as an educational program that also represented a new form of strategy in those times.

Because of Clarke’s boundless contributions to the study of Pan African civilizations and people, his mentorship of emerging African American scholars and activists such as Audre Lorde and Julian Mayfield, and his role in the founding of the National Council of Black Studies, he is regarded the “Father of Black Studies.” Seeking out African social thought concerning religion, economics, politics, culture, and knowledge as it related to past, present, and future questions and theories is how Clarke intended African American studies to fulfill its practical role in a global project of decolonization. A special emphasis on the necessary study of African world history played a central role in what Clarke foresaw as a proper and comprehensive education for African Americans.

Clarke’s work exemplifies the importance of attaining an exhaustive knowledge of self and one’s people in order to confront the distorted image that had been deliberately imposed upon African peoples for centuries. From 1969 to 1973, he served as president of the African Heritage Studies Association (AHSA) in an effort to bring about intentionality in the study of African history in higher education. His membership with the AHSA, an association that evolved as a result of a demand that the study of African history proceed from a Pan African perspective, solidified his belief that scholarship be linked to activism toward the liberation and unification of all African people. This was in essence the central argument in Clarke’s “Education for a New Reality in the African World.”

COLE, JOHNNETTA (1936–)

Activist, educator, and humanitarian Johnnetta Betsch Cole is best known for her leadership role as president of the only two historically Black women's colleges in the United States: Spelman College, founded in 1881, and Bennett College, founded in 1873 (it became a women's college in 1926). At Spelman, she was the seventh president and first African American woman to lead the institution. Cole's distinctive legacy was cemented by her tremendous work in developing Spelman College into a premier institution of higher education from 1987 to 1997. When she later assumed the role of president at Bennett College for Women in 2002, she continued her work in advancing the causes of African American women by using her unique talents to assist this fiscally challenged institution. Cole's distinctive skills as fund-raiser, outspoken advocate for African American women, and scholar have led many to herald her as the "Sister President." This entry looks at her life and contributions.

Early Years

Cole was born in Jacksonville, Florida, on October 19, 1936. She was the second of three children born to the union of John Betsch Sr. and Mary Frances Lewis Betsch. Her maternal great-grandfather, Abraham Lincoln Lewis, was the first

African American millionaire in Florida and the cofounder of the Afro-American Life Insurance Company, the first insurance company established in Florida (in 1901). Her parents were both graduates of historically Black colleges, her father from Knoxville College in Tennessee and her mother from Wilberforce University in Ohio.

Cole's father, John Betsch Sr., originally worked for the Atlanta Life Insurance Company but later worked with other Lewis family members at the Afro-American Life Insurance Company. Cole's mother, Mary Frances Betsch, was an educator who taught English and was the registrar at Edward Waters College. She later joined the family's insurance business after her husband's death. Cole has often credited much of her success to her family's prominence and service in the community of Jacksonville.

Cole's family was close to the great educator and leader Mary McLeod Bethune. She recalled fond memories of visiting Bethune in Daytona Beach, Florida. Cole remembers how her interactions with Bethune as a role model would serve as a great source of inspiration for many years. Cole was heavily influenced by the educational and service-oriented values of her family members and close friends.

Cole entered the early admission program at Fisk University in 1952 when she was 15, the same year that her father passed away. After one year at Fisk, she left to attend Oberlin College in Oberlin, Ohio, where her older sister Marvyne Betsch was enrolled as a music major. While at Oberlin, Cole was impressed by a course taught by George Eaton Simpson that focused on racial and cultural underrepresented groups. Although she originally intended to major in medicine, she quickly changed to sociology. She completed a bachelor of arts degree in sociology with a minor in anthropology in 1957. She was admitted to Northwestern University for graduate school and completed a master of arts (MA) in 1959 and doctor of philosophy (PhD) in anthropology in 1967, studying under leading anthropologists including Melville J. Herskovits and Paul J. Bohannan.

While at Northwestern, Cole met and married Robert Cole in 1960. He was from Iowa and a graduate student in economics at Northwestern. The couple had three sons, David, Aaron, and Ethan Che. While both were graduate students

working on their dissertations, they moved to Liberia, West Africa, to conduct research. They were married for 22 years, divorcing in 1982. Cole also held teaching positions at the University of California, Los Angeles, and Washington State University in Pullman.

At Washington State, Cole taught courses in anthropology and directed the Black Studies Program. In 1970, Cole left Washington State and accepted a tenured faculty position at the University of Massachusetts, Amherst. There she was instrumental in establishing a Black studies program and continued to teach anthropology. She later became the associate provost for undergraduate education at this institution.

Cole left the University of Massachusetts for a position at Hunter College in 1983, where she became the Russell Sage Visiting Professor and later a tenured faculty member. She also became the director of the Latin American and Caribbean Studies program. She held visiting appointments at Oberlin College, City College of New York, and Williams College during her time at Hunter College. It was while Cole was in her position at Hunter that she came to the attention of those interested in appointing the first African American female president of Spelman College.

The Spelman Period

Cole was an esteemed scholar whose research had often focused on intersections of race, class, and gender with specific emphasis on the persistence of social inequities for African American women. Prior to 1987, she published numerous articles and authored the book *All American Women: Lines That Divide, Ties That Bind* in 1986. She was also the editor of the anthologies *Anthropology for the Eighties: Introductory Readings*, published in 1982, and later *Anthropology for the Nineties: Introductory Readings*, published in 1988. Spelman students had long advocated for the college to hire an African American woman as president, and the path was laid for Johnnetta Cole.

When Cole assumed the presidency of Spelman in 1987, this marked a significant moment in higher education. Also during this time, she married her second husband, public health administrator Arthur J. Robinson Jr., whom she later divorced. Cole's inauguration on September 8, 1988, was marked

by another historic occasion when it was announced that Bill and Camille Cosby would honor this moment with a \$20 million gift to this small liberal arts institution. At that time, this gift was the single largest personal donation by any individual to a historically Black college or university.

This donation would become a mark of distinction for Cole, since she spent much of her time raising funds to build the college's endowment. Other gifts followed: \$1 million from Oprah Winfrey and \$37 million from the DeWitt Wallace Fund in 1992. Under her presidency, the Spelman College endowment grew from \$41 million to \$143 million. At the time, this was the largest endowment of any historically Black college or university (HBCU).

In addition, under her leadership Spelman's national profile and rankings greatly improved. The *U.S. News & World Report* named Spelman the number one liberal arts college in the South in 1992. Cole made significant changes on Spelman's campus by focusing heavily on fostering a spirit of giving within the campus community. While at Spelman, Cole was also actively involved in establishing the Office of Community Service and linking the concept of volunteerism to the mission of the college.

Former President George H. W. Bush recognized one of Spelman College's service projects as a "Point of Light" due to the volunteerism of the students. Cole's fund-raising also led to the establishment of endowed scholarships, professorships, and mentoring programs for students. Cole consistently taught one anthropology course a year while she was president of Spelman. She was known as an accessible and very involved president who encouraged and motivated her young female students. Cole authored the book *Conversations: Straight Talk With America's Sister President*, which was published in 1993.

Cole's influence on Spelman and her charismatic leadership led her to receive even more national attention when in 1992, President-Elect Bill Clinton appointed her as cluster coordinator for education, labor, and the arts and humanities. For this role, she was to be responsible for advising the administration on education issues and reviewing the personnel, budget, and programming of the Department of Education. It was during this time that her leadership came under attack as criticisms of her membership in organizations that were considered leftist

prevented her from being appointed as secretary of education, for which many thought she was highly qualified.

Money magazine recognized Spelman in the Top 10 of “Best College Buys” in 1996, based upon its stellar reputation. In 1997, after 10 years at Spelman, Cole retired from Spelman. That same year, her inspirational book *Dream the Boldest Dreams: And Other Lessons of Life* was published. She chose to return to teaching and accepted a position at Emory University in Atlanta as a Presidential Distinguished Professor of Anthropology, Women’s Studies and African American Studies in 1998. She remained at Emory until her retirement in 2001.

The Bennett Presidency

Cole’s retirement was short lived; she accepted the presidency of Bennett College for Women in July 2002. Bennett is a small, 4-year liberal arts college that was founded by formerly enslaved Africans with assistance from the United Methodist Church in 1873. It was struggling financially, and Cole was just the person that they needed to revive the institution, which had formerly been a beacon for civil rights. Bennett students had been actively involved in the civil rights movement in Greensboro, North Carolina, and the college had hosted Rev. Martin Luther King Jr. when no one else in their small town would welcome him. When Cole stepped in to shepherd the school, it was in danger of losing its accreditation and had a deficit of more than \$2 million.

Cole’s leadership of Bennett was supported by many dignitaries and notable individuals, including poet Maya Angelou, former Senator Bob Dole, former U.S. President Bill Clinton, and Oprah Winfrey. Cole began the “Revitalizing Bennett Campaign,” led by Clinton and Dole, who held a benefit gala resulting in more than \$700,000 being raised in 2005. Overall, under Cole’s leadership, Bennett’s endowment reached well over \$8 million. Cole’s leadership was once again signified by her development of new departments, an increase in enrollment of students, and initiatives to encourage community service among Bennett students.

Cole’s leadership also presented some challenges, which became evident when she suddenly announced her retirement in April 2005. During

this period, Cole was in a disagreement with faculty over budget cuts that would decrease some jobs in various departments. Due to the conflict with the faculty, Cole publicly considered leaving Bennett. As soon as her intent to resign became national news, she was besieged by requests from faculty, staff, board members, and students to remain at Bennett. Rallies were held to convince her to remain in the presidency, and she stayed for two additional years.

Cole announced plans to permanently retire from Bennett in 2006 and was in the position until 2007. Just before her departure from Bennett, she accomplished her goal to raise \$50 million, with Bennett alumnae giving major donations during her tenure at the institution. She was succeeded by Julianne Malveaux, who became the 15th president of the institution.

Honors and Awards

Cole has continued to be actively involved in creating a more diverse and inclusive world as the president emerita of Spelman College, professor emerita of Emory University, and president emerita of Bennett College. As a dynamic, engaging speaker whose leadership of African American women’s colleges served as an inspiration for countless individuals, she has consistently demonstrated that she will continue to change the world.

Cole was the first woman named to the board of directors of Coca-Cola Enterprises. She also became the first African American woman to serve as chair of the Board of the United Way of America in 2004; she held that position until 2006. She has also served on the Board of Directors of Merck and Company; the Atlanta Falcons; the Carter Center, Trans-Africa; Africa University in Mutare, Zimbabwe; and the National Visionary Leadership Project. Cole has received more than 51 honorary degrees and numerous awards from both international and national organizations. She has held leadership positions with the Martin Luther King Jr. Center for Non-Violent Social Change, the Rockefeller Foundation, the United Negro College Fund, and the American Council on Education.

In 2005, Spelman College broke ground on a building named the Johnnetta Betsch Cole Living and Learning Center, which they dedicated in her honor on her 70th birthday on October 19 of that

year. The Johnnetta B. Cole Global Diversity and Inclusion Institute at Bennett College is an enduring and vibrant part of her legacy. This institute exists to provide an additional resource to create and cultivate a more diverse and inclusive society, and Cole remains an active part of ensuring that these goals are reached as chair of the board.

In 2007, just after her retirement from Bennett College, Cole married her friend and partner James D. Stanton Jr. at the Carter Center in Atlanta. She touched many lives through her service at Spelman and Bennett. Her unwavering commitment to the advancement of women continues to ensure that her two granddaughters will live fuller and richer lives in a world where their grandmother chose to make a difference in the lives of those around her through active and civic engagement.

COLEMAN REPORT

The Coleman Report was named for James Coleman, the primary researcher and author of a large-scale, nationwide study of school inequality. It was the product of an extensive survey that was requested as Title IV of the Civil Rights Act of 1964. The purpose of the survey was to document the availability of equal opportunities in public schools. The report particularly focused on the educational opportunities of underrepresented groups such as African Americans.

The findings indicated that school quality and school resources did not significantly affect academic achievement as measured by test scores. Rather, the results suggested the importance of family background in academic achievement. In addition, it found that African American students and teachers in public education were unequally segregated from their White counterparts. African American students were found to be more influenced by school segregation than were White students. Finally, the findings indicated that African American students achieved less or scored lower on standardized tests than did their White counterparts.

There is perhaps no more influential study in education related to school quality, school segregation, and the achievement of African American students than the Coleman Report. The unexpected findings in many ways shifted the national focus and responsibility for achievement from schools to students, families, and communities. The findings related to school segregation provided a significant impetus for school busing and a path toward school desegregation. This entry focuses on the context and purposes, findings, later interpretations, and policy implications of the Coleman Report as it relates to the education of African American students.

Context and Findings

As part of the legislation of the Civil Rights Act of 1964, in Title IV, James Coleman, Ernest Campbell, Carol Hobson, James McPartland, Alexander Mood, Frederick Weinfeld, and Robert York were commissioned by the federal government to conduct a large-scale survey study of public schooling in the United States. The final product was entitled *Equality of Educational Opportunity*, but it has been more commonly referred to as the Coleman Report. The purpose of the study conducted by Coleman and his colleagues was to explore racial segregation and resource inequalities in the public school system in the United States.

The study was a large-scale survey study, one of the largest of its time, including 600,000 public school teachers, principals, district school superintendents, and pupils from 4,000 public schools across the United States. The project was funded by the federal government, and it was intended to demonstrate that unequal school achievement

between students from different racial or socioeconomic groups was a function of unequal educational opportunity. Both government officials and the research team expected that school quality would help to explain the differences in achievement between White and African American students. Yet, the findings were quite unexpected, indicating that there was almost no relationship between measures of school quality and student achievement.

The most cited finding of the Coleman Report was that school quality did not influence academic achievement. In rank order of their effect on the academic achievement of African American students, the study found that a student's background was most influential, followed by teacher quality, with school quality and school resources coming in as the least important factors related to the academic achievement.

Yet, other findings should not be overlooked. For example, the finding that the *peer composition* of schools and *student's family background* significantly influenced student outcomes had significant implications for policy and subsequent research studies. Here, findings related to the following issues are explained: school quality and academic achievement, public school segregation, achievement in schools, and families and achievement.

School Quality

Perhaps the most significant and influential finding in Coleman's study was that there was little relationship between school quality and student achievement. School quality was evaluated in terms of the entire school environment, including such things as the facilities, programs, and student body characteristics. Classroom sizes differed for White and African American students. White children generally attended elementary schools with a smaller average number of pupils or student-to-teacher ratios in each class. African American students did not have as much access to facilities like physics, chemistry, and language laboratories as did White students.

In addition, other resources were lacking in schools with high African American populations. For example, there were fewer books per pupil in schools with larger African American populations. In terms of programmatic differences, African

American students had less access to extracurricular programs. Additionally, they were less likely to attend regionally accredited schools.

Public School Segregation

One of the first studies to identify racial segregation in schools, the Coleman Report maintained that the majority of students in the United States attended schools that were racially segregated, where the majority of students were from the same racial background. However, the study found that no group was more unequally affected by this segregation than were African American students. This was particularly the case in the South, but the report found that segregation did extend into all parts of the country.

In addition to segregation by students, the Coleman Report indicated that schools were segregated in terms of teachers. That is, most African American students attended schools with primarily (approximately 65%) African American teachers, and most White students attended schools with primarily (approximately 97%) White teachers. Given these statistics, one could surmise that African American students were sometimes taught by White teachers but White students were seldom, if ever, taught by African American teachers.

Due to the segregation in schools, the Coleman Report indicated that the classmates of African American students were less likely to have mothers who had graduated from high school and more likely to have classmates with larger families. African American students were also less likely to have classmates enrolled in college preparatory classes, and African American students' classmates had taken fewer courses in English, mathematics, and foreign languages than had the classmates of their White counterparts.

Achievement Measures

The Coleman Report asserted that standardized tests were "culture bound," measuring skills that were important for getting a good job or moving to a better job in the United States. This perspective differed in that it considered testing as a marker of the opportunities available to students, and it outwardly identified the potential for bias in the tests. African American students had significantly lower

standardized test scores—one standard deviation lower—at every level than did their White peers.

The Coleman Report argued that because of this consistent test gap, schooling provided few opportunities for African American students to overcome this initial inequality. In fact, given the one standard deviation difference in test scores, the study suggested that the cumulative effects of this test score gap actually increased for African American students as they progressed through schooling. That is, the effects and implications of this gap in test scores would become greater for African American students in the higher grades.

School Characteristics

While the Coleman Report asserted that differences between schools and between school resources generally did *not* account for differences in student achievement, the findings did indicate that African American students were *more* affected by school quality and school resources than were White students. In other words, the academic achievement of African American students was more readily influenced by schooling and school quality than was the academic achievement of White students.

The Coleman Report further offered a consideration of the *types* of school characteristics that most heavily affected African American student achievement. The findings suggested that the existence of science laboratories, the quality of teachers, and the educational background and aspirations of peers all influenced African American student achievement. Due to the differential resources, facilities, and peers within predominantly African American schools, the Coleman Report hypothesized that desegregation of schooling should be expected to have a positive effect on African American achievement.

Family Background

The findings of the Coleman Report indicated that students' background and families, rather than schools, were integral to the academic achievement of African American students. While the data did not support a link between school quality and academic achievement, the interpretations of Coleman and his colleagues ascertained that differences in achievement between African American

and White students must be related to factors *outside* of the school, such as characteristics within the family.

Limitations of the Report

While the Coleman Report has been cited and discussed in many circles since the 1960s, there are some potential limitations to this research that need to be considered. These limitations are separated here by methodological limitations and theoretical limitations.

Many critics of the work of Coleman and his colleagues suggest that the measures of school characteristics were crude and that crude measures of test scores were also employed in this research. For instance, the measures used to represent particular variables may not have been appropriate, and the statistical analyses employed in the analysis were not highly advanced. These critiques indicate that the surveys, questionnaires, and statistical tools available at the time do not do justice to the complex nature of schools.

Related to the complexity of schools, there has been some general critique of the use of large-scale survey research for the Coleman study. In this type of research, it can be difficult to gather detailed and subtle indicators of school quality or of student learning. Thus, some generalizations were made that disallowed for an analysis of the nuances in schools. Second, some scholars asserted that the tests used in Coleman's survey were designed to reflect individual differences *within* schools. Following this logic, it would be inappropriate to reflect on *between*-school differences.

Related to the testing of particular concepts, some scholars questioned the lack of a theoretical model with regard to educational achievement in the Coleman Report. Therefore, the testing of academic achievement in this study could have been hampered. This argument indicates that the interpretation of the results may have been weakened due to lack of specification of determinants of educational achievement.

Revisiting the Data

Following the widespread dissemination of the Coleman Report, the findings were debated and much controversy ensued over the unexpected

result that school quality did not influence academic achievement. Other scholars reanalyzed the data collected in Coleman's research, and new data were gathered. Arguably one of the most important scholars in this reanalysis of Coleman's data was Christopher Jencks. In the early 1970s, Jencks and his colleagues reanalyzed the data in their book entitled *Inequality: A Reassessment of the Effect of Family and Schooling in America*, maintaining that differences between schools and differences in school resources did not account for variations in student educational attainment.

Jencks and his colleagues concluded that the Coleman Report had *overestimated* the strength of the relationships between school quality and students' test scores. While this extensive reanalysis of the data by multiple scholars was expected to offer different findings, with few exceptions, the results of these studies not only reaffirmed but at times also strengthened the initial findings suggested by the Coleman Report.

The reanalysis of the Coleman data conducted by Jencks and his colleagues was significant because it provided an evidence-based rationale for the link between student achievement and family background. This link in many ways became an impetus for studies that connected IQ, race, and class: for instance, studies like those of Arthur Jensen, which claimed that differences in test scores were due to inherited intellectual traits. In part, the findings of the Coleman Report and the subsequent analyses of them data can be connected to the line of research that claims that differences in achievement between African American students and White students are linked to inherited differences in IQ. A good example of this line of research is the controversially acclaimed work of Richard Herrnstein and Charles Murray in their book *The Bell Curve*.

Policy Impact

The unexpected finding in the Coleman Report that school quality had little influence on the differential academic achievement of African American students had serious ramifications for policy and practice in education. From a policy standpoint, this finding undercut the primary rationale for requesting increased expenditures on schools from the federal government.

In addition, the finding that school quality was not related to academic achievement had serious consequences for the way that African American students were studied and discussed in research. Some began to speculate about the difference in intelligence between African American and White students, claiming that if schools were not able to overcome inequalities in achievement it was because some students (namely, African American students in this case) had lower intelligence than others (namely, White students).

In addition, because the findings of the Coleman Report shifted away from the responsibility of school quality and school resources in closing the achievement gap between African American and White students, there was a shift in focus from schooling to the family. Thus, many researchers began to change their focus from considerations of the influence of schooling on student achievement to interventions in home environments as being the way to overcome inequality.

Related to research in education, the Coleman Report's suggestion that school resources were not as important as once thought shifted the focus to students' backgrounds. Many subsequent studies in education began to explore students' racial and socioeconomic background, attempting to offer suggestions for ways that students' backgrounds could affect academic achievement. A potential caution of this shift however, particularly for African American students, was that the shift in focus to families and background also represented a shift in responsibility for achievement. Thus, there arguably was a shift in research and national discussion toward blaming students, students' families, and students' general background for the achievement gap between African American and White students.

The Coleman Report did, however, provide compelling evidence of educational inequalities that worked to the general disadvantage of African American and other underrepresented students in the public school system in the United States. This finding was particularly influential in providing a rationale for school busing, whereby students were bused from one school district to another in order to diminish racial segregation in public schooling.

In addition to providing a rationale for school busing, the findings about racial segregation had other implications. The Coleman Report suggested

that students' peers influenced academic achievement. In particular, large concentrations of African American students or segregated African American peer groups were found to have lower academic achievement. Yet, African American students in predominantly White peer groups had higher academic achievement. This finding became one of the rationales for school desegregation, suggesting that African American students should be in schools with lower concentrations of African American students. This also affected research; a long line of subsequent work has focused on the effect of African American peer groups on academic achievement.

Finally, the Coleman Report's findings suggested that teachers played a central role in students' academic achievement. This became a rationale for discussions of teacher quality that influenced teacher training and the national perspective on teaching and teachers' roles. In addition, this finding became a rationale for the professionalization of teaching.

Many questions are still being considered, such as: Does school quality and inequality of resources in school affect student achievement? What does explain the achievement gap between White and African American students? Is it *between*-school differences or *within*-school differences that influence inequalities in student achievement? Researchers, practitioners, and teachers have grappled with these questions since the Coleman Report, and many of these questions still remain.

COLLEGE ATHLETICS

College athletics has provided millions of students with opportunities not only to compete in athletics but also to achieve an education and ultimately

a college degree. College sports have evolved into a profitable industry that has combined the pursuit of athletic excellence with the academic mission of institutions of higher learning. African American athletes have made significant contributions in elevating college athletics to a profitable commercial entity. College athletics continue to offer the student body an avenue to unite and share in a common tradition and sociocultural practice while giving athletes the opportunity to use their talents in exchange for an athletic scholarship (especially at the National Collegiate Athletic Association [NCAA] Division I and II levels). For many, this means getting a college education, as well as the opportunity to develop transferable and marketable skills (for example, character development, hard-work ethic, ability to work with members of a team to achieve a common goal) within the highly competitive environment of college athletics. Finally, it provides national and international exposure to institutions that previously have not enjoyed this privilege.

Thus, the future of college athletics presents an ambiguous forecast for the African American athlete: continual controversy and criticism about low graduation rates and the exploitation of athletic labor in the revenue-generating sports of football and basketball. This entry begins with a brief look at the origins of college athletics, then discusses African American involvement and related issues.

Early History

College athletics has very modest beginnings, dating back to the Gilded Age of 1865–1900. What we consider college athletics today began as student-controlled sporting opportunities for members of the university student body; they were not sanctioned by the institution, thus they did not receive financial support. As these activities became popular and profitable enterprises, alumni, faculty, and administrators took control, which created a shift from college athletics being informal student-controlled activities to formal university-sanctioned events. This move from informal to formal required additional administrative and governance structure to oversee these events.

A major part of college athletics history is the development of its organizational and governance structures. Therefore, a major shift in college athletics

took place in 1905, when President Theodore Roosevelt summoned 13 institutions to the White House to address the need for athletic reform—more specifically, the need for rule changes in the game of football. Thus, the Intercollegiate Athletic Association of the United States (IAAUS) was formed by 62 institutions to address additional concerns that emerged since college athletics' inception. In 1910, the IAAUS changed its name to the National Collegiate Athletic Association, continued to grow beyond its initial aims of being an advising and rule-making association, and sought to address issues, including commercialization, institutional control, player safety, and so on, that were challenging the very nature of college athletics.

African Americans in College Athletics

In the early years, historically Black colleges and universities (HBCUs) provided the major avenue, and many times the only avenue, of intercollegiate competition for talented African American high school athletes seeking to extend their athletic careers and obtain a college education. Although a few African American athletes attended predominantly White colleges and universities in the late 1800s, the majority competed at HBCUs. They competed in a variety of sports, but the dominant sports were initially football, baseball, basketball; later, tennis, golf, wrestling, and track were popular intercollegiate sports at HBCUs. The sports HBCUs offered reflected the demands and interests of the African American community as well as mirroring their White counterparts.

Athletic excellence for African American women also had its roots at HBCUs. Though ideologies about female physical abilities restricted many of their White counterparts and to a certain degree African American females in general, African American females excelled in a variety of sports at HBCUs. Among the pioneers in women's athletics at HBCUs were Wilma Rudolph, Wyomia Tyus, Willye White, and Madeline Manning, who competed for Tennessee State; Althea Gibson, who attended Florida Agricultural and Mechanical Institute (FAMU); and Alice Coachman, who competed for Tuskegee Institute. Not only did African American female athletes receive conference and national honors and awards, but many also represented the United States in international

events such as the Olympic and Pan American Games.

African American students (including athletes) have made a major shift from attending traditional Black colleges and universities in the South to attending predominantly White colleges and universities throughout the United States. At the beginning of World War II, only 10% of African American college students attended mostly White schools. As of 1984, 80% of African American students in higher education attended these institutions. Currently, according to the *2007 Status on Minorities in Higher Education Report*, this percentage remains fairly consistent, with a fluctuation between stagnation and decline.

African American athletes' contributions to intercollegiate athletics have been well noted, especially in the revenue-generating sports of football and basketball. Currently, African American male athletes represent more than 50% of the football players, more than 60% of men basketball players, and more than 45% of women basketball players. Their representation in non-revenue-generating sports—for example softball, volleyball, soccer—has been meager, except for track and field; however, progress is being made by African American collegiate athletes in these sports.

The role of the athlete in collegiate sports has changed considerably since the first intercollegiate athletic competition. Initiated originally as extra-curricular or intramural activities, some of these competitions have evolved into multimillion-dollar events. Athletic competitions were once events used to break the monotony of the rigorous academic pursuit; now they have become staples and major attractions at many collegiate institutions in the United States. Thus, the athlete has evolved from simply a leisurely participant in these competitive engagements to a celebrity on campuses throughout this country.

Issues and Controversies

These NCAA Division I Institutions are the top-tier athletic programs in the country, and the athletic operating budgets of the top 20 of these institutions ranges from \$32 million to \$75 million. They sponsor football programs with stadiums that seat 60,000 to 100,000 people and basketball arenas that seat from 10,000 to more

than 25,000 people. These programs operate like corporations in which the athletic talent is the major commodity. These programs require a premium on athletic talent; thus, they spend a significant amount of time and money recruiting the best athletes.

This form of corporate athleticism or athletic capitalism places the athlete within controversial and sometimes diametrically opposing roles, especially in revenue-generating sports (that is, football and basketball). The extensive demands on students that arise from their athletic participation often make academic demands a lower priority. The roles of student and athlete require a healthy balance that many young men and women competing in intercollegiate athletics learn to master effectively. Many African American athletes have met the challenges of the academic rigor of higher education and the mental and physical demands of collegiate athletics. Some have experience social mobility through obtaining a college degree, while others have had the opportunity to compete in various professional sport leagues (for example, NBA, NFL, WNBA, MLB).

However, graduation rates are often the determining factor as to whether athletes are successfully balancing the role of student and athlete. At this level, the NCAA reported in 2006 that athletes graduated at a rate of 77%, while the regular student body graduated at a rate of 61%. The revenue-generating sports of football and men's basketball have had the lowest rates, graduating at 55% and 45%, respectively. The most alarming statistic was the graduate rates of African American male athletes, which were reported as 49% in football and 38% in basketball. Thus, women, especially White women athletes, and White male athletes have fared better at balancing the role of student and athlete and continue on to graduation than do their African American male counterparts.

One of the remedies for the low graduation rates among athletes in sports that generate millions of dollars a year in revenue is the Academic Progress Report (APR). The APR was designed to assist in reforming college athletics by improving academic success and graduation rates among athletes. It is calculated whereby one point is given to a team each term a scholarship athlete meets the required academic eligibility standards and an additional point if he or she remains with the institution.

A cutoff score of 925 corresponds to graduating 59% of scholarship athletes. If a team does not meet the cutoff on what the NCAA refers to as a “basis” that is statistically significant, they can be penalized by losing a scholarship in that sport.

The need for athletic reform speaks to the demands athletes have faced in balancing the roles of student and athlete. It also speaks to the incongruence many critics see between institutions that earn millions off of the blood, sweat, and tears of young vulnerable men and women and the lack of academic integrity demonstrated each year when institutions are exposed for academic fraud.

COLLINS, MARVA (1936–)

Marva Collins has been a lifelong educator and founder of the nationally recognized Westside Preparatory School in Chicago. Her career reminds

educators of the possibilities that can emerge from a persistent insistence on success. Children, communities, and educators associated with Westside Preparatory School provide evidence of the transformative effects that can emerge from appropriate learning conditions and dedicated individuals.

As an elementary school teacher in Chicago public schools, Collins became convinced that the policies, practices, and bureaucracy of public schools eroded institutional effectiveness and stymied student success. Her eventual resignation from the Chicago school system signaled the beginning of a well-regarded journey to educate children separate and apart from the public school system. African Americans, economically disadvantaged youth, and students labeled as “uneducable” became primary beneficiaries of her efforts. This entry profiles her life and her work at Westside Preparatory School.

Early Years

Marva Collins was born August 31, 1936, in Monroeville, Alabama, and later spent part of her life in nearby Atmore, Alabama. Although her father, Henry Knight, secured only a fourth grade education, he became a highly respected and accomplished businessman who challenged prevailing norms of the segregated era. His example as a risk taker and nonconformist encouraged Collins's lifelong sense of determination, independence, and resiliency in achieving identified goals.

Combining such characteristics with her abilities as a strong reader and thoughtful learner positioned Collins to continue her family's tradition of study and excellence. She became the family's first college graduate by receiving a degree in secretarial science from Clark College in Atlanta, Georgia. In her 1982 coauthored book, *Marva Collins' Way*, the educator confessed to completing a few education courses based on personal interest rather than any particular desire to become a teacher. Paradoxically, Collins would become one of the nation's best-known teachers and forge a long, robust career in education.

Following brief employment stints in the business sector and an Alabama school, Collins served as a Chicago public school teacher for 14 years. She found an inadequate focus on teaching in

public schools and believed that such a school atmosphere detracted from instructional quality, diminished meaningful learning, and underserved children.

School Founder

After resigning from the public school system, Collins established her own institution, Westside Preparatory School, in Garfield Park in September 1975. Her long residence in the area sensitized Collins to the needs of children from inner-city locations and heightened her desire to educate youngsters who were not likely to thrive in public schools. During its infancy, Westside had limited finances and, as a result, was forced to operate from Daniel Hale Williams University, the Collins's family house, and the National Bank of Commerce Building. Eventually, it gained the fiscal stability to acquire a permanent facility.

Westside's educational approach draws on traditional and inclusive techniques that are geared toward educating the whole child. Instructionally, teachers rely heavily on the Socratic method, with the aim of developing students' reasoning and logic skills. The technique then becomes a logical bridge to building youngsters' capacities for language use, divergent thinking, interrelated learning, and creativity.

Instructional sources are selected from children's reading materials, such as Leo Tolstoy's *Fables and Fairy Tales* as well as classic writings by Paul Dunbar, Ralph Waldo Emerson, and Plato. Directing children's attention to abstract concepts, advanced vocabulary, and grand ideas debated throughout society enables young people to puzzle through multidimensional concepts and complex thoughts as they make sense of societal values, ideals, and dilemmas. Moreover, students learn to craft their own perceptions and opinions of important realities. Daily recitation, phonics, and repetition drills are favored tools for imparting and reinforcing lesson content.

Behaviorally, students are encouraged to engage in productive actions through encouragement, positive reinforcement, and firm, loving guidance by teachers. As students chart gains in their coursework, intellectual base, and applied abilities, their success and enjoyment of learning becomes the strongest motivator for continued efforts.

The enrollment and success of scholastically lagging students eventually attracted national attention to Westside School and Marva Collins's life narrative. Major media organizations have raised awareness about her work through featured pieces on *Good Morning America*, *20/20*, and *60 Minutes*, among others. Presently, Collins's daughter, a former Westside Preparatory student, oversees the school while Collins devotes her energy to teacher training and speaking engagements via the Marva Collins Seminars. While the Westside model has attracted supporters, false imitations of her work have damaged the program's reputation.

To date, Marva Collins's contributions to education and young people have been recognized with the Jefferson Award for Benefiting the Disadvantaged, the Humanitarian Award for Excellence, the Legendary Women of the World Award, the National Humanities Medal, and a number of honorary degrees.

COLUMBUS BOARD OF EDUCATION V. PENICK

Columbus Board of Education v. Penick (1979) significantly affected the education of African Americans because the U.S. Supreme Court ruled that even if there was no statutory mandate to have separate schools for African American and White students, a school system's segregation intent could be inferred from its decisions on school construction and attendance zones where they ignored the resultant unconstitutional disparities.

In *Columbus Board of Education v. Penick*, African Americans parents were protesting the resegregating of Columbus schools—which occurred in the early 1900s, after a brief period in which segregated schools had been declared illegal—and still continued in the second half of the century as a result of the board of education’s efforts to maintain a dual system. The Supreme Court, the court of appeals, and the district court found the board of education’s actions were unconstitutional and ordered systemwide distribution of resources in building facilities and creating attended zones in the Columbus public school system.

Historical Background

Although school segregation is often associated with public schools in the South, the education system in the North was not immune to the disparities in educating White and African American children. Prior to 1848, the State of Ohio did not provide any means of educating African American children within the state. Non-White children could attend White schools if no White parents objected. However, if a White parent objected and there were 20 or more African American children in the district, then a school for African Americans could be created but was not required.

Then, in 1848, the Ohio General Assembly required school boards to establish separate schools for colored children when there were 20 or more such students who wanted an education. An Ohio Act defined in 1853 *colored* children as having at least three-eighths African blood and being regarded as colored by the community. The new colored schools were funded by property taxes exacted from African American property owners. The small number of African American property owners ensured that the colored schools began with insufficient funding.

In 1871, an African American parent filed a lawsuit in Ohio arguing that separate schools for African American and White children violated the Fourteenth Amendment. The Ohio Supreme Court in *State ex rel. Gaines v. McCann* disagreed and held that separate schools were not unconstitutional. Seven years later, in 1878, the Ohio General Assembly created a law that gave localities the authority to create and fund schools exclusively for African American children with funding to

come from taxes paid by all property owners. White students attended schools in their residential districts, while African American students, who may have lived closer to a neighborhood school, attended schools that were specifically designated for African Americans. As a consequence of the 1878 Ohio law, all African American children in Columbus attended Loving School.

Within 3 years, in 1881, the Columbus Board of Education abolished its separate school system and reassigned all students to their residential districts. In 1887, the Ohio legislature abolished segregated public schools and it was enforced in another lawsuit, *Board of Education v. State* (1888), when the Ohio Supreme Court struck down segregated schools in Ohio, finding that separate schools for African Americans and Whites were unconstitutional; it agreed that students should be assigned to their neighborhood schools. Columbus had ended its de jure policy of segregated public schools. This was 73 years before the *Brown v. Board of Education, Topeka, Kansas* (1954; *Brown I*) decision. In fact, from 1900 to 1907, schools in Columbus were racially mixed or desegregated. Later, the Columbus Board of Education would take legal steps to re-create a separate education for African Americans and Whites in the city.

In 1909, the Columbus Board of Education built the Champion Avenue School in an African American neighborhood and staffed it with African American teachers. Charles W. Smith, an African American parent, objected to the creation of a “Black” school and subsequently filed suit. He argued in the Common Pleas Court of Franklin County that although not officially designated as such, Champion Avenue was a “Black” school and in direct violation of Ohio law. The court of common pleas dismissed the case in 1911.

Mr. Smith appealed the dismissal, but the circuit court agreed with the court of common pleas. In dismissing the appeal, the circuit court held that the school board had the authority to determine where to create a school district and it was not within the court’s jurisdiction to second-guess that decision. During the 1920s and 1930s, Champion had an African American student population and even employed all of the African American teachers who worked in the Columbus school system.

During the next 40 years, leading up to *Brown I*, the Columbus Board of Education built schools

and instituted policies that solidified separate school systems for African American and White students. By 1943, there were five public schools in Columbus attended by all the African American students in the city. School districts were gerrymandered in such convoluted ways that in one district, African American students who lived in the 340 through 500 blocks of the street attended the African American public school, while White students who lived on the very same side of the street, but in the 500 through 940 blocks, attended the White public school. White principals were assigned to White public schools, and all of the school system's African American administrators were assigned to African American public schools.

After several complaints from the National Association for the Advancement of Colored People (NAACP) and the Columbus Urban League, the Columbus Board of Education in 1967 adopted a policy to consider racial balance when creating public school districts. The board of education also instituted a voluntary transfer program whereby students could transfer to another public school if it improved the racial mix at each school. Unfortunately, the program had very little impact on the racial distribution of the public schools.

Six years later, the board of education adopted the Columbus Plan. The Columbus Plan expanded the voluntary transfer program to include four types: racial balance, vocational program, educational program, and occupational program. Despite the introduction of the additional programs, in the 1975–1976 school term, 70.4% of all students in Columbus attended schools that were either 80% to 100% African American or White.

The Case and the Rulings

On June 21, 1973, Gary L. Penick (a 13-year-old), acting on behalf of African American parents and 14 other children, filed suit in the U.S. District Court for the Southern District of Ohio against the Columbus Board of Education, the State Board of Education, and other local and state officials. The plaintiffs argued that the Columbus Board of Education had built new facilities in certain areas, thereby maintaining the racial imbalance in the public schools. The plaintiffs requested that the proposed \$89.5 million funding for future building projects be used in such a way that Columbus

public school students would have a desegregated educational experience.

In October, 1974, the complaint was amended as a class action. It alleged that the board of education took advantage of segregated housing patterns in the city to create a neighborhood school policy that maintained segregation in violation of the Fourteenth Amendment. In response, the board of education argued that it had not intentionally segregated public school students and that any existing school segregation was due to segregated housing patterns and a racially neutral neighborhood school policy.

The next year, the U.S. District Court for the Southern District of Ohio ruled in favor of the plaintiffs. The district court held that in 1954, the Columbus Board of Education had intentionally segregated its public schools by race; the board of education was well aware of the dual school system, but did not actively try to change it; the board of education had created and implemented attendance zones and other boundary changes that maintained the racial imbalance in the school system, and the board of education continued to follow its neighborhood school policy, knowing that such adherence would produce racial imbalances in the public schools.

The district court then directed the board of education to create and submit a desegregation plan for the whole Columbus public school system. The board of education appealed the case to the U.S. Court of Appeals for the Sixth Circuit. On July 14, 1978, the circuit court ruled in favor of the parents (*Penick v. Columbus Board of Education*, 1978). The board of education then appealed the case to the U.S. Supreme Court.

In affirming the decision of the court of appeals, the Supreme Court often quoted from the district court opinion. The Supreme Court held that Columbus did have a dual public school system in 1954 and that current practices by the Columbus Board of Education maintained a separate school for African Americans and Whites. The Court considered the actions of the Columbus Board of Education unconstitutional and ruled that the systemwide remedy ordered by the district court was appropriate.

Outcome and Impact

The case of *Columbus Board of Education v. Penick* was significant because the Supreme Court

agreed that unconstitutional racial disparities could be caused by a school system even without a statutory mandate to create separate schools for African Americans and Whites. The Court affirmed that intent to segregate could be inferred when a school board intentionally disregarded the consequences of where it chose to build new facilities or create attendance zones.

Since the *Penick* decision, the Columbus public school system has gone through amazing change. In the 1950s, African American students were approximately 15% of the total public school population. Today, African American students are approximately 61% of the student body, while White students are only 28%. This dramatic change in the racial composition of the public schools has been credited to changing demographics. In the mid-1960s, Columbus annexed several surrounding communities. During the annexation period, the city agreed that the surrounding communities could be designated within the city limits yet still maintain their own school districts. As a consequence, the city of Columbus has grown by approximately 33% since 1970. In 1972, Columbus public schools had 112,000 students. But, from 1979 to 1996, when the Columbus Board of Education used busing as a means of desegregation, White parents responded by removing their children from the public school system. Today, the number of students in Columbus public schools has dropped by nearly 50%.

Although the Supreme Court did not agree with the board of education's argument that demographics in the city were the reason for the racial disparities in the public school system, it is ironic that demographics today still play a significant large role in the racial imbalance in the Columbus public school system.

COMER, JAMES (1934–)

James Comer is a Yale University professor of psychiatry and associate dean of the School of Medicine whose accomplishments extend to the field of education. His school development program, now called the “Comer Process,” is a highly regarded roadmap for organizing schools to be effective in educating the nation's youth.

Comer's family members were among the significant number of African Americans who altered the nation's demographic landscape early in the 20th century by leaving the South and migrating to northern and midwestern spaces. Migrants frequently moved with the hopes of securing improved educational, economic, political, and social opportunities as compared to their experiences in the segregated South. Unfortunately, obstacles stemming from personal and structural discrimination too often prevented African Americans from achieving their desired goals.

Although Comer's lineage resonates with the difficulties that African Americans faced in leaving the South to carve new lives, his personal narrative stands as an inspiring model of how communal tenets have enabled African Americans to persevere and thrive. According to his 1988 book,

Maggie's American Dream: The Life and Times of a Black Family, dedication to educational excellence was a central driving force throughout his upbringing. Schools, moreover, emerged as spaces in which he learned lifelong lessons about dynamics of race and social class in moving toward professional goals and navigating human arrangements. This entry looks at his life and accomplishments.

Early Years

Comer was born in East Chicago, Indiana, the oldest of Hugh and Maggie Comer's four shared biological children. His older sister, Louise, was the product of his father's previous marriage. Although lacking elevated levels of formal education, Comer's parents structured their household so that their children were expected to perform well and graduate from college.

Comer, like his siblings, responded to their standard by cultivating his talents both scholastically and in the extracurricular realm. As a youth, for instance, Comer involved himself in student government affairs, participated in piano competitions, and was active in basketball. Comer's interactions in and outside of the classroom placed him in regular contact with both the White and African American communities, thereby creating opportunities to witness extremes and norms of cross-cultural and within-group interactions. Throughout elementary and high school, the sting of discrimination sprung from some Whites' racialized beliefs about Black inferiority, manifested in decreased expectations, circumscribed learning and work opportunities, and the articulation of racial insults.

Promises of inclusion, however, materialized in peer friendships, encouraging teachers, and broad community respect earned from observation of the Comer family's sturdy values. Taken together, such experiences prepared Comer to navigate trying years as an undergraduate student at Indiana University, where he earned an AB degree in 1956. Disappointment with the fallacy of a meritocratic system and race relations at the predominantly White state university prompted Comer to complete his medical degree at the Howard University College of Medicine in Washington, D.C., in 1960. He later completed requirements for a master's degree in public health at the University of Michigan in 1964.

Focusing His Career

Concerned with the psychological and developmental aspects of well-being, Comer eventually shifted his interests from becoming a general practitioner to becoming a psychiatrist. His training at the Yale University School of Medicine and Child Study Center provided the basis for worthwhile contributions in medicine, education, and psychology. Life in the nation's capital had further sensitized him to the value of holistic care and the complexities of African American life.

Following his appointment to the Yale University School of Medicine, Comer was tapped to develop a program to merge the fields of education and child psychology. Conceived as a schoolwide intervention, the school development program maintained responsibility for implementing what is now known as the "Comer Process." Branches of the framework address the multiplicity of children's growth and are grounded in a developmental prototype. As a consequence, schools that adopt the reform design attend to pathways such as young people's physical, cognitive, psychological, language, social, and ethical competencies.

In practice, a successful school requires the creation of school planning and management, student and staff support, and parent teams. Members of the three groups collaboratively work to create schools that adhere to clear goals, courageous leadership, high standards, caring environments, ongoing student assessment with feedback, working with competent practitioners, engaging learners, and making children's circumstances conducive to learning. Input from parents and communities is expected to lend additional support, modeling, and rewards for success. Guilford County, North Carolina, officials, for example, report diminished dropout rates and rising standardized test scores based on their decision to employ the Comer Process.

A Record of Achievement

Colleagues have honored Comer's work with extensive recognition and acknowledgment of the useful roadmap that he has provided to better communities. He is the recipient of more than 40 honorary degrees, the John P. McGovern Behavioral Science Award from the Smithsonian Institute, the James Bryant Conant Award from the Education

Commission of the States, the Rockefeller Public Service Award, the John and Mary Markel Foundation Scholar Award, and the University of Louisville Grawemeyer Award.

Today, Comer serves as the Maurice Falk Professor of Child Psychiatry at the Yale Child Study Center and is associate dean of the Yale University School of Medicine. Beyond his teaching and research responsibilities, he has been a consultant with the Children's Television Workshop and the Public Committee on Mental Health, a member of the National Board for Professional Teaching Standards, the Carnegie Forum on Education and the Economy, the National Commission on Teaching and America's Future, and a director or member of several college, university, and civic boards. His publications include several books and more than 150 articles.

COMER PROCESS

The Comer Process is a school development program (SDP) associated with Yale University and named after Dr. James Comer, a faculty member in the School of Medicine. It is a well-regarded example of how to restructure organizations for improved educational practice. The SDP prototype has been influential in informing educators nationally and internationally. Communities find the model compelling because the Comer Process

encompasses many tenets of effective schooling and actively recruits input from diverse constituents. This entry provides an overview of the Comer Process and describes its implementation.

Context and Theory

Creating effective schools requires steady adherence to a sound vision, contributions from multiple stakeholders that are designed to enact articulated ideals, and avoiding simplistic tendencies to attribute success or failure to a single cause, group, or facilitating condition. Accomplishing each task can be a complex endeavor, particularly in schools where traditional evidence of success is scarce. To redress such challenges, reformers have promoted numerous blueprints to guide the reshaping of educational institutions and districts that suffer from chronic underperformance, among them, the SDP.

What makes the SDP model successful? And, how does the Comer Process differ from other frameworks? SDP staff claim that the Comer approach contributes to the school reform movement by promoting a developmental method of working with students and adults—a lens that program organizers believe is unique. Program proponents suggest that James Comer is the only prominent educational reformer who connects life success and academic achievement with critical approaches to good health and human development.

The Comer Process specifically stresses six areas of human growth. These are physical, cognitive, psychological, language, social, and ethical trajectories. *Physical* domains include meeting students' bodily health needs such as sight, hearing, and nutritional necessities. *Cognitive* strands center on scholastic outcomes as evidenced by measures of knowledge acquisition and application. *Psychological* factors act to direct progress in self-perception, negotiate emotions, and the like. Proficiency in expressed and received communication, relationship building, and personal growth undergirds the *language* branch. Cultivation of latent characteristics, such as empathy, for positive interpersonal relationships and human understanding forms the *social* sphere. Finally, *ethical* concerns lend themselves to learning about and promoting universal values including respect, fairness, and justice. Whereas such an integrated approach may have been unusual during the program's inception in

1968, the pillars stand as an integral part of most reform initiatives today.

How It Works

Changes within schools are driven by an operating system inclusive of three structures (school planning and management team, student and staff support team, and parent team) and guiding principles (no-fault, consensus, and collaboration). Organizers created the school planning and management team to place administrators, teachers, support staff, and parents in dialogue around overarching school plans, goals, activities, and forms of monitoring. More specifically, the group develops the comprehensive school plan, provides staff development, and outlines needed assessments and modifications.

The student and staff support team consists of school personnel who attempt to create favorable conditions in which individuals can thrive. For example, members may devise prevention and intervention programs to boost graduation rates, set up conflict resolution teams, and create alternative programs to decrease grade retention. The parent team draws on family knowledge to move identified decisions forward. The shape of parental involvement may range from daily volunteer assistance in classrooms to mothers, fathers, and other family members coordinating offices and centers within participating schools.

Schools must complete a 5-year implementation cycle prior to becoming fully certified. Dr. Comer describes school experiences related to these areas in his book *School Power: Implications of an Intervention Project*.

Advocates assert that the Comer Process is most effective when operating under mutually reinforcing philosophical concepts. No-fault accountability embodies the spirit of meaningful reform by fostering shared responsibility and broad-based investment. In practice, no-fault schools emphasize problem solving rather than blame. As a consequence, all stakeholders are expected to play an integral role in resolving weaknesses and facilitating improvements.

Consensus efforts, moreover, remind participants to back choices that most factions lean toward, bearing in mind, of course, that new plans may be pursued. Although school principals maintain their legal role, teams and principals are

expected to work collaboratively. Teams should not—individually or collectively—be hostile to principal leadership. Principals in turn must be faithful to empowering the school community. Massaging traditional hierarchies to distribute power differently may partially remove the barriers to school improvement that can stem from controlling or personality-driven environments.

In the Comer Process, students are not viewed one dimensionally; they are appreciated as thinking, maturing, moral, communicative beings. Additionally, structures are employed to stimulate institutional exchange and encourage parents, teachers, administrators, and other parties to channel their energies in a complimentary fashion. Contemporary supporters have chronicled reviews and reflections of the process in publications such as *Child by Child: The Comer Process for Change in Education*.

Reforming underperforming schools is a major challenge, and the Comer Process certainly presents a viable means of maneuvering organizations toward healthy ends. The program intentionally inserts important—although sometimes neglected—human and institutional aspects of schooling. Yet, the vitality of any reform, of course, extends beyond the conceptual blocks to employing well-selected personnel, having ongoing access to good resources, and becoming skilled in working with recalcitrant people and conditions, among other issues. Educators and policymakers who adopt the Comer Process must insist on keeping high standards in such areas as they combat educational ills.

COMMONWEALTH OF PENNSYLVANIA V. BROWN

Commonwealth of Pennsylvania v. Brown, 270 F. Supp. 782 (E.D., Pa. 1967), was one of the last in a series of lawsuits and court decisions related to a Philadelphia school for orphans—specifically, White boys with no living fathers—that had been funded by a private individual in 1831 and administered by the city. The struggle to integrate Girard College, a private school for orphaned boys in North Philadelphia, took nearly 10 years and involved almost as many court decisions. Efforts to integrate the school both preceded and followed on the heels of the U.S. Supreme Court's landmark decision in *Brown v. Board of Education Topeka, Kansas*, rendering segregation in education illegal in 1954.

The initial Girard litigation culminated in a favorable U.S. Supreme Court decision in 1957 and represented an early victory in the Court's march toward dismantling the "separate but equal" doctrine after its decision in *Brown*. This march included immediately striking down laws permitting segregation in public recreation facilities in 1955 and intrastate transportation in 1956 (*Dawson v. Mayor and City Council* and *Browder v. Gayle*, respectively). However, a decade passed before Girard College was integrated, and not before the Orphans' Court of Philadelphia County, in an effort to evade the Supreme Court decision, removed the school's city-appointed trustee board and only after the National Association for the Advancement of Colored People (NAACP) years later staged a daily protest campaign lasting more than 6 months outside Girard walls. This entry tells the story of this extended case.

Historical Background

Girard College was established pursuant to the last will and testament of Stephen Girard, who was born in Bordeaux, France. He was a mariner who eventually settled in Philadelphia in 1777, never to return to France. He became a banker, taking over

what was once the first Bank of the United States; renamed it the Bank of Stephen Girard and made his fortune in banking, commerce, and foreign trade. He died in 1831, leaving a last will and testament so meticulously considered and drafted that it has been the subject of study.

Girard left a major portion of his vast estate to the "Mayor, Aldermen and citizens of Philadelphia" for the establishment of a college to maintain and educate "poor male White orphans" (*orphans* defined as those without fathers), initially between the ages of "six and ten." He also left money to the Commonwealth of Pennsylvania on the condition that it enact the laws necessary to ensure the college's construction and the city's administration of the school.

Girard's relatives challenged the will, specifically the trusteeship over and gift to the city of Philadelphia, in cases said to have established the basic principles of the law of charitable trusts in the United States. Nevertheless, the will stood, the legislature passed the necessary laws, Philadelphia supervised the construction of the school, and it opened in 1858. In 1869, the legislature created the "Board of Directors of City Trust" and transferred the administration of the college trust to it. By the 1950s, the city's stewardship had increased the trust to more than \$98 million, while the land on which the college sat was valued at more than \$10 million.

By the 1950s, both the city of Philadelphia and the area in which the college was located had changed considerably from the largely undeveloped land it had been in Girard's time. The area had become quite urban and its population increasingly African American. In February, two African American boys, Ashe Foust and Robert Felder, by the hand of their mothers, applied to attend Girard College. They were orphan boys by the school's definition, and it was subsequently determined that they met all of the qualifications for admission except they were not "White." The board of trustees dismissed their applications, ruling that it had no choice but to adhere to the terms of the will, which was established for male White orphans.

Facts of the Case

In July, Foust and Felder, joined by the Commonwealth of Pennsylvania and the city of Philadelphia,

petitioned the Orphan's Court of Philadelphia County for an order to direct the board to admit them. The petition argued that the word *White* should be struck from the will as inconsistent with constitutional law and public policy as it had developed during 125 years since the will was written. These changes included the passage of the Thirteenth, Fourteenth, and Fifteenth Amendments to the Constitution. In doing so, they suggested that the exclusion of the boys violated the equal protection clause of the Fourteenth Amendment.

The Orphan's Court noted that the Fourteenth Amendment applied only to state action, not to individual or private action. So the first question for the Court was whether the city's administration of the trust constituted "state action" or "individual action." The second question was whether city officials in operating the trust and denying the applicants admission were denying them equal protection.

The Court held that the exclusion did not violate the Fourteenth Amendment. It noted first that the college was a public charity and a private school, not a government institution. Second, it noted that the will not only excluded non-Whites but also girls, those who were not poor, and those who had living fathers. It explained that the *Brown v. Board of Education* case involved a right to *public* education. Further it suggested that the U.S. Supreme Court in another case, *Shelly v. Kramer*, had found that private restrictive agreements, even where discriminatory, did not violate the Fourteenth Amendment; rather, states violated the Fourteenth Amendment when they enforced the private agreements against the right to property of others. *Shelly* involved parties who, by selling their property to African Americans, breached real estate covenants (agreements) that restricted the sale of property to Whites only. Other parties to the covenant brought suit, and the state ordered the African American purchasers to vacate the property. The Supreme Court reversed the state, finding that the *enforcement* of the covenant by the state violated equal protection.

The Orphan Court, applying this analysis, reasoned that the exclusion, dictated by Girard, the benefactor, was private action, and although discriminatory, it was nonetheless constitutional. Further, it reasoned that the restriction did not

impinge upon the constitutional rights of others, including the right to public education, the right to property, or any other guaranteed constitutional rights. In addition, the Court distinguished between the city acting in its governmental capacity and in its fiduciary (trustee) capacity, finding that there was no state action because there was no governmental activity in the operation of the trust. The Orphan Court then intimated that even if the administration of this private trust by the city constituted government action, the administration of this private trust by private trustees would not violate the Fourteenth Amendment.

The First Appeals

The petitioners appealed to the Supreme Court of Pennsylvania, which affirmed the earlier decision. It emphasized the fundamental right of individuals to dispose of their own property by gift or will as they saw fit. The question the court posed was whether the limitation in Girard's will to White orphans as the beneficiaries of his college, although undoubtedly lawful at the time he executed the will, had become invalid as a result of the Fourteenth Amendment's adoption. The court then explained that to use property in a way other than that instructed by the benefactor was to inappropriately appropriate the property. It reasoned that the property belonged to the estate and that the city's nominal title and function were merely to facilitate the disposal of this property consistent with its benefactor's wishes. It reemphasized the distinction between the city acting in its fiduciary capacity as opposed to its governmental capacity, finding that the city was operating in its fiduciary capacity, holding that there no governmental action, and thus finding that the government action necessary to trigger application of the Fourteenth Amendment was not present.

The petitioner then appealed to the Supreme Court of the United States. In a short opinion, the U.S. Supreme Court reversed the Supreme Court of Pennsylvania's decision and remanded the case back to the state court for further proceedings consistent with its decision. The Court noted that the city of Philadelphia and the state had carried out the provisions of the will, that an act of Pennsylvania legislature in 1869 had established the Board of Directors of City Trust of the city of Philadelphia

to administer the trust, and that the board had administered and operated the college since then. As such, the Court held that the board was an agency of the state, and even though the state was acting as a trustee, its refusal to admit applicants was discrimination by a state, a violation of the Fourteenth Amendment.

Upon remand, the Supreme Court of Pennsylvania vacated the Orphan Court's prior decree dismissing the two boys' applications and sent the case back to the Orphan's Court. The Orphan Court then, without an opportunity of the parties to be heard, removed the Board of City Trust of the city of Philadelphia as trustee and appointed as new trustee private persons who could administer the trust pursuant to its benefactor's express wishes.

The applicants, the city, and the commonwealth appealed the Orphan Court's removal of the city as trustee again to the Supreme Court of Pennsylvania, arguing that the action of the Orphan Court was inconsistent with the U.S. Supreme Court decision. The Supreme Court of Pennsylvania held that the action was not inconsistent with the Supreme Court's decision. The U.S. Supreme Court refused to hear the case again. The college was thus left with a new board committed to operating the college as an institution for poor male White orphans.

Later Protests and Litigation

By the early 1960s, the civil rights movement was in full swing in Philadelphia as it was in other places, and the frustration with the unchanged conditions of poverty were evident. In fact, 1964 had seen three days of rioting in poor African American neighborhoods of North Philadelphia in response to police brutality and the perception of high prices and poor-quality goods in White-owned businesses in these areas. A year later, Girard College, still segregated space in the heart of North Philadelphia and a symbol of city-sponsored African American exclusion, again became the focus of civil rights activity and African American anger.

That same year, the head of the Philadelphia NAACP, Cecil Moore, spearheaded a protest against Girard's White-only admission policies. The protest consisted mostly of young African American men picketing and protesting outside the 10-foot wall outside Girard. They protested for 6

months, from May 1 through December 18, 1965. Efforts to resolve the Girard protest resulted in Governor William Scranton appointing two prominent lawyers to file suit to force the trustees to allow admission of African Americans. On December 16, 1965, these lawyers instituted yet another suit, this time in the federal district court and on behalf of seven African American boys, their mothers as well as the state and the city. They sought to enjoin the school from continuing to refuse to admit the applicants and other similarly situated persons because they were African Americans. They again, specifically alleged violation of the Constitution, specifically the Fourteenth Amendment. But they also alleged violation of the Pennsylvania Public Accommodations Act.

The district court, after deciding a number of jurisdictional questions and motions in separate decisions, ruled only on the Public Accommodations Act, a state law, holding that the trustees' decision violated it. It then granted an injunction against continuing the discrimination. However, on appeal, the U.S. Court of Appeals, Third Circuit reversed, finding the state had previously ruled on the act and that the federal court was bound by the prior decision. It then remanded the case for resolution on the Fourteenth Amendment claim.

On remand, the district court found that the board of trustees' continuing racial discrimination constituted unconstitutional state action. It relied on the then-recent Supreme Court decision in *Evans v. Newton*, deriving from it a two-part test seeking to determine the nature of the institution concerned and the nature of state involvement. In *Evans*, a tester willed land to Macon, Georgia's, mayor and city council for development of a park, to be controlled by the White board of managers for the benefit of White people. The managers sued to remove the city as trustee after it desegregated the park, requesting a court to appoint private trustees who would enforce the racial restriction. The court did so and the state supreme court upheld the new appointment and the terms of the will. The U.S. Supreme Court reversed, noting that the momentum the park acquired as a public facility had not disappeared because of the private trust appointment and that the character of the park required that it be treated as a public institution subject to the demands of the Fourteenth Amendment.

The district court applied the admittedly novel test to the Girard case. It first noted that private discrimination such as that found in Girard's will was constitutionally permissible and that the mere administration of that will consistent with its terms, alone, would not constitute state action in the design of the discrimination violating the Fourteenth Amendment.

As to the nature of the state involvement, the court found that even though there was a transfer of control over to a private trustee, the state was still associated with the college in its discriminatory policies. In support of this finding, the court noted that the college not only benefited from tax exemptions but also from other public agencies' assistance as well. Furthermore, the state failed to remove the perceived public approval that was imbedded in the college's policies.

As for the nature of the institution, the court found that Girard College performed a service to the community, and although private, it did entail state involvement. Specifically it found that the public nature of the college, the testator's involvement of the city in administration of the College that lasted for more than 125 years, and the Orphans' Court's appointment of private trustees for the primary purpose of perpetuating the will's discriminatory intent, together with the Orphans' Court's continued supervision of the trust, rendered the exclusion at Girard afflicted with state action and thus unconstitutional.

The Third Circuit affirmed the district court's decision holding that Girard College's discriminatory admissions violated the Fourteenth Amendment because it involved state action. The court centered its decision on the State Orphans' Court's appointment of private trustees after it removed the city from the board. It found that the appointment increased the state's involvement with the college and its discriminatory design and that the court's action and motivation, together with the long history of city and state administration of the college, were conspicuous in encouraging and involving the state in private discrimination. This action violated the Fourteenth Amendment and was consistent with the Supreme Court's holding in *Evans v. Newton*. Further, it gained support from the Supreme Court's decision in *Shelley v. Kramer*, which prohibited the state enforcement of restrictive covenants.

Girard College admitted its first African American students in 1968.

COMMUNITY CONTROL OF SCHOOLS

Community control of schools was the rallying cry of African American activists in the late 1960s, as they sought to replace New York City's central board of education with "community control" boards governing inner-city schools. The campaign for community control centered on the creation of two boards governing a number of schools in Harlem and Ocean Hill-Brownsville, Brooklyn. African American activists embraced community control not only as a means of addressing racism in education but also as a means opening school jobs to African Americans and as a lever for achieving political power.

Their demand mirrored the wider eclipse of desegregation by nationalism as a goal of African American activists and reconfirmed the central place of schooling in the racial politics of the United States. African Americans across the United States looked to community control as a way to win racial justice in education, and African American educators such as Jitu Weusi, Herman Ferguson, and Rhody McCoy in New York won recognition as leaders in the Black nationalist liberation struggle. This entry looks at the background and history of the struggle, along with its impact.

Historical Context

The movement for community control was the climactic chapter in a long struggle to achieve racial equality in New York City's schools. In the decade following the U.S. Supreme Court's 1954 *Brown* decision, the city's school board repeatedly proclaimed its commitment to desegregation. Behind the scenes, however, the board blocked crucial changes in teacher assignment and school zoning policies.

African American activists organized ever-larger and more militant actions in support of desegregation, culminating in a February 1964 school boycott that remains among the largest civil rights protests in U.S. history. Meanwhile, declining blue-collar employment, discrimination in housing, and massive government highway construction and urban renewal programs propelled the simultaneous growth of White suburbs and African American inner-city communities. The schools became increasingly segregated.

The April 1966 opening of a new Harlem intermediate school marked the end of the desegregation movement in New York. Although school officials had promised a desegregated school offering a state-of-the-art education, when I.S. 201 opened, it was understaffed and segregated. Parents responded by boycotting the school. Echoing national calls for Black power, they no longer called for desegregated schools and instead demanded African American control of segregated ones.

The New York Campaign

Militant school activism spread, and in April 1967, experimental neighborhood school boards were created in Harlem (I.S. 201) and Ocean

Hill-Brownsville, Brooklyn, together with a third neighborhood in Manhattan's Lower East Side. Community control led to a number of curricular reforms, including new attention to African American, Puerto Rican, and African history and culture. Still, the movement for community control did not focus on culture or learning styles; rather, activists believed that African American educational failure was the intended outcome of a brutal system designed to exploit and oppress African American people. The campaign for community control was deemed a crucial step in African American people's collective struggle for self-determination.

Although the United Federation of Teachers (UFT) initially supported the decentralization of New York's mammoth, dysfunctional school bureaucracy, tensions grew steadily as African American parents and activists sought control over staffing and curriculum. In May 1968, the Ocean Hill-Brownsville School Board ordered 14 teachers, five assistant principals, and one principal out of the district. The UFT increasingly viewed community control as a threat to due process, job security, race-blind standards of equal opportunity, and unbiased quality education. The conflict between the African American activists and the UFT brought to the surface extraordinary levels of racial animosity, along with charges of Black anti-Semitism.

In the fall of 1968, the UFT and the Council of Supervisory Associations went out on a series of three strikes against community control, with nearly 90% of teachers and administrators honoring picket lines. The strikes shut down the schools for most of the fall. Meanwhile, in the community control demonstration districts and scattered neighborhoods around the city, dissident teachers, parents, and community activists confronted police and strikers in an effort to keep African American schools open. Only when the UFT had succeeded in dismantling community control did union teachers return to work.

Outcomes

A state-appointed trustee took over control of the Ocean Hill-Brownsville district; the transferred teachers were allowed back into their classrooms; and a 1969 union-endorsed "decentralization" law replaced the community control districts with 32 "community" school districts, each containing a few hundred thousand residents. The community

school boards tended to preserve the power of school professionals and to preclude effective community political mobilization. The central board of education retained authority over the city's high schools, along with substantial power over teacher hiring, textbooks, curriculum, and school construction. At the same time, the existence of the new boards allowed White New Yorkers to blame failure of schools serving poor underrepresented children on the communities from which those schools drew their students.

Despite their defeat in the battle over community control, African American activists could point to significant achievements. By creating a number of autonomous African American schools and other institutions, they legitimized the notion of Black self-determination. And, as Black nationalists repudiated the desegregation ideal, they laid to rest notions that African American culture was merely a distorted version of White life. Community control educators substantially advanced attention to African American history and culture within the public schools. Even decades later, both proponents of African-centered schools around the country and activists demanding the creation of individual school councils invoked New York's struggle over community control.

And yet, the defeat of community control left a decades-long residue of bitterness, alienation, and distrust in New York's schools. Meanwhile, the rhetoric of community control and the rhetoric of race-blind equal treatment were both appropriated by opponents of racial equality.

COMPENSATORY EDUCATION

Compensatory education is a term that generally refers to governmental programs designed to

enhance or improve the academic standing of children from economically or educationally disadvantaged groups. These children can be classified as disadvantaged due to poverty, linguistic competency, and physical or mental impairment. The aim of these programs is to provide disadvantaged children with positive early educational experiences. It is thought that this form of early educational intervention will help these children perform at their highest abilities both in regular school and afterward as citizens. African American children have been singled out as especially needing compensatory educational programs. This entry looks at the origins of compensatory education and then examines the programs and their efficacy.

Historical Background

The 1954 *Brown vs. Board of Education, Topeka, Kansas*, decision forced many legislators to re-examine the quality of education that African Americans were receiving. Because of the high rates of poverty in many African American communities, it became widely accepted that poverty was a leading cause of the low educational scores of many African American students. Poverty was at the root of the dreadful educational experience of many African Americans because schools in poor communities were underfunded and had less competent teachers and limited academic resources. Children who lived in poverty often came to school hungry, which affected their ability to learn. Poor education and/or the lack of ability to perform well academically (both caused by poverty) were the primary reasons, it was argued, that African Americans failed to succeed in the United States.

This reasoning led then-President Lyndon B. Johnson to declare his famous "War on Poverty." It was thought that if poverty could be eliminated, disadvantaged children would have a better chance of doing well academically and have better lives. A good education was viewed as the key to success and happiness. With the belief that education was one of the best remedies for a life of poverty, it was also argued that it was the job of the federal government to ensure that all children regardless of class or race should be able to compete in the academic arena.

To facilitate this mandate, President Johnson pushed for a federal law that would supplement

and support educational programs meant to enhance the education of disadvantaged students. One of the important pieces of legislation of the Johnson presidency was the Elementary and Secondary Education Act of 1965 (ESEA). It was an act “to strengthen and improve educational quality and educational opportunities in the Nation’s elementary and secondary schools.” Section 201 of the act reads as follows:

In recognition of the special educational needs of children of low-income families and the impact that concentrations of low income families have on the ability of local educational agencies to support adequate educational programs, the Congress hereby declares it to be the policy of the United States to provide financial assistance (as set forth in this title) to local educational agencies serving areas with concentrations of children from low-income families to expand and improve their educational programs by various means (including preschool programs) which contribute particularly to meeting the special educational needs of educationally deprived children.

Care was taken to ensure state and local governments that these programs were not an attempt by the federal government to usurp the authority of local communities regarding the education of children. To this end, the act mandated that the monies for compensatory education programs followed the child.

Over the next 20 years, other categories of disadvantage were added, including children of immigrants, children with physical and mental impairments, and children with emotional problems.

Programs and Assessment

Head Start

Of all of the programs created by ESEA, Head Start has been the most researched and evaluated. While there have been success stories regarding Head Start, there is debate as to the degree of academic carryover from early educational intervention programs. There has been some improvement in the levels of educational attainment of African American students in Grades K–12, but there is

still debate about the overall success of compensatory programs funded by ESEA.

While much of the literature on compensatory education has focused on Title I programs of ESEA, there were other compensatory education programs developed within the purview of the Education Act of 1965. The focus of the government was not solely on K–12 education. In the 1960s, African American students started to enroll in large numbers in predominantly White colleges and universities. The federal government addressed this issue with the Higher Education Act of 1965. This act was meant to supplement and support the entrance of underrepresented and disadvantaged students into the nation’s institutions of higher learning.

College-Oriented Programs

Title IV of the act states that the act is meant to address the problem of disadvantaged students. The act provides funding for special programs and projects designed to identify and encourage qualified youth with financial need with a potential for postsecondary education, and it provides remedial preparation (including remedial language study) and other services to students and assistance to institutions of higher education.

Along with the Pell Grant Program, the act created three programs to identify qualified disadvantaged students who would benefit from compensatory education programs: Upward Bound, Talent Search, and Special Services for Disadvantaged Students, which was later renamed Student Support Services. These three programs, now known as TRIO, form the basis for programs designed to identify qualified disadvantaged youths at the high school level and to get these students ready for the higher education experience. These programs are designed to supplement and support the educational experience in higher education. The legislative requirements for all TRIO programs can be found in the Higher Education Act of 1965, Title IV, Part A, Subpart 2. As conceived, these programs are designed to provide a compensatory educational experience for underrepresented students.

These programs have been seen as primarily geared to support African American students. While this is not true, it is still the public’s perception. There has been and continues to be much

debate over the effectiveness of these programs. Supporters cite the many success stories from both Head Start and other ESEA-funded programs, including the programs created by the Higher Education Act. Detractors, on the other hand, cite the high cost of these programs and the slow change in academic advancement of underrepresented students. As long as there is a perceived educational attainment gap between African American and White students, there will be arguments for and against compensatory education programs.

COOPER, ANNA JULIA HAYWOOD (1860–1964)

Anna Julia Haywood Cooper was one of the most influential African American women of the late 19th and early to mid-20th centuries. She was an acclaimed educator, community activist, and author who devoted her life to the education and racial advancement of the African American community. Cooper lived and worked during a period when the civil and human rights of African Americans were under systematic assault. It was also a period when women were oppressed politically and economically due to their gender status in society. The intersections of being African American and female in 19th-century United

States contributed to multiple forms of oppression African American women experienced at that time. Refusing to acquiesce to the yoke of oppression, Cooper struggled tirelessly to transform inequitable social institutions that pervaded every facet of U.S. society and that negatively affected the lives of African Americans. As a result of her battles, Cooper made noteworthy contributions to the empowerment of the African American community in the areas of education and social reform. This entry looks at her life and accomplishments.

Early Years

Cooper was born during U.S. enslavement, in Raleigh, North Carolina, on August 10, 1860. Her mother, Hannah Haywood, was enslaved and her father, George Haywood, was from a prominent North Carolina enslaving family. Anna was the youngest of Hannah's three children. Although her early years were spent during the tremendous upheaval of the Civil War, hope for freedom and full rights to citizenship brought new dreams and possibilities for her and the approximately 4 million newly freed people.

Anna was among the first group of students to attend the St. Augustine Normal School and Collegiate Institute in 1868. She remained at this school for 14 years, completing her course of study in the classical arts in 1877. In 1877, Anna married George Cooper, a St. Augustine theology student and instructor. George passed away in 1879.

Cooper's experience as a teacher began at the age of 8, when she was required to work as a "pupil teacher" to satisfy her scholarship. In later years, she became a teacher of the female students and taught Latin, Greek, and mathematics. Cooper described St. Augustine as a wonderful place for her because it contributed to her growth and development.

Cooper relocated to Ohio, to attend Oberlin College in 1881; she graduated in 1884, with two other Black women, Mary Church (Terrell) and Ida A. Gibbs (Hunt). After graduation, Cooper taught at Wilberforce University for one year, and then returned to Raleigh to teach at St. Augustine. While there, she fought to secure equal treatment and salaries for African American teachers in the North Carolina schools and argued for public school provisions for African American youth. In 1887,

Cooper accepted a teaching position at the Washington Colored High School (nicknamed “M Street” and later renamed Paul Laurence Dunbar), the most prestigious African American high school in the nation during that time. Also in 1887, she was awarded a master’s degree from Oberlin.

Promoting Women’s Clubs

The period from 1887 to 1906 marked a turning point in Cooper’s professional career. In the 1890s, she became a major figure in the African American women’s club movement on the local and national level. In the various organizations where Cooper was active, she sought to ameliorate the educational and social welfare issues that were plaguing the African American community. One of the clubs included the National Association of Colored Women, a major African American organization that heavily campaigned for an antilynching bill. Cooper was one of the founders of this club, which was established in 1896.

During the same period, numerous organizations asked Cooper to give presentations on topics pertaining to race uplift, women’s equality, and education. Cooper wrote *A Voice From the South, by a Black Woman of the South*, in 1892. In this collection of Cooper’s essays, she critiques racism and sexism in 19th-century United States and passionately argues for the higher education of African American women because she believed *only* African American women were capable of being pivotal players in the advancement of the race.

In 1893, Cooper spoke at a special session that focused on the progress of African American women in the United States, at the Women’s Congress in Chicago. Two years later, Cooper attended the First National Conference of Colored Women in Boston, where she delivered a paper that outlined the need for African American women to organize on a national level. In 1900, Cooper was invited to speak at the first Pan-African Conference in London, along with her friend and supporter, W. E. B. Du Bois.

A Consummate Educator

By 1902, Cooper became principal of the Washington Colored High School (“M Street”). During the 4 years Cooper served as principal, the

school achieved significant recognition. As a result of the school’s prominent status, Harvard University awarded admissions to large numbers of this “M Street’s” graduates. Many of “M Street’s” students were also granted admissions to numerous major universities in the North. Despite her successes as a principal, Cooper became enmeshed in a controversy over her refusal to allow the school board to dismantle “M Street’s” college preparatory curriculum and replace it with an industrial one. Following her dismissal from the school, Cooper moved to Missouri to teach at Lincoln University in 1906. Four years later, she was asked to return to “M Street” as a teacher of Latin.

Not long after Cooper returned to Washington, she began raising one of her brother’s five grandchildren. In 1925, Cooper earned a PhD from the Universite de Paris, Sorbonne; she became the fourth African American woman in the United States to hold a PhD. Cooper’s dissertation, *L’Attitude de la France a l’egard de l’esclavage pendant la Revolution* (France’s Attitude Toward Slavery During the Revolution), examines the relationship between France’s involvement in enslavement in Santo Domingo (now Haiti) and class exploitation in France, and how the revolts of the enslaved in Santo Domingo catapulted the revolutionary uprisings in France.

Cooper was a consummate educator who passionately enjoyed teaching. In 1930, she became president of Frelinghuysen University, an independent university for working-class African American adults. She brought many years of successful teaching, administrative skills, and a strong sense of commitment to this school. Her adult educational ideas predate the Brazilian educator Paulo Freire’s ideas. The school closed its doors in 1964, the year Cooper passed away at the age of 105. In honor of Cooper’s commitment to education and social advocacies, the District of Columbia named a street after her, the Anna J. Cooper Memorial, which is in the LeDroit Park community. In 2009, the U.S. Postal Service issued a commemorative Black Heritage Stamp in honor of Cooper’s life and accomplishments.

COOPERATIVE ECONOMICS EDUCATION

African Americans have used cooperative economic development as a strategy in the struggle for economic stability and independence. This requires that co-op members as well as clientele be educated about the model and understand cooperative economics and consumer cooperation. African Americans in most cases have had to educate themselves in this area, sponsoring study circles and classes about cooperative economics through public as well as private schools, labor unions, and religious organizations. In some cases, they have established high school and college courses about cooperative economics and consumer cooperation. African Americans have also gained knowledge and shared knowledge about cooperative business ownership through conferences and articles in African-American-owned newspapers and magazines. This entry provides an overview of the types of cooperative education African Americans have developed and practiced, particularly throughout the 20th century.

Basic Principles

The International Cooperative Alliance (ICA), founded in 1895, defines a *cooperative business* as "an autonomous association of persons united

voluntarily to meet their common economic, social, and cultural needs and aspirations through a jointly-owned and democratically-controlled enterprise." Cooperative economics includes the study of the theory and practice of cooperative ownership of economic enterprises; the values, principles, and practices of democratic economic participation, shared ownership, and democratic governance; and sometimes includes consumer education and rights. Continuous education is the fifth of seven international principles of cooperation (part of the cooperative statement of identity adopted in 1995 by the ICA).

W. E. B. Du Bois noted in his autobiography that continuous education of co-op leaders and members, especially the proper training of managers, was essential to the success of African American cooperatives. He also discussed the importance of selecting and developing leaders who could be good business managers and would be accountable to "intelligent democratic control."

The success and growth of many cooperatives depend on education strategies: orientation and training about economic cooperation and democratic economic participation, as well as how to operate in and manage a particular business. Future co-op business development also depends on reaching young people with knowledge about alternative economic structures and cooperative economics, as well as experiences with entrepreneurship. In addition, leadership developed through cooperative economic experiences is practiced in other areas of civic engagement.

Formal Cooperative Economic Training Among African Americans

Historical research by Jessica Gordon Nembhard on African American-owned cooperative businesses suggests that most African-American-owned cooperative businesses started with a group of people coming together to study their economic circumstances and teach themselves about cooperative economics. Consumers' Cooperative Trading Company (CCTC) in Gary, Indiana, for example, began with a study circle in 1932, according to one of the founders, Jacob Reddix. In 1933, the course CCTC developed on cooperative economics and management had the largest enrollment of any of the local high school's evening classes at

that time. Also in the 1930s in North Carolina, Brick Rural Life School and Tyrrell County Training School offered courses and/or training in cooperative economics.

Lee Brooks and Ruth Lynch surveyed the coverage of the “cooperative movement” and “consumer problems” in courses in 75 southern African American universities, colleges, and junior colleges in 1943. Of the 57 institutions that responded, about 25 different institutions taught a course or a section of a course on cooperatives, with eight indicating they taught an entire course on the cooperative movement. More recently, evidence suggests that only a handful of African American economists and social scientists include cooperative business structures and cooperative economics in economics and/or African American studies undergraduate courses.

African American labor unions have also supported cooperative and consumer economics education. As early as 1938, in the “Bulletin of Instruction on Decisions and Orders,” the Ladies Auxiliary to the Brotherhood of Sleeping Car Porters dictated that local auxiliaries should subscribe to *Consumers Union* and *Consumers Guide* publications. They were also advised to study credit unions and were directed to information about consumer cooperatives, particularly books on cooperation by James Warbasse, Beatrice Potter Webb, and African American cooperators Jacob L. Reddix. In the 1990s, the APR Educational Fund of the A. Philip Randolph Institute (Washington, D.C.) began to support the development of worker cooperatives among its members.

For Black youth, less than a handful of public school programs include cooperative business training. Those that exist are often connected to school gardening programs such as “Food From the ‘Hood” in Los Angeles and the Urban Nutrition Initiative in Philadelphia. These programs introduce students to buyers’ clubs and cooperative business structures and provide some overview of cooperative economics.

Public and Informal Cooperative Education

The Federation of Southern Cooperatives/Land Assistance Fund trains young African Americans in cooperative economics, business development, and sustainable agriculture through workshops

and summer programs. One strategy used is to call students’ attention to culturally familiar ideas and apply them to cooperative economics, and refer to the principles celebrated during the Kwanzaa festivals (in particular *ujamaa*, a Kiswahili term used by Julius Nyerere to refer to cooperative economics). This helps the participants feel more comfortable thinking in new ways and feel a connection between the democratic economic concepts and their own culture and family values.

Many African American cooperatives and leaders also engage in public education—educating their customers, potential customers, and surrounding communities about cooperative economics and the missions of their enterprise. This may consist simply of providing informational brochures and bulletin boards about the cooperative, its mission and products, or more extensively with forums and workshops for customers. Many cooperatives or cooperative trade associations produce newsletters, brochures, and Web sites to educate the public about what they do and to introduce the concept of cooperative economics.

African Americans have also participated in conferences on cooperative businesses and cooperative economics, and consumer cooperation and organized labor sponsored, for example, by Atlanta University (in 1907), the Young Negroes’ Cooperative League (1930s), and by other African American and White cooperative trade organizations and trade unions. African American newspapers and magazines (such as *The Crisis* magazine, *Pittsburgh Courier*, *The Messenger*, *The Black Worker*, *The Negro World*) also published articles and opinion pieces on cooperative economics as an economic development strategy and highlighting African American cooperative businesses.

In sum, African Americans have engaged in economic cooperation and cooperative ownership of businesses, farms, and houses throughout their history, as part of their economic self-help strategies and efforts toward economic independence in the United States. They also have a long and strong history of educating themselves, their children, and their neighbors about cooperative economics and consumer cooperation. These have been both through informal structures such as newspaper articles, conferences, workshops, flyers, and more recently Web sites, as well as

occasionally through formal courses taught in accredited educational institutions.

COOPER V. AARON

Cooper v. Aaron (1958) began with a lawsuit in the federal district court in 1955 brought by a group of Black plaintiffs asking the court to order the full desegregation of the Little Rock, Arkansas, schools based on the U.S. Supreme Court's decision in *Brown vs. Board of Education, Topeka, Kansas*. While this case began as a simple question of how to fashion a remedy based on a decision already handed down by the high Court, it was soon transformed into the profound legal question of who had the final authority to interpret the U.S. Constitution.

Cooper v. Aaron raised once again one of the most crucial questions in the constitutional history of our country: Who had the authority to interpret the Constitution and determine what its provisions meant? Equally important, if a state court, or in this case a state governor or legislature, disagreed with the Supreme Court, were they bound by the Constitution to follow the Supreme Court's ruling? Few would have imagined that this case would not only raise questions about school desegregation but would also confront the very balance of power between states and our national government known as "federalism." The outcome was an assertion of both the need to proceed with school desegregation and the primacy of the U.S. Supreme Court in determining the law of the land.

Historical Context

Following the Supreme Court's historic decision in *Brown v. Board of Education*, (*Brown*, 1954; *Brown II*, 1955) civil rights advocates began the long and arduous process of dismantling the system of public school segregation that had been in place in southern states since the advent of public education itself. They knew the task would be difficult, but armed with the legal authority of *Brown*, they set out to change history. While *Brown* was a both a legal and social watershed, the Supreme Court divided its desegregation decision into two parts and

in doing so shaped the direction of equal opportunity in public education in ways that were both remarkably successful and tragically disappointing.

In *Brown I*, the Court asked the question of whether the *Plessy* doctrine of “separate but equal” that underpinned segregation in public schools was permitted under the equal protection clause. They answered with a unanimous decision that it was not. But the Court had reserved ruling on the equally important question of how to implement desegregation, given that nearly a third of the nation’s schools governed by a myriad of regulations and laws were now operating in violation of the mandate articulated in *Brown*.

Usually, appellate court decisions are simply remanded to lower courts with instructions to apply the new ruling accordingly. But the school cases were more complicated. While today most commentators look back on *Brown* as one of the most important of the Supreme Court, in 1954, the local and state response of “massive resistance” to *Brown* raised questions about the capacity of our legal system to implement the principle of the equal protection of the law that the court had handed down. To address these concerns, the Court heard *Brown II* in 1955, and the parties were asked to brief issues concerning the implementation of the Court’s earlier decision. In the *Brown II* decision, the Court took a cautious route, and instead of ordering desegregation immediately, or at least on a set timetable, they instructed the federal district courts to proceed with desegregation on a case-by-case basis “with all deliberate speed.”

To be fair, the Court’s path on these matters was not as clear then as it might seem today. The justices were rightfully concerned about the resistance in the South, where the codes of racial subordination were often enforced with violence. Despite the existence of several post-Civil War statutes empowering the federal government to protect African Americans whose civil rights were being violated, the political power wielded by southerners in Congress had nullified any serious enforcement of those provisions. They were also mindful of the history of race relations in the South. Since the end of Reconstruction in 1876, the southern states had erected an elaborate system known as “Jim Crow” segregation that had become part of the fabric of everyday life. Against this historical backdrop, the Court might have

rightfully expected resistance to its ruling. But by announcing an “all deliberate speed” policy the Supreme Court was in effect subordinating the principle of the equal protection of the law to the need for the South to “adjust” to the new realities that school desegregation would require. However, despite the furious reaction throughout the South against *Brown*, few would have predicted the constitutional crisis that ensued when the state of Arkansas challenged both the Supreme Court and the federal government in the case that became known as *Cooper v. Aaron*.

Facts of the Case

The case of *Cooper v. Aaron* began in 1956, when a local Black attorney named Wiley Branton along with Thurgood Marshall and Robert Carter representing the NAACP Legal Defense Fund filed a lawsuit against the Little Rock Board of Education in the federal district court, calling for the speedy desegregation of the local public schools. The Little Rock School Board had initially reacted to the *Brown* decision in 1955 by changing its official policy of maintaining segregated schools even before the “all deliberate speed” order from *Brown II* was issued. Their plan, which included the building of several new schools, called for desegregating the high schools first and then gradually desegregating the lower grades over a 7-year period.

When *Brown II* was announced, this 7-year plan raised the question of whether such a gradual approach was consistent with the “all deliberate speed” order from the Court. In response to the NAACP lawsuit, the school board claimed as follows:

The plaintiffs unreasonably insist on a hasty integration which will be unwise, unworkable, and fraught with danger; that would prove detrimental to the personal interest of plaintiffs and the educational needs of both races, and would unnecessarily and inevitably hinder and retard the accomplishment of integration of the schools of the defendant District.

The first phase of the plan called for a few African American students to enroll in the all-White Central High School. The judge hearing the case agreed with the school board that token desegregation was

appropriate as a start and so ordered only nine African American students to be transferred to Central High School. The plaintiffs appealed to the Eight Circuit Court of Appeals arguing for more students and a faster pace that would address the entire school district, but the court denied their request and affirmed the district court's order.

The Little Rock Nine

On September 3, 1957, nine African American students were chosen by local African American leaders to be the first to integrate Central High School in Little Rock and were scheduled to start school the next day. John Aaron was simply the first of the nine African American students listed on the petition in alphabetical order. William Cooper was the president of the board of education. While the school board had agreed to comply with at least these minimal steps toward desegregation, local resistance to school desegregation was growing in the streets as well as in the elite circles of law and politics.

On September 4, 1957, as the new school year was about to begin under the mandate of *Brown*, Governor Orvill Faubus, a vociferous supporter of segregation, called out the Arkansas National Guard. Although they were under orders to prevent violence at Little Rock Central High School, they were also instructed to ignore the Court's desegregation order and to turn away any African American student seeking to attend the school. With this act of defiance against federal authority, a constitutional crisis was joined.

For the next 3 weeks, tense negotiations took place between the governor's office and the White House, but by the third week of this standoff, the "Little Rock Nine," as they were called, once again attempted to enter the school, this time under local police escort. When the police declared that they were unable to ensure the safety of the African American students, President Dwight D. Eisenhower finally sent in Army paratroopers who surrounded the campus and escorted the nine African American students to school each day. As the school year progressed, Eisenhower withdrew the federal troops but federalized the Arkansas National Guard, requiring them to follow Army orders to keep the school open rather than those of the governor. Ironically, the very troops that had once

kept the Little Rock Nine out of Central High School were now required to protect them.

The Legal Issues

The issue that the court was ultimately called on to address in *Cooper v. Aaron* was hardly new to our constitutional jurisprudence. Early in the nation's history, the question of who had the final authority to interpret the Constitution was presented in the case of *Marbury v. Madison* (1803). There, Chief Justice John Marshall fashioned a legal theory of profound constitutional significance. That critical doctrine grew out of a minor dispute over whether a Whig Party functionary was entitled to a judicial commission that had been signed just as the old administration was going out of office but had not yet been delivered before power was turned over to the Republicans. The new administration refused to deliver the commission, and *Marbury* sued.

In 1803, when the case came before the Supreme Court, the political arrangements of the nation's new democracy were still very fragile, and Marshall knew that his decision would have implications far beyond the issue of party patronage that the Republicans would later practice just as vigorously as the Whigs. In a decision that is still debated among legal scholars, Marshall crafted an opinion that held that in our tripartite system of government, it is the Supreme Court that has the final say over the interpretation of the Constitution.

Ironically, the drafters of the Constitution had not clearly addressed this crucial question in the specific language of Article III of the Constitution, where the structure and duties of the Supreme Court were spelled out. So Marshall, with what some call skill and others claim was circuitous logic, reasoned that the Supreme Court must have the final authority to decide what the language of the Constitution means. He reasoned that the founders intended that authority to lie with the Supreme Court, even though it was not explicitly stated in Article III. After all, he argued, if the Supreme Court did not have that authority, then either Congress or the president might take actions that were contrary to the Constitution, and since the founders had declared that the Constitution was the supreme law of the land, then it followed that for that proposition to have effect there had to be some final determination other than by

Congress or the president as to what that written document meant.

The Constitution, Marshall reasoned, was designed to define the powers and authorities of the federal government but also to place certain limits on that authority. He held that this included the power of the Supreme Court to invalidate decisions of either Congress or the president that were inconsistent with what the words of the Constitution required, thus preserving the document as the supreme law of the land. Years later, the same principle was held to apply to laws enacted by the states. It was this exercise of constitutional authority over the states authorized by the Fourteenth Amendment that was in fact the cornerstone of *Brown*.

Marbury had been cited by the court for more than a hundred years for its jurisdictional authority to decide constitutional issues, and the Fourteenth Amendment had made it clear that this power also extended over the states. Now, both the Arkansas legislature and the governor openly proclaimed that not only had the Supreme Court been wrong in its *Brown* decision, but that the states had the right to hold a federal court order in abeyance until they could devise a system that would produce a different result. Specifically, “all deliberate speed” would mean what the governor and legislature of Arkansas decided it meant, not what a federal district court had declared.

Governor Faubus knew that if he could prevail with his arguments on the need to maintain public order as a delaying tactic that this rational could trump the Court’s decision on school segregation and would set a precedent for the entire South. In effect, popular opposition to a rule of law would be cited as a reason for refusing to implement court orders based *Brown I* and *Brown II*. Mob rule would bring the promises of the equal protection clause to a grinding halt. The issue of who had the last word on the Constitution that Justice Marshall had settled in 1803 was reopened in 1957 by the festering wound called segregation.

The Supreme Court Steps In

The Supreme Court term normally begins in October of each year; however because of the nature of this case, Chief Justice Earl Warren called the Court out of recess to a special term on September 11, 1958. This was only the third time in the Court’s history

that a special term had been called. Judge Harry Lemley of the federal district court had initially issued the order to admit the Little Rock Nine to Central High School. However, after violent opposition erupted, he agreed with the local school board to delay any further desegregation efforts for another 2 years. The plaintiffs appealed to the circuit court, which reversed his decision. This conflict now set the stage for the matter to be decided on appeal by the Supreme Court.

Richard Butler, an experienced local attorney, argued on behalf of the city of Little Rock. Thurgood Marshall, who had argued the first *Brown* case, represented the plaintiffs. Butler began by stating the obvious, that he was arguing on behalf of not just the city of Little Rock but “for the great mass of people throughout the South.” He claimed that the real problem in this case was that the law-abiding White citizens of the South simply were not clear on whether they had an obligation to follow the mandate of *Brown*. After all, he pointed out, despite the Court’s ruling, the Arkansas legislature and the governor had both proclaimed the *Brown* decision to have no basis in the Constitution.

He further argued that a decision of such profound “cultural implications” needed time to be worked out on the local level and pointed to the language of *Brown II*. He declared that the language “all deliberate speed” provided precisely the flexibility that Judge Lemley had granted the school board in their request for the two-year delay.

Marshall’s argument was blunt and to the point. He reminded the Court that this delay was simply one among many tactics to obstruct the process of school desegregation. Finally he argued that what was really at stake in this case was the rule of law. He asked the Court for a “definitive decision” that would leave no doubt in Arkansas that the “orders that district courts hand down must be respected and cannot be suspended and cannot be interfered with by the legislature or anybody else.” Anything less than that, he concluded, “would not give these young children the protection that they need and that they most certainly deserve[s].”

The solicitor general, J. Lee Rankin, representing the administration, weighed in on behalf of the plaintiffs and reminded the Court that “this case involved the question of the maintenance of law and order, not only in this community in the state of Arkansas, but around the country.”

The Supreme Court's Ruling

Normally, one justice writes the opinion for the Court and the others either concur in the judgment, concur in the reasoning, or both. Those who disagree are assigned to write a dissenting opinion in which other justices may join. However, because of the momentous impact of this decision, all nine justices signed the opinion as its authors. The decision was very brief for a case of this impact. Most of the text was taken up simply reciting the procedural history and the underlying facts that brought the matter before the Supreme Court. Then the Court got to the point:

The controlling legal principles are plain. The command of the 14th amendment is that no [State] shall deny to any person within its jurisdiction the equal protection of the laws. . . . The prohibitions of the 14th amendment extend to all actions of the state denying equal protection of the laws; whatever the agency of the state taking action . . . or whatever the guises in which it is taken. . . . In short, the constitutional rights of children not to be discriminated against in school admission on grounds of race or color declared by this Court in the *Brown* case can neither be nullified openly and directly by the state legislators or state executive or judicial officers, nor nullified indirectly by them through evasive schemes for segregation whether attempted ingeniously or ingenuously.

Citing *Marbury v. Madison*, the Court declared that “it is emphatically the province and duty of the judicial department to say what the law is.” It naturally follows that this authority applies as much to the Court’s interpretation of the Fourteenth Amendment as it does to any constitutional provision. The Court then went on to remind the nation that “no state legislator or executive or judicial officer can war against the Constitution without violating his undertaking to support it.”

Finally, the court declared as follows:

The principles announced in that decision [*Brown*] and the obedience of the states to them, according to the command of the Constitution, are indispensable for the protection of the freedoms guaranteed by our fundamental charter for

all of us. Our constitutional ideal of equal justice under law is thus made a living truth.

Impact of the Case

With this firm declaration of principle, the case of *Cooper v. Aaron* came to a close. Following the Supreme Court’s decision, the Little Rock School Board was ordered to follow its original desegregation plan beginning with the start of the school year in September 1958. Governor Faubus, whose defiance had helped him get reelected, reacted by ordering the Little Rock schools closed for the remainder of that year. Although his order and the legislation on which it was based were eventually ruled unconstitutional, by the time the appeals had been heard, the entire school year had been lost.

In the fall of 1959, the Little Rock schools finally reopened under a court order to follow a desegregation mandate. Despite the violent protests to the original desegregation order, the 1959 school year began with relative peace. In addition to the desegregation of Central High School, five African American students also enrolled in the previously all-White Hall High School. Unfortunately, Little Rock’s response to *Brown* simply became a model for how local school boards throughout the South decided to address the issue of school desegregation. Initial reluctance or outright refusal to desegregate the schools resulted in lawsuits and court orders for desegregation. But in responding to the court order, the school boards used their local authority to set district lines and to establish pupil assignment criteria in ways that continued to leave most of the school’s almost as segregated under the desegregation order as they had been prior to *Brown v. Board of Education*.

Cooper v. Aaron gave way to a new desegregation lawsuit titled *Clark v. Board of Education* (1966). This suit, filed in 1965 against the Little Rock School Board, alleged that the school assignment plan that the board had been using was effectively being used to deny African American students entrance to predominantly White schools. These new plaintiffs showed that by 1966, only 16.7% of all African American students in Little Rock attended schools with White students. A combination of local housing discrimination and creatively drawn district lines resulted in essentially a dual-race school system, with seven schools in Little

Rock being almost all White and 12 schools all African American.

This case dragged on for another 15 years as the school board proposed various desegregation options while the White population of Little Rock began to empty out to the suburbs or choose private education for their children. Toward the end of the federal courts' supervision of the Little Rock school system, substantial busing of both White and African American students had become the only reasonably effective means of achieving desegregation.

The Little Rock Nine, as they have become known, faced enormous pressure during their time at Central High School. Harassment was continuous, including death threats to them and their families. Some chose not to continue at Central High under those torments. One was expelled in an incident instigated by her harassers, and bullying was a daily affair. But others graduated from Central High School, and all went on to have productive lives and careers. While they did not seek notoriety or fame, the courage and sacrifice of these nine students was recognized in 1999 when each was awarded the Congressional Gold Medal, the highest civilian award that may be bestowed by the U.S. Congress. The decoration is awarded to an individual who performs an outstanding deed or act of service to the security, prosperity, and national interest of the United States. Their courage was both exemplary and common among the African American students in the 1950s who first sought to break the color barrier in public education in the South.

Despite the Court's emphasis on its constitutional authority in *Cooper v. Aaron*, the justices did not revisit or alter their decision in *Brown II*. Little Rock and other southern school districts knew that they would not get the Court to overturn *Brown*, so they proceeded to turn "all deliberate speed" into an endless process of judicial appeals and foot dragging to delay effective school desegregation for years. But despite these often successful delaying tactics, *Cooper v. Aaron* stands today as one of the landmark decisions in the long saga judicial recognition of the right to an equal education.

COUNCIL OF INDEPENDENT BLACK INSTITUTIONS

The Council of Independent Black Institutions (CIBI) was established in 1973 in Frogmore, South Carolina, to enable African American educators to share information, materials, and curriculum and to have material unity that would support the development of independent African-centered schools. CIBI is an umbrella organization for independent African-centered schools whose purpose is to promote an African-centered education. African-centered education, as defined by CIBI, is the means by which African culture is systematically developed and advanced. While membership once spanned from the United States to Europe and Africa, CIBI schools nowadays are primarily found in the United States. In 2002, a few original CIBI schools separated from the organization to become charter schools.

CIBI hold several annual professional meetings: the teacher training institutes that cater to both public and private school teachers, the science exposition in April for children from various member schools, and the CIBI convention that provides a forum for educators to share curricular information and to elect the new *Ndundu* (executive officers).

CIBI's newsletter, *Fundisha! Teach!*, is used to disseminate ideas about innovations in curriculum development and updates on member schools and students. CIBI has also published African-centered curriculum materials and guides. These publications are described at <http://www.cibi.org/publications.html>. In addition, the CIBI speaker's bureau and the alumni association for graduates are two

other organizations that help provide technical assistance to individual operating or wishing to start an African-centered institution.

CRISIS, THE

The Crisis was founded in 1910 by the National Association for the Advancement of Colored Peoples (NAACP), and it has historically served as the voice of the organization, chronicling its growth and its participation and leadership in the struggles by African Americans for greater civil rights and equality. Under the leadership of W. E. B. Du Bois, cofounder of the NAACP and the editor of *The Crisis* from its inception in 1910 to 1935, *The Crisis* emerged as the premier African American magazine of the early 20th century. This entry begins by providing a brief survey of earlier African American journalistic publications, then looks at the history of *The Crisis* and its contributions.

Historical Context

The birth of the African American press in the United States is marked by the establishment the first African American newspaper, *Freedom's Journal*, in 1827 by John Russwurm. By the beginning of the Civil War, more than 40 African American newspapers, including Frederick Douglass's *North Star*, had been established. Many of these papers, due to lack of funding and small readership bases, would be short-lived.

As the primary conduit of information for both freed and enslaved African Americans, the African American press emerged in the antebellum United States as one of the most significant advocates in the abolitionist movement, organizing the thoughts and actions of freed African Americans against enslavement as well as fighting for the civil rights of freed African Americans in the North.

In the decades after the Civil War, before the turn of the century, African American magazines and newspapers growing in significant numbers addressed a wide range of issues facing African Americans, such as education, political, and economic disenfranchisement and the continued fight for greater civil rights for African Americans. Dominated previously by African American newspapers, the first quarter of the 20th century saw the rise of African American magazines like *The Crisis* that would be catalysts in advancing the African American press to its greatest heights.

Early Years

The Crisis was originally titled *The Crisis: Record of the Darker Races*, after James Lowell's poem, "The Present Crisis." Designed to appeal to the educated African American reader, with its deliberate and cultural quality, the magazine began with a small subscription base; the first issue of the magazine in 1910 sold only 1,000 copies. These numbers increased steadily, and by July 1919, the magazine reached its greatest circulation, selling 100,000 copies for the month, closely rivaling the daily sales of popular African American newspapers of the time, like the *Chicago Defender* and the *New York Age*.

The first issue of the magazine established that its goal was "to set forth those facts and arguments which show the danger of race prejudice,

particularly as manifested towards colored people.” To fulfill this mission its editorial page “would stand for the rights of men, irrespective of color or race, in the highest ideals of American Democracy.” Innovative features included “Along the Color Line,” which focused on the activities of African Americans; “Opinion,” a synthesis of news and reports significant to African Americans in the United States; “What to Read,” suggestions and reviews of literature pertinent to African Americans; and “Men of the Month,” profiling the achievements of prominent African Americans. These features highlighted Du Bois’s interest in helping to educate and uplift, promote and advocate for civil rights as well as foster political empowerment among African Americans and other underrepresented peoples in the United States.

The editorial pages of the magazine, the dominant feature of the magazine for the 25 years Du Bois was the editor, were reflective of his opinions and critiques on a wide range of topics from education, the NAACP, the race problem, racial justice, women’s suffrage, lynching, segregation, discrimination, civil rights, and social equality to housing, business, travel, patriotism, music, and war. Uncompromising in addressing issues significant to African Americans in the United States, Du Bois’s editorials were the subject of criticism from both Whites and African Americans. He critiqued subjects like Booker T. Washington’s accommodationist stance, the hypocrisy of White Christianity, the African American church, support of African American participation in World War I, and the NAACP itself. Increasingly in his last years as editor, his views and his support of Black separatism were considered too radical and threatening to the status quo. These editorials outside of the well-known publications of Du Bois represent an archive of some of his best-known thoughts, opinions, and critiques on a wide variety of topics and were critical to the early success of the magazine.

Accomplishments

Primarily focused on news and current affairs, *The Crisis* played an essential role in the emergence of the Harlem Renaissance through its publication of creative writing in the form of essays, poetry, and fiction and its support of creative writing contests.

During a time when young talented African American writers had very few outlets for their work, Du Bois encouraged and provided an important space for the work of young writers and scholars like Countee Cullen, Langston Hughes, and Arna Bontemps.

In 1934, due to his increasing support of Black separatism and the lack of support from the NAACP for his new stance, Du Bois left the organization and his role as editor of *The Crisis*. In the decades after his departure, the magazine struggled to remain the premier African American magazine of its time. Despite a drop in its prestige, the magazine remained significant in the development of the burgeoning civil rights movement and the efforts of the NAACP to end legal segregation in the 1950s and 1960s.

The role of the African American press as one of the earliest and consistent advocates for the emancipation of enslaved Africans and civil rights of African Americans, promoter of African American education, culture, and history, chronicler of African American history and culture and as the primary conduit for the hopes, aspirations, and dreams for African Americans in the United States has been severely understudied. Continuing the historical legacy of the African American Press, *The Crisis* magazine under the control of Du Bois, noted by Elliot Rudwick as the “father of militant journalism,” significantly contributed to the empowerment and education of a generation of African Americans and advanced the standards of political journalism and activism to previously unknown heights.

CULTURAL DEPRIVATION

The concept of cultural deprivation began circulating in educational discourse in the 1960s, when many theorists argued that high rates of academic failure among African American children residing in economically devastated areas was indicative of the fact that they lacked the necessary cultural capital to succeed in school. It was believed that their families and communities did not possess and thus could not transmit the appropriate cultural values and patterns that would stimulate intellectual development and translate to school success.

Unlike those who subscribed to theories of biological or genetic deficiencies, cultural deprivation theorists believe that African Americans can succeed in school with appropriate interventions in their early childhood years. Like the biological theories, the cultural deprivation perspective has also faded from the literature, as more contemporary views see the positive assets of African American culture and attempt to incorporate them in the curriculum. This entry examines the background of theories about African American academic difficulties and looks at the evolution and decline of the cultural deprivation theory.

Theoretical Background

Prior to the 1960s, mainstream perspectives on race included a belief that African Americans were biologically inferior and faced difficult social and economic challenges primarily for that reason. Biological determinism—greatly influenced by Darwin's theory of evolution—suggested that African American children were, by virtue of their genetic makeup, intellectually inferior, and as such would likely not succeed on par with their White peers. Although a host of African American intellectuals, including Horace Mann Bond, Carter G. Woodson, W. E. B. Du Bois, and Anna Julia Cooper, consistently challenged the notion of racial inferiority, it persisted and was often reinforced in the scientific community. At various historical moments, biological determinism has been used to rationalize efforts to deny education, to maintain substandard education, and/or to support specific kinds of education over others (that is, vocational over academic).

Biological notions of race began to change slowly among scientists with the work of anthropologist Franz Boas. Boas disagreed with the conception of the evolutionary scale, that represented a continuum from savagery to culture and as such deemed African American inherently inferior to Whites. Instead, Boas argued that environment played a significant role in the development of human cultures. Early in the 20th century, he proposed the idea of cultural relativism, which held that (a) all humans have culture; (b) while there are differences among cultures, they should not be judged hierarchically; and (c) cultures are complex.

While some might suggest that deterministic ideas about race began to shift in the public domain on the heels of *Brown v. Board of Education, Topeka, Kansas* (1954), it is probably more accurate to insist that instead of shifting, they expanded to include a more Boasian perspective. Thus, some of the views that came to dominate thinking about race throughout the 1960s and thereafter focused on the ideas that an individual's culture could result in an inability to achieve academically and that academic failure precluded the possibility of realizing the American dream.

The major distinction between biological and the cultural explanations of failure was that biological conditions are considered permanent and thus unchangeable, while cultural ones can be changed through the right intervention. This shift in thinking affected perceptions not only of race but also of poverty. The sociological concept of a "culture of poverty," for instance, drew attention to the socialization processes of the poor and the need to positively intervene on them.

A New Perspective

In the educational literature, the culture of poverty perspective emerged in the concepts of cultural deprivation, cultural deficit, and culturally disadvantaged. The idea gained early prominence with the work of Frank Reissman in *The Culturally Deprived Child*, published in 1962. While the central thesis focused on the lack of cultural capital among low-income students, ideas of race were more often than not inextricably linked to images of urban poverty in particular.

During the next several decades, the cultural deprivation paradigm would influence a host of

compensatory educational programs, including Operation Head Start and Upward Bound, which were initiated as part of the Johnson administration's "War on Poverty" in the 1960s. With the passage of the Elementary and Secondary Education Act in 1965, millions of dollars were allocated for educational reforms, reflecting the ideas and goals of the cultural deprivation paradigm.

Throughout the 1960s, the cultural deprivation paradigm continued to play out and reinforce the dominant ideologies about race and poverty that were drawing significant attention at the time. With the onset of deindustrialization, economic decline, and White flight, many social scientists were turning their attention toward African American communities to describe the socialization and behavior of many of their inhabitants.

Two reports in particular contributed significantly to representations of African American people residing in poor urban areas. In Daniel Moynihan's study of the African American family, which was published in 1965 and became known as the Moynihan Report, he argued that the situation in many of these devastated African American urban areas reflected a "tangle of pathology" that had become entrenched and circuitous. The National Advisory Commission on Civil Disorders published the Kerner Report in 1968 as an effort to understand urban riots, and while the commission supported an agenda of inner-city revitalization, it also warned that the United States was functioning as two separate societies, one African American and one White.

Together, these reports offered images of African American poverty that became solidified in the term *underclass*, which came to describe both the conditions of urban poverty and pathological behaviors or, rather, behaviors not consistent with dominant norms and expectations. The idea of the "underclass" influenced many of the political ideologies and social policies during the next several decades.

Criticisms and Decline

Although the shift from biological explanations to cultural explanations was progressive for its time, criticisms of the cultural deprivation paradigm began to emerge alongside an effort by anthropologists to challenge the idea that people can lack

culture or that one's culture can be deficient. There was a proliferation of critiques throughout the 1970s. One of the major criticisms of cultural deprivation theories was that they rearticulated a belief in the inferiority of African Americans from a cultural lens, which continued to hold up mainstream cultural values as the desired and expected norm.

It also failed to contend with the fact that African American children possessed the self-esteem, motivation, and familial support to succeed within their cultural milieu. Arguments against cultural deprivation took shape within the context of one of the most significant movements in the history of U.S. education. The multicultural education movement, buttressed by the work of many scholars, including James A. Banks and Geneva Gay, has brought about the proliferation of a host of other cultural theories, including cultural difference, cultural pluralism, biculturalism, and multiculturalism, all of which attempt to recognize not only the value of the diverse cultural backgrounds children bring to school but also the importance of engaging their backgrounds as part of the teaching and learning process.

While one theory of culture or another may dominate thinking at a particular time, these perspectives usually do not disappear altogether; rather, they tend to take a back seat or morph into new forms. To this extent, although the language of cultural deprivation is no longer very popular in the educational literature, the idea that in order for African American children to be academically successful, they must strive to assimilate to the mainstream cultural values, continues to influence much of our everyday thinking about race and education.

CULTURALLY APPROPRIATE CURRICULUM/EDUCATION

Culturally appropriate education is a pedagogical approach that is student centered and authentic. It is rooted in the belief that students and their culture are intricately intertwined and that teachers can intentionally enhance student learning by embracing and utilizing various aspects of each student's culture. This student-centered approach considers the historical, social, political, and economic conditions that influence the daily lives of students and subsequently come to bear on the students' schooling. Teachers employing culturally appropriate education integrate these aspects of students' lives into the curriculum and their teaching in order to meet the academic needs of the students, enhance their teaching, and sustain quality teacher–student interactions. By doing so, the content becomes relevant and comprehensible, thereby empowering all students.

Culturally appropriate education is also intimately tied to the ethic of care. In order for teachers to utilize such an approach, they must have a genuine care for the students they serve. In essence, culturally appropriate education is defined as a tangible and learnable approach to education; however, it is also a disposition that drives the interactions that teachers are likely to have with their students. In other words, those teachers who genuinely care about African American students, for example, must understand their students'

historical, social, economical, and political positioning and believe that they are capable of meeting and/or exceeding high standard and expectations.

Misperceptions about culturally appropriate curriculum and education view it as the desegregation of a few multicultural facts within the curriculum and/or teaching, the addition of units that are based on holidays or cultural events, or that it is only for one subset of the U.S. population. While African American scholars have been leaders in the field of culturally appropriate curriculum and education, as a pedagogical approach, it is much more dynamic and applicable to other racial-ethnic groups. Essentially, culturally appropriate curriculum is an authentic student-centered approach that involves the use of a variety of instructional strategies that help students attain and experience academic success through the consistent use of curricular materials and instructional strategies that are validating, comprehensive, empowering, emancipatory, and transformative.

Culturally appropriate education emerged within the context of the standards movement. The mandate that all states use standardized tests to measure achievement disproportionately had a negative impact on the academic achievement of African American students. Culturally appropriate education is an approach that allows teachers to meet the needs of all students by providing them with opportunities to experience school success. It also has the potential to be a way to encourage students' further exploration in various subject areas, particularly those in which African Americans and other groups are disproportionately underrepresented. Furthermore, scholars in culturally appropriate education argue that it validates and empowers groups such as African American students because it capitalizes on their culture by appreciating the perspectives and experiences that they bring into the classroom.

There is much research on the interaction between student and school culture. Thus, many researchers and key terms have emerged from the literature; subsequently, culturally appropriate education is also described using the following terms: culturally relevant teaching; culturally responsive teaching; cultural synchronization; culturally relevant pedagogy; cultural congruence; as well as culturally relevant curriculum. Although the terms vary and may focus on one aspect of the

intersection of culture and teaching and learning, the underlying theme persists: How do teachers increase student achievement for culturally diverse students?

Four of the leading figures on culturally relevant teaching are Gloria Ladson-Billings, Jacqueline Jordan Irvine, Geneva Gay, and Michele Foster. Gloria Ladson-Billings's research on successful teachers of African American students, published in *The Dreamkeepers: Successful Teachers of African-American Students*, defined and illustrated how teachers can use culturally appropriate education to bring about an increase in student achievement for African American students. Geneva Gay's contributions to the field have shaped the understanding of culturally appropriate teaching. Her work *Culturally Responsive Teaching: Theory, Research, and Practice* defined culturally appropriate teaching and provided practical strategies that teachers can use to help under-represented students attain and experience academic success.

Another scholar who has been instrumental in defining the need and relevance of culturally appropriate teaching is Jacqueline Jordan Irvine. Through her research she introduced to the field the concept of the "cultural eye" and "lack of cultural synchronization." The latter concept helped bring to light the conflict that often exists between student culture and the culture of the school and/or teacher; *cultural eye* refers to the way in which teachers acknowledge the impact culture has on teaching and learning. The work of Michele Foster also has been pivotal in illuminating the connection between culture and education. In her review, *African American Teachers and Culturally Relevant Pedagogy*, she describes research that examined the characteristics of successful teachers of African American students. From her work emerged the concepts of teachers exhibiting cultural solidarity, connectedness, and affiliation with the community of their African American students, all of which are used by teachers who deliver culturally appropriate education.

CULTURE-BASED EDUCATION

Culture-based education consists of educational practices that affirm a community's culture by recognizing and validating its spiritual, cultural, and social mores, global perspectives, and language while promoting awareness of the community's ancestral and contemporary accomplishments. It uses familiar cultural contexts to facilitate the assimilation of new information, thereby preventing *cultural mismatch*, a term used to indicate cultural differences between the home and school environment that make it difficult for a child to determine appropriate school practices.

The distinction of culture-based education in each culture is prescribed by the community's individual cultural values and experiences. Native Americans, Hawaiian Americans, and Australian Aborigines have incorporated cultural practices in schools to contextualize academic content. This entry describes African American culture-based education, including the concept of double consciousness, spiritual reverence, and features characteristics of African American learning and linguistic styles. Of equal importance, African American culture-based education epitomizes the

fundamental belief that education is the prerequisite to obtaining and maintaining all rights, both civil and human.

Features

Racially based enslavement and oppression resulted in conflict between European-based mainstream popular views and views that acknowledged links with Africa and its descendants. W. E. B. Du Bois termed this conflict “double consciousness.” He believed its resolution was to use African American culture as the basis for navigating U.S. society. Culture-based education codifies and reconciles these dual perspectives through critical thinking and interactive discourse.

Across Africa’s ethnic groups and throughout the diaspora, that which is interpreted as spiritual is given central importance. Furthermore, religious and secular thought is inseparable. For instance, God is perceived as existing in every living thing and as part of daily affairs. Additionally, there is a notion that the soul survives death by becoming an ancestor and is enlisted to guide daily activities and cause psychophysical interactions and therapeutics. Culture-based education employs aspects of spiritual reverence to foster resiliency by using it as a basis for overcoming challenges (for example, through God all things are possible).

African American learning styles reflect distinctive behaviors that affect learning and classroom social interactions. Factors that may affect learning are the African American conceptual orientation, which leans toward categorizing information according to function, verve (receptiveness to high sensate stimulation), and affect (emphasis of emotion or feelings). Factors that may affect social interaction are the African American propensity for attending to and communicating using nonverbal behaviors, expressive individualism (distinctive personality and spontaneity), orality (preference for oral modalities), and social time (time passes through social rather than material space), less concern about personal space, value placed on words that embody themes of social needs and racial desegregation, preference for cooperative efforts over individual endeavors, and response to the authority figure within a kinship network while successively moving toward independence. Culture-based education promotes active group-based learning that praises individual

contribution to the group’s goal and subscribes to discussions that incorporate emotional interpretations of sociohistorical experiences.

African Americans have a vibrant linguistic style. Many orators maintain attention and simplify information while using a rhythmic preaching style filled with repetition and call-response features. Recognition within the African American community is garnered through superior oral telling characterized by meandering from the point to take on episodic frames; signifying characterized by talking about listeners to drive home a point or initiate verbal war; and verbal dueling known in various regions as “woofing,” “joining,” or “playing the dozens.” Signifying incorporates simile and metaphor building figurative language understanding. Culture-based education uses rhythmic call-response features to assist students in remembering declarative and procedural information and employs oral telling and debates.

Pedagogical Perspective

Culture-based education from an African American perspective requires that teachers be able to link African descendants throughout the diaspora to traditional African views by identifying the common theme of human beings as divine and teachable with free will to produce in the objective world. They must accept morality as an essential attribute and believe that learning should be lifelong. This perspective is an outgrowth of the Egyptian system of Maat, which recognizes the importance of truth in all affairs. Teachers must be committed to using cultural and historical contexts that illustrate the resiliency of Africa’s descendants to overcome enslavement, colonialism, and foster a spirit of uplift.

In culture-based education, teachers engage in critical pedagogy emphasizing group and individual agency that consider relationships to the African Diaspora. They are culturally responsive, having the constructivist understanding that teachers’ and students’ preexisting perspectives are derived from their personal and cultural experiences. They are adept at figuring out a culture’s cognitive tools, including words, concepts, mental strategies, and problem-solving procedures that help learners interpret and address situations and problems they face. Consistent research findings across content areas (for example, math, reading, social science)

have demonstrated that tasks building upon cultural themes and values result in favorable achievement outcomes. However, these research initiatives were confined to low-income African American students and did not incorporate variations based on ethnic group and social class.

Culture-based education is much more than an outlet for cultural expression (for example, enjoying cultural holidays, food, and literature), broad cultural diversity considerations described in national standards (for example, social studies or language arts), or the need to culturalize content instruction (that is, math or science) by including cultural achievements throughout the curricula. Culture-based education is a comprehensive focus that embraces a culture's perspectives and accordant pedagogical practices.

CUMMING V. RICHMOND COUNTY BOARD OF EDUCATION

Cumming v. Richmond County Board of Education (1899) was an important case involving the education of African Americans in the United States that clearly

signaled how the *Plessy v. Ferguson* “separate but equal” doctrine could be used to continue racial segregation. As the first U.S. Supreme Court case on education heard after the *Plessy* ruling, it emboldened states, especially those in the Deep South, to use their discretion in determining what was legally permissible racial segregation of government-funded services and facilities. In effect, the Court in *Cumming* ruled that inequalities between public schools for Whites and those for African Americans did not violate the federal or state constitutions where economic exigencies were involved. This entry looks at the background of the case, the Supreme Court ruling, and its impact.

In the landmark 1896 case of *Plessy v. Ferguson*, the Supreme Court adopted the “separate but equal” doctrine, which maintained that segregated public facilities were legal. This doctrine underscored the second-class citizenship of African Americans and other underrepresented for the next 60 years. Still, African Americans and others fought these barriers by going to court and continued to fight until *Brown v. Board of Education, Topeka, Kansas* (1954) finally struck down *Plessy*. Repeatedly, African Americans plaintiffs, both as individuals and in class action, asked the Supreme Court to look at the constitutional issues posed by *Plessy* in several different ways. One of those cases, *Cumming v. Richmond*, is the topic of this entry.

Facts of the Case

In 1897, the Augusta, Georgia, Board of Education decided to close Ware High School, the only secondary school for African Americans in the state. The prestigious Ware High School was founded in 1880 after a long struggle by the African American community. The board reasoned that it was not economically feasible to continue to operate the African American high school for 60 students when there were about 300 elementary-school-aged African American children without a school. The board closed the African American high school and opened four primary schools for African American students; the high school's \$845 budget was put toward the salaries of teachers in the grammar schools.

Further, the board claimed that three other high schools—Payne Institute, Walker Baptist Institute, and Haines Normal and Industrial Institute—were available for the African American high school students. The board claimed that they would reopen the

school when it was economically feasible. At the same time, the Richmond County Board of Education levied taxes against all county residents for the support of primary, intermediate, and high schools.

The plaintiffs, African American residents of Richmond County, Georgia, and taxpayers, sued the Richmond County Board of Education and the county tax collector, alleging that the county violated the Fourteenth Amendment, which makes it illegal for a state to deny anyone within its jurisdiction equal protection of personal rights under the law. The plaintiffs said the county violated this amendment because it taxed them but used the revenues to support two White high public schools (Tubman High School for girls and Richmond Academy for boys), which their children could not attend, while closing the only African American high school. The three alternative high schools mentioned by the board were private fee schools were not supported by the taxpayers and were not public schools. The plaintiffs argued that the board illegally used tax money collected from African American residents to fund a Whites-only high school while there was no African American public high school their children could attend. They sued, claiming to be victims of unconstitutional and unequal treatment.

The plaintiffs filed their action in Superior Court, and the defendants filed *demurrers*, a legal response admitting the allegations are true but questioning whether the plaintiffs' pleadings were legally sufficient. The tax collector's demurrer was sustained by the Superior Court; the judge refused to issue an order preventing the tax collector from collecting taxes on this basis. However, the judge ordered the school board not to use the tax money collected to support the exclusively White public high schools until the board of education provided equal facilities for the high school education of the city's African American children.

The order was suspended, while the Augusta board of education appealed to the state Supreme Court. The Georgia Supreme Court reversed the injunction, and the Superior Court denied the plaintiffs' request for relief.

Supreme Court Ruling and Its Impact

The plaintiffs filed a writ of error to the U.S. Supreme Court, which upheld the lower court

decision. The U.S. Supreme Court held that the plaintiffs failed to plead facts showing which paragraph of the Fourteenth Amendment the board violated. They also found that the Georgia constitution did not require the county to provide a public high school; the board therefore was not in violation of the Georgia state constitution.

The decision was a landmark case because it sanctioned *de jure* segregation of races in public school. This opinion was written and published by Justice John Marshall Harlan, who was well-known for decisions that supported the separation of the races.

This decision encouraged and allowed several school districts to discontinue high school education for African Americans. In 1900, the Orleans Parish School Board in Louisiana decided to discontinue public funding high school education for African Americans, arguing that an elementary school education was all African Americans needed for that "sphere of labor and social position and occupation to which they are best suited and seem ordained by the proper fitness of things." It was not until 1918 that New Orleans provided public high school to African Americans.

In 1908, the Supreme Court followed the same thinking in the *Cumming* decision in a Kentucky case. Berea was a small Presbyterian college that was integrated. The Kentucky State legislature passed a law requiring that different races could be taught at the same institution only if they were taught in different classrooms at least 25 miles apart. The U.S. Supreme Court did not find a constitutional violation in this case because the Kentucky law did not prevent Berea from teaching students of different races as long as they were taught at different times or at different places.

DAVIS V. COUNTY SCHOOL BOARD OF PRINCE EDWARD COUNTY

Davis v. School Board of Prince Edward County (1952) was a lawsuit filed on behalf of African American students of a legally segregated high school in Prince Edward, Virginia. The initial lawsuit was merged with other similar school desegregation cases into the cases eventually decided under the heading *Brown v. Board of Education, Topeka, Kansas* (1954), and *Davis* became part of that landmark ruling. But despite the ruling in *Brown*, the *Davis* case continued on for many years while the school district evaded the desegregation order by shutting down all public schools and starting private academies for Whites only. Young African Americans, left with no local schools, endured significant hardship causing social disruption and extended hardship for many. This entry describes the *Davis* case and its aftermath.

Historical Context

Prince Edward County is a rural area in southeastern Virginia. As in the rest of Virginia, the schools there had been segregated by race since Virginia began supporting public education in 1869. In fact, the only provision of the Virginia Constitution that expressly mandated racial segregation referred explicitly to public schools. But following the end of World War II, many African American veterans returned to rural Virginia with a renewed sense of the importance of education. Although some sought

to escape from segregation by moving north, others chose to begin the struggle for equal educational opportunity right in their local Southern towns.

Prince Edward County's main city was Farmville, where African American and White children attended high school in roughly equal numbers, but in very different facilities. Moton High School, designated for African Americans, was built in 1939 to accommodate 180 students. When it opened, it was already inadequate for the needs of the African American community, and by 1951, nearly 450 students were enrolled. To accommodate these students, the local board of education added several wooden classrooms built adjacent to the main building. Although the district court that eventually heard the case of *Davis v. Prince Edward County* referred to the facilities as less adequate than those available in White schools, the testimony of the African American students was more vivid. They described them as little more than shacks whose wood sides were covered with tar paper to protect against the elements. The roofs leaked, and the potbellied coal stoves rarely provided enough heat, so in the winter students had to sit through lessons wearing their coats. There were no gym or science labs and no cafeteria; books were inadequate, and the African American high school lacked the range of courses that were offered at the White high school. It was a segregated, second-class school whose facilities reflected the second-class social status that African American students were expected to assume in the South.

Despite these deficiencies, Farmville had a cohesive African American community that while

the working class and the poor recognized the importance of education and decided to challenge the school board for its years of unfulfilled promises for better facilities. The political alignments that made up the school equality movement of Prince Edward County could not have been more unique. There were the usual civil rights leaders in the African American community, including local clergy. But unlike the struggles in some other towns, the *Davis* case was also driven by a talented and determined student movement. Although the history of the college students who participated in lunch counter sit-ins and freedom rides are fairly well known, the student movement in Moton High School in 1951—although receiving less attention—was an equally important part of the civil rights movement of that region.

As in most Southern schools, the African American principal at Moton, J. B. Pervall, was expected to run the school and to keep the students in line. But the African American students of Moton were tired of their cramped school and were acutely aware that nearly everything in their high school was inferior to the White school across town. Barbara Johns, the daughter of a local civil rights activist and president of the student body, tricked the faculty of Moton into thinking that a special assembly had been called, and when all the teachers went to the auditorium, the students left the high school and staged a demonstration in downtown Farmville demanding equal educational facilities. Their courage and audacity sparked a movement that eventually became the case of *Davis v. Prince Edward County*.

It was not as if the African American adults of Prince Edward County had done nothing to secure better schools. Each year they had petitioned the county board for better educational facilities, and every year promises were made, but never fulfilled. The student demonstration reflected both the frustration and the determination of the African American community to finally get results. Following the student demonstration, Johns wrote a letter to the National Association for the Advancement of Colored People (NAACP) Legal Defense Fund seeking their assistance. By the late 1940s, the NAACP had decided to abandon its strategy of filing lawsuits to simply equalize school facilities. Although they had been reasonably successful, Thurgood Marshall and the board

reasoned that this strategy would take years to generate real changes to the second-class status of the thousands of segregated schools in the South.

In 1951, the NAACP agreed to help the African American families of Prince Edward County, but only on the condition that they sign off on their new policy of attacking segregation itself rather than seeking separate, but equally funded schools. This new policy was not without controversy. For many African Americans in Farmville, as elsewhere in the South, the segregated schools played a complex role in the life of the community. On one hand, they were a clear symbol of the second-class status forced on the African American community by law. Moton High School, with its overcrowding and inadequate facilities, was all too typical. On the other hand, these schools were also social centers for an African American community that was cut off from the civic life of the larger White cities and towns. These all-African American schools had sports teams and marching bands, debate societies, and glee clubs, and graduation ceremonies were often special events for the entire community in the spring of each year. Thus, pride was often mixed with the frustration and anger over the segregated school system. Though separated from the White community, African American schools were a source of local pride, and the African American teachers and principals were frequently regarded by African Americans and by Whites alike as the civic leaders of their community. Despite the fact that some African Americans in Farmville actually preferred an equalization lawsuit as opposed to a desegregation case, after a mass meeting, they finally agreed to the NAACP's terms and asked them to represent them to secure better schools. In May of 1951, the lawyers for the NAACP filed suit in federal district court in the case that became known as *Davis v. Prince Edward County*. With that decision, a course of events was set into motion that changed the course of education in United States.

The Facts of the Case

The lawyers for the NAACP Legal Defense Fund filed a lawsuit in federal court for the Eastern District of Virginia alleging that the racial segregation of the schools of Prince Edward County violated the African American students' rights under

the equal protection clause. They also charged in the alternative that the two county high schools, one African American and the other White, were unequal in terms of buildings, facilities, curricula, and buses and that this inequality also violated the Constitution.

Their first charge represented a new strategy by the NAACP to get the court to look squarely at the issue of legally imposed segregation and hopefully find that it was unconstitutional. Their second argument was a holdover from an older plan that sought to chip away at the margins of segregation. This strategy of equalization lawsuits sought to use the existing *Plessy v. Ferguson* (1896) separate-but-equal doctrine but found it simply too expensive to maintain.

In its frontal attack on school segregation, the NAACP had marshaled the testimony of educators, psychologists, anthropologists, and psychiatrists to prove that segregation was not simply the separation of the races, but a legally imposed stigma of inferiority, marking African Americans for a host of subordinate roles throughout society. Although the focus of the case was the state's policy of forced segregation in the public schools, it was clear that schools were simply one of many examples of state-imposed segregation across Virginia. Attacking segregation head on as a constitutional strategy raised the stakes in *Davis*, and the lawyers on both sides knew that if the state could not require separate schools, they would lack the legal authority to impose segregation in other public facilities as well.

In its defense, the state of Virginia responded with its own witnesses who argued there was no real evidence in psychology or other fields that the separation of the races imposed a badge of inferiority on African Americans. The state also took pains to assert that equalization of school facilities across the state was in fact well under way by 1952 and that although they conceded that the Black Prince Edward facilities were inferior to the local White high school, in other parts of the state newly constructed Black schools were now superior to those for local White students. This testimony made it clear that despite the cost of building new schools for African Americans, even this burden would be borne if that was necessary to prevent the commingling of African American and White students.

The District Court Decision

Finally, in March of 1952, the district court held that the schools of Virginia had been segregated by law since the inception of public education in the state and there was no federal or state constitutional requirement to change that practice. They pointed out that other federal courts faced with cases dealing with segregated public schools had declined to find segregation unconstitutional, so the court found no precedent for siding with the plaintiffs.

The court described the Virginia laws as simply a way of life that was as old as the public school system itself. They pointed out that the legislative intent to maintain separate schools also had been made clear by the fact that separating the schools was consistent with the constitution of Virginia. On the basis of this reasoning, they refused to grant the broad relief sought by the first argument in the plaintiffs' case.

However, the court held that although the separation of the races by law authorized by *Plessy v. Ferguson* would not be disturbed, they were at least willing to be more open to enforcing the equal side of this separate-but-equal equation. As part of its defense, the state offered to appropriate funds to build a new African American high school, and the court incorporated this offer into its ruling. Although this political promise had been made to the African American community of Farmville many times before, this was the first time that it now had at least the potential to be enforced as part of a court order.

The court's conclusions were not unexpected. The African American students of Prince Edward County obviously had been denied equal educational facilities, but in the court's judgment, there was nothing constitutionally suspect about maintaining separate facilities based on race. As expected, the NAACP appealed this decision to the Fourth Circuit Court of Appeals.

Davis and the Brown Case

In 1953, while the appeal of the district court decision in *Davis* was pending, Chief Justice Earl Warren granted certiorari to have *Davis v. Prince Edward County* consolidated, along with three other cases that lower courts had decided in which the issue of the continuing constitutionality of the school segregation statutes had been raised. These

cases were listed alphabetically on the Supreme Court docket, and *Davis* became subsumed under the heading of what would become its more famous companion case, *Brown v. Board Education*.

In 1954, the Supreme Courts landmark decision in *Brown* sent shockwaves throughout the Deep South. The expressions of anger and defiance to the court's decision that began springing up in several Southern states were also shared by many of the White residents of Prince Edward County Virginia. Chief Justice Warren's unanimous opinion declared as follows:

In the field of public education the doctrine of "separate but equal" has no place. Separate facilities are inherently unequal. Therefore, we hold that the plaintiffs and other similarly situated for whom actions have been brought are, by reason of the segregation complained of, deprived of the equal protection of the laws guaranteed by the Fourteenth Amendment. (347 U.S. at 493)

Despite this declaration, the governor of Virginia pledged to pursue all legal avenues to block desegregation because as the district court had stated, it was not just school assignments that were at stake, an entire way of life was about to be challenged. The local school board of Prince Edward County assumed that there would be some recourse to the *Brown* decision, so their first response was simply to do nothing.

But the plaintiffs in the *Davis* case were not to be deterred, and in September of 1955, they appealed to the district court to have the original decision in *Davis* modified to comply with *Brown*. Instead of equal facilities, they now demanded that the entire school system be desegregated. The local board responded to this new challenge by threatening to close the public schools and voted to fund the system on only a month-by-month basis so that if a desegregation order was issued, they could in short order make good on their threat.

Legal maneuvers continued through 1956 as the NAACP asked the district court for an immediate desegregation order, and the school board once again got the court to delay. By March of 1958, the *Davis* case found itself once again before the U.S. Supreme Court where the board argued that its 10-year desegregation plan that would slowly phase in integration was consistent with *Brown*.

But the Supreme Court declined to hear the case, and finally, in May of 1958, the court of appeals held that Prince Edward County had delayed enough and ordered them to start admitting African American students to the previously all-White schools beginning in September of 1958, 3 full years after the original *Brown* decision.

Protracted Litigation

One would have thought that with this decision the final chapter of this legal odyssey was about to be turned. But shortly after *Brown* was decided, the Prince Edward County School Board recognized a private group called the Prince Edward Educational Corporation, which was organized to provide private schooling for White students only. This corporation was the beginning of the White-academy movement that was occurring throughout the South, and in October of 1959, weeks after the public schools were scheduled to open, the board ordered the doors of all public schools closed and the school system effectively shut down.

It would take 6 more years of protracted litigation before the public schools of Prince Edward County were reopened. The legal struggle during that period included contests over whether county and state funds could be used to support private education in the county while refusing to open the public schools. In May of 1964, the Supreme Court answered that question in *Griffin v. County School Board*. They held that the closing of the public schools in Prince Edward County while public schools were maintained throughout the rest of Virginia denied African American students their rights protected by the Fourteenth Amendment, and they ordered the county schools reopened.

Although that decision marked the end of the litigation that began with *Davis*, it was the beginning of several more years of court battles over school funding, the use of busing to meet the desegregation order, and a host of other issues designed to make the simple request of African American students for an equal education a reality. Although *Davis v. County School Board of Prince Edward County* stands as a historic milestone in the history of civil rights litigation, it is also an example of the depth of racial prejudice that African American children have had to endure in their quest for educational opportunity.

Afterward and Impact

The case of *Davis v. County School Board of Prince Edward County* is one of the great ironies of the civil rights era. It started with the hopes and aspirations of a handful of courageous African American high school students who decided to challenge Jim Crow segregation to improve their own educational opportunities. But due to an odd convergence of political and legal forces, that simple request for equal educational opportunity took a number of twists and turns covering the next 40 years and would sadly leave most of those early aspirations unfulfilled.

Although some Southern towns reacted violently to the Supreme Court's decision in *Brown*, the White residents of Prince Edward County made a calculated decision to maintain segregated schools by subterfuge rather than by force. By setting up a separate private school system, they planned to keep all-White schools that would be legally beyond the reach of the Fourteenth Amendment. Rather than blocking schoolhouse doors, they established The Prince Edward Educational Corporation, which later created the Prince Edward County Foundation to receive funds to maintain the free academy. In pursuing this plan, they relied upon two critical events, both of which needed to occur in order for the plan to succeed. One was simply their calculation that the federal and state court litigation would drag on for years. This gave them the time to develop the resources to establish the free academy for the White children in Prince Edward County. The second was their ability to skillfully utilize the Virginia state constitution and Virginia's various educational statutes to steer public monies in the direction of this private effort so that the academy, while legally private, would be supported to varying degrees by public resources.

Although White parents did pay tuition to the foundation, public monies found their way into this venture in a number of nefarious ways and accounted to some degree for the longevity of the academy. To add insult to injury, while the African American children of the county had no schools at all, their parent's taxes were supporting the education of the county's White children in segregated private academies.

The African American families who had signed on with the in NAACP in 1951 to initiate this

litigation were also not of a single mind as to its direction or its ultimate goal. Some supported the lawyers' efforts to desegregate the entire school system. Others would have been equally satisfied had the state simply been forced to support the African American high school to the same degree that the local White high school had been funded. The tensions between these perspectives, while kept under wraps during the early days of litigation, surfaced over time, and as the legal struggles stretched out from one decade to the next, it caused some of the earlier supporters of the school desegregation litigation to doubt the wisdom of that decision.

When the county closed the schools in 1955 the free White academy was up and operating and able to provide basic educational services for most of the White residents of Prince Edward County. But the facilities were nowhere near what they had been accustomed to with the all-White public schools, and it became clear that maintaining racial apartheid would indeed have its costs for White and African American students alike. Some local Whites were too poor to pay even the modest tuition and too proud to ask for assistance. So they, like their African American neighbors, were simply closed out of educational opportunities. But despite these burdens on a few Whites, the impact of the school closings for the African American community was nothing short of a catastrophe.

Many Black families in this rural corner of Virginia had little formal education under the segregated system. When their children were shut out of the public schools, they were unable to provide much support through homeschooling or tutoring to help them keep up with their studies. The tragic result was that in the initial year after the school closings, the majority of African American students in the county simply had no education at all. When it became clear that the legal struggle to reopen the schools was going to be a long struggle, many African American families were forced to send their children to friends and relatives across the state and some even out of state in order to continue their education.

The social impact on these children was devastating. They had gone to school with friends and neighbors, and life in the public schools had become a vital part of their social network. Suddenly, that was all gone. Families were split up as siblings were sent to different relatives to attend schools in other

parts of the state. Parents lost critical contact with their children at a time when they were developing and maturing and needing their guidance. Some students, despite efforts by churches and other outside groups, found no educational options at all. These African American children from Prince Edward County who endured these hardships for 5 long years became known as the lost generation.

Subsequent educational studies revealed that this metaphor was not an exaggeration. As the African American Prince Edward children drifted in and out of various schools, nearly all fell dramatically behind in their educational achievement. Although some persevered, for others, the effect of those lost years of instruction was too great to overcome, and they simply dropped out of school as soon as they were old enough. For others, they were forced to deal with the psychological trauma of being 2 or 3 years older than students in classes where they were eventually placed. For almost all, their aspirations were blunted in ways that were never recouped.

Although in 1963, the Supreme Court ordered the Prince Edward County schools to reopen and to implement a desegregation plan, even this decision did not mark the end of the litigation. In fact, various lawsuits over busing and other forms of administrative devices to create desegregated schools in the county would persist well into the 1980s. For most of those years, the free academy would exist side by side with the public schools and would continue to draw the majority of White residents of the county to its doors. Although the energy and cost necessary to run a separate all-White private school gradually began to work against the academy, reintegrating Whites into the public schools was a long and slow process and one that continues with mixed results to this day. The Virginia Civil Rights Memorial at the Virginia State Capitol pays tribute to the protest and to the case.

DAYTON BOARD OF EDUCATION V. BRINKMAN, I AND II

The *Dayton Board of Education v. Brinkman I* (1977) and *II* (1979) desegregation cases represent a unique place in Ohio history. The Ohio legislature had disavowed segregated education in 1887. Although Ohio law stated that separated schools for White and African American students were illegal, the reality was quite different. In 1972, when Mark Brinkman filed a class action lawsuit on behalf of Dayton African American and White parents, 80% of all students in the Dayton public school system attended one-race schools. *Dayton I* and *II* addressed the scope of remedies for northern states in de jure desegregation cases and examined the right of local control by school boards. The Supreme Court confirmed its willingness to require broad and systemwide remedies in Northern schools, but insisted that constitutional violations be sufficiently significant. *Dayton I* was a setback for desegregation because the Supreme Court, in a decision written by Associate Justice William Rehnquist, set aside the court of appeals systemwide remedy where the record failed to indicate broad de jure underpinnings of the violation. But *Dayton II*, along with *Columbus Board of Education v. Penick* (1979) affirmed the court of appeals systemwide desegregation order when evidence showed that little desegregation had occurred between 1951 and 1952 and between 1971 and 1972. The Court found there was clear inference systemwide of intentional and purposeful operation of a dual school system. This entry explores the history, development, and impact of the *Dayton Board of Education v. Brinkman I* and *II*.

Historical Background

In 1799, Benjamin Van Cleve opened the first school in Dayton. Like those that soon followed, it was a private school. Until 1831, there were no public schools in Dayton. In December of that

year, the first public school was opened. Funds were appropriated for the school, which was for White students only, but those students still had to pay one dollar each academic quarter for tuition.

It would be 18 years before the first “colored school” was opened in Dayton. In 1848, the Ohio General Assembly required school boards to establish separate schools for colored children when there were 20 or more such students who wanted an education. The act defined “colored children” as those having at least three-eighths African blood and/or being regarded as colored by the community. The new colored schools were funded by property taxes exacted from African American property owners. Yet, since the number of African American property owners was quite small, the colored schools never had sufficient funding. From 1849 to 1853, only one colored school was available for African American children in Dayton.

In 1871, an African American parent filed a lawsuit arguing that separate schools for African American and White children violated the Fourteenth Amendment. However, the Ohio Supreme Court in *State ex rel. Garnes v. McCann* (1871) disagreed and held that the separate schools were not unconstitutional. In 1878, the Ohio General Assembly created a law that gave localities the authority to create and fund schools exclusively for African American children. Funding would be different from the past in that the schools would obtain monies from the taxes of all property owners.

On February 22, 1887, the Ohio General Assembly repealed the Ohio law that permitted separate schools for White and African American students. The next year in *Board of Education v. State* (1888), the Ohio Supreme Court upheld the new Ohio law when it ruled that separate schools for African Americans and Whites were unconstitutional and that students should be assigned to their neighborhood schools. In response, Dayton closed its separate schools for African American children and reassigned all children to their neighborhood public schools.

Unfortunately, racial harmony in the public schools did not exist for long. By the 1920s, African American and White students attended the same public schools, but the board of education provided separate buildings for African American students and their teachers. Then, in 1926, the Ohio Supreme Court ruled against segregated education

in *Board of Education of School District of City of Dayton v. State ex rel. Reese* (1926), again this time stating that racial separation of students and teachers into different physical locations within the same school was unconstitutional.

Despite these earlier decisive cases, by the time the U.S. Supreme Court decided *Brown v. Board of Education, Topeka Kansas II* (1955), Dayton public schools were still racially segregated. All of the African American principals and 11 of the 14 assistant principals were assigned to African American schools. Of the 181 African American high school teachers in the Dayton public school system, 156 were assigned to schools where African American students were at least 92% of the total student enrollment. The elementary schools were no different; 17 schools could claim 90% of all African American children enrolled in the public school system.

Dayton I

Facts of the Case

In 1967, as a response to community discontent, the Dayton Board of Education organized the Citizens Advisory Council to review alleged racial imbalances in the public school system. Two years later, in 1969, the U.S. Office of Civil Rights informed the Dayton Board of Education that the school system was not complying with Title VI of the Civil Rights Act of 1964. In opposition to proposed school busing, four new board members were elected. To ensure the passage of the school levy, all board members signed a resolution that there would be no school busing in Dayton unless the board was forced by lawful authority. Unfortunately, the school levy was still defeated.

On April 29, 1971, the board admitted by resolution that the city did not provide an equal educational opportunity for African American students. The president of the board then appointed a committee (known as the Committee of 75) of educators and community leaders to evaluate and advise the board on how to implement a desegregation plan. After the Committee of 75 submitted its report, the board passed three resolutions confirming that Dayton public schools were racially and economically segregated and that residential housing patterns were partially responsible for the

disparity, and past activity or inactivity of the board had exacerbated the problem of segregated education in the Dayton public schools. Yet, before a desegregation plan could be implemented, another new board, which was elected in November of that year, rescinded the three resolutions.

In response to the action of the new board of education, on April 17, 1972, Brinkman, on behalf of several African American and White parents, filed a class action lawsuit in U.S. District Court for the Southern District of Ohio against the Dayton Board of Education. At that time, there were 50,000 students in the Dayton public school system with 44.6% of them being African American. Yet, 80% of all students in the public schools attended one-race schools (schools that were populated 90% by students of one race).

District Court Rulings

In 1973, the district court held that the public schools in Dayton were racially imbalanced, optional attendance zones (whereby students who resided in those districts could pick between two or more schools to attend) contributed to that imbalance, and rescission of the three resolutions cumulatively violated the equal protection clause of the U.S. Constitution. As a remedy, the district court required the board to submit a desegregation plan; it required the board to end improper procedures in the areas of attendance zones, student transfers, and faculty hiring and assignment.

In response, the board submitted a desegregation plan to the district court on February 7, 1973. In addition, separate plans were submitted to the district court by the African American members of the board of education and the Dayton Classroom Teachers' Association. Yet, it was the plan by the board of education that the district court accepted 5 months later.

On July 13, 1973, the district court issued its supplemental order on remedy accepting the desegregation plan drafted by the board of education. However, the court required the board to submit a freedom of choice plan for the Dayton high schools. Twenty-eight days later, in compliance with the district court's instructions, the board submitted another desegregation plan for Dayton high schools. The board argued that it had complied with the September 1973 directive of the

district court and requested that the U.S. Court of Appeals for the Sixth Circuit dismiss Brinkman's pending appeal in district court.

After a review of the facts, the court of appeals denied the board's request, and on August 20, 1974, the court of appeals affirmed part of the district court decision holding that the public schools in Dayton were indeed racially imbalanced and optional attendance zones cumulatively violated the equal protection clause of the U.S. Constitution. However, for procedural reasons, the court of appeals chose not to address the issue of the rescinded resolutions. Thus, the court of appeals affirmed part of the district court opinion, but remanded the case for further action by the district court. In the remand, the court of appeals stated that a racially neutral plan that still did not fix the problem of segregation in the public schools was not an acceptable plan.

On remand, the district court required the board of education to submit another desegregation plan in accordance with the court of appeals directive. The board's plan was accepted and implemented for the 1975 to 1976 school year. Brinkman and the other parents appealed the decision of the district court alleging that the board's new desegregation plan still did not comply with the orders of the court of appeals. On June 24, 1975, the court of appeals held that the newest desegregation plan still failed to end desegregation in the Dayton public schools. The court of appeals then directed the district court to adopt a systemwide desegregation plan no later than the end of December 1975 and implement it by September 1976.

After the second decision by the court of appeals, the district court requested a master to establish new attendance zones for the Dayton public schools. On March 15, 1976, the master submitted a report to the district court, which included specific racial percentages for desegregating the public schools in Dayton. The district court then accepted the master's recommendations, but the board of education subsequently appealed. The board argued that the remedy accepted by the district court exceeded the scope of the violations and used a fixed percentage formula to achieve racial balance, a formula which it believed was contrary to the U.S. Supreme Court's ruling in *Swann v. Charlotte-Mecklenburg Board of Education* (1971). On July 26, 1976, the court of appeals

supported the actions of the district court. The court of appeals reiterated that a systemwide desegregation plan was needed in order to eliminate discrimination in the Dayton public school system. The board of education then appealed to the U.S. Supreme Court.

U.S. Supreme Court Ruling

In *Dayton Board of Education v. Brinkman I* and *II*, the Supreme Court held in 1977 that the court of appeals incorrectly required the district court to develop a systemwide desegregation plan. The court stated that the mere fact that a public school system has some predominantly African American and some predominantly White public schools does not automatically mean it has done something unconstitutional. In support of the Dayton board of education, the court ruled that a systemwide remedy was required only when a school board had taken such unconstitutional actions to promote improper racial distribution throughout the whole public school system. The judgment of the court of appeals was vacated and remanded with instructions for the district court to make new findings in accordance with the Supreme Court's opinion.

Dayton II

In response to the Supreme Court's remand, the district court held a supplemental evidentiary hearing from November 1 to 4, 1977. The Supreme Court directed the district court to first determine whether the Dayton board of education had discriminated against African American teachers, staff, and students. If the response to the first test was affirmative, the district court then had to compare how the board's actions impacted the current racial distribution in the public schools against what the racial distribution was in the past. If discrimination still existed in the public school system, then the district court had to create a remedy that was most appropriate under *Dayton I*.

The district court then proceeded with an exhaustive analysis of racial imbalance, faculty assignment and hiring, attendance zones, site selection, and transportation in the Dayton public school system. After an extensive review of the record, the district court held in *Brinkman v.*

Gilligan that Brinkman had to prove that the board of education was discriminatory in its actions and that an incremental segregative effect could be proved for racial imbalance, faculty assignment and hiring, attendance zones, site selection, and transportation. On December 15, 1977, the district court held that Brinkman failed to satisfy the incremental segregative effect test. Thus, the complaint was dismissed. Brinkman, once again, appealed the district court decision.

On July 27, 1978, the Court of Appeals for the Sixth Circuit released its opinion on the *Brinkman v. Gilligan* case. It held that the district court had a misunderstanding of the Supreme Court decision in *Dayton I*. The court of appeals determined that the district court looked at isolated occurrences in the public school system and then incorrectly examined specific areas for segregative intent and incremental segregative effect. The court of appeals held that using an act-by-act approach was inappropriate and that it was the combined actions or inactions of the board of education that produced the dual public school system in Dayton. The court of appeals ruled in *Brinkman* that once plaintiffs established that the board of education's policies perpetuated segregation in the public school system, it was then the board's burden to prove that its actions were in accordance with racially neutral policies. The decision of the district court was reversed with instructions to reinstate the plan drafted by the court of appeals in *Dayton I*. The Dayton Board of Education subsequently appealed the decision of the court of appeals.

U.S. Supreme Court Ruling

Finally, on July 2, 1979, the Supreme Court held in *Dayton Board of Education v. Brinkman II* that the district court did indeed misunderstand the ruling in *Dayton I*. The Supreme Court stated that the court of appeals correctly determined that Dayton had a dual public school system. Thus, the board of education had an affirmative duty to end racial imbalance in the public schools. Agreeing with the court of appeals, the Supreme Court stated that the board's actions since *Brown v. Board of Education* had perpetuated a dual system in regard to faculty and student assignments, school site selection, optional attendance zones, and transportation. Thus, the burden was on the

board of education and not Brinkman to prove that its actions or inaction did not perpetuate or reestablish a dual system. *Dayton II* affirmed the decision of the court of appeals.

Impact of Dayton Cases

On April 17, 1972, when Brinkman filed a lawsuit on behalf of several African American and White parents who had children in the Dayton public school system, he began what would amount to a 7-year legal battle in the federal courts. After two U.S. Supreme Court decisions, it was determined that Dayton, Ohio, did indeed have a dual public school system and that it was the responsibility of the Dayton board of education to eradicate racial imbalances in the public school system. The *Dayton I* decision was significant because it gave the federal courts the power to dictate that certain measures be taken, like busing, to end racial imbalances in the schools. However, as the response to school busing was quite volatile, Brinkman's desire for Dayton children to attend public schools without racial imbalances was never quite fulfilled. During the time of *Brown v. Board of Education II*, African American students were only 18% of the public school community. By 1971, 17 years later and a year before Brinkman's initial lawsuit, the number had risen to 45%. Unfortunately, past real estate practices and personnel preferences have caused certain areas of Dayton to be predominantly African American or White. Today, the number of African American students in the Dayton public school system is 69%, while Whites are a mere 25% of all public school students.

DENTAL EDUCATION

Almost as long as dentistry has been the subject of formal education in the United States, African Americans have been included among the graduates of such programs. In recent years, however, there has been a decline in the proportion of African Americans pursuing this profession. The 1995 Institute of Medicine Report on the future of dental education identified the need for a dental work force that reflects the diversity in the United States. Specific racial and ethnic groups remain underrepresented in the active dental profession compared to their representation in the general population. African Americans comprise 2.2% of active dentists versus 12% of the general population. In addition, the percentage of African Americans who are dental school students is less than half of their proportion in the U.S. population. In the 2004 entering class of U.S. dental schools, the African American percentage was 5.4%. This entry begins with a look at the history of dental education for African Americans, examines the current diversity situation more closely, and then provides an overview of dentistry and dental education in the United States.

Historical Background

In 1840, the Baltimore College of Dental Surgery, now a part of the University of Maryland, initiated the availability of formal education for the profession of dentistry. At that time, about 120 African American dental practitioners had been trained through the preceding apprentice system. The creation of the Baltimore College, however, signaled the end of apprentice-style training in dentistry.

Harvard University was the first to establish a dental school. It is noteworthy that Robert T. Freeman was among the six students accepted in the first class in 1867. Two years later, he became the first African American to graduate with a Doctor of Dental Medicine (DMD) degree from a university dental school in the United States.

Dental departments were created at Howard University in 1881 and at Meharry Medical College in 1886. Howard University's College of Dentistry, and Meharry Medical College's School of Dentistry were established specifically for training African Americans. They survived the 1926 William J. Gies Report on dental education in the United States, published through the Carnegie Foundation for the Advancement of Teaching. The Gies Report was responsible for the disaccreditation and subsequent closure of deficient dental school facilities. However, the Gies Report emphasized the need for additional dental schools for African Americans. Despite this recommendation, Howard and Meharry continued to prepare most African American dentists to care for the oral health needs of African Americans and other minority and disadvantaged communities.

Current Representation

The Surgeon General's Report on Oral Health in America, published in 2000, pointed out that while diversity in U.S. society is increasing, the number of individuals from minority groups prepared to provide dental care is decreasing. The analysis of the ratios of dentists to population by race and ethnicity found in the Surgeon General's report revealed disparities, which are cause for national concern. In 1996, the ratio for Whites was 1 to 1,450; for Hispanics, 1 to 5,400; for African Americans, 1 to 6,150; and for Native Americans, 1 to 10,000. For the total population of U.S. citizens, the ratio was one dentist for every 1,700 people.

There has been a decrease in the total production of dentists since the early 1990s and into the 21st century. The decline of minority graduates from dental school is even more dramatic. More specifically, data for the period of 1995 to 1996 through 2001 to 2002 shows a 10% decline in total enrollment of African Americans during this period. In 2001 to 2002, 13 of the nation's dental schools had no African Americans enrolled in the entering class, and 10 schools had only one African American student enrolled in the entering class.

This challenge that dentistry faces cannot be solved without taking into consideration how the profession has addressed issues of diversity and outreach, especially for African Americans, in the past. More dentists are leaving the profession than entering. Of the 152,000 active, practicing dentists, over a third are over 55 years of age. The number of jobs exceeds the number of professionally active dentists, according to the U.S. Public Health Service.

Dental schools are strengthening their efforts to recruit students from underrepresented minorities, prompted by the efforts of the National Dental Association (NDA) and the American Dental Association (ADA). Traditionally, dentistry has not enjoyed great popularity attracting African Americans to its ranks. However, this is changing as an increasing segment of the population understands that dental infections influence the health of the whole body and is a critical component of public health and welfare of the populace.

Due to supply and demand, dentistry is a good career choice now and for the near future, offering exceptional opportunities for underrepresented minorities. Studies have shown that dental care is more readily accepted when the dentist is not only cognizant of a patient's language but also sensitive to his or her cultural and ethnic background.

What Is Dentistry?

Dentistry is defined as the evaluation, diagnosis, prevention, and/or treatment of the oral cavity through nonsurgical or related procedures. Dentists are often the first health care professionals to recognize and identify a variety of diseases ranging from diabetes to cancer. Technological advancements have improved the ability to assist dentists in the diagnosis and treatment of problems that

affect the mouth and jaws. Through surgical restoration and repair, retention of healthy teeth and gums can be accomplished. Implants, tissue grafts, and laser surgery are techniques used to reverse trauma caused by accident or disease.

Although dentists treat the mouth, by definition as health care professionals, they treat people. Through cosmetic dental procedures, dentists can improve the appearance of patients, ultimately improving their self-esteem. The profession of dentistry performs an important public service to help people maintain their health and appearance. General dentists provide a vast majority of dental care and perform a wide array of dental procedures. There are specialties in dentistry that make up approximately 20% of the profession. The following are specialties in dentistry: endodontics, the treatment of diseased or injured pulp (nerve) tissue; orthodontics, the treatment of malocclusion (straightening of teeth); oral and maxillofacial surgery (extractions and correction of injured or diseased jaws); pediatric dentistry, specializing in children's dentistry; periodontics, treatment of the gums, bone, and supporting teeth (pyorrhea); and prosthodontics, treatment by replacement of missing teeth with fixed or removable appliances.

In addition, there are areas in dentistry that are limited to specific procedures such as cosmetic or aesthetic dentistry (treatment focused on appearance) and implant dentistry (replacement of the support for which teeth can be replaced with stability), oral pathology, public health dentistry, oral biology, hospital dentistry, and dental education (being on a dental school faculty). The options are many, and in some instances, they are combined.

Qualifications and Licensing

All 50 states and the District of Columbia require dentists to be licensed. To qualify for a license in most states, a candidate must graduate from an accredited dental school approved by the Commission on Dental Accreditation and pass written and practical examinations on patients selected by the candidate. Most states require passing a written examination given by the National Board of Dental Examiners and permit dentists to engage in both general and specialized practice; in such cases, the dentist acknowledges his or her limitation. Some

states require that a specialty license be obtained before practicing as a specialist.

Dental license exams are given by individual states, but there are regional exams the results of which are accepted by states for licensure. To practice in a different state, a licensed dentist may have to pass that state's examination. However, there is growing acceptance of licensure by credential, where a licensed dentist from another state can also be licensed in that state. Eventually, there may be elimination of individual state or regional boards requiring practical examination on live patients with the establishment of a national, simulated practical examination.

Dental schools require a minimum of 2 to 4 years of college-level courses, that includes both science and nonscience courses. The traditional science major is joined by a variety of nonscience degrees from psychology to music to humanities. However, the core science courses—biology, inorganic chemistry, biochemistry, physics, and organic chemistry—and depending on some schools, additional science courses may be required or recommended. All dental schools participate in a nationwide testing program, the Dental Admission Test to evaluate dental applicants academically, in addition to the overall and science grade point average. Also used for consideration are the letters of recommendation, extracurricular activities, interviews, and the personal backgrounds of the applicants (i.e., disadvantaged status, research experience, publications, etc.).

Dental school generally lasts 4 years. There are both didactic and laboratory work in the sciences: anatomy, microbiology, biochemistry, physiology, and histology. Students are also taught dental biological sciences such as oral anatomy, oral pathology, and oral histology. There are prelaboratory technique courses that require manual (hands-on) skills and good visual memory. These are preparatory requirements before taking on patients in the clinic. Clinical experience can happen as early as the 1st year, but the most intensive is during the last 2 years, usually. During this time, students gain practical experience treating patients as they would as licensed dentists. This experience requires that students demonstrate a high level of diagnostic ability and a high degree of manual dexterity, the ability to use of the technologies available, and,

above all, a sensitivity to the needs and concerns of the patients they are treating.

Most dental schools award the degree, Doctor of Dental Surgery. An equivalent degree, DMD, is conferred by others. Earning a degree is costly. Dental school graduates may elect to go to a postdoctoral training program to increase their proficiency. This is usually an additional year and is in the form of an Advanced Education in General Dentistry (AEGD) or is a General Practice Residency (GPR).

In addition, postdoctoral students in GPR and AEGD, along with recent graduates from dental school, can elect to later take one of the dental specialties. Depending on the specialty, an additional 2 to 6 years of study is required. These are either certificated or degreed programs. If one is interested in academics, the degree programs are usually preferred. The ADEA sponsors the Post-Doctoral Application Support Service (PASS), making it easier to apply to the various postdoctoral programs.

Career Opportunities

Although African Americans are still underrepresented in dentistry and there is still shortage of dental practitioners in general, the career opportunities in the dental profession are exciting, challenging, and rewarding. Dental school graduates have a variety of options and opportunities. They can be self-employed in private practice; this is the traditional route. Ninety percent of private practice dentists own their own practice. Many begin by working for an established dentist in salaried or associate positions. This enables them to gain experience and save money to purchase or buy into the practice for which they are working. Some, however, purchase an established practice after graduation or set up their own offices after graduation or in partnership.

In 1999, the ADEA projected that there would be an increasing shortage of dentists through the year 2020. Just a few years ago, the number of dental school first-year enrollees dropped due to the reduction of class size and closing of some dental schools. However, two additional dental schools have opened in Nevada and Arizona, and a third is scheduled to open in California in 2009. Though the success of preventive dentistry has reduced the

occurrence of oral disease, there are more dental options, such as cosmetic dentistry and implants, which raise the demand for newer services in all segments of society.

A survey reported by the ADA in 1999 indicated that dental offices were the third highest in ranking of all start-up businesses. During the first year of practice, dentists earn more than the minimum to manage dental school debt over 25 years and, in many cases, over 10 years. The earnings of dentists rapidly rise from the beginning stages of practice. In 1992, the average income of dentists was \$80,000. In 2000, the average income of general dentists was over \$160,000, a 100% increase over the 8-year period. The income for dental specialists was over \$260,000. The average income for dentists is in the upper 5% of family incomes in the United States. The financial success by dentists outweighs the cost. Debt is usually managed and paid within 7 years.

In addition to working in the private sector as a self-employed or salaried employee or associate dentist, opportunities in academics, dental research, and service in the federal government and public health care sectors are available. These options, in many instances, overlap. The list of practice options continues to grow as new areas in dental service are developed. Dentistry is a highly rewarding profession that offers personal satisfaction, autonomy, financial security, cultural and ethnic interactions, and the opportunity to positively change an individual's life.

DESEGREGATION

Since the middle of the 20th century, desegregation has been widely used as a remedy for de jure (by law) and de facto (by practice) school segregation. Desegregation is the process that removes the formal and informal barriers preventing students from diverse racial and ethnic backgrounds from learning in the same classrooms and schools. The policy is intended to ensure that all children have equitable opportunities to learn.

The United States has a long history of providing racially segregated and unequal public education to its children. Racially separate and unequal public education was not an accident; it was created by laws that were enforced by state governments and policies enacted by local school systems. Even after a series of U.S. Supreme Court decisions eliminated the formal legal foundation for segregation in the mid-20th century, segregation often was encouraged or re-created through racially discriminatory public policies and private practices in housing, transportation, lending for home purchases, and education.

These obstacles notwithstanding, from roughly the middle of the 1970s through the early 1990s, U.S. school systems under court orders to desegregate

employed a variety of strategies to create diverse student bodies and teaching staffs. Strategies included closing down and/or combining formerly racially separate schools, drawing new attendance boundaries across diverse neighborhoods, pairing of schools, busing students living in one neighborhood to a school in another neighborhood, race-conscious magnet school enrollments policies, and the siting of new schools in locations that maximize student diversity.

Efforts to desegregate U.S. K–12 public schools commenced with a series of state and federal lawsuits. *Mendez v. Westminster School District Orange County* (1947) was the first case in which a federal court ruled that racial segregation of schooling was unconstitutional. Latino families in Orange County, California, initiated the case. *Mendez* set a legal precedent for the Supreme Court's decision declaring all racial segregation unconstitutional in *Brown v. Board of Education, Topeka, Kansas* (1954), 7 years later. In the landmark 1954 *Brown* decision, the Supreme Court declared that separate educational facilities were inherently unequal and that they denied students equal protection of the laws. It took several additional court cases following *Brown* to actually begin the dismantling of dual educational systems.

Nonetheless, the *Brown* decision triggered a sea change in the larger U.S. society because it overturned the moral and constitutional basis of the separate-but-equal doctrine enshrined in the infamous *Plessy v. Ferguson* (1896) case. Thus, many observers believe the most enduring legacy of the *Brown* decision is not desegregated public schools—especially in light of nationwide trends toward resegregation and the continuing struggle for educational equity—rather, *Brown* enshrined in law the principle that all people are citizens of this nation and are equal under the law.

The tension between legal mandates for racial justice in education and private beliefs and action taken to preserve White middle-class families' educational privileges hampered effective school desegregation. During the decades since the *Brown* decision, some regions of the United States have been more successful in desegregating their schools than others. Southern schools remained segregated well into the 1960s, and Northern schools remained segregated until the 1970s. Southern and border states eventually experienced the greatest degree of

desegregation. In some Southern school systems, the percentage of African Americans attending extremely segregated schools dropped from 78% in the late 1960s to 25% at its lowest in the mid-1980s. Other regions of the country where de facto segregation was the norm also desegregated to a large degree.

In the middle of the 1980s, the national trend toward greater interracial contact in public schools stalled and began a slow reversal by that decade's end. By the early 1990s, a series of U.S. Supreme Court decisions permitted school districts to end mandatory desegregation efforts even if the districts had racially identifiable schools as long as the systems demonstrated that they had done all that was practicable to eliminate the vestiges of de jure segregation. Soon after their court orders to desegregate were lifted, many formerly desegregated school districts began to resegregate. Although the lifting of desegregation orders was not the only reason for widespread resegregation, it was a major contributing factor to it. By the first decade of the 21st century, levels of segregation in U.S. public schools approached those of the 1960s. This entry focuses on the impact of desegregation as shown in research over several decades.

Within-School Segregation

A nuanced discussion of desegregation must acknowledge that segregation exists both between and within schools, a distinction often discussed in terms of first- and second-generation segregation. First-generation segregation generally involves the racial composition of schools within a single district or between adjacent districts. It has been the focus of most national desegregation efforts since *Brown*. Second-generation segregation involves racially correlated ability grouping (in primary grades) and tracking (in secondary grades). First- and second-generation segregation can intersect in ways that subvert the goals of desegregation efforts. Second-generation segregation also has been the target of litigation, especially when tracking was instituted to circumvent court-mandated desegregation.

Ability grouping and tracking often resegregated students even in school districts operating under court-mandated desegregation plans. When compared with their comparably able White and Asian

peers, African Americans, Latinos, and Native Americans are disproportionately absent from the accelerated tracks at the same time that they are disproportionately overrepresented in lower level classes or tracks. Racially stratified tracks create a cycle of restricted educational opportunities for students in them because compared to higher track courses, lower tracks generally offer less rigorous and narrower coverage of the curricula, weaker academic expectations, and less-qualified instructors. These circumstances lead to diminished school achievement and in turn contribute to race and social class differences in school outcomes.

Effects of Desegregation

Since *Brown*, researchers, parents, educators, and policymakers have examined the effects of desegregation on various educational outcomes. Effects typically fall into two categories: long-term effects, which refer to adults' educational and occupational attainment trajectories that are influenced by their interracial experiences during elementary and secondary school, and short-term effects, which refer to what happens to students' academic achievement and racial attitudes as a result of intergroup contact. The evidence showing that desegregation has a positive effect on African American students' long-term outcomes is well documented and rarely controversial: African Americans who attended desegregated schools have greater educational and occupational attainment and are more likely to work and live in integrated environments than those who went to segregated schools. Adults who attended desegregated schools have lower levels of racial fears and antagonisms than those who attended racially isolated schools.

Most of the scholarly and policy debates concern the short-term effects of desegregation on achievement. Early research on short-term effects on achievement was equivocal. Some social scientists found that desegregated education modestly benefited African American students' academic outcomes (especially in language) without harming Whites' achievement, while other research found no effects on achievement for any students.

There are several reasons for the mixed results from the earliest research on short-term desegregation effects. The earliest research studies were

conducted soon after the first desegregation programs were implemented and arguably, before many programs had sufficient time to be fully implemented. Most of the early empirical studies of desegregation suffered from limitations in their design, measurement, and samples. Researchers often did not have the data to adequately control for the high correlation between social class and race. However, some scholars argued the flawed logic of desegregation was responsible for the mixed results: Racial inequality in educational outcomes was largely due to social class differences, not racial isolation among students.

In 1984, a National Institute of Education (NIE) panel examined the then-extant corpus of empirical studies on the effects of desegregation on African American students' reading and math achievement. The panel did not examine effects of desegregation on Native American, Asian, and Latino/a students because at that time there was insufficient empirical research on these population subgroups. In their summary of their meta-analyses of the 19 best studies, the panel reported that while desegregation appeared not to either increase or decrease African Americans' mathematical achievement, evidence suggested desegregation modestly increased mean reading levels. Nevertheless, the panel's chair concluded that they had little confidence that the scientific community knew much about how desegregation affected reading achievement.

Results from the next generation of research conducted roughly from the late 1980s through the late 1990s continued to fall into several conflicting categories: those that found small positive effects of school diversity on achievement outcomes, those that found no positive effects, and those that concluded desegregation policies were essentially ineffective because the larger societal problems at the root of racially correlated school outcomes were left untouched by school desegregation.

Methodological Innovations in Desegregation Research

The results of empirical studies published roughly since 2000 generally show benefits from desegregated schooling and harms from racial isolation in school. One reason for the new trend in desegregation findings is that the advanced methodologies

used in the latest generation of studies allow researchers to address several shortcomings of the older empirical research and in addressing these shortcomings, to resolve many questions raised by the inconsistent findings. Recent studies share many of the following features: large-scale random samples of ethnically diverse students, high-quality measures, appropriate control variables, an examination of both classroom and school compositional effects, and cutting edge statistical techniques such as multilevel modeling.

Multilevel modeling is appropriate when student data are nested within schools. Analyses that do not take the nested nature of educational outcomes data into account can produce biased and incorrect results. For example, Geoffrey D. Borman and N. Maritza Dowling used hierarchical linear modeling to reanalyze the original data James Coleman collected for his landmark 1966 *Equality of Educational Opportunity Report*. One of Coleman's most provocative findings held that family background was far more important for student achievement than school factors. Coleman did not use multilevel modeling to analyze his data. In dramatic contrast to original Coleman findings, Borman and Dowling demonstrated that school factors dwarf the effects of family background. They found both the racial-ethnic and social class composition of a student's school are approximately 150% more important than a student's individual race-ethnicity or social class for understanding educational outcomes. They also reported that racially isolated high-poverty schools have a strong negative influence on student achievement.

In one of the largest U.S. studies of school compositional effects, Douglas N. Harris analyzed 2005 No Child Left Behind data from 22,000 schools and 18 million students. He reported that African Americans and Latinos/as learned more in desegregated schools and were more likely to perform better in college and in their adult jobs than those who attended racially isolated schools. He also found that controlled choice and other forms of desegregation that benefit African American students are relatively inexpensive school improvement strategies.

Other new generation studies conducted since 2005 demonstrate the negative effects of racial isolation on achievement. Eric A. Hanushek, John

F. Kain, and Steven G. Rivkin examined the effects of school racial composition on Texas students' math and reading outcomes. They found that an increasing percent of African American classmates had an adverse effect on the achievement of African American students, but a noticeably smaller adverse effect on White and Latino/a students. Borman and his colleagues analyzed statewide data from Florida. They found in 2005 that school segregation negatively influenced mathematics achievement among students from minority groups. Stephanie Southworth analyzed reading and mathematics scores of White, African American, and Latino North Carolina fourth-, sixth-, and eighth-grade students. She found that even after controlling for students' individual and family background factors, attending a high-poverty, racially isolated minority school had a significant negative effect on their outcomes. David J. Armor and Shana J. Watkins used 2003 and 2005 NAEP data to explore the relationship between school racial composition and achievement. They reported modest negative effects of segregation on math achievement, but no significant effects on reading. They also found complex patterns among state outcomes. For example, they found no segregation effects in some states and large effects in others.

Researchers also investigated long-term educational and occupational attainment and attitudinal and interpersonal outcomes of desegregation. Findings consistently indicate that African American and Latino/a college students who attended desegregated high schools are more likely to attend and graduate from college than their peers who went to segregated schools. Compared to their counterparts who attended racially isolated minority schools, minority students who attended desegregated schools are more likely to pursue degrees in scientific and technical fields, to work in integrated settings, and to earn higher wages. Thomas F. Pettigrew and Linda R. Tropp's 2005 meta-analyses of over 500 studies on the effects of interracial contact on stereotypes and prejudice found students exposed to different other-race peers have more positive interracial relationships, less fear of those who are different, and have fewer prejudices and stereotypes than students who attended segregated schools.

The Future of Desegregation

Recent history suggests that once a school district is unitary, it will become segregated unless its leadership voluntarily pursues desegregation. For instance, school districts in Charlotte, North Carolina, and in Nashville, Tennessee, experienced striking resegregation soon after becoming unitary. In contrast, a number of unitary school systems have voluntarily pursued student diversity using strategic tools such as locating schools in integrated neighborhoods, race-conscious magnet school enrollments, or redrawing attendance boundaries. Wake County, North Carolina, uses socioeconomic status and test performance as criteria for pupil assignment. Rock Hill, South Carolina, redrew attendance boundaries to maximize racial diversity.

In 2007, in twin cases involving voluntary desegregation in Seattle, Washington, and Louisville, Kentucky (*Parents Involved in Community Schools v. Seattle School District No. 1*, 2007, and *Meredith v. Jefferson County Board of Education*, 2007), a majority of the Supreme Court affirmed the nation's compelling interest in creating an integrated society and avoiding racially isolated schools, but a different majority of justices struck down both plans' use of individual student race in their pupil assignment plans. These justices held that the Seattle and Louisville race-conscious assignment plans were unconstitutional because the plans were not sufficiently narrowly tailored to justify the use of an individual student's race in assignment plans.

Justice Anthony M. Kennedy's controlling opinion identified possible race-neutral alternatives that a school district could use to promote diversity. These include strategically selecting the location of new schools to maximize diversity, drawing attendance zones with general recognition of neighborhood demographics, allocating resources for special programs, recruiting students and faculty in a targeted fashion, and tracking enrollments, performance, and other statistics by race. Kennedy's controlling opinion left the door open (even if only slightly) to the possibility that a school district could constitutionally use race for pupil assignments if race is not the primary criterion for admission and it is one of several factors that a school board considers in making admissions decisions.

Many legal scholars and education experts expect that the extent of the *Parents Involved in Community Schools* decision's limitations on the use of race in K–12 public school assignments will be defined through future court challenges. The *Parents Involved in Community Schools* decision, however, does not affect the use of individual student's race in higher-education admission decisions. In the 2003, *Grutter v. Bollinger* Michigan Law School affirmative action case, the majority of the Court held that because diversity in higher education is a compelling state interest, institutions of higher education may use race, among other criteria, to create diverse student bodies.

After decades of collective struggles for civil and educational rights, a series of judicial decisions during the second half of the 20th century launched the United States on a path toward desegregated public schooling. Much of the nation's de jure segregation was dismantled for a period between the 1970s and the late 1980s; de facto segregation was markedly reduced as well. The regions of the country that were once the most segregated became the most highly desegregated. Racial gaps in academic achievement narrowed considerably when the nation's public schools were the most racially balanced.

A number of demographic and political shifts in U.S. society have made the pursuit of desegregation more difficult. As the federal government's judicial and executive branches retreated from desegregation after the 1980s, the demographic changes exacerbated the weaknesses in the nation's political resolve to end segregated schools. Burgeoning suburban growth along with large demographic changes in the ethnic composition of the U.S. population make desegregation logistics rather complex.

Support for desegregation efforts has declined in a number of minority communities as well. Some African American, Latino, and Asian parents have developed doubts about the policy. Disappointed by the results of desegregation's uneven and sometimes ineffective implementation and weary of continuing political struggles over the policy, some leaders have come to regard the costs of desegregation to their communities' cohesion, cultural identity, and educators' jobs as excessive, as discussed by Mwalimu Shujaa.

In addition, in school systems that actually accomplished some degree of desegregation, a

number of middle-class White parents seized opportunities to circumvent desegregation through practices such as tracking and school choice (originally termed freedom of choice plans). The willingness of school officials and other state actors to accommodate White parents seeking to maintain their race (and class) privileges, combined with the weakening resolve of many parents and federal officials charged with carrying out the courts' mandates to desegregate, made it increasingly difficult to fully implement desegregation policy during the last two decades of the 20th century.

The future of desegregation in the 21st century is uncertain. Although the Supreme Court's decision in the Seattle and Louisville cases recognized that achieving diverse public schools and overcoming racially isolated ones are compelling national interests, the decision also made the creation of diverse schools more difficult. Ironically, this development has occurred at a time when the U.S. population has become much more ethnically diverse, and recent research has clarified how integrated education contributes to all students' cognitive growth, diminishes interracial fears and stereotypes, and prepares youth for working in a global economy and for citizenship in a multiethnic democratic society.

African American education. This entry looks at developmental education's goals and pedagogical strategies.

Academic and Political Goals

Developmental education is about creating a political, cultural-ideological frame of thought and social action, linking notions of culture, history, identity, freedom, and liberation to the political goal of achieving the sovereignty and dignity of all peoples. Developmental education is about the possibilities of critical, anticolonial education that can help learners subvert the taken-for-granted assumptions of colonial-imperial education. Developmental education, as a process of teaching, learning, and mode of educational delivery, also engages the local-social environments and multiple cultural knowings in diverse contexts. In the pursuit of developmental education, issues of curriculum, text, and classroom instruction are all structured to affirm self, individual, and group worth, as well as develop a collective pride and dignity of all peoples.

Developmental education is geared to social and community advancement. It seeks to promote the satisfaction of local needs and aspirations through a paradigm of social equity and justice, including a respect for the fundamental freedoms and rights of all peoples. Education is understood as the varied strategies, ways, and options through which we come to understand, live, and act in our complex social worlds. Developmental education broaches questions such as the purpose, objective, and goals of learning, as well as questions the intellectual and political ends of educational scholarship. It works with an understanding of local peoples' knowledge and how such knowing contains seeds of creativity and resourcefulness critical to self-actualization.

An important goal of developmental education is to address the unequal power relations between school-academic knowledge and local, indigenous, and community knowledges. Local cultural resource knowledges point to the ways in which communities come to share power and resources to address questions of difference and inequity. When tapped as part of formal educational processes, local knowings offer some of the possibilities of social transformation. Consequently, as one of its foremost objectives, developmental education ensures

DEVELOPMENTAL EDUCATION

African American education is education regarding the history, culture, identity, and politics of African peoples pursued through an African prism. This education has a clear sense of purpose to uphold the African presence, and it is fundamentally geared toward the development of peoples of African descent. Although African American education has relevance for all peoples, this form of education is critically and primarily (but not exclusively) about the holistic development of African peoples. In this regard, there is a powerful connection between what constitutes developmental education and

that the pursuit of social development extends beyond material, economic, technological, and material constraints and possibilities to affirm the spiritual, emotional, and social-cultural dimensions of existence.

Pedagogical Strategies

In connecting the foregoing with concerns about education of African Americans certain issues are salient. Proponents of developmental education see the need for a critical discursive approach from an African-centered prism in three interrelated aspects. First, the need to reclaim and affirm past intellectual traditions, knowledge, and contributions to world history is a necessary exercise in decolonization. Second, the need to reflect on the present and the necessity to theorize Africa beyond its boundaries. Africa matters politically, culturally, and intellectually. To understand the nature of the problems and challenges facing African Americans as a people today (e.g., education, health, development, etc.) requires bringing a critical reflection about collective consciousness of their interconnected realities and existence. And third, Africa and African Americans must set the terms of their development agenda so as to contest and project into the future.

When these concerns are taken up in the pursuit of developmental education, it necessitates a shift away from a politics of negotiation to a politics of transformation (e.g., setting the agenda and rules of engagement under African American terms). In other words, African Americans need to strategize and rethink ways of addressing the problems and many challenges confronting them as a people. This is only possible if African Americans are healed as a people—spiritually, mentally, and materially. This calls for an affirmation of the African American sense of community, social responsibility, and spiritual reembodiment. It also requires an engagement in a new anticolonial project that would allow African American learners to define their own agenda for education, freedom, and recognition while making linkages with others through an understanding of shared community, belonging, and responsibility.

In the midst of the contingencies of globalism, corporate international capitalism, imperialism, racism, and the dominance of Westernity, a critical

developmental education can hold some of the possibilities of social transformation, anchored in a sacred-secular nexus as (re)configured in the normative of contemporary education. The promotion of developmental education must, therefore, involve the lived experiences of multiple subjects and agents. Developmental education must connect youth schooling with histories of African enslavement and resistance while bringing a critical reading to allow the African diaspora to connect to their African past and heritage, not only in the geophysical sense but also in the spatial and temporal dimensions of an Africanness.

What surfaces then is a spiritual connection that reinvigorates and affirms a complex African American identity. Developmental education must promote an understanding of collective histories and experiences. This can be used to challenge the underlying colonial assumptions that have long informed dominant Western epistemologies (e.g., the discourse of development). Through an anticolonial prism, African Americans can contribute to the decolonizing project in concrete ways so that development is not about what people lack, or are expected to become, but what people do for themselves.

Indigenized epistemologies, emerging from the colonized, can challenge the institutionalized narrative that has upheld the Western ordering of knowing. Anticolonial thinking allows learners to work with a politics of identity-affirmation while bringing to the discussion questions about the interconnections of power, difference, and resistance.

Today, the relevance of developmental education, as defined in the context of schooling and education of African Americans, is that it helps to give a voice to oral histories and cultures, something which resides outside Western academic corridors is a much needed voice for an African American resurgence. Proponents argue that African American learners must be able to draw from their history, cultures, and traditions to be self-reflective of their experiences and be better prepared to encounter the global context. A critical African American education has to be steeped in local communities' experiences and be able to point to the political, social, historical, and spiritual connections of global humanity.

DIVERSE: ISSUES IN HIGHER EDUCATION

The journal *Diverse: Issues in Higher Education* was formally known as *Black Issues in Higher Education*. Founded in 1984, the journal's decision to take on a name change was a move that allowed for the embracing of a wider audience than that of African Americans alone, making it inclusive of Hispanic and other marginalized populations. As noted by the journal's corporate statement, the need for more resources for "groups of color" has increased tremendously in the past 10 to 20 years. This entry looks at the journal's content and describes the related Web site.

Journal Contents

Resorting to resources provided by the dominant culture, resources which are intentionally designed to leave out vital information, causes minority

groups to come up short in locating data they need in an efficient and time-conscious manner. Minorities may then be forced to settle for piecemeal stories and insufficient facts from sources that have no guarantee of reliability. *Diverse: Issues in Higher Education* addresses those elements pertinent to education, especially at the undergraduate- and graduate-school levels, that provides access to tools needed for success.

In the past, patrons of *Diverse: Issues in Higher Education* have used the journal to find information on current trends in the news, updates on happenings in government, and tips on financial resources for faculty and students. They have also been able to hear about minority men and women who have become trailblazers in their occupations and special interests. For more than 5 years, the journal has issued a special report titled "Emerging Scholars" (also previously called "Scholars of Note," "Rising Stars," and "The Academy's New Cast") where readers are able to discover the tremendous strides minorities are making each day in their respective fields by showcasing the biographies of the most promising academicians in higher education. The ages of those featured range from 31 to 45, each realizing amazing accomplishments and becoming major contributors in computer science, African American studies, mathematics, and chemistry, to name a few. This annual special report can serve as a vehicle of encouragement for rising graduate students who hope to soon reach the level where they too are recognized for their dedication to the causes in which they believe.

For updates on minorities who have been appointed new positions to advance their careers, *Diverse: Issues in Higher Education* has a section titled "On the Move." Faculty and staff from various colleges and universities around the country are profiled with the names of their new positions, an explanation of their previous positions, and a list of accolades posted next to their photographs. This provides information on the many men and women who continue to climb the ladder at public and private institutions, paving paths for those who will follow and seek to make similar professional advancements.

The *Diverse: Issues in Higher Education* section on historically Black colleges and university (HBCU) news provides readers with current events at academic institutions that educate thousands of minority

students around the United States each year and graduate many of the top scholars who go on to be leaders in their communities. Students from Hampton University and other historically Black schools made preparations to attend what became the historic “Jena 6” march in Jena, Louisiana, in the fall of 2007. Other HBCU news has included an explanation of a \$31 million federal research grant to Atlanta-area universities, the testimony from former Governor Mark White on behalf of Priscilla Slade, the former president of Texas Southern, and the approval for a raise in salary for presidents at six public universities. Those who have an interest in HBCUs and their state of affairs may find *Diverse: Issues in Higher Education* to be a useful resource with updated notices of the schools.

A tool most helpful within *Diverse: Issues in Higher Education* is its section listing books that deal with diversity. Several titles worth mentioning are *Higher Ground: Ethics and Leadership in the Modern University* by Nannerl O. Keohane; *Higher Education and the Color Line: College Access, Racial Equity and Social Change* by Gary Orfield, Patricia Marin, and Catherine L. Horn; and *Keepin’ It Real: School Success Beyond Black and White* by Prudence L. Carter. Along with the book summaries are brief biographies of the authors for those interested in searching for additional sources that might add to their list of relevant literature for scholarly articles or simply to increase their knowledge on a particular subject. This offers readers several texts they may find useful in their research, and it also highlights new authors and their contributions to addressing issues of diversity.

Supplemental Web Site

Individuals who are unable to subscribe to the journal may find they can glean the information they need from *Diverse: Issues in Higher Education* by logging on to the journal’s Web site. This online version of the periodical provides all of the information that can be found in the hard copy of the journal. For example, individuals who are in the market for a new career will find it to their advantage to utilize the “Diverse Jobs” section where at least three employers are listed at a time to advertise their available positions. By clicking additional links, potential candidates can search for faculty jobs, academic administration, and executive positions.

A link sends users to the *Diverse Hispanic* homepage, which houses a plethora of information on issues related to the Hispanic population, keeping all readers fully informed.

Using both the journal and the online tool, minorities interested in higher education can find out the latest news in Washington, D.C., or locate statistics on colleges and universities who graduate the most minority students around the country. *Diverse: Issues in Higher Education* is one of the best sources to meet all of those needs.

DRAKE, ST. CLAIR (1911–1990)

St. Clair Drake, who trained formally in social anthropology, was an influential educator and committed scholar-activist. One of the first African American professors at mainstream, historically White universities, he was also involved in the birth of the field of African American studies and in helping to build the struggle for civil rights and for African liberation. Because of the breadth and depth of his involvement and his role as chronicler of the Black diaspora, Drake was an important pioneering scholar and contributor to African

American education in the United States and abroad. This entry looks at his life and legacy.

Early Years

Drake was born in Suffolk, Virginia, on January 2, 1911. His father, a Baptist minister, was born in Barbados, West Indies; his mother was a schoolteacher. In 1927, he entered the Hampton Institute, where he studied English literature with Professor Allison Davis and was graduated in 1931 with a BS in biology with honors. Black colleges played an important role in shaping Drake's early life and his later work as a scholar and intellectual. He taught school in Virginia for 3 years and attended Pendle Hill, an innovative academy founded in 1930 by Quakers outside Philadelphia.

In 1935, Drake was invited by Allison Davis to join a team that was conducting research in Natchez, Mississippi, for what would be published in 1948 as *Deep South: A Social Anthropological Study of Caste and Class*; his role in editing the final volume and guiding it through publication is acknowledged in the book. Drake taught anthropology at Dillard University (Louisiana), where his officemate was the artist Elizabeth Catlett, and in 1937, he accepted a Rosenwald Foundation fellowship to begin graduate study at the University of Chicago. In 1938, he began a collaboration with Horace Cayton that would result in the 1945 publication of *Black Metropolis: A Study of Negro Life in a Northern City*, with an introduction by Richard Wright. Drake received his PhD from Chicago in 1948. In 1942, Drake married Elizabeth Dewey Johns (1915–1996), a sociologist who received her AB in 1934 and her PhD in 1942, both from the University of Chicago. They had two children, Sandra and Karl, both academics.

At a time when there were few relatively few African American professors in U.S. higher education outside of historically Black colleges and universities (HBCUs), Drake taught at Roosevelt University from 1948 to 1969 as professor of sociology and anthropology. During this period, he made important contributions to African American education in the international arena. He completed his PhD dissertation in 1955, based on fieldwork in Cardiff, Wales: *Values, Social Structure, and Race Relations in the British Isles*. It was never published because he feared it would endanger his

informants engaged in the struggle against colonialism. In 1957, he contributed to founding the African Studies Association, and later, he helped to establish the American Society for African Culture. And in 1958, he attended the All-African Peoples Congress called by George Padmore and President Kwame Nkrumah of Ghana. Drake headed the sociology department at the University of Ghana at Legon and advised President Nkrumah from 1958 to 1961. Responding to a request by Nkrumah, Drake helped to train the first group of Peace Corps volunteers sent to Ghana by President John F. Kennedy in 1963.

His Legacy

Although his scholarship always focused mainly on the African American experience, Drake's formal role in the developing African American studies movement started in 1969, when he became chair of the Program in African and African American Studies at Stanford University, retiring in 1976. One of his most important publications in this context was the two-volume *Black Folk Here and There: An Essay in History and Anthropology* (1987, 1991).

Among his many honors were the American Sociology Association's Du Bois-Johnson-Frazier Award in 1973, his election as an Honorary Fellow of the Royal Anthropological Institute of Great Britain & Ireland in 1986, and the Distinguished Achievement Award for Extraordinary Scholarship and Activism from the Association of Black Anthropologists in 1989.

Drake provided a useful tool for understanding his life and work and that of other African American scholars. He summed up the advice of his mentor Davis that an African American scholar should try to provide theoretical input to their discipline, to develop empirical expertise in some area of society, and to contribute to what he called Black liberation. Much of Drake's scholarship was based on the theoretical formulation of such concepts as caste, class, and race, developed by W. Lloyd Warner at the University of Chicago and reflected in *Deep South*, *Black Metropolis* and in other publications. *Black Folk Here and There* was concerned not just with people of African descent but also with their interaction with broader global dynamics, dealing with the situation of people of

African descent before White racism was developed as a way to justify the trade of enslaved Africans, enslavement, and colonial imperialism around the world.

In detailed empirical research on issues of social structure, Drake completed *Churches and Voluntary Associations Among Negroes in Chicago* (1940), the title of a research memorandum reference in Gunnar Myrdal's *American Dilemma* (1944), and he was always particularly devoted to in-depth study of the lower-social-class strata of the African American community. Insights developed from "hanging out in the hood"—whether this was the jook joints of rural Mississippi or the beer halls on the south side of Chicago or the pubs of Tiger Bay in Wales—were highly valued and reflected Drake's understanding that without the experiences and insights of working-class African American people fully recorded, the resulting picture of the world and theories of social change would be stunted.

The study of the African American experience in U.S. higher education best represents the third aspect of his mentor's advice: selecting a problem that contributed to racial advancement or Black liberation. Although it was not called African American studies in the early stages, this began with Drake's role in the founding the African Studies Association, his role in organizing African studies at Roosevelt, and his contribution as founding director of the Program in African and Afro American Studies at Stanford in 1969, described as the first such program in a private institution in the United States.

Drake brought a considerable degree of legitimacy to the field of African American studies: a prestigious older scholar with an established reputation bringing his personal and professional reputation to bear on why it was right for younger scholars to insist on the legitimacy of the African American perspective in the academy. This is best summed up by his statement in an unpublished essay cited by McWorter and Bailey:

The very use of the term Black Studies is by implication an indictment of American and Western European scholarship. It makes the bold assertion that what we have heretofore called "objective" intellectual activities were actually *white* studies in perspective and content; and that corrective

bias, a shift in emphasis, is needed, even if something called "truth" is set as a goal. . . . the present body of knowledge has an ideological element in it, and a counter-ideology is needed. Black Studies supply [*sic*] that counter-ideology.

Drake also understood and appreciated the imperative of interdisciplinary approaches and the need for dialogue between the humanities and the sciences, a point of emphasis by pioneering African American studies scholars echoing an earlier call by British writer C. P. Snow. Drake was a biologist as an undergraduate and was deeply influenced by Davis, who taught literature at Hampton, but retooled in 1932 to 1933 under the tutelage of Bronislaw Malinowski and Lancelot Hogben in anthropology and evolutionary biologist Julian Huxley of the London School of Economics, and did early research on nature and nurture and race as a sociocultural construction. This kind of approach could help clarify some of the issues and implications related to the African American experience of contemporary research on human origins, the human genome, brain-mind-memory, and related topics.

Drake did not shy away from social activism either in his own life or in his patience and support for his many students who sought to combine scholarship with social activism. He was thus an early exemplar of what the African American studies movement eventually adopted as a motto: academic excellence and social responsibility. Drake played an important role in shaping the intellectual underpinnings and the public policy debate that led to the Supreme Court decision in *Brown v. Board of Education, Topeka, Kansas* (1954); work on the Deep South research project led Davis to conduct in-depth studies published as *Children of Bondage: The Personality Development of Negro Youth in the Urban South* (1941) and *Social-Class Influences Upon Learning, Intelligence and Cultural Differences* (1948).

From his standpoint as an intellectual and committed scholar, Drake was deeply involved in the international arena and in the escalating struggle in the United States. This included the 1930s, when the radical ideas of Marxism and socialism were placed on the nation's agenda, the civil rights movement of the 1950s and 1960s, the turn to Black nationalism and African American studies in

the 1970s, and the African American community upsurge and changes in race relations during these periods. His role as a teacher—acknowledged, for example, by James Forman, former leader of the Student Nonviolent Coordinating Committee and many other scholar-activists—is not well-known and should be the subject of future research.

DROPOUTS

The definition of *dropouts* in contemporary U.S. society is complex. Historically, definitions of the term have varied from state to state, across school systems within states, and, in some instances, within school administrative offices. Although the definition still demands clarity, many African

American students are leaving high schools across the United States without diplomas at alarming rates. This trend has cultivated comparatively low lifetime earnings for this population and contributed to income disparities that negatively impact African Americans.

The National Center for Educational Statistics offers several definitions of *dropout*. Event, status, and cohort dropout rates each provide a different perspective on the school dropout population. Event dropout rate is an annual measure that provides data about how effective educators are at retaining students in schools. Status dropout rates indicate the extent of the dropout problem in a population and can be used to estimate the need for further education designed to help dropouts become productive members of contemporary society. Finally, cohort dropout rates reflect what happens to a group of students over a period of time. These rates are based on repeated measures of a cohort of students with shared experiences and reveal how many students starting in a specific grade drop out over time. This entry looks at data about African American dropouts and explanations for this phenomenon.

Data on African Americans

These definitions hold implications for African American students. Within each, consideration must be given to the representation of African Americans relative to other ethnicities. Historically, reports based on different types of dropout data have indicated that African American students are more likely to drop out of high school than their White and Asian American counterparts and that demographics, family educational support, behavior, and student school behavior were key variables in their decisions to drop out.

The National Educational Longitudinal Study of 1988 (NELS) identified and surveyed dropouts who left school between the 8th and 10th grades and compared them with 1990 dropouts who returned to school, enrolled in general education diploma courses, or remained dropouts 2 to 4 years later. NELs addressed questions related to when students begin to behave as potential dropouts and was developed to provide explanations on the dropping out on a national level. The results of these national quantitative analyses provided

the foundation for a number of studies that focus on the dropout rates among African American students.

A 2004 report published by the National Center for Education Statistics included estimates about the trends in dropout and completion rates defined by event and status dropout rates, status completion rates, and the average freshmen graduation rate. The report indicated that African American students are still disproportionately represented as high school dropouts (5.7%) in the United States compared with White students (3.7%). In a follow-up report, *Diplomas Count 2006*, it was noted that African American students drop out of school at a rate of approximately 52%, suggesting a glaring disparity with the 36% rate of their White counterparts.

Theoretical Explanations

Several theories have emerged as explanations of dropout behavior among African American students. Historical perspectives have indicated that many economic and social factors, as well as structural features of schools, contributed to the dropout problem among African American students. Even when armed with high school diplomas, these adolescents are more likely to suffer economically and socially compared to their White middle-class counterparts.

This may have the foundation in the ideologies of African American males, who were more likely than their female counterparts to believe that school was a waste of time and concluded that they were unconvinced that they would be rewarded for their hard work and effort. As a result, it has been suggested that these students questioned the effects of the community, social, and economic opportunities that surrounded them, and the rejection of these factors may lead to dropout behavior.

A 2006 report, *The Silent Epidemic: Perspectives of High School Dropouts*, identifies four reasons given by students for dropping out of school:

- School is boring.
- Uninspired teaching, unmotivated students.
- Struggling in school and needed help.
- Slow process of disengagement.

According to this report, the number of African American public high school students who did not graduate with a diploma was approximately 50%. The report also suggests that 63% of the African American students surveyed said that they were not motivated or inspired and that this was a major reason that they decided to drop out of high school.

Adair White-johnson proposes that the schooling experience can reflect tenets of a hidden curriculum that encourage African American students to engage in a process of cultural surrender, which she refers to as a “barter syndrome.” She argues that although dropout status has been variously linked to low self-esteem, demographics, socioeconomic status, societal structural conditions, passive agency, and family characteristics, it is evident that there is a relationship between African American students and the barter syndrome. Students who participate in this exchange process are more likely to accept the rules of the institution as is, listen without question to the authority figures, and exhibit socially acceptable behaviors than the students who opt not to participate in this educational bartering system. White-johnson suggests that the rejection of the exchange process through refusal to give up personal cultural expression by engaging in conformist behavior to gain acceptance by authority figures could reduce the likelihood of academic success and the ability to earn a high school diploma.

A multitude of factors have contributed to the disproportionate dropout numbers of African American students in U.S. schools. The aforementioned explanations have contributed to the contemporary framework that characterizes reasons for the disproportionate dropout rate among African American students. Efforts continue to formulate clearer definitions of the term dropout and to learn more about the factors that contribute to dropout behavior in U.S. public schools.

DU BOIS, W. E. B. (1868–1963)

William Edward Burghardt Du Bois is one of the most prolific and influential intellectuals ever birthed in the United States. Although he was a trained historian, his accomplishments in the discipline of sociology are immense and continue to be lauded as seminal developments in the U.S. intellectual experience. The majority of his scholarly accomplishments were made during his tenure with the Atlanta Sociological Laboratory from 1897 to 1914. Under Du Bois's leadership, perhaps the most significant achievement of the Atlanta Sociological Laboratory was the establishment of the first U.S. school of sociology; the Du Bois-led Atlanta Sociological Laboratory was the first sociological research unit in the United States to engage in collective research on a particular research topic. This is a distinction that, until recently, had been bestowed on sociologists at the University of Chicago for activities that followed Du Bois's research program by nearly 20 years. Although this is a noteworthy feat, Du Bois was responsible for additional contributions to the discipline.

Prior to the dominance of U.S. sociology by the University of Chicago, Du Bois had penned the first U.S. studies, regardless of race, on the family and religion. In addition, he spearheaded the first

objective and scientific inquiry into the education of African Americans at the turn of the 20th century. More significant to the discipline of sociology are his accomplishments in research methodology that are now standard practice. First, he was the earliest sociologist to institutionalize the practice of utilizing insider researchers to gather data. This data collection strategy enables researchers to gain easier access into the groups studied. The result was the collection of data that were, quite possibly, more reliable than that collected by someone viewed by the subjects as an outsider. Second, Du Bois was the first to institutionalize the practice of using more than one research method to address a research question. This practice, now called method triangulation, improved the likelihood of gathering data that were both reliable and valid. Finally, he was the first to institutionalize the practice of acknowledging the limitations of his research. Prior to Du Bois's work at Atlanta University, very few, if any, social scientists voluntarily identified the weaknesses in their work. Du Bois, wanting to be free from charges of bias given the nature and focus of his research, openly acknowledged the flaws and imperfections of his research. Similar to method triangulation, acknowledging the limitations of one's research is now common practice in the discipline.

The significance of W. E. B. Du Bois to the discipline of sociology and to research on diasporic Blacks cannot be overstated. Accordingly, much of his scholarship continues to serve as templates by which research on these topics are grounded and replicated. Despite the tremendous obstacles that he faced during his 96 years, Du Bois was always hopeful that scientific inquiry would lead to improvements in the social, economic, and physical condition of diasporic Blacks. Without question, the studies he spearheaded at Atlanta University between 1897 and 1914 were influential in achieving that goal.

"Willie's" Early Life

Du Bois was born February 23, 1868, in Great Barrington, Massachusetts, to Alfred Du Bois and Mary Silvina. Although there is no credible account of the life of Du Bois's mulatto father, it is known that Alfred was never a part of his child's life. Mary raised Alfred's son as a single parent in

a town known to be ardently supportive of the abolitionist movement.

The Great Barrington of the mid-1800s was vastly different from many U.S. towns in that it was a place where overt acts and practices of racism and violence were the exception, not the rule. Moreover, the few Black youth of Great Barrington, like their White town peers but unlike their race peers in the majority of the nation, were encouraged to obtain an education and to enter into the world of knowledge with as much abandon as children of any race. Young Willie Du Bois, as he was called during his adolescence, often reflected fondly on his experiences as a child growing up in Great Barrington and on the ways in which he was treated not very differently than the White children of the town.

The only example one finds of Du Bois's experience with "the Negro problem" in his hometown is in his classic text *The Souls of Black Folk*. Here, Du Bois recalls an incident where he offered a White girl a card, presumably for Valentine's Day, but his bid was rebuked. In his mind, he believed the young White girl's refusal of his card was rooted in racism and thus, comprised, according to him, the major race incident he experienced prior to leaving the northeastern town for college life in the U.S. South and beyond.

In 1885, Du Bois's mother died. He had spent the 2 previous years caring for his ailing mother while looking forward to the time when he could enter the local institution of higher education, Harvard University. Although the death of Mary released him of his caretaking responsibilities, entry into Harvard had to wait. Du Bois excelled in academics during his years in primary and secondary school in Great Barrington, thus eliminating the problem of grades as his major obstacle to attending the prestigious institution. He was unable to attend Harvard because of a lack of money and because of the school's reluctance to admit African Americans, even those as talented and exceptional as the future cofounder of the National Association for the Advancement of Colored People (NAACP).

Unable to attend the most prestigious White college in the nation, Du Bois set his sights on one of the most prestigious African American college of the era, Fisk University. Again, the matter of money served as an initial, yet brief barrier to Du Bois's entering the all-Black college located in Nashville, Tennessee. Because young Du Bois was

regarded by many in Great Barrington to be an exceptional scholar, someone who would go off to college and accomplish great things, and in light of his beloved mother's passing, several local churches raised monies to support his 4-year education at Fisk. Thus, with his monetary concerns allayed, Du Bois was freed to focus singularly on academics and intellectual endeavors.

His Education

Entering the Negro World

When Du Bois entered Fisk University in the fall of 1885, the institution, along with Atlanta University, was considered one of the top colleges in the United States regardless of race. Moving from the sheltered abolitionist town of his youth and into the belly of Jim Crow, however, proved to be quite an experience for young Du Bois. In Tennessee, he readily acknowledges first experiencing the daily insults of being a person of African descent living in the United States. Commenting on his initial impression of Tennessee and the South, Du Bois told his biographer, "I go down to Fisk University and suddenly I am in a Negro world where all of the people except the teachers belong to this colored world" (cited in Asch, 1961, p. 1).

Arguably, the seeds of his passion for the social justice rights of American Americans were planted and nurtured by faculty and administrators at Fisk. This institution, established in 1866 on the promise of educating emancipated African Americans, was a racially integrated campus where most early instructors were former abolitionists from Oberlin College who encouraged their students to engage in proactive activities in the struggle for their own liberation. Although the origin of Du Bois's theory of the Talented Tenth is usually traced back to Alexander Crummell and Henry L. Morehouse, it was at Fisk that Du Bois was indoctrinated with the idea that the eradication of the race problem through intelligent leadership should be the goal of educated persons. According to Du Bois's recorded interview, faculty at Fisk guided him in the following way:

[They] developed in me, and I am sure the majority of my fellow students, the idea of the Negro problem as being an evangel, a gospel where chosen men were trained and armed, and went

out to take the leadership of the mass. (cited in Asch, 1961, p. 2)

Harvard at Last

Upon graduating from Fisk in 1888, Du Bois was well prepared to face the rigors of Harvard and resolute in his belief that scientific inquiry into the “Negro problem” would be his life’s work. In the fall of 1888, Du Bois accepted a scholarship to Harvard, which paid his tuition and provided a stipend. Had he entered Harvard immediately after high school, Du Bois admits that he would have thought differently on matters such as race relations. By the time he entered Harvard, Du Bois’s Fisk training in the social gospel altered his notions on race to such a degree that he, as told to his biographer, “brought with me the feeling of a separate race. I never thought of myself a Harvard man as I’d felt myself a Fisk man” (cited in Asch, 1961, p. 1).

During his years at Harvard, Du Bois was determined to study intently and to develop research programs to scientifically study the condition of the African American and develop theories to address the many problems facing U.S. second-class citizens. So focused was he on his studies that he acknowledges not knowing, or desiring to know, many of his classmates. Instead, he delved into his courses and in 1890, received the BA from Harvard. Because the academic rigors of Fisk were thought to be inferior to Harvard, Du Bois was required to complete 2 years of undergraduate work prior to entering the graduate program. In 1892, he earned the MA from Harvard.

Desiring a greater challenge, as the University of Berlin was considered a grade above Harvard, Du Bois went to Europe to study in Germany. Were it not for a residency requirement, he would have received a doctorate from the University of Berlin. Later in life, Du Bois stated in a recorded interview, “It’s rather interesting to know that last year [1958], when I was in Berlin, that the University brought out my records and gave me the degree that I didn’t get some 70 years before” (cited in Asch, 1961, p. 2).

In 1895, upon completing his doctoral dissertation, *Suppression of the African Slave Trade to the United States of America, 1638–1870*, Du Bois received his PhD from Harvard, the first African American to do so.

Teaching and Research

The young scholar accepted a faculty position at Wilberforce University in Xenia, Ohio. His tenure at Wilberforce was short, for he desired a greater opportunity to bring to fruition his research agenda on African Americans and race issues. In 1896, Du Bois accepted an invitation from the University of Pennsylvania to spearhead a study of African Americans in the Seventh Ward of the city. Despite not receiving official faculty designation (he was listed as assistant in sociology) nor having an office or teaching responsibilities, he conducted a thorough investigation that resulted in the first scientific urban sociological study conducted in the United States, *The Philadelphia Negro*.

Almost immediately following the completion of his Philadelphia study, Du Bois was offered a position at Atlanta University in Atlanta, Georgia. The university had recently initiated a series of investigations into the social, economic, and physical condition of African Americans in the United States and after a nationwide search, concluded that Du Bois was the best person, African American or White, to lead such an endeavor. The decision to accept the Atlanta University offer was easy for Du Bois because, as he posits in an interview near the end of his life,

What we needed was an academic study of the American Negro. I wanted the Universities of Pennsylvania and Harvard and Yale and so forth to go into this partnership by which this kind of study could be forwarded. But they of course didn’t do anything at all. But Atlanta University, which was a Negro institution down in Atlanta, Georgia asked me to come down there and teach and take charge of some such study. (cited in Asch, 1961, p. 3)

Although much is known about the life and career of Du Bois, arguably, the least amount of information regarding this giant scholar has historically been on his immense contributions as leader of the department of sociology at Atlanta University.

The Atlanta University Years

In 1895, Atlanta University President Horace Bumstead and Trustee George G. Bradford

spearheaded the establishment of the Atlanta University Studies on the Negro Problem. The Atlanta studies were to replicate for urban African Americans what the Tuskegee Institute and Hampton Institute conferences were accomplishing for rural and industrial interests, respectively. Although Bradford performed admirably as the director of the first two Atlanta University studies, it was clear to President Bumstead that a trained academician was needed to raise the scientific quality of the annual investigations. In 1897, Du Bois was offered the position of director of the Atlanta University Studies on the Negro Problem, and he began his tenure at Atlanta University in January 1898.

Although the Atlanta University Studies on the Negro Problem was initiated 2 years prior to his arrival, the research unit now known as the Atlanta Sociological Laboratory, the moniker bestowed on scholars affiliated with the scientific research efforts conducted at Atlanta University between 1895 to 1917, did not begin its ascension to social science greatness until Du Bois's arrival. Immediately upon accepting the position, Du Bois began to reorganize the annual investigations in three major ways.

First, the two initial studies were deemed by him to have low scientific value due to their efforts to replicate the Tuskegee and Hampton models that were aimed primarily at social reform and uplift. For Du Bois, although social reform and uplift were possible results of research, they should be one's mediate not immediate goal. The immediate goal of the researcher should be to construct and conduct scientifically grounded and sound research. Accordingly, Du Bois utilized what is now known as method and theory triangulation. Although triangulation was probably utilized by some academics of his era, it was Du Bois who institutionalized the practice of using two or more methods of research to study a particular phenomenon and two or more theories to explain a particular phenomenon.

Second, the initial conferences focused singularly on the experiences of African Americans in cities. Du Bois wanted to, as much as possible, make the findings generalizable to the entire U.S. population. Thus, the focus shifted toward human conditions that were experienced by a variety of persons, not only African Americans. It must be noted that although Du Bois desired generalizability, his primary research focus was

on the experiences of African Americans in the United States.

Finally, the plan of the initial studies, according to Du Bois, was to address a hodgepodge of issues each year with little direction as to topical preference. His idea of the Atlanta University studies was to address 10 specific topics concerning African Americans over a 10-year period. At the completion of the 10-year cycle, the same topics were to be revisited to note changes. In theory, the desired result was to be a 100-year longitudinal study of the social, economic, and physical condition of the race that could be the basis from which grounded theories on topics such as economic development, immigration, and assimilation could be developed. In restructuring the Atlanta University studies, Du Bois laid the foundation for one of the most significant programs of sociological inquiry ever established in the United States: the Atlanta Sociological Laboratory.

Du Bois served on the faculty at Atlanta University from 1897 to 1910. His departure in 1910 was due to his aggressive research in the area of race relations, which displeased many philanthropists who were generous contributors to the university. Knowing that his presence on the faculty was affecting the financial health of the institution, Du Bois tendered his resignation. Although he left the faculty of the university in 1910, he continued to serve as the codirector of the Atlanta University studies for an additional 3 years. During this time, he edited or coedited 14 monographs and led the Atlanta Sociological Laboratory to academic prominence in a number of areas.

First, he established at Atlanta University the first U.S. school of sociology. Although the Chicago School of Sociology, the moniker bestowed on scholars engaged in sociological activity at the University of Chicago between 1915 to 1930, is generally regarded as the first American school of sociology, recent research indicates that Du Bois's Atlanta Sociological Laboratory predates Chicago by almost 20 years. Relatedly, the Atlanta Sociological Laboratory represented first program of systematic and scientific urban research in the United States. Prior to the program in Atlanta, there had never been a scientific and systematic study of the urban United States.

Second, Du Bois and the Atlanta Sociological Laboratory spearheaded the first scientific study of

the family in the United States, regardless of race. Third, Du Bois and the Atlanta Sociological Laboratory spearheaded the first scientific study of religion in the United States, regardless of race. Fourth, Du Bois was the first U.S. scholar to conduct an objective scientific study of African American education. Using admission data, correspondence with college presidents, and questionnaires administered to African American college graduates, Du Bois refuted Booker T. Washington's argument that there was little, if any, need of African Americans trained in liberal arts colleges. Instead, Du Bois concluded that African Americans with liberal arts college degrees were sufficiently employed, and further, there existed a need for a larger number of African Americans educated in this manner.

Summarily, Du Bois's years at Atlanta University proved to be his most productive and infuriating as an academic. His departure from the university was initiated by the loss of philanthropic gifts to the institution from Whites who were not pleased with his often highly critical analyses of U.S. life. In his 1910 letter of resignation, quoted in his autobiography, Du Bois (1968) stated, "I insist on my right to think and speak; but if that freedom is made an excuse for abuse of and denial of aid to Atlanta University, then with regret I shall withdraw from Atlanta University" (p. 229).

Agitator for Human Rights

In 1910, Du Bois accepted the position of director of publicity and research in the NAACP and editor of the organization's magazine, *Crisis*. During this period, he penned many scathing editorials on topics such as lynching, sharecropping, politics, and communism. So long as the *Crisis* magazine was a self-sustaining unit, which made it virtually independent of NAACP control, Du Bois had a free hand to write on the topics of his choice without much serious reprisal.

After some time, the circulation numbers of Du Bois's magazine began to decline. Suddenly, the brashness of the acclaimed scholar, combined with the magazine's new dependence on the NAACP for financial assistance, led to direct conflicts with the organization's leadership. For Du Bois, the multiracial leadership of the NAACP was unwilling to confront the real conditions of African Americans with frank and honest discussion. Instead, as

proposed by Du Bois, the NAACP attempted to placate the fears of its White former abolitionist philanthropists who viewed his radical editorials in the pages of the *Crisis* magazine as anathema by toning down, or at least attempting to, the pen of the brilliant scholar. Du Bois ended his tumultuous first tenure with the NAACP in 1934.

Between Du Bois's first tenure at Atlanta University and his initial departure from the NAACP, his approach to eradicating the African American problem in the United States changed. In his early years as an academic, Du Bois ardently believed the major cause of race tensions between African Americans and Whites was caused by a lack of knowledge concerning the other and, to a certain degree, a lack of education. If only Whites would become better educated about African Americans, then the problems of race could be minimized or eliminated, according to Du Bois. Conversely, if only African Americans would obtain an education and prove to the White members of this nation that they have human capacities equal to theirs, then the perceived differences between African Americans and Whites could be eliminated. He believed that once education and knowledge were obtained by all, the race problem would diminish.

Unfortunately, he found over time that even when knowledge and information were obtained by Whites, racial antagonisms continued. It was at this point that Du Bois began to focus on highlighting the evils of Jim Crow racism in *The Crisis* magazine. This posturing discomfited many of the organization's assimilationist-minded members and led to Du Bois's departure from the organization.

Back to Atlanta

After an unceremonious departure from the NAACP and in need of a job, Du Bois accepted President John Hope's invitation to rejoin the faculty of Atlanta University and to continue the research program he led to prominence some 20 years earlier. He wrote,

In 1934 [Atlanta University President] John Hope and I set out to revive the old Atlanta University conferences and studies of the Negro problems. Hope sought unsuccessfully to obtain funds for this enterprise. (Du Bois, 1960, p. 19)

Although funding for the new research program was hard to obtain due to the economic downturn of the Great Depression era, they were successful in procuring some monies from the Carnegie Foundation, and research publications were released in 1941, 1943, and 1944. The revived Atlanta University studies were an attempt by Black land grant colleges and a few private Black colleges to engage in social science research on the social, economic, and physical condition of African Americans, especially in the South. As in the initial studies, Du Bois desired the procurement of data that could be utilized to challenge Jim Crow.

After President Hope's death in 1937, however, Du Bois's opportunities to complete his ambitious agenda at the university became precarious as the new administration felt challenged by the eminent scholar whose shadow, it was believed, loomed too largely over the small all-Black college. In 1939, Atlanta University instituted new guidelines regarding tenure and rank. Included within these new rules was the compulsory retirement of faculty members upon reaching the age of 65.

By the time this rule was enacted, Du Bois was well beyond the required age, as he was 65 when he returned to Atlanta University in 1934, and constantly engaged in various battles with university administrators. In something of a well-executed coup, a committee was established without his knowledge in 1944 to construct a suitable financial package to be awarded to Du Bois in the event of his retirement. According to Du Bois's autobiography, "My sudden retirement savored of a deliberate plot" (Du Bois, 1960, pp. 37–38). Although in the process of reestablishing the Atlanta University studies at the age of 75, Du Bois was informed by President Rufus Clement that he would be "retired from the active faculty of Atlanta University when [his] present contract expires on June 30, 1944" (Lewis, 2000, p. 493).

Back to NAACP

After his distasteful exit from Atlanta University, Du Bois once again reunited with the NAACP despite receiving academic job offers from Fisk and Howard. During his 10-year hiatus from the NAACP, the organization had become an even stronger influence in U.S. race relations, principally through the legal efforts of Charles Hamilton

Houston and Thurgood Marshall. Despite his unceremonious departure from the NAACP some years earlier, Du Bois was invited back to the organization, principally to serve as a figurehead, or so thought Walter White and the leadership of the organization.

As the director of special research, Du Bois continued his Pan African efforts and began to further his interests in communism as a solution to the problems of race in the United States and global colonization. Any positive discussion of communism, especially by African Americans, during this era was anathema. Du Bois not only openly discussed communism, but he also championed an antiwar peace movement during the late 1940s. His efforts within this movement resulted in charges placed against him by the U.S. government. Because of his active participation in the peace movement and sympathy with communism, Du Bois was asked to register with the government as a representative of a foreign nation.

He rebuffed this request due to his insistence that he was not a representative of a foreign nation, but a U.S. citizen who had the right to express his free will in any manner he so chooses. Although the charges of serving as a foreign agent in the United States were ultimately dropped, what disappointed Du Bois most during his ordeal was the refusal his beloved Talented Tenth, en masse, to come to the aid of their founder.

Years of Disappointment and Frustration

When Du Bois penned his seminal theory on African American leadership in 1903, he charged the exceptional members of the race with the responsibility of lifting up the less fortunate members of the race as they ascended to a better position in life. Essentially, Du Bois believed the Talented Tenth, which includes noncollege-educated persons, were to be the leaders of their respective communities and the example for adolescents and young adults. As mentioned, Du Bois was supremely disappointed that his Talented Tenth did not come to his aid during his trial with the U.S. government. With the exception of a few persons, the majority of the Talented Tenth, fearful of being viewed as sympathetic to the communist cause, shied away from Du Bois as if he were stricken with leprosy.

Years after the trial, Du Bois noted in his autobiography that “the intelligentsia, the Talented Tenth, the successful business and professional men, were not, for the most part, outspoken in my defense. They were silent or actually antagonistic” (Du Bois, 1968, p. 370). The aging dean of U.S. academics theorized that many middle-class African Americans, the locus of his Talented Tenth, were extremely worried that their defense of him might possibly result in direct physical and economic attacks. In addition, he believed a great many African Americans did not understand true communism, but relied on the propaganda of the U.S. government and mainstream press. To these members of his beloved cadre, Du Bois stated the following in his autobiography:

Negroes of intelligence and prosperity had become American in their acceptance of exploitation as defensible, and in their imitation of American “conspicuous expenditure.” They proposed to make money and spend it as pleased them. They had beautiful homes, large and expensive cars and fur coats. They hated “communism” and “socialism” as much as any White American. Their reaction toward Paul Roberson was typical; they simply could not understand his surrendering a thousand dollars a night for a moral conviction. (Du Bois, 1968, pp. 370–371)

After spending the first 93 years of his life fighting for the civil and human rights of African Americans in the United States, the aging intellectual giant, frustrated with the slow pace of progress in the area of race relations in the United States, made the cogent decision to apply for membership in the Communist Party of the United States. Immediately thereafter, he departed for Ghana. There, Du Bois received the high praise and honor of a scholar and international humanitarian that he had been denied in the United States.

Having returned to the land of his mother’s ancestors with 95 years of active struggle in the pursuit of the human rights of underrepresented people throughout the world, Du Bois died in Accra, Ghana, in August of 1963, on the eve of the delivery of Martin Luther King Jr.’s “I Have A Dream Speech,” at the March on Washington, D.C.

DUNBAR HIGH SCHOOL (WASHINGTON, D.C.)

Dunbar High School of Washington, D.C., formally Paul Laurence Dunbar High School, was considered one of the most prestigious African American schools in this nation between 1870 and 1955. During that period, the school was known for its academic excellence and highly educated faculty. Unlike the majority of segregated U.S. public school systems, the school system in Washington, D.C., was almost totally controlled by an African American superintendent and African American school board members until 1901. These administrators wielded influence over teacher appointments and curriculum. They were strong advocates for high-performing schools for African Americans, and Dunbar High School graduated numerous African American women and men who went on to become major figures in the United States. This entry looks at the school’s history during its period of excellence.

Early Years

Dunbar High School was established as the Preparatory High School for Negro Youth (later

renamed the Washington Colored High School) in 1870, by the Board of Trustees of the Colored Public Schools of Washington, D.C., and Georgetown. William Syphax, the first president of the board of trustees, spearheaded the drive for the creation of this school, the first high school founded for African Americans in this country. It was established 9 years before the creation of a high school for White students in the nation's capital.

The funding for the establishment of the school came from the Miner Fund, a fund that was created in the memory of Myrtilla Miner, a White woman who established a school for African American females in Washington, D.C., in 1851. The school was originally housed in the basement of the Fifteen Street Presbyterian Church.

In its first 2 years, the school had two female principals. The first principal was Emma Hutchins, a White woman from New Hampshire who served a 1-year term. The second principal was Mary Jane Patterson, an African American woman who was the first to earn a bachelor's degree from Oberlin College in 1862. Patterson headed the school from 1871 to 1872 and again from 1873 to 1884. Under Patterson's leadership, the school added a normal school teacher training program, changed its name to the Washington Colored High School, and held the first commencement exercises in June of 1877. Eleven male and female students graduated on that date.

When Patterson stepped down from her position as principal, Francis L. Cardozo took over as head of the school in 1884 and served until 1896. Cardozo was a highly experienced and visionary leader. During his tenure, the Washington Colored High School went through several transformations. Cardozo implemented a policy that required students to be admitted to the high school based on their qualifications and academic performance.

The Cardozo Years

In 1891, Cardozo secured a new facility on M Street near New Jersey Avenue, and in turn, the school took on the nickname "M Street High School." M Street later became the predecessor to Dunbar High School. Because M Street was the only high school for African Americans in the District of Columbia and the surrounding jurisdictions, it experienced overcrowding. By 1895, M Street had outgrown its new facilities.

Cardozo extended M Street's academic course of study from 3 years to 4 years and implemented a classical arts curriculum and a vocational and business curriculum. The vocational and business programs became the first of their kind in the Washington, D.C., schools. These programs provided a pattern for two other African American high schools in the district: Samuel Armstrong Manual Training High School and Francis Cardozo Trade and Business High School, which were established in 1902 and 1928, respectively. Cardozo believed that at M Street the vocational and business courses should give the students an alternative choice to a classical education and should prepare them for a career in the trade and business industry.

Although the school offered a vocational curriculum, M Street also had a strong college preparatory program. Most of the school's students attended college, which was unprecedented in the nation during the 1890s. Between 1891 and 1916, M Street graduated a multitude of students who achieved prominence on the local, national, and international levels. Others gained recognition for being the first African American in their respective professions.

The school also had an extremely high number of college-educated African American teachers and principals, starting with its inception. The M Street African American faculty held college degrees as opposed to normal school teaching certificates, which was unusual for public or private school teachers during that era. In fact, the faculty possessed more college degrees, including doctorates, than their White counterparts at the White high school in the nation's capital. Entrenched racist segregation laws and policies barred college-educated African Americans from various professions in the overall general society. Thus, teaching in segregated African Americans schools was their only option to make a decent salary.

Still, in this de jure segregated school, M Street students encountered caring and stimulating educators who personally held themselves accountable to the education of their students and to the community and overall society from which their students hailed. The school's academic standards and success in educating its students were higher than those in the District of Columbia's two White high schools in the first half of the century. In 1899, M Street students scored higher in English and in gen-

eral subjects on a citywide standardized exam than students at two of the District of Columbia's White high schools—Western and Eastern High Schools.

A New Century

Five years after Cardozo stepped down from his position in 1896, Anna Julia Cooper became principal in 1901. Cooper, who later earned her PhD from the Université de Paris, Sorbonne, transformed the school's college preparatory program and expanded it. During the 4 years Cooper worked as the principal of M Street, it achieved significant success and recognition. As a result of her pioneering changes at M Street, students were admitted into Harvard University and other major universities in the North and Midwest due to their high scores on college entrance exams.

In 1917, M Street moved to a new facility and was renamed Paul Laurence Dunbar High School, after the famous African American poet. Dunbar High School continued to maintain a rigorous college preparatory program. Many of the teachers incorporated African American history into their lessons or curricula. They also encouraged their students to utilize their education for the uplift of the African American community.

With the advent of school desegregation in 1954, Dunbar High School became a neighborhood school. From that point on, Dunbar High School began to experience significant academic decline and other problems that plague urban schools. In 1977, the 61-year-old Dunbar High School facility was demolished, and a new school was built.

E

EBONICS

The origin of the term *Ebonics* is attributed to psychologist Robert L. Williams, who coined the term in 1973 during a conference on language and African American children. In the conference proceedings published in 1975, Williams defined the term, which combines the words *ebony* and *phonics* to signify the following:

The linguistic and paralinguistic features which on a concentric continuum represent the communicative competence of the West African, Caribbean and United States slave descent of African origin. It includes the various idioms, patois, argots, ideolects, and social dialects of black people forced to adapt to colonial circumstances. (p. vi)

Despite the introduction of Ebonics in 1973, the term was not used widely until December 1996, when it was used by the media and public in the aftermath of a challenge to educational policy that erupted into a racially and politically charged controversy in Oakland, California. Since the late 1990s, Ebonics has often been used interchangeably with Black English, Black English Vernacular, African American English, and African American Vernacular English; however, these alternative terms are generally preferred over Ebonics by many academicians in disciplines that include linguistics, education, sociology, and anthropology.

Ebonics is a language variety spoken by many African Americans and some non-African Americans in the United States. The linguistic repertoire of many African Americans who are speakers of Ebonics reflects their skills in bidialectalism and their ability to code-switch between Ebonics and Standard English. Ebonics has a systematic, rule-governed grammar and is a dialect of English and is therefore understood to be mutually intelligible with English. Ebonics has three forms: vernacular, or what is sometimes referred to as nonstandard; standard; and literary. Ebonics has distinct features in phonology, morphology, syntax, and lexicon.

Further, Ebonics is distinguished by distinctive stylistic and performative features and is perceived as a marker of identity, authenticity, attitude, and ideology. Ebonics in schools has been highly publicized and political, and linguistic prejudice against Ebonics has major implications for educational practice and policy. This entry explores the beginnings of the use of the term Ebonics and its significance for African American education.

Origins and Features

Although Ebonics emerged at the forefront of volatile national and international public debates about Ebonics, race, class, and education in the 1970s and 1990s, the discursive practices of Africans forcibly transported from African nations during the transatlantic trade of Africans were first documented in the 1700s. As the nomenclature associated with the Black population has evolved, so has

the term used to refer to the distinctive speech of many African Americans. Nonstandard English and nonstandard Negro English were commonly used in the 1960s, Black English and Black English Vernacular in the 1970s and 1980s, and African American English and African American Vernacular English since the late 1980s. In contrast to William's global focus on African-descended populations, scholars have used these terms to refer almost solely to the discursive practices of African Americans in the United States.

Although Williams attributes the origins of Ebonics as an adaptation of colonization, Creolists such as John Dillard view Ebonics as the linguistic heir of Creole languages that developed among enslaved Africans as native languages were replaced by pidgin languages, which evolved into Creole. In contrast, proponents of the divergence model such as William Labov debate whether Ebonics is diverging or converging from White dialects in the United States. Other models call for merging Creolist and divergence theories. These explanations of the origins of Ebonics emphasize racial segregation and restricted social contact between African Americans and Whites.

Ebonics has been widely studied in disciplines in the humanities and social sciences. Literary scholars have examined narratives of enslaved Africans, testimonies, and letters for descriptions and perceptions of encounters with the disruption of native African languages and for the perceived acceptance of African Americans by Whites in speaking the King's English. Literary scholars have also examined use of Ebonics as a literary device perceived to lend authenticity to African American experiences as represented in literary genres including poetry, the novel, and the short story.

In contrast, linguistic studies of Ebonics have focused on quantitative analysis of specific features, sociolinguists and anthropologists have incorporated quantitative and qualitative analyses, and folklorists have drawn from more qualitative studies. Increasingly, scholars have attended to the complex diversity of the African American speech community and the role of context in influencing linguistic choices.

There are several comprehensive descriptions of the features of Ebonics authored by Geneva Smitherman, Lisa J. Green, and John Rickford. Key features that distinguish Ebonics from Standard

English include divergent patterns in consonant devoicing, reduction and deletion, copula absence, aspectual *be*, stressed *been*, and negation construction.

Implications for Education

Linguistic prejudice and profiling, while universal, have serious legal and policy implications. Since the 1970s, investigations of Ebonics English and language discrimination have increased and shifted from a focus upon education as a primary site of inquiry into social scientific and legal documentation of the impact of the confounding of Ebonics, or any accented form of English, race, ethnicity, and social class discrimination in credit, housing insurance, fair employment hiring and promotion, and judicial participation.

Linguistic discrimination against Ebonics has emerged as a contributing factor to racial and ethnic educational disparities by functioning as a barrier that limits access, progress, and success for African Americans in the educational system. In school districts across the United States, there are several thousand children who speak Ebonics as a primary language. Students who are primarily speakers of Ebonics tend to perform more poorly or at least not as well as Standard U.S. English speakers on written or oral examinations or standardized tests. Similarly, students who are primarily speakers of Ebonics appear to face greater challenges in acquiring skills in reading, writing, mathematics, and science.

Ebonics has implications for teacher education and professional development. Teachers have the greatest amount of contact with children in their daily school lives and contribute directly and indirectly to their placement within schools. Many teachers may not be familiar with or trained in the features of Ebonics, and others may be insensitive and perceive Ebonics speakers as unintelligible and incapable of listening, understanding, or learning. These linguistic and cultural biases may contribute to tracking and the dismal trends in academic low performance among African American students. Success in decreasing cultural and linguistic barriers has been demonstrated as a result of teacher education programs that familiarize teachers unfamiliar with Ebonics.

In classrooms where Ebonics is used as a teaching tool, students demonstrate marked improvement in

reading, writing, and speaking. Success has been demonstrated in the use of readers or bridge programs that transition native speakers of Ebonics from their home language to Standard English. Ebonics has been shown to be a rich and engaging resource that contributes to effective culturally based instructive pedagogies designed for speakers of the language ranging from K–12 education to public health awareness campaigns for chronic diseases that disproportionately affect the lives of African Americans.

Federal and state educational policy determines linguistic services provided to children who speak languages other than English as their native or home language. The 1996 Oakland School Board resolution that declared Ebonics the official language of the district's 28,000 African American students and called for resources to support the education of children who were Ebonics speakers advocated an understanding that these students were similar to other students for whom English was not a native language; hence, African American students were at a educational disadvantage. Similar legal cases related to Ebonics and education include the *Martin Luther King Jr. Elementary School Children v. Ann Arbor School District* (1979), the 1994 New Jersey ruling on special education and the case of a child known as E.J., *Donohue v. Copiague Union School District* (1977), and *Hoffman v. Board of Education* (1978).

ECONOMICS OF EDUCATION

Education alone is meritorious; however, for most, it is a means to an end. This entry considers the economics of African American education by focusing on returns to education—the earnings that accrue when the knowledge and skills obtained through education are used to produce income and wealth. The economics literature indicates that the quality of education is highly correlated with returns to education. Consequently, the link between education quality and earnings is explored in a historical context. This entry begins with a theoretical overview and then reviews the history of the economics of education, considering four periods: the antebellum era and the time periods from 1865 to the 1930s, 1940 to 1970s, and 1980 to the present.

Theoretical Overview

Returns-to-education experts equate the process of gaining an education to the production of tangible and intangible capital (structures, equipment, and software). Just as tangible and intangible capital is produced and is used by economic agents to produce goods and services over its useful life, humans are characterized as building human capital through an education process and using it to produce income during a work career.

A critical question that has not been fully answered by scholars is why have returns to education been less for African Americans than for other U.S. citizens historically. For 2005, U.S. Census Bureau estimates reveal that the average African American household income is only about 60% of average White household income.

Current explanations for the returns gap include, but are not limited to, a vector of variables that may be broadly defined as the economic, social, and cultural capital differences between Whites and African Americans. An important variable in the vector is school quality. In other words, because Whites enjoy more favorable economic, social, cultural, and educational environments, they are better prepared to learn and they become more educated. Ultimately, this higher level of learning translates into more and better opportunities to earn income and produce wealth.

The explanatory factor to be considered throughout this entry is the quality of education for African Americans. The assumption is that the quality of education is determined in large measure by the level of expenditures that are made to produce educational services. Therefore, it is important to explore historical circumstances to determine whether African Americans receive poorer-quality education than Whites. This trek through African American education economics may help reconfirm the reason for a portion of the gap in earnings between African Americans and Whites.

Antebellum Period

Attitudes toward educating enslaved African Americans and the related efforts to obtain education by enslaved Africans during the antebellum period may be separated into two key periods. The first spans the introduction of enslaved Africans into the Americas during the 17th century up to about the third decade of the 19th century, which was preceded by a few revolts of enslaved Africans. The remainder of the antebellum period accounts for the second period.

During the early portion of the first period in Northern and in Southern states, there were incentives to educate enslaved Africans for religious and economic reasons. A fully or partly educated worker could be freely converted to Christianity, could be influenced to live a Christian life, and

proved to be more economically productive. Because of these factors, and contrary to popular belief, many Southern enslavers facilitated literacy attainment by their chattel. Most religious organizations, philanthropists, and enslaved Africans themselves contributed to the development of private institutions that provided educational services.

There is evidence that certain enslaved Africans attained high-quality education as is reflected in the property and other wealth that they were able to accumulate in the South and in the North. However, the unsystematic and nonuniversal coverage of education for enslaved Africans during the period make it impossible to construct comprehensive data sets on the overall costs and benefits of education. Indeed, because most enslaved Africans remained enslaved after obtaining education, it would be misleading to compare returns to education for African Americans and for Whites.

The second period followed key rebellions of enslaved Africans by Gabriel Prosser in 1800, Denmark Vesey in 1822, and Nat Turner in 1831. The sophisticated and violent methods used during these revolts convinced Whites that education was a contributing cause of revolts. Therefore, in the South and in the North, attitudes toward educating enslaved Africans turned negative. This is not to say that education ceased for enslaved Africans. It did not. However, new penalties for educating enslaved Africans in the South and changing sentiments toward African Americans in the North slowed African Americans' acquisition of education significantly.

This slowing of education is evidenced by the number of free African Americans attending school in 1860, which was only about 6,000 above the number enrolled in 1850. Over that 10-year period, the population of free African Americans had increased by almost 54,000. Along with the deceleration in African American education, harsh racial discriminatory practices bubbled up in the North and created restrictions on employment. It became increasingly difficult for African Americans to obtain professional employment, even with training that was comparable to that obtainable by Whites.

Between the 1830s and 1865, African Americans in the North incurred heavy costs to obtain education. Even when laws permitted African Americans to attend schools, they were not generally able to obtain an education easily due to racial discrimination.

Moreover, although certain state laws provided for funding for separate African American educational institutions, states and counties exhibited a strong proclivity to not release those funds. In many cases where the funds were released, they were insufficient to support a school. Hence, it was necessary for African Americans and White philanthropists to provide considerable support for African American schools.

It is noteworthy that by the time of the Civil War, three African American educational institutions of higher learning were established: The Institute for Colored Youth, Lincoln University, and Wilberforce University. These institutions were funded by African Americans and their religious organizations and by White philanthropists. However, it was not generally possible for African American graduates of these institutions to secure employment and earnings that were comparable to similarly qualified Whites.

Data on African American earnings from this era are sparse, and it is inappropriate to compare those earnings with White earnings at the national level. However, given the racial discriminatory practices that African Americans faced in obtaining an education and in employment, it stands to reason that the average returns to education fell far shorter than of those for Whites. Returns to education for African Americans would likely be negative if the out-of-pocket costs of education were augmented by values that represented the physical and psychological costs that they incurred to acquire education. It goes without saying that the quality of African American education during the period was poorer than that of White education.

1865 to 1930s

This period is considered in two parts: (1) the period 1865 through Reconstruction and up to the turn of the century and (2) the period from 1900 to the 1930s. For these periods, it is important to review developments for common or elementary schools, normal or high schools, and colleges and universities separately. The quality differences in schooling by period and by level of education are reflected both in the enrollment and in the spending gaps that are part of the historical record. It is also important to distinguish between developments in the Southern versus Northern states.

Southern States

Southern states entered a recovery period immediately after the Civil War during which free African Americans temporarily assumed new roles in politics and education. They used their new influence to support the creation of common schools that were financed by public funds. Significant progress was made on this front until the end of Reconstruction in the late 1880s. By the 1890s, Whites had regained control of the Southern states and reimposed a life of mainly agricultural labor upon African Americans. It was primarily because of the need for Whites to have complete control of newly freed African Americans as agricultural laborers that African Americans in the South experienced very low levels of educational enrollment.

By 1900, Black–White enrollment in common schools was 22% and 37%, respectively, for children ages 5 to 9, and 52% and 76%, respectively, for children ages 10 to 14. In 1890, African American enrollment for high school students ages 15 to 19 was about 0.4% versus 4% for the White population. In addition, less than 0.1% of African Americans attended colleges or universities in 1900. The ratio of elementary and secondary school teachers to the population was 1 to 334 for African Americans, as opposed to 1 to 145 for Whites. For college professors, the ratio was 1 to over 40,000 for African Americans, but it was 1 to less than 6,000 for Whites.

After entering the 20th century, African Americans in the South continued their uphill battle toward educational equality with Whites. They helped fight World War I, contributed to the fast-paced economic growth of the Roaring Twenties, and persisted through the Great Depression of the 1930s. By the end of that decade, the gap in Black–White elementary school attendance was closed for children ages 5 to 9; 66% of African Americans attended school versus 65% of Whites. For children ages 10 to 14, a small gap persisted; 90% of African Americans versus 91% of Whites attended school. For secondary school and youth ages 15 to 19, 22.9% of African Americans were attending school by 1940; over 50% of White youth were enrolled. As for college, African American attendance had nearly tripled since 1900 to about 0.3% of the population.

Northern States

For most of the 1865 to 1930s period, 90% of the African American population resided in Southern states. Hence, with the exception of certain cities such as Philadelphia, New York, Boston, and Chicago African American students were distributed quite sparsely across most of the Northern states. Theoretically, the quality of education provided to them should have superseded that of African American students in the South. Northern states generally made significantly higher per capita expenditures on education than Southern states; the highest-spending Northern state more than doubled per capita expenditures on education in comparison to the highest spending Southern state.

However, as highlighted during the discussion of the nation's early history, racial discrimination in education was not absent from Northern states, and the theoretical advantages just mentioned were not fully available to African Americans. In fact, discriminatory pressures increased when African Americans migrated rapidly to Northern cities after World War I. The lack of African American political and economic power in the North played a key role in preventing African Americans from obtaining education that was comparable in quantity and quality to that received by Whites.

After the Civil War, the U.S. government and the states through taxation, key philanthropists such as John F. Slater, Anna T. Jeans, and Julius Rosenwald, White and African American religious organizations, and African Americans themselves all contributed to the development of African American educational institutions. Millions upon millions of dollars were spent. However, with common or elementary school being the exception, African Americans were still very far behind Whites in school attendance and in school quality as signaled by spending at the end of the period. Consequently, there still existed a sizable gap in Black–White educational attainment, earning power, and wealth when the nation reached the 1940s.

1940 to 1970s

This four-decade period was marked by four major developments that produced important changes to African American education and earnings: three wars (World War II, the Korean War, and the

Vietnam War), the *Brown v. Board of Education, Topeka, Kansas* (1954) decision, the Civil Rights Act of 1964, and Affirmative Action. The wars initiated a desegregation process, they provided incentives for African Americans to migrate North to assume new factory jobs and to complete additional years of education, and they made funds available for soldiers to extend their education and to better prepare themselves for new jobs that were appearing as part of a modern economy.

The *Brown* case struck down the so-called separate-but-equal doctrine for Black and White schools that was based on the *Plessy v. Ferguson* (1896) Supreme Court case. It would take nearly two decades before the nation would sort out how to comply with the *Brown* ruling. During the 1970s, most of the nation's elementary and secondary schools and institutions of higher learning were becoming desegregated. However, many African American teachers lost employment due to the imposition of new teaching standards, and high-quality urban African American communities across the nation showed signs of Black flight to increasingly desegregated suburbs. These were not intended outcomes of desegregation; nevertheless, they represented a deterioration of African American cultural and social capital that had been a positive factor in educational attainment.

The Civil Rights Act of 1964 and the related presidential executive orders that mandated Affirmative Action programs provided an additional impetus for desegregating educational institutions. These new laws were opposed by Whites—especially on the education front. By the end of the 1970s, the number of newly founded White religious schools that helped circumvent desegregation had mushroomed, and Whites were seeking legal redress for reverse discrimination, which they contended characterized Affirmative Action programs.

These four major developments, however, produced undeniable improvements in the educational and earning status of African Americans. For example, economists estimate that over 50% of the 1940 earnings gap between Black and White males was closed by 1980—although certain methods that are used to prepare such estimates are controversial. This improvement in African American earnings is closely linked to improvements in the quality of African American education that were made possible by the

aforementioned four developments. In addition, from 1960 to 1980, African American enrollment in non-African American colleges and universities increased dramatically from 1.8% to 8.2%.

The *Brown* case caused federal government agencies to discontinue tracking educational data by race; therefore, there is a severe shortage of data for this period with which to analyze trends in African American and White education. Nevertheless, the evidence that remains makes it clear that the quality and quantity of education increased over this period and facilitated improvements in earnings and wealth for African Americans.

1980 to the Present

Over the past three decades, relative educational attainment for African Americans versus Whites has continued to improve, but relative earnings have plateaued. This result emerged despite the strong surge in economic growth and earnings that marked the second half of the 1990s and the rise of the new information technology economy. At the midpoint of the first decade of the 21st century, the percentage of African Americans relative to Whites who were 25 years of age or older and held at least a high school diploma stood at about 95%. Similarly, the percentage of African Americans relative to Whites age 25 or older with bachelor's degrees stood at about 63%. (Notably, historically Black colleges and universities [HBCUs] continued to produce the vast majority of these African American graduates.)

These statistics reflect significant increases over their 1980 values of about 74% and 49%, respectively. On the other hand, the African American–White household earnings gap stands at about 60%; it was about 57% in 1980. This persistent earnings gap points to a broken link in the chain between education and earnings.

Today, selected African Americans receive great acclaim and wealth for achievements in a variety of fields—athletic, cultural, and entertainment fields predominate. Unlike earlier periods in the nation's history, these popular personalities serve increasingly as spokespersons for African Americans on critical issues. Their opinions are sought, not because of their intellect, but because of their wealth and popularity. This may be viewed as a favorable outcome, but it does invite the question whether

new African American leaders provide the sound judgment, advice, and direction that was forthcoming from the likes of W. E. B. Du Bois, Booker T. Washington, and Mary McLeod Bethune. However, a reemergence of African American leadership that has vision and insight that is derived, at least in part, from their extensive and high-quality education may be seen in the future. The 2008 election of Barack Obama as president of the United States serves as an example of such new leadership.

EFFECTIVE SCHOOLS

Within the context of education and schooling in general, the term *effective* is often used to

determine how successful a school or district has become in its quest to fulfill the requirements of the federal No Child Left Behind (NCLB) Act. Despite the fact that NCLB requirements are aligned with effective schools, it should be noted that there is quite a bit of debate about whether its mandates are actually improving educational outcomes for all students. With this being considered, this entry takes a different path, seeking to explain and appropriate the term *effective schools* by providing useful and practical explanations for how schools can be classified, identified, and operate to achieve such noteworthy distinction.

Several schools in predominantly African American communities have been identified as effective schools over the years. An effective school is one where the entire school's community has collectively agreed to invest all efforts in embracing both the systematic mission of the school district and the overall vision of the respective school. Administrators, teachers, support staff, parents, and community stakeholders all are a part of this cultural paradigm, and each group serves and assists the school in various capacities with the goal of ensuring that student achievement is the top priority.

Effective schools often adhere to a systematic, institutionalized, and seamless instructional program that closely monitors what students know and what they should be able to do. More important, schools that are deemed highly effective and successful typically use a plethora of interrelated programs for students and staff, guided by a common framework for curriculum, instruction, assessment, and learning climate, that are pursued over a sustained period. They further contend that once these sustainable efforts become institutionalized, student achievement efforts are easily documented, and the school's climate will ultimately change.

Effective schools successfully use data to drive their instructional program. All of the decisions that are made on behalf students—how they are placed into academic courses, what type of counseling and social needs they require, and also the various interventions and support that they may need—are determined by thoroughly explicating and disaggregating each child's data and assessments. There are several components in developing an effective school. These include, but are not necessarily limited to, professional development for

teachers, time for teachers to work collaboratively with each other in addressing the various needs of students, ongoing assessment and accountability efforts, and buy-in from all teachers.

The vast majority of teachers in effective schools feel as though they are reflective scholars who are a part of a larger educational community working tirelessly to close any educational gaps that their students may have. These are highly qualified professionals who have an excellent command of their subject matter and are able to use various pedagogical and instructional tools to maximize their delivery of the standards or objectives being taught. Being highly qualified means that teachers have met or exceeded their state's requirement for becoming a certified credentialed teacher and have demonstrated a level of competency in a particular subject area(s)—both single- and multiple-subject disciplines.

What is even more important is that teachers in effective schools acquire through quality professional development the best, most successful, and most research-based strategies that have been proven to be successful in ensuring that students achieve at high academic levels. Undoubtedly, teachers in effective schools ensure that their students have access to quality teaching by working collaboratively with their fellow teachers and parents to ensure that they are cognizant of how their child is progressing.

Parents also play a role in helping a school to become effective precisely because they are responsible for helping and assisting their offspring with their educational endeavors. One of the greatest strengths that effective schools have in terms of parental involvement is their ability to work closely with parents by helping them understand the systems and protocols of the school. Parents understand what, essentially, is expected of their children, and many effective schools require parents to commit to several hours of community service. This enables the students to see that their parents are also involved in their education and the overall academic success of the entire school community.

Community stakeholders are also viable players in helping schools become effective in that they often provide financial support to schools, and many enable students to work (both volunteer and unpaid) and apply some of what they have learned. It truly takes a village to raise a child, and businesses,

churches, and civic organizations help students before and after schools are closed for the day.

ELEMENTARY AND SECONDARY EDUCATION ACT OF 1965

The Elementary and Secondary Education Act of 1965 (ESEA) was adopted during the 89th U.S. Congress, one of several pieces of legislation that composed President Lyndon B. Johnson's overall Great Society programs. In many ways, ESEA represented an unprecedented commitment on the part of the federal government toward K–12 education with \$1 billion earmarked for this program. ESEA was set apart from previous federal interventions on K–12 education. This entry begins

with a look at the federal government's previous role in public education, then examines the act and its implementation, and closes with a discussion of some related policy issues.

Historical Background

To understand the history of ESEA, one must first recognize that K–12 public education is not a constitutional right and thus has always been a reserved power granted to state governments. This reality has not diminished the role federal intervention has played in U.S. public education, particularly around concerns with equality and equity of educational opportunity for African American students and others. This history, however, has and continues to be fraught with contention and controversy.

Prior to the passage of the ESEA in 1965, the U.S. federal government played a limited, yet fairly targeted role in K–12 education. In the 18th century, these efforts centered on the creation of schools and universities and by the 20th century were focused on the development of a national school lunch program and the creation of a K–12 math and science school curriculum.

By the mid-1900s, many educational advocates pushed for the federal government to take a stronger role in the funding of K–12 schools. Several communities posed a challenge to these efforts, including those that opposed any federal intervention into K–12 schooling that did not include support for private and parochial institutions. In addition, there were others who were afraid that federal intervention would lessen the control states had over public education. In spite of these challenges and with considerable persistence, Johnson was able to get the ESEA passed in 1965. At that time, ESEA represented an unprecedented federal investment and intervention on K–12 education and remains one of the longest-standing federal policies related to education.

Race and Poverty

From its inception, ESEA was one of several policies that came out of the larger Great Society programs implemented during the Johnson presidential administration. Although ESEA served the purpose of improving the educational opportunities

afforded to students who were considered economically disadvantaged, collectively the Great Society programs sought to redress larger social ills such as poverty. Race and poverty were often conflated in these discussions, as large concentrations of the individuals living in poverty in the United States were African American. For example, designed to remedy entrenched, generational poverty found across the urban and rural United States, the Great Society programs were rooted in the growing belief that federal policy could successfully intervene in and help remediate conditions of poverty. This perspective was fueled in part by growing social discontent and unrest around large-scale social inequalities and by the work of scholars who argued that a culture of poverty existed in impoverished communities often inhabited by African Americans.

The culture of poverty thesis suggested that because of structural barriers, individuals living in poverty adapted distinct—and generally negative—experiences, values, and ways of being. Although it was posited that these adaptations emerged in the context of larger social forces, it was simultaneously argued that these adaptations traveled across generations and ultimately defined the nature and character of those (and their descendants) living in poverty. This approach implied that the condition of poverty was related to the character and value of individuals who lived in poverty rather than a symptomatic feature of the larger social context and institutional practices that supported and maintained societal poverty. Important to note is that these perspectives on poverty did not emerge during this time, but rather emerged and became popularized in the early 20th century social science discourse.

Though the focus of the ESEA bill was on remedying poverty, this was not the only intended goal that framed the creation and implementation of the ESEA. The *Brown v. Board of Education, Topeka, Kansas* (1954) decision overturned the existing separate-but-equal doctrine that had legalized racial segregation in the United States. Although in theory this decision outlawed racial segregation in public spaces (i.e., de jure segregation), racial discrimination and segregation continued to flourish, particularly in the Southern states (i.e., de facto) because prior to congressional enactment of the Civil Rights Act in 1964, there

was little the federal government could do (or actually did) to oversee and enforce desegregation across the Southern region.

During his administration, Johnson recognized the virulent resistance Southern states had toward the racial integration of schools. At this time, it was often assumed that schools serving African American students provided an educational experience that was inferior to that offered in White school settings. It was believed that if African American students were to receive a better education—and in some cases, escape the pernicious effects of poverty—it was imperative that they attend racially desegregated schools. Johnson, then, positioned ESEA as both a remedy for poverty and as part of a carrot-and-stick program for ending school desegregation both in the North and in the South. School systems that did not comply with the federal order to racially integrate could not receive ESEA funding.

Key Provisions

In its original instantiation, ESEA had several provisions that targeted multiple areas in K–12 and higher education. These provisions included allocating funds for preschool programs, supplementing existing local and state funding for K–12 schools, creating regional research centers to improve school curricula and teacher training, strengthening state educational agencies, and providing scholarship funding for promising, but economically needy students. However, the hallmark of the ESEA was Title I.

The Title I portion of the ESEA legislation focused on the improvement of K–12 schooling for economically disadvantaged students—a group often referred to in the 1960s and 1970s as culturally deprived. Although the Title I program received the bulk of funds allocated for ESEA, there was very little guidance or direction offered to state school programs on how to use these monies. In the early years, school administrators looked to the U.S. Office of Education (then the Department of Health, Education, and Welfare) for assistance; later, oversight was given to the U.S. Department of Education.

During these times, two primary approaches characterized the funding allocation process. The first approach was more traditionalist in nature

and relied on using the poverty formula to identify the need level of school districts. This formula referred to a mathematical equation used to pinpoint how many students living in poverty were enrolled in any given school system. Under this approach, Title I monies would be given to school systems on the basis of how many students living in poverty attended these schools. School districts could choose to use their portion of Title I funds in whatever manner they deemed necessary. As a result, both students targeted for these funds (i.e., educationally and culturally deprived) and those who did not fall into this category could have equally received the benefit of Title I monies. In other instances, Title I funding was sometimes used to fund noninstructional programs, as was found during early evaluations of the program.

It was not uncommon for school districts to use Title I funding to fund general educational needs that did not specifically focus on the direct academic development of poor students. Monies might be used for general school purposes such as buying books and supplies for all school children (not just those identified as poor under the poverty formula requirements), to increase teachers' salaries, or to furnish the offices of district level officials. At the federal level, concerns arose about the widely disparate and often untargeted ways Title I funding occurred across the country.

The reformist view of funding allocation suggested that Title I funds should follow and be used specifically to improve the education of students living in poverty and not the school system in general. This approach sought to tighten up how Title I funds were used, including setting the requirement that school districts could not choose to use only Title I funds—rather than state and local monies—to support the educational services offered to students deemed educationally and/or culturally disadvantaged. School districts were required to use Title I funds to supplement, rather than replace, the services already provided to this specific student population.

Accountability Concerns

Aside from funding issues, one of the primary challenges related to Title I has been evaluating its effectiveness in improving the educational experiences of its targeted student populations. At the

federal level, policymakers pushed to make the Title I program more accountable for showing evidence of student academic improvement. Beginning in the mid-1980s, federal officials required that states identify those schools that both received Title I funding and failed to show improvement in achievement among their targeted student population. This emphasis on accountability of results, coupled with the request from states to have more flexibility in terms of how Title I monies could be used across school systems, defined debates about Title I during the latter part of the 20th century.

Beginning with the reauthorization of ESEA under the Clinton administration's *Goals 2000*, school systems were expected to create state learning and performance standards that linked with statewide student assessments measuring students' learning. This system foreshadowed the federal government's changing emphasis from just providing school systems with additional funding to improve individual students' learning to focusing on holding states and school systems accountable for actually improving the achievement of those student populations historically identified as disadvantaged.

It is not surprising that in its most current instantiation—as part of the No Child Left Behind Act of 2001 (NCLB)—Title I funding is integrally tied to accountability systems that hold school systems and schools responsible for showing evidence that students have improved academically.

Across the life of ESEA, another interesting dynamic has occurred that relates to, but is somewhat distinct from, concerns with the implementation and evaluation of Title I. This dynamic concerns how policy discourse has positioned and discussed student populations targeted by the program. Students who have received (and continue to receive) support through Title I programs were (and are) often characterized as deprived and deficient—culturally, economically, and educationally. Monies attached to ESEA (notwithstanding the early problems with funding use in the 1960s and early 1970s) were thought to provide educational experiences that would compensate for or improve upon the deficits that these students presumably brought with them to schools. In this equation, school systems worked to clearly identify and demarcate students presumed to need Title I services, and it was not uncommon to hear school officials refer to these students as Title I students.

These youth were sometimes part of pullout programs (one contentious strategy implemented by school systems to specifically target Title I's intended student population) or other compensatory supplemental programs designed specifically for them. It is perhaps not ironic that during the same time period that compensatory education programs were funded by Title I and implemented in schools across the nation, there was increasing empirical evidence that teachers and other school staff held lower learning expectations for African American students and students that lived in poverty. Such practices were the norm for African American students that attended both racially desegregated and racially segregated schools in urban, suburban, and rural areas.

To address these concerns, African American scholars working under the umbrella of multicultural education, and later African-centered education, challenged school officials, policymakers, and teacher education programs and textbook companies to examine the misguided and deficit-oriented way they approached the education of African American students and those who lived in poverty. Concerns with the longstanding tradition of holding deficit oriented perspectives about African American students and those who lived in poverty continued throughout the latter part of the 20th century. These concerns touched conversations about ESEA and in particular Title I.

For example, by the early 1990s, under the Clinton administration, there was a shifting focus placed on improving the education of all students, not just individual Title I students (or Chapter I students, as the program was renamed under the Clinton administration) previously highlighted in federal education policy discourse as uniquely deserving of special attention (e.g., culturally-educationally disadvantaged, at risk). This subtle shift in language put school officials on notice to attend to the improved achievement of all the students they served and thus, made it possible for schools to receive Title I–Chapter I funds based on the percentage of students in the targeted population who attended any given school.

The discourse of Title I–Chapter I students shifted from a focus on individual students to one that targeted schools as Title I or Chapter I. Yet while this discourse changed from placing a stigmatizing category on an individual student to one that placed

a stigmatizing category on schools (and by default school systems that had large numbers of schools that received Title I–Chapter I funding), the underlying assumptions and epistemologies about who constituted the low achieving student did not change.

For example, although the terms used to identify this group of students has shifted since the 1960s from culturally-educationally, disadvantaged-deprived to at risk, the general defining characteristics of this population have remained the same. These students are presumed to come from low-income family backgrounds, are primarily African American and/or Latino and are generally assumed to come to school lacking certain prerequisite knowledge and/or skills needed to academically succeed. It is further posited that these students come from families, communities, and/or cultural groups that do not value or support the pursuit of education. The danger of this policy discourse is that it not only helps to maintain a long-standing, deeply entrenched societal perception that poor African American students (and their families) do not care about education, but also frames how schools and teachers view and ultimately propose to work with these students.

Consequently, one of the by-products of this kind of discourse, regardless of the shift in policy focus since the late 1990s, is the explicit and/or implicit lowering of expectations for student learning. This occurs when curriculum is watered down to make it more appropriate and accessible to students who are positioned as in need of special attention or when teachers are asked to provide these students curricula that focus on rote transmission of knowledge rather than critical thinking. Since the passage of the NCLB (the most recent ESEA reauthorization) in 2001, criticism has been leveled at the way schools serving high populations of students living in poverty have narrowed and mechanized how and what these students learn. Indeed, these issues make any discussion about the effectiveness of federal policies such as ESEA both a contentious and complex undertaking.

EPPS, EDGAR (1929–)

Edgar Epps is one of the few notable, nationally recognizable African American scholars in the United States. His career was founded on and propelled by a profound understanding for the importance of education in the Black liberation struggle and his early interest in issues related to social stratification and social mobility. A sociologist at the University of Chicago who also writes about education, Epps mentored many African American scholars in both subject areas. This entry looks at his life and achievements.

Biographical Summary

Edgar Epps was the second of seven children (five grew up to be educators) born to Clifford and Odelle Epps in 1929. Epps spent his early years in Arkansas; he was born in Little Rock and reared and educated in Woodson before returning to Little Rock to complete high school after his parents insisted he attend a more academically challenging institution. On graduation from Dunbar High School in Little Rock, Epps attended

Talladega College in Alabama, where he majored in sociology. Epps completed a master's degree in social science at Atlanta University, the program famous as the home for W. E. B. Du Bois's classical sociological studies of Blacks in the South.

Epps departed for Washington State University in the mid-1950s, where he completed his PhD in sociology in 1959. This program was second only to the University of Chicago in graduating Black PhDs in sociology. Among the program's distinguished graduates were Epps, James Blackwell, and William J. Wilson.

Having finished his dissertation, Epps took teaching appointments at Tennessee State University, Florida A&M University, and the University of Michigan before becoming a professor of sociology at Tuskegee Institute. By 1970, he was named the Marshall Field IV Professor of Sociology and Education at the University of Chicago. At that time, Dr. Epps was among only a half-dozen African American scholars to occupy endowed chairs at the nation's major research universities. In this position, Epps played a pivotal role in expanding the production of African American PhDs in education and the social-behavioral sciences.

Following his long and successful tenure at the University of Chicago from which he retired in 1998, Epps became a senior professor at the University of Wisconsin in the department of educational policy and community studies. In addition to these academic appointments, Epps worked to inform education policy by serving two terms on the board of education of the Chicago Public Schools and spending 2 years as senior advisor to the assistant secretary for research of the U.S. Department of Education.

Research and Accomplishments

Given that education is a significant vehicle for social mobility, Epps was led to focus his research on the opportunities, access, and experiences of African American students within the education system. He was also interested in urban education, specifically addressing the desegregation of urban school districts, the effect of vouchers on urban education, and the institution of magnet and charter schools. The focus of Epps's work has been primarily on African Americans; however, he frequently connects the

implications of his work to the outcomes of other racial and ethnic groups and the broad experiences of students in the U.S. educational system.

Throughout his career, the work of Epps has been widely published in the professional and scholarly journals in education and sociology. In addition to his many journal articles and academic presentations, Epps is the author or editor of six books, including *Black Students in White Schools* (1972) and *Restructuring the Schools: Problems and Prospects* (Lane & Epps, 1992). He is especially known for the seminal work he published with Patricia Gurin, *Black Consciousness, Identity and Achievement: A Study of Black Students in Historically Black Colleges* (1975). This book reflects 6 years of research on African American college students, expanding the scholarly knowledge about these students and examining the interplay between their racial identities and academic achievement goals.

His body of inspired work has resulted in Epps's being the recipient of multiple honors and awards in his illustrious career, which include the Du Bois, Johnson, Frazier Award from the American Sociological Association; the W. E. B. Du Bois Distinguished Lecture Award from the American Educational Research Association; and the Giant in Science Award from the Quality Education for Minorities Mathematics, Science and Engineering Network.

In addition to his significant scholarly contributions and accolades, Epps has also distinguished himself as a mentor to a significant number of distinguished and emerging scholars. He has been described as demanding and patient, inspiring his students through his personal example of excellence in teaching, service, and scholarship. In 2002, Epps's students collaborated on a volume in honor of his significant contributions to education, social science, and the study of African Americans. Edited by Walter Allen, Margaret Beale Spencer, and Carla O'Connor, *African American Education: Race, Community, Inequality and Achievement: A Tribute to Edgar G. Epps* celebrates Epps's career and accomplishments by highlighting how his work and the Chicago School both contributed to contemporary scholarship about race and educational achievement.

ETHNICITY

Ethnic group (*ethnicity*) or *race*—which is the appropriate term when referring to the descendants of enslaved Africans who now call themselves African Americans? This entry examines that question by highlighting the similarities and differences between the two terms and what they mean in African American life and schooling.

Historical Background

Enslaved Africans who were forcibly brought to the United States and other parts of the Americas were not initially called Blacks, Negroes, Coloreds, or African Americans. Instead, they were from various regions and ethnic groups on the continent of Africa. Thus, out of many ethnic groups, they became one as a result of a shared history of enslavement, oppression, discrimination, and prejudice. The institution of enslavement and the various plantations and towns of the U.S. South is where the majority of enslaved African peoples' culture and language patterns—originating from Africa—became forged into what is now known as African American culture.

It is important to understand that this new culture and sense of community among African American people evolved in response to White

racism and their oppression as enslaved people. Thus, the ethnic identity of African Americans—just as anthropologist Frederick Barth noted in relation to the formation of ethnic group membership in Europe—also arose under oppressive conditions and the need for enslaved Africans and their descendants to form a collective identity for survival and success.

The term *ethnicity* may encapsulate one's language, political allegiances, and cultural basis. For example, the term *African American* implies that an individual shares common social, political, historical, and cultural experiences with other descendants of enslaved Africans in the United States, whereas the term *Black* is a more inclusive term that may include people from varied experiences (Caribbean countries or the African continent). Members of these groups may or may not ethnically identify as African Americans. Instead, *Black* is more of a racial category that may refer to people whose ancestors originate from Africa, whether recently as immigrants or earlier via enslavement in the Americas and Europe.

Describing Differences

Although sometimes used synonymously to refer to individuals who may have a shared genealogy, the terms *ethnicity* and *race* carry different meanings. Neither term is a static concept and therefore is not easily defined. In the United States and Europe, ethnicity is commonly associated with membership in a nondominant group (not of predominant European ancestry) and is perceived as constituting a different culture—in terms of language, style of dress, political consciousness and worldview, foods, music, and so on—than that of the dominant European American descended groups.

Membership status within ethnic groups can sometimes be negotiated, situational, or optional. For example, European Americans, depending on the context, sometimes exercise what Mary Waters refers to as ethnic options when it comes to group membership (e.g., Irish American, Polish American, etc.). For the most part, many just accept the broad racial category of White.

It is difficult to analyze ethnicity apart from a simultaneous analysis of race. The concept of race, contrary to its usage to physically describe humans, is not a biological category, but a social construction

predicated on supposed phenotypic characteristics; as a concept, it was used by Europeans to legitimate prejudice and discrimination on the basis of these supposed differences. As noted by Michael Omi and Howard Winant in their influential 1994 book, *Racial Formation in the United States*, the formation of race is social and historical in nature. Throughout the history of the United States, phenotypic characteristics were used to mark racial differences to legitimate racism, prejudice, and discrimination. Such classifications created a hierarchical arrangement of so-called races with White people at the top and enslaved Africans at the bottom; this oppressive system continued past emancipation onto future African Americans.

Historically, this hierarchical arrangement adversely affected African-descended people and was codified in the form of the Three-Fifths Compromise in the U.S. Constitution, the emergence of Jim Crow Laws after the end of Reconstruction, the *Plessy v. Ferguson* (1896) Supreme Court decision, and the subsequent erecting of Whites-only and Colored-only public facilities throughout the South during the 19th and 20th centuries. Consequently, this hierarchical arrangement of White over African American led to the legal formation of racially segregated schools, which adversely affected the quality of schooling for African American children throughout the 20th century.

Not only is race social and historical, but it is also deeply connected to geography or place, which influences how people are identified either racially or ethnically. In other words, place is implicated in racial and ethnic identity, the way groups or individuals are perceived, and thereby, their social, political, economic, and educational opportunities. Numerous examples illustrate the dynamic meaning of ethnicity and race across place (Latino or Hispanic) and time (e.g., the shifting in names such as Negro to Black, and Irish to White) in the United States.

Scholarly Understanding

At the beginning of the 21st century, however, most within the scholarly community no longer use biosocial terms such as race, but embrace ethnicity instead because of the fluidity in its definition. Embracing ethnicity in place of race has

shifted the discourse surrounding human differences in the United States from one that is biological in nature to one that is greatly shaped by nurture, culture, and historical experiences. The change in terminology, however, does not automatically change the privileges and social disadvantages of being identified and categorized as a member of a particular group.

Thus, while race, scientifically speaking, is a social construction and therefore not real, for African American people in the United States, however, its consequences have been real because race has fundamentally affected the housing, economics, and educational opportunities for African American people in the United States.

The changing demographics in the United States, particularly the expansion in the numbers of first- and second-generation foreign-born African American populations, have raised a new set of issues around race and ethnicity, which have implications for schooling. For example, even at the university level, where the percentage of African American students from immigrant communities in the United States has grown tremendously, students from diverse African American communities sometimes find that their cultural differences and different conceptions of race and ethnic identity can be a source of the confounding relations between African, Afro Caribbean, and African American students. Whereas some African American students may possess an Americanized notion of race and a broad view of African American identity—molded by skin color and their and their parents' experiences in the United States—this may not necessarily be the case with students who were not born in the United States.

For some, ethnic group membership (e.g., Ashanti, Diola, Fante, Hausa, Igbo, Kikuyu, Tswana, Yoruba) or the country where they or their parents grew up in (e.g., Jamaica, Guyana, Haiti, Kenya) serves as their most salient identity.

This area of research on race and ethnic identity is in need of greater exploration. For example, how do teachers' perceptions of African American students vary by ethnicity? And what are the consequences for these students' academic achievement outcomes? Furthermore, how and to what extent do these various African American subcommunities' ethnic identities become forged into a larger African American racial identity over time?

F

FIRST-GENERATION COLLEGE STUDENTS

Participation rates of African Americans in higher education have steadily increased during the latter half of the 20th century, and their patterns of attendance have shifted over time. Prior to 1945, almost all African Americans seeking access to an undergraduate education attended historically Black colleges and universities (HBCUs), according to William Harvey, Aida Harvey, and Mark King. Over the years, HBCUs have continued to remain an institution of choice whereby African American students learn from mentors and peers of their race who structurally sustain and support their success. Since *The Brown v. Board of Education, Topeka, Kansas* (1954) decision, a significant majority of African American students attend predominantly White colleges and universities. Community colleges also enroll a significant number of African American students, for their admissions academic requirements are less stringent and they are financially less expensive than many 4-year colleges.

Yet at the beginning of the 21st century, first-generation African American college students are still proportionately underrepresented in predominantly White institutions, and the gap between the rates of postsecondary attainment for African Americans (42%) as compared to Whites (62%) still remains, according to data reported in the *Journal of Black Studies in Higher Education*. Moreover, college graduation rates for African

American females stands at 46% and African American males at 35%, the journal notes. Many first-generation African American college students come from lower socioeconomic backgrounds, a 1997 study by Kassie Freeman found, and they also attended large urban comprehensive high schools, which did not provide an academically rigorous college preparation curriculum. As first-generation college students, they have parents who have not earned a bachelor's degree or have limited postsecondary experience. Although family members have wanted their children to achieve beyond their level of schooling, first-generation students will have less familiarity with the college process. In order to increase African American participation in college, social and environmental factors, as well as cultural and structural barriers and solutions unique to many first-generation African American students, must be taken into consideration to provide appropriate support for their access to and retention in college.

Supporting the high aspirations of college access, attendance, and retention for most first-generation African American college students requires negotiating several structural and cultural barriers that limit their access to higher education. Freeman investigated some of these barriers, which include academic, economic, psychological, cultural, and familial barriers. Academic barriers are rooted in the lack of adequate academic preparation of students coming from predominantly minority urban schools. Many students also identify economic barriers or insufficient financial support to pay for a college education. Students acknowledge that

there is a job ceiling and a lack of job opportunities that would be commensurate with their higher-education level.

Psychological barriers are manifested in several ways. A good number of students do not receive encouragement to go to college, and going to college is never presented as an option by school personnel. In addition, first-generation African American college students experience a loss of hope for a bright future and cultural shock in the intimidating hostile atmosphere while visiting some predominant White colleges. Cultural barriers were noted in the school curriculum that does not emphasize cultural contributions of African Americans and a lack of awareness of their specific social and economic conditions. With an awareness of these structural and cultural barriers, first-generation African American college students can be better assisted to address these challenges, access higher education, and persist in college completion.

The development and achievement of first-generation African American youth's aspirations to attend college have occurred through traditional powerful positive influences throughout the years and more nontraditional influences impacting youth in the 21st century. The more traditional positive college-going influences include the presence of a significant teacher, counselor, or family member who plays a transformative role in the lives of such students. Many African American students state that a teacher or counselor encouraged and helped them to develop their academic potential. Counselors facilitate the college-going process by providing current institutional information, access to college campus personnel, college visitations, and financial aid information. Cultural awareness of African Americans and a culturally responsive curriculum rooted in African American traditions have been cited as solutions to some of the structural barriers first-generation African American students encounter in schools. In addition, although African American family members may not have attended college, they have consistently promoted educational attainment and want their children to surpass their level of schooling. Moreover, in the Freeman study, students also mentioned that they are their own motivators in striving for the lives that they know they want to lead. Nontraditional factors such as spirituality,

popular culture, and youth's participation in research during their high school years also play a vital role in positively influencing some African American to attend college. Some African American first-generation students rely on spirituality as a positive and supportive cultural strength that fosters more positive academic achievement outcomes in their schooling experiences in general and college-going processes more specifically. In the face of much criticism surrounding popular culture, African American youth value the ways in which the media support their academic and college-going aspirations and identities. These traditional and nontraditional influences can buffer some of the negative structural and cultural barriers first-generation African American students encounter, support their educational futures, and ultimately increase their participation in higher education.

FISK UNIVERSITY

On January 9, 1866, Fisk Free Colored School, named in honor of General Clinton B. Fisk, was opened in Nashville, Tennessee. The school, which first offered instruction in the primary subjects of alphabet, lettering, and counting to formerly enslaved Africans of all ages, quickly evolved into Fisk University. Today, Fisk University is a large campus offering a wide range of academic and professional degrees. The African American's life story in the South—from plantation enslavement, emancipation, and contraband camp to acquiring education, civil rights, and full citizenship—is reflected in Fisk University's ongoing mission to encourage and train African Americans for service to humanity. This entry explores Fisk University in depth: its origins, the Jubilee Singers, its overall significance, its key leaders, and its role in the civil rights era.

Early Years

With the conclusion of the Civil War in 1865, the Bureau of Refugees, Freedmen, and Abandoned Lands (or the Freedmen's Bureau) was established by Congress to provide federal assistance in education and health care for emancipated African Americans. After the Tennessee Freedmen's Bureau was established, its superintendent John Ogden came to the Bureau's Nashville headquarters in late 1865. Joining forces with him were the Reverend Edward P. Smith, district secretary of the Middle West Department of the American Missionary Association, and the Reverend Erastus M. Cravath, field secretary of the American Missionary Society. Ogden, Smith, and Cravath agreed that Nashville, with its large population of

freedmen and women, was a suitable site for a normal school for African Americans and purchased land on the border of downtown Nashville for the school's campus. General Fisk, who had been in charge of Nashville's occupation and after the war became assistant commissioner of the Freedmen's Bureau for Tennessee and Kentucky, secured the surplus Union Army Hospital barracks to house the school. Fisk was an ardent proponent of rights and education for the formerly enslaved and donated over \$30,000 for the school.

Ogden, Cravath, and Smith each pledged \$4,000 of their personal funds to establish the school. Ogden resigned from the Freedmen's Bureau to become the school's first principal and then recruited a faculty of 10 instructors. Within 4 months of the school's opening, an education audit revealed that over 200 Fisk students could read.

The school's focus was redefined late in 1867 after the Tennessee General Assembly passed enabling legislation for the state's free public schools. Since the law would create a greater demand for qualified teachers, Fisk University elevated its educational mission from primary to higher education to meet the demand for African American teachers. On August 22, 1867, Fisk Free Colored School was incorporated as Fisk University, with Clinton B. Fisk as its leader, George White as treasurer, and a governing board of trustees. After shepherding the school through its evolution into Fisk University, Ogden left the school. Following Ogden to assume academic leadership of the school was Adam K. Spence, a former professor at the University of Michigan.

Spence expanded the school's faculty to 15 as student enrollment also expanded, but Fisk's buildings still consisted of the original, wooden hospital barracks. These facilities had deteriorated greatly within a few years and were overcrowded, necessitating funding for new school accommodations. At the suggestion of White, fundraising concert tours by Fisk's nine-member student choir, the Jubilee Singers, were conducted in 1871 to 1872. During those first U.S. tours, the youthful singers—for whom White served as business manager—introduced Negro spirituals to the world beyond the South, and money was raised to purchase 40 acres of land (the former site of Fort Gillam) in northwest Nashville for the school's new site.

During the Jubilee Singers' 1873-to-1874 concert tour of Europe, the group raised almost \$50,000 for construction of the school's first permanent building. This imposing six-story structure, named "Jubilee Hall" in honor of the Jubilee Singers, was designed by Architect Steven D. Hatch of New York. Construction began in 1873 on the high point between old city thoroughfares later named Seventeenth and Eighteenth Avenues, North. The Victorian Gothic structure, dedicated in January of 1876, first housed the entire college and is one of the oldest structures continuously in use for educational purposes by the African American community. Fisk University's earliest Jubilee Singers, who established the Negro spiritual as an authentic musical expression worthy of respect while creating a new image of the African American, remain as an inspirational chapter in the school's history. Contemporary members of the Jubilee Singers continue to uphold and enhance the group's heritage of celebrated choral performances.

Growth and Recognition

In the midst of Fisk University's growing recognition and fame, administrative growth also took place. Early in 1875, the Reverend Erastus M. Cravath was appointed as first president of the university. Cravath's visionary leadership would guide the school and produce monetary support for the following quarter of a century.

Vigorous construction of campus buildings in the 1880s enhanced the university's stature, as did the school's well-educated graduates. The school's curriculum was expanded in the 1890s to include a secondary school, a department of theology, and advanced training for teachers. By 1892, several new structures had been added to the school's campus. As the wave of social reform crested and swept the country toward the new century of 1900, Fisk University's students also called for social reform, including demands for adding African Americans to the school's White administrative staff and faculty. This goal would not be achieved for many decades.

As the new century dawned, Fisk's first academic dean, Spence, died April 24, 1900, and the first president, Cravath, followed on September 4. The following year, the Reverend Dr. James G.

Merrill, who had joined the faculty in 1898, was inaugurated as the second president of Fisk. After 7 years at the school's helm, Merrill resigned in 1908 due to his wife's ill health.

After an intensive national search, the Reverend Dr. George A. Gates was chosen in 1909 as the university's third president. Under Gates's leadership, the university curriculum was expanded to include three different courses of study leading to the bachelor of arts degree. Sociology was added to the curriculum, as part of an introduction to the social sciences. Selected to establish the school's Department of Social Sciences was Dr. George E. Haynes, and under his leadership, an academic program was developed at Fisk to train professional social workers. The university would become a recognized leader in this field.

As the university prospered, however, tragedy befell Gates. While traveling to New York in early 1912, he was involved in a train wreck; his prognosis of being merely shaken up proved erroneous. Ill health overtook Gates, bringing his death in late summer. A committee of administration and faculty members operated the university while the board of trustees conducted a search for Fisk's new president.

Fourth President Dr. Fayette McKenzie assumed leadership of Fisk in the summer of 1915. Less than 2 years later, the United States entered World War I in Europe, and patriotic fervor was high among Fisk students. What would be the role of the African American in World War I? The Colored Woman's Chapter of the National Council of Defense was organized, and in Nashville, chapters of the American Red Cross at Fisk University and seven other African American schools and social agencies were established. Hundreds of African American women volunteered to roll bandages, knit and crochet bed-shirts and other garments, sell Liberty Loan war bonds, and engage in innumerable activities to contribute to war work.

But there was no provision in the modern armed forces for African American soldiers, especially for those who were college-trained African American men. Despite that bureaucratic stumbling block, many of Fisk University's sons joined the United States military ranks, and 32 of these Fisk students would be commissioned as officers in the great fight for democracy. Those African American soldiers returning to the United States after the war's

armistice on November 11, 1918, believed that their successful contributions to the war effort would ensure greater democracy in equal rights. That optimistic belief was short-lived and soon would be dead, as the aftermath of World War I was manifested in a country even more hostile to African Americans.

The New Negro

As the postwar era in the United States saw the rise of the new Negro movement, reflecting the new spirit of freedom and fearlessness embodied by combat-tested African American veterans, the era also marked the revival of the White supremacist Ku Klux Klan with its doctrine of racism and hatred. Lynching of African Americans appreciably increased after the war. By the summer of 1919, there was so much violence, lynching, and race riots that writer James Weldon Johnson identified this bloody summer as the red summer.

McKenzie, who had been remarkably successful as a diplomat and fundraiser within the White community, was judged as being out of touch with the African American determination to obtain greater democracy, as being out of step with the spirit of the times, and as being unable to change or adapt. He was forced to deal with student revolt and an on-campus strike of students refusing to attend classes. This lengthy upheaval forced McKenzie's resignation as university president in April of 1925.

Less than a year later, Thomas Elsa Jones, a young Quaker and PhD candidate at Columbia University, was chosen as the new president of Fisk. The crises that destroyed former McKenzie's administration were not forgotten. Jones began to search for African American scholars to join the faculty. Three African Americans joined the existing three African Americans on the board of trustees. A healing, spiritual light began to radiate from the Fisk campus under Jones's guidance, and many academic and social programs were established in the late 1920s and early 1930s, despite the Great Depression strangling the United States. By 1933, the popular perception in both the White and Black communities was that Fisk was the leading African American university in the nation. Fisk's educational importance was acknowledged in 1934 when President Franklin D. Roosevelt visited the school's campus.

As this productive era progressed, Fisk students began to protest against a perceived administrative attitude of paternalism, Uncle Tomism, and Jim Crowism. As student unrest gained wider press coverage, the seeds were planted for a full-blown debate over race relations in the United States. Compounding the student body's unrest was Europe's entrance into war in 1939, bringing U.S. military participation in 1941. World War II would have greater impact upon Fisk than World War I and the Great Depression.

Jones was a devout Quaker (Society of Friends) and a conscientious objector to war. His pacifist views and support of evading military service flew in the face of the patriotic fever burning brightly among Fisk students, who supported and contributed to U.S. war efforts. Many young men joined the military, while both students and administrators volunteered for work with the American Red Cross and civilian defense and sold war bonds and stamps. In April of 1945, the U.S. Navy launched a Liberty Ship christened the *S. S. Fisk Victory* from Richmond, California.

Reflecting the direction-seeking era following the September 2, 1945, end of World War II, Jones tendered his resignation, effective July 1, 1946. A new president was needed to assert Fisk's African American identity with its vision of the university. Selected in October of 1946 was the university's first African American president, Dr. Charles S. Johnson, a scholar and researcher who had joined the school's faculty in 1927 to organize Fisk's Department of Social Research. He had served in the U.S. Army during World War I, and after his return to the United States, he had witnessed three separate racial upheavals during the red summer of 1919.

The Civil Rights Era

Under Johnson's leadership, Fisk University became a recognized center for research and field investigation in race relations. He expanded the scope of the Institute of Race Relations, established at Fisk in 1944, and recruited a distinguished faculty of social science researchers, writers, and scholars. Every area of Fisk blossomed under Johnson's nurturing, and the campus had been expanded several times by 1955. The following year, Johnson suddenly died, abruptly ending his trailblazing administration.

In 1958, Dr. Stephen J. Wright came to Fisk as its seventh president. Under his leadership, several new structures were added to the campus, and there was every reason for optimism for the decade of the 1960s. This decade, however, would prove to be another turbulent one as the modern civil rights movement engaged Fisk students. They had joined other Nashville students in the first nonviolent sit-ins in the South in November 1959, when they sat in at the segregated lunch counters of two department stores in Nashville. By mid-April of 1960, 78 cities and towns in the South were involved in the sit-in movement, with 50,000 African American students and White sympathizers as participants. Through his support of the Fisk students involved in the sit-in movement, Wright became the only college president in Nashville to openly support the student movement for equal rights.

Wright departed from Fisk on June 1, 1966, as the school celebrated its centenary. None of the succeeding seven presidents or four acting presidents would face the upheavals endured by the first seven presidents as the school marked the end of the 20th century and welcomed the 21st century. Fisk's first female president, Carolynne Reed Wallace, was appointed in 2000, and a second female president was selected in 2004: Hazel R. O'Leary, former U.S. Secretary of Energy.

Today, Fisk University's mission is manifested in its expanding campus, amplified faculty credentials and professional development, and historic structure restoration and modernization. Fisk's campus has the distinction of being the only college campus in Middle Tennessee—and one of only four such campuses throughout Tennessee—listed as a Historic District in the National Register of Historic Places, maintained by the U.S. Department of the Interior in Washington, D.C. Jubilee Hall has received recognition from the State of Tennessee in the form of a historical marker denoting the structure's significance, and in 1976, Jubilee Hall was designated as a National Historic Landmark by the National Park Service of the U.S. Department of the Interior.

FLORIDA AGRICULTURAL AND MECHANICAL UNIVERSITY (FAMU)

Florida Agricultural and Mechanical University (FAMU) is a coeducational, liberal arts institution located in Tallahassee, Florida. FAMU, founded in 1887, is the nation's largest historically Black university and graduates more African Americans than any other institution. The institution is a member of the State University System of Florida and holds the distinction of being the only historically Black state-supported institution in that state.

FAMU is the third-oldest historically Black institution of higher education in Florida. For more than a century, the university's mission has primarily been to meet the educational needs of African Americans and other minorities. Approximately 90% of the school's population is African American. The institution, however, seeks students from all racial, ethnic, and religious backgrounds without concern for age, gender, sexual orientation, or disability. FAMU currently enrolls approximately 12,000 students and has over 600 faculty members. The majority of students, roughly 88%, are at the undergraduate level while 12% are graduate and professional students. The faculty-to-student ratio on the campus is approximately 10 to 1.

FAMU is a land grant institution and as such, places a high degree of importance on instruction, research, and service to promote excellence and to develop the value of life for those that it serves. The school's motto, excellence with caring, suggests the value it places on the spirit of giving back to one's community among its students, faculty,

and staff. This entry chronicles the history and contemporary circumstances of FAMU.

Historical Background

FAMU was founded on October 3, 1887, as the State Normal College for Colored Students to train teachers. FAMU's first president was Thomas DeSaille Turner (1887–1901), an attorney from Pensacola, Florida. At the time, the school had only 15 students and two instructors. In 1891, it was designated as Florida's land grant college for African Americans, and the name was changed to the State Normal and Industrial College for Colored Students after receiving a \$7,500 grant through the Second Morrill Act. The Second Morrill Act provided federal funds to colleges and universities that promoted education in agriculture and the mechanical arts.

Following the name change, the college was moved from Copeland Street (now the site of Florida State University) to its present location on what the school now touts as “the highest of seven hills” in Florida's capital city of Tallahassee, a location that led to FAMU's nickname of “The Hill.”

With enrollment having grown to 317 students, the school's name was changed in 1909 to Florida Agricultural and Mechanical College for Negroes, and 1 year later, it granted its first bachelor's degrees. The fledgling institution was nearly forced to close its doors after a devastating fire that completely destroyed the main building on the campus, Duval Hall, which housed the university's administrative offices, cafeteria, and library. Philanthropist Andrew Carnegie donated \$10,000 to the school to build a new library, which gave the school the unique distinction of having the only Carnegie library on the campus of an African American land grant college.

Although strapped with limited resources, the college began to flourish under the leadership of President Nathan B. Young (1901–1923), with a significant expansion of undergraduate programs, including bachelor of science degrees in education, science, home economics, agriculture, and mechanical arts. The school would undergo an additional name change when, in 1953, it achieved university status and became Florida Agricultural and Mechanical University.

FAMU is made up of 13 schools and colleges, including Colleges of Arts and Sciences, Education,

Pharmacy and Pharmaceutical Sciences, Engineering (jointly with Florida State University), Allied Health Sciences, Architecture, Business and Industry, Journalism and Graphic Communications, Nursing, General Studies, Graduate Studies and Research, Law, and an Environmental Sciences Institute. FAMU is noted for having eight fully-funded endowed eminent scholars' chairs in the Schools of Journalism and Graphic Communications, Business and Industry, and Pharmacy; College of Education; and the College of Arts and Sciences. The university offers approximately 62 bachelor's degrees in 103 majors, 36 master's degrees with 56 majors, two professional degrees, and 11 doctoral programs. In September 2006, FAMU was named the number one college in the country for African Americans by *Black Enterprise Magazine*.

The university is consistently cited among the nation's leading institutions for awarding baccalaureate degrees to African Americans. It routinely receives approximately 6,000 applications per year from high school graduates and accepts an average of 70% of those applicants for admission. Of that number, the school graduates about 45%. In addition, FAMU is considered a national leader in the enrollment of National Merit Achievement Scholars, top high school students who are hand-picked by the National Merit Foundation and highly recruited by colleges and universities nationally. FAMU was tied with Harvard in the recruitment of these scholars in the fall of 2000 and was number one in the nation in enrolling these students in 1992, 1995, and 1997. The institution, with its 6-year doctoral program, graduates 90% of all African American pharmacists in Florida. Its renowned School of Business and Industry is well-known among Fortune 500 companies, many of which regularly target the school's graduates when recruiting future executives.

FAMU's sports program is also well-known and highly regarded. The FAMU Rattlers have made their mark in college sports, winning numerous titles in the 1970s, 1980s, and 1990s. The football team was a powerhouse in the middle of the 20th century. From 1938 to 1961, it won the Black College National Championship eight times, including six under the famous head coach Alonzo Smith “Jake” Gaither in 1950, 1952, 1954, 1957, 1959, and 1961. When Gaither retired in 1969,

after 25 years of coaching, his FAMU teams had achieved a phenomenal record of 203 wins and just 36 losses with 22 Southern Intercollegiate Athletic Conference championships. Thirty-six players from Gaither's teams were All-Americans, and 42 went on to play in the National Football League. He was inducted into the College Football Hall of Fame in 1975.

The storied sports program includes basketball, baseball, track and field, and others, which produced standout players and coaches for many years and at least two Olympic athletes and one gold medal winner, track and field stand-out Robert "Bob" Hayes. FAMU's tennis program produced its own star, Althea Gibson, who turned professional in the late 1950s, and who won several big tournaments, such as the French Open, Wimbledon, and the United States Open. Gibson went on to break other barriers for African American women in sports, winning fame in women's pro golf in the 1960s and early 1970s.

As much an attraction on the field as the institution's football team, FAMU's Marching 100 band also has a long and proud tradition. The school's first band was formed in 1892 under band director P. A. Van Weller, who served until 1898. His era was followed by other notable directors such as Nathaniel C. Adderley, Leander A. Kirksey, Dr. William P. Foster, and current band director, Dr. Julian E. White. Although the band has retained its original name, the "Marching 100," it has grown to more than 360 members today. The group's skill and precision have been polished over the past century to legendary perfection. FAMU's Marching 100 is largely responsible for having set the standard for high school and collegiate marching bands around the country. In 1985, the band was the recipient of the prestigious John Philip Sousa Foundation's Sudler Trophy, which is given to one university marching band each year for having demonstrated high performance standards for an extended period of time. FAMU is the only historically Black college and university (HBCU) to have received the trophy since it was first awarded in 1982.

Although FAMU is known for its academic and sports programs, it has also become known in recent years for being home to the Black Archives Research Center and Museum, which is housed in the school's historic Carnegie library. Opened in 1977, the attraction features a collection of historical artifacts

focusing on the experiences of people of African descent around the world. The Black Archives Research Center and Museum has become a popular tourist destination. On May 9, 1996, FAMU was officially listed in the United States Register of Historic Places.

FRANKLIN, JOHN HOPE (1915–2009)

John Hope Franklin, often referred to as the dean of American historians, was the James B. Duke Emeritus Professor of History at Duke University. In his nearly 70 years of work as an educator, he wrote and edited 18 books, received numerous awards including the Presidential Medal of Freedom (the nation's highest civilian honor) in 1995, and had been awarded over 130 honorary

degrees from colleges and universities across the globe. An unsurpassed scholar, author, and statesman, from his first book *The Free Negro in North Carolina, 1790–1860* to his best-selling work, *From Slavery to Freedom*, Franklin proved to be one of the most respected and influential thinkers of the 20th and the 21st centuries. This entry reviews the life and contributions of John Hope Franklin.

Early Years

Franklin was born in Rentiesville, Oklahoma, a tiny all-Black town in the northeastern portion of Oklahoma, on January 2, 1915. In December of 1925, his parents Mollie and Buck Franklin moved their family (Buck Jr., Anne, and John) to Tulsa, Oklahoma, in search of greater economic opportunities. Franklin's parents met while they were students at Rogers Williams University in Nashville, Tennessee. This period was so important for the Franklins that they went on to name their second son after one of their most respected professors while at Roger Williams University, noted educator and architect of Black higher education, John Hope.

Although Franklin was born in a racial climate that he described as uncomfortable and emotionally troubling, the influence of a highly educated family was evident in his personal and professional achievements. In 1931, Franklin with his sister Anne moved to Nashville, Tennessee, to attend Fisk University where their older brother Buck Jr. had graduated a year earlier.

Although he had intended to major in English and eventually go on to law school, Franklin changed his plans after taking Professor Theodore S. Currier's U.S. history course and switched his major to history. Currier became Franklin's mentor and best friend and influenced his decision to attend Harvard University for graduate school and to pursue a career as a historian. Harvard was Currier's alma mater, and despite the fact that he never finished his doctoral work at Harvard, Currier taught many of his courses at Fisk in a manner that Franklin believed perfectly prepared him for graduate study at Harvard.

This change in career paths was a major decision for Franklin, considering his lifelong aspirations to follow in his father's footsteps and become a lawyer. However, with the blessings of his father

who encouraged him to "just be great" and the intellectual and eventual financial support he would receive from Currier, Franklin was well on his way to becoming one of the most important voices in U.S. history. Furthermore, despite his decision to become a historian, Franklin made significant contributions to the practice and study of law through his service on the National Association for the Advancement of Colored People (NAACP) Legal Defense team in the 1950s and through his appointment from 1985 to 1992 as a professor of legal history at the Duke University Law School.

In addition to being an excellent student while at Fisk, Franklin was also active in numerous extracurricular pursuits. These activities included participation with the university newspaper the *Fisk Herald*, the university choir, debate team, student government association, and Alpha Phi Alpha fraternity. Hence, Franklin made the most of his time at Fisk as a scholar in and outside of the classroom.

At Fisk, he also met his wife of more than 50 years, Aurelia Washington. After a 10-year courtship, Aurelia and Franklin were married in Greensboro, North Carolina, on June 11, 1940. In 1952, they had their only child, John Whittington Franklin. John Whittington Franklin, or Whit, is an anthropologist who would eventually follow his parents into a life as an educator and who is currently serving as a program manager for the Center for Folk Life and Cultural Heritage at the Smithsonian. In 1997, with his father, Whit coedited his first and his father's 15th book, titled *My Life and an Era: The Autobiography of Buck Colbert Franklin* about his grandfather. After 59 years of marriage, Aurelia passed away, succumbing to an extended illness in 1999.

A Scholarly Foundation

In 1935, Franklin left the comfortable confines of historically Black Fisk University to pursue graduate studies at the United States' oldest and most prestigious higher-education institution, Harvard University. This experience of leaving a familiar setting and chartering new prospects in less familiar territory had already become a theme in Franklin's life, and it would continue in the future. Franklin is noted as being the first student from a historically Black university to be admitted into Harvard unconditionally. He would go on to earn

his master's and doctoral degrees in 1936 and 1941, respectively, both in history.

The combination of the increased rigor of graduate studies and the more isolated nature of being an African American student at Harvard in the 1930s caused Franklin to focus even more on his studies. However, he did find time to secure several part-time jobs and to participate in a few of the graduate student organizations. His activities in the Henry Adams Club for history students at Harvard were often discussed because they present an early incident of Franklin recognizing bigotry within the academy. Franklin was serving as a nominating member on the organization's board, and the person that he nominated for the presidency of the organization was of Jewish descent. Prior to the anti-Semitic responses that his selection had received, the fact that he had been placed on the nominating committee effectively removing him from consideration for the presidency was not lost on Franklin. The combination of the bigotry exercised against him and the Jewish student that he nominated taught Franklin one of many lifelong lessons about the pervasiveness of bigotry and the need for continued and measured action to counter similar prejudices. Upon his graduation from Harvard, he would set out to work toward these means through his voice within the academy.

Despite Franklin's impeccable credentials as a student at Harvard, he never had an opportunity to serve as a teaching assistant during his graduate career. In fact, Franklin soon realized that the fellowship he had received as a graduate student, while definitely providing needed financial support, ensured that he would not serve as a teaching assistant at Harvard through a clause that precluded working. Regardless of his credentials, the fact that there was no historically White institution that was willing to hire an African American professor led Franklin to move back to the South—where the majority of historically Black institutions were located—to seek employment.

Academic Assignments

Consequently, upon graduation from Harvard, Franklin's first teaching position was in the history department at his undergraduate alma mater, Fisk University. Although he welcomed the return to Nashville, Franklin recalled the sometimes awkward

circumstances associated with teaching and advising many of his peers with whom he had previously studied. Once he had settled in on the faculty at Fisk, Franklin went on to teach at several other historically Black institutions including St. Augustine's College in Raleigh, North Carolina; North Carolina Central in Durham, North Carolina; and Howard University in Washington, D.C.

In an era where Jim Crow policies still dominated U.S. higher education, Franklin's appointment to Howard University (1947–1956) at age 32 signaled the supposed pinnacle of an accomplished career for African American scholars at the time. The faculty of Howard University was composed of some of the most influential African Americans of the 20th century. The highly regarded faculty at Howard included educators such as the head of the NAACP's Legal Defense team and eventual Supreme Court Justice Thurgood Marshall, as well as noted sociologist E. Franklin Frazier and philosopher Alain Locke.

Franklin's decision to leave Howard to assume the chairmanship of the history department at Brooklyn College in New York signaled an erosion of discriminatory practices on U.S. college campuses and another racial barrier that Franklin would soon shatter. The fact that Franklin's offer by Brooklyn College made the front page of the *New York Times* reflects the historic nature of Franklin's departure from Howard University and his arrival at Brooklyn College.

By accepting the appointment at Brooklyn College in 1956, Franklin became the first African American historian to assume full professorship and to chair a department at a predominantly White institution. Franklin would eventually leave Brooklyn College in 1964 to serve in the history department at the University of Chicago. While at Chicago, Franklin would serve as chair of the history department from 1967 to 1970 and as the John Matthews Manly Distinguished Service Professor from 1969 through 1982. From 1982 until his death in 2009, Franklin served as the James B. Duke Emeritus Professor of History at Duke University. In light of the partial acceptance and little if any consideration for similar appointments that Franklin received while presenting summer lectures at institutions such as Harvard, Wisconsin, and Cornell, Franklin's tenure at Brooklyn College was truly historic and demonstrated a rapid and prestigious

ascension through the arguably still racially coded ranks of U.S. academia.

Beyond his work at specific institutions, Franklin was hailed as a monument to U.S. education as a whole. In this vein, he was noted for his reappraisal of the importance of African Americans in shaping modern U.S. identity and consequently helping to establish the foundation for the development of African American studies programs across the nation. In discussing his broad accomplishments, the John Hope Franklin Center for Interdisciplinary Studies at Duke University described Franklin as early in his career deciding to examine history from a variety of perspectives, to scrutinize new areas or subjects regularly, and to seek collaborative opportunities throughout the international community.

This approach to scholarship afforded him the honor of being one of the most productive and influential authors in U.S. history. He first gained international acclaim with his multimillion selling *From Slavery to Freedom*, which is now in its eighth edition and still regarded as the most popular African American history text ever written. Some of Franklin's other frequently referenced works include *The Free Negro in North Carolina, 1790–1860*, *The Militant South, 1800–1861*, *George Washington Williams: A Biography*, *Racial Equality in America*, and *Reconstruction After the Civil War*.

Public Service and Honors

Through the extraordinary success that Franklin experienced as a scholar, his work has constantly been used as an avenue for fostering political and social change. This is evident in several of his civic activities from his advisory roll in the historic *Brown v. Board of Education, Topeka, Kansas* (1954), to his participation in the 1965 Montgomery Civil Rights marches, and his eventual appointment to chair President Bill Clinton's One America in the 21st Century: Initiative on Race in 1997. Franklin's international significance was demonstrated by his appointment to the Fulbright Board of Foreign Scholarships from 1962 to 1969 and as chair from 1966 to 1969, his appointment in 1980 to the U.S. Delegation to the United Nations Educational, Scientific and Cultural Organization (UNESCO) General Conference in Belgrade, his selection to deliver State Department and United States Information Services lectures across

three continents, and his appointment to the President's Advisory Committee on Ambassadorial Appointments.

In addition to the aforementioned forms of public and professional service, Franklin also served as the president of several key professional organizations such as the United Chapters of Phi Beta Kappa (1973–1976) and the American Studies Association (1967). Of specific importance for the field of history, Franklin was the first African American to serve as president of the American Historical Association (1979), the Southern Historical Association (1970), and the Organization of American Historians (1975). Franklin also extended his leadership skills through service on several boards at institutions such as Fisk University, the Chicago Public Library, and the Chicago Symphony Orchestra Association.

Franklin's honors and awards in each of his teacher, author, and public servant capacities were numerous. A selective list of these accomplishments includes his early recognition as Alpha Phi Alpha fraternity's Foundation Publishers award recipient and later selection by the fraternity as the Alpha Phi Alpha Award of Merit recipient. In 1978 Franklin was selected by *Who's Who in America* as one of eight U.S. citizens who made significant contributions to society. He also received the 1984 Jefferson Medal from the Council for the Advancement and Support of Education, the 1993 Charles Frankel Prize for contributions to the humanities, the 1994 Cosmos Club Award, the Trumpet Award from Turner Broadcasting Corporation, the 1995 Organization of American Historians' Award for Outstanding Achievement, and the inaugural W. E. B. Du Bois award from the Fisk University Alumni Association.

Franklin's accomplishments have been greatly chronicled, and until his death, the professor who has been referred to as one of the fathers of African American history had continued to maintain an active academic life that included numerous appearances on the lecture circuit, television documentaries, and writing and research projects.

FRASIER V. BOARD OF TRUSTEES OF THE UNIVERSITY OF NORTH CAROLINA

In *Frasier v. Board of Trustees of the University of North Carolina* (1955), three young African Americans challenged a decision by the university to deny them admission as undergraduates. They were subsequently admitted, and the case had a significant impact in the fight against Southern segregation. This entry looks at the legal background of the case, the court review and ruling, and the impact on the young men, on African Americans in general and on the nation.

Historical Background

A transplant from Europe, higher education in the United States has been an anchor of U.S. life since the colonial era. However, entry into higher education for African Americans was unavailable at all until the 1820s. Even then, admissions for African Americans were available on a highly elective, token basis at a handful of private religious institutions such as Oberlin College, Berea College, Bowdoin College, Amherst College, and Middlebury College. From 1826 to 1910, there

were only 693 African American graduates from U.S. institutions. By the time of the Supreme Court's decision in *Brown v. Board of Education, Topeka, Kansas* (1954), African Americans constituted only 1% of freshman enrollments at predominantly White institutions.

None of these undergraduate enrollments was in the traditionally White campuses of the University of North Carolina (UNC) or any other university in the Southeast. Although other non-Whites were allowed to matriculate in North Carolina's traditionally White institutions, African Americans were summarily excluded. The exclusion of African Americans was not the result of failures to try. In 1933, Thomas Raymond Hocutt attempted to pursue a degree in pharmacology. His application was rejected by the board of trustees, and he lost his case in court on a technicality. In 1939, Pauli Murray's application for graduate study in sociology was rejected, and a lawsuit was not fully pursued.

In response to the suits, and to comply with *Plessy v. Ferguson's* (1896) separate-but-equal framework, the board of trustees continued to add graduate programming to the state's historically Black institutions, namely North Carolina College for Negroes (now North Carolina Central University) and North Carolina Agricultural and Technical College.

During the 1940s, there was a lull in North Carolina higher-education desegregation litigation. Meanwhile, federal precedents continued to chip away at the equality portion of the separate-but-equal doctrine. These cases established fertile ground for new challenges to North Carolina's admissions policy. In 1949, Harold Epps and Robert Davis Glass sued to compel admission to the UNC School of Law. Their case was not heard until 1950, just after the Supreme Court's decisions in *Sweatt v. Painter* (1950) and *McLaurin v. Oklahoma Regents for Higher Education* (1950).

Nevertheless, the district court ruled in favor of the state, reasoning that the law school at North Carolina College was superior in quality to the African American law school in Texas (*Epps v. Carmichael*, 1950). However, North Carolina College's law school was not accredited yet. Epps graduated from North Carolina College, Floyd McKissick became the named plaintiff in the suit, and several additional African American men joined the litigation as plaintiffs. In 1951, the

Fourth Circuit remanded the case to the district court, ordering a fair consideration of the plaintiff's application (*McKissick v. Carmichael*, 1951). Upon a final appeal to the Supreme Court, the circuit court's decision stood (*Carmichael v. McKissick*, 1951). Five African American men entered UNC Law in the summer of 1951, joined in the fall by another in the law school, and by another, Edward Oscar Diggs, the first African American admitted to the UNC's School of Medicine.

To address the new admissions policy as directed by the courts, the board of trustees issued the order of April 1, 1951, stating that applications of non-Whites to professional or graduate school would be processed without regard to color or race. Although the doors to UNC's graduate schools were now open, the number of African Americans gaining admission was a mere trickle. In addition, doors to undergraduate programs remained closed.

Facts of the Case

On April 19, 1955, two brothers, LeRoy Benjamin Jr. and Ralph Kennedy Frasier, were joined by a friend, John Lewis Brandon, in submitting applications to the UNC at Chapel Hill. The young men were graduates of Hillside High School in Durham, North Carolina, and the applications submitted were complete with records of their academic achievements and letters of reference. One week and a day later, on April 27, each of the men received an identical rejection letter from Roy W. Armstrong, director of admissions, stating that their applications were rejected because African Americans were not eligible to attend the undergraduate school of the UNC, as per policy as established by the board of trustees of the university.

The students appealed their admissions decision directly to the board of trustees, who responded on May 23, 1955, by reaffirming resolution stating that North Carolina had funded appropriate institutions of higher education for all races and would not accept African American applicants to the undergraduate schools of the UNC.

The young men then filed suit with the Middle District Court of North Carolina, requesting that the court declare the May 23, 1955, order in violation of the Fourteenth Amendment's equal protection clause. In addition, they asked that the court restrain the UNC from denying admission to

African American students solely on the basis of race. This latter request was not only for themselves, but also for similarly situated students who would qualify for admission to North Carolina's traditionally White colleges and universities under all conditions except for their race.

Legal Issues and Rulings

Three legal issues lay before the court. The first was a matter of procedure, whether the court, a three-judged panel, had jurisdiction to hear the case. The court ruled that it did have jurisdiction and the authority to hear the case in panel because rules allowing the establishment of a panel hearing extended beyond cases in which the constitutionality of a statute issued by the legislature is at stake to cases where the constitutionality of actions by administrative agencies, such as the board of trustees, is questioned (*Frasier v. Board of Trustees*, 1955).

The second issue was a matter of substance, whether the U.S. Supreme Court's opinion in *Brown* that "in the field of public education the doctrine of 'separate but equal' has no place," (347 U.S. at 599) applied to schools of higher education. The Middle District Court of North Carolina held that while the facts of the *Brown* case were specific to K-12 education, the rationale behind the Supreme Court's ruling was readily applicable to higher education.

The district court drew further support from the pre-*Brown* Supreme Court precedent of *Sweatt*. The district court quoted directly from Chief Justice Vinson's opinion in *Sweatt*, wherein Vinson notes how the University of Texas School of Law excluded 85% of the State of Texas's citizens from entry to the law school, depriving that 85% of meaningful educational interactions with the lawyers, officials, and laypersons with which they would have to work postgraduation. Vinson specifically states that "with such a substantial and significant segment of society excluded, we cannot conclude that the education offered petitioner is substantially equal to that which he would receive if admitted" (cited in *Frasier v. Board of Trustees*, 134 F. Supp. at 593).

The third and final issue was whether the district court's opinion would extend more broadly, beyond the application of the three men before the court. The court answered in the affirmative, reasoning

that because of the university's unfavorable attitude toward African American citizens' right to have a fair assessment of one's qualifications at the traditionally White public institutions, the ruling of the case would extend to the entire class of African Americans qualified to enter UNC schools: "Negroes as a class may not be excluded because of their race or color. . . . This applies to the plaintiffs in the pending case as well as to all Negroes who subsequently apply for admission" (*Frasier v. Board of Trustees*, 134 F. Supp. at 593). The court made it clear, however, that the board of trustees would retain the power to admit or reject individual students on the basis of their qualifications. The board of trustees appealed directly to the U.S. Supreme Court, where the district court opinion was affirmed (*Board of Trustees v. Frasier*, 134 F. Supp. at 979).

Impact of the Case

On September 17, 1955, L. Frasier, R. Frasier, and Brandon all became both the first African American freshman to matriculate at the University of North Carolina (UNC) at Chapel Hill and the first African Americans enrolled as undergraduates at a traditionally White public institution in the southeastern United States. Although the Frasier brothers later transferred to complete their undergraduate studies at North Carolina Central University, Brandon graduated from UNC at Chapel Hill in 1959, earned a master's in chemistry from the University of Houston–Clear Lake, and went on to become a senior research chemist with Dow Chemical Corporation. In his retirement, he is a science instructor at Houston Community College.

L. Frasier became a teacher in Long Island, New York. His brother continued his studies at North Carolina Central's law school and became a banker with Huntington Bancshares, Inc., in Ohio. In his retirement, R. Frasier serves as a senior advisor to law firms in Columbus, Ohio, and Durham, North Carolina. His community service includes membership on the Ohio Board of Regents and North Carolina Central's Board of Trustees.

Beyond the impact on the lives of the three young men who in postgraduation and even into retirement continue to serve the community, the case of *Frasier v. Board of Trustees* is significant in several ways.

First, the *Frasier* precedent is cited in a number of cases in the fight to dismantle Southern

segregation across a range of contexts including K–12 education (e.g., K–12 schools: *Buckner v. County School Board*, 1964; reform school: *State Board of Public Welfare v. Myers*, 1961; higher education: *Gant v. Clemson Agricultural College*, 1963; employment: *Dickerson v. U.S. Steel Corp.*, 1974; voter registration: *U.S. v. McElveen*, 1960; and access to public parks: *Gilmore v. Montgomery*, 1959).

Second, *Frasier* underscores the need for institutions to think beyond access and toward meaningful academic and social support for students from underrepresented groups. The Frasier brothers and Brandon experienced significant difficulty maintaining good academic standing because of underdeveloped study habits. In addition, the Frasier brothers were able to engage in on-campus paracurricular activities only on a limited basis because of their commute. Brandon, however, moved to the African American dormitory on campus in his second semester. In spite of over 50 years of nominal desegregation, the academic and social integration of students from underrepresented groups remain a significant issue in their persistence to degree and institutional retention.

Third, the *Frasier* case and its success are in part attributable to the actions of students. The Frasier brothers, Brandon, and others were recruited at their high school by UNC at Chapel Hill student activists. The case, thus, is an example of how students can make a difference when they step beyond the university's gate and civically engage.

served. Although most of the freedom schools no longer exist, the model is still in use. This entry looks at their history and contributions.

A New Kind of School

The concept of freedom schools had been used by educators and activists across the country in, for instance, Boston, New York, and Prince Edward County, Virginia, where public schools were closed in reaction to the *Brown v. Board of Education, Topeka, Kansas* (1954) decision or, in the case of Boston, as acts of protest against detrimental school conditions. The Mississippi Freedom Schools have emerged as the quintessential model, however. Educators who use a freedom school model today, such as the Children Defense Fund's Freedom School program, generally cite the influence of the 1964 Mississippi Freedom Schools.

The Mississippi Freedom Schools were developed as part of the 1964 Freedom Summer civil rights project, a massive effort that focused on voter registration drives, educating Mississippi students for social change, and building a network of community centers. The Council of Federated Organizations, an umbrella civil rights organization comprising activists and funding drawn from the Southern Christian Leadership Conference and the Student Nonviolent Coordinating Committee (SNCC), among other organizations, coordinated the Freedom Summer project. The project was essentially a statewide voter registration campaign, and SNCC activists called for 1,000 volunteers to assist in the undertaking. Activists made plans to conduct a parallel election in order to elect a separate delegation that would challenge the White-only delegation sent to the 1964 Democratic National Convention in Atlantic City. Activists contended that an illegal electoral process systematically excluded African American participation, and therefore, the all-white delegation was illegal.

In December 1963, during a meeting held to plan the upcoming Freedom Summer project, SNCC activist Charles Cobb proposed a network of freedom schools whose aim was to foster political participation among Mississippi elementary and high school students in addition to offering supplemental academic courses. Activists organizing the Freedom Summer project accepted Cobb's proposal and soon organized a curriculum planning conference

FREEDOM SCHOOLS

The first freedom schools were developed as part of the larger civil rights movement to provide an education for young African Americans that would foster leadership development and political participation. The hours, location, and curriculum for these schools varied according to the area being

for the freedom schools in New York in March of 1964. The curriculum adopted was divided into seven core areas that analyzed the social, political, and economic context that caused the precarious race relations. Issues such as leadership development, remedial academics, contemporary issues, and nonacademic courses were also incorporated, which included foreign language, African American history, typing, and drama in addition to basic academic courses. Each teacher was given this curriculum to follow, but teachers were also encouraged to only use the curriculum as a guide, for some teachers were not professionally trained. The education at freedom schools was student centered and socially relevant. Curriculum and instruction was based on the needs of the students, discussion among students and teachers (rather than lecturing) was encouraged, and curriculum planners encouraged teachers to base instruction on the experiences of their students.

Freedom schools opened during the first week of July, 1964, after approximately 250 freedom school volunteers attended 1-week training sessions at Western College for Women in Oxford, Ohio. The original plans had anticipated 25 freedom schools and 1,000 students; yet by the end of the summer, 41 schools had been opened to over 2,000 students. Freedom schools were established with the help and commitment of local communities that provided various buildings for schools and houses for activist housing needs. The schools were held in nontraditional locations: parks, kitchens, and private homes, but most classes were usually held in churches. Attendance varied throughout the summer; some schools experienced regular attendance, but usually attendance fluctuated based on the interests of the students. In Clarksdale, Mississippi, for instance, the average student attendance during the 1st week was 15; the 2nd week was 8; but at any point during the summer, the school may have had as many as 35 students in attendance. In some schools, it was not uncommon for teachers to report that community adults would also attend class regularly.

Curriculum and Contributions

Instruction was conditional and varied from school to school. In rural communities where students were expected to work during the school day,

classes were held only at night. In schools that maintained traditional school hours, most often in urban areas, traditional academic courses were offered in the morning, and special classes such as music, drama, and typing were offered in the afternoon. In many instances throughout the summer, entire school days would be devoted to demonstrations or voter registration efforts. It was imperative for SNCC activists that students would be invested in civil rights activity, as this cadre of students was expected to remain in the state to enact social change.

At the conclusion of the freedom school term in August 1964, activists and students organized a student-led conference in Meridian, Mississippi. Each freedom school sent three representatives to the conference to form a youth platform for the Mississippi Freedom Democratic Party, the separate delegation that sought to replace the all-White delegation in Atlantic City. The student delegates discussed issues related to jobs, schools, foreign affairs, and public accommodations and proffered recommendations for the state party. By the end of the conference, students prepared a statement that demanded access to public accommodations, building codes for each home, desegregated schools, a public works program, and the appointment of qualified African Americans to state positions.

Freedom school teachers and students remained committed to the freedom school concept. In early August of 1964, plans were being made to continue the freedom schools during the upcoming school year, as some volunteer teachers had already agreed to stay. Students implemented the leadership and activism experienced during the summer in their own schools. Some students returned to school and demanded better facilities and more courses. Other students began to organize meetings among themselves to brainstorm ways to implement the Civil Rights Act of 1964. Freedom school teachers maintained commitment to the social justice ideals expressed during the summer as some became involved in desegregation efforts and demonstrations against the Vietnam War. Despite such individual commitments, an extensive network of freedom schools as observed in Mississippi during 1964 would not materialize again.

FREEMAN V. PITTS

Freeman v. Pitts (1992) signaled the beginning of a trend by federal courts that showed federal monitoring of desegregating public school systems was a temporary judicial measure. In this case, the district court on remand found the DeKalb school system was unitary, or racially neutral, based on the four conditions already achieved: student-assigned mentors, transportation, physical facilities, and extracurricular activities. It ruled that the contested factors—faculty assignments, and per pupil expenditures—had also been achieved. This entry looks at the historical backdrop, the case itself, subsequent appellate rulings, and the overall significance of *Freeman v. Pitts*.

Historical Background

The state of Georgia was founded in 1733 by General James Edward Oglethorpe and his friends as a utopia of high moral standards eschewing enslavement, Catholicism, and hard liquor.

However, by 1749, Georgia began to import enslaved Africans to work the growing number of cotton plantations, adopting the agricultural model of South Carolina; it played a central part in the Civil War to maintain its plantations and enslavement society. By the time of the Civil War, enslaved Africans in Georgia accounted for 44% or almost half of the state's population. Georgia was determined to maintain enslavement and the agricultural system. Its bitter Civil War defeat and 1861 secession were marked by Sherman's march to the sea. In 1868, Georgia ratified the Fourteenth Amendment and was then readmitted into the Union. However, the state's history provided the basis of Georgia's forthcoming approach to civil rights and school desegregation.

DeKalb County, Georgia, was created in 1822. Until the 1960s, it was primarily farmland. Before and during the 1960s, the majority of White Georgians opposed desegregation, the legally enforced dismantling of segregation laws and policies. Expressing that widespread sentiment, Governor Ernest Vandiver vowed in 1958 that school desegregation would not happen while he remained in office. In January of that year, a group of African American parents and their children filed suit in U.S. District Court for the Northern District of Georgia alleging that Atlanta's public schools remained racially segregated.

In 1959, the U.S. District Court for the Northern District of Georgia gave the African American parents a partial victory. The court agreed that the schools were racially segregated, but then gave the board of education another year to implement a desegregation plan. A year later, the board of education introduced its Freedom of Choice school desegregation program. Previously, each school was assigned a neighborhood attendance district. Although the Freedom of Choice program claimed all children would be able to attend any public school of their choice, transfer students had to satisfy aptitude and scholastic tests and even personality interviews.

Before the Freedom of Choice program could be implemented, the state had to resolve the problem of implementing a school desegregation plan while there were still several state anti-integration laws in force to preclude such action. Some of the laws provided for closing all of the public schools and creating private schools in their place to defy

court-ordered desegregation. In 1961, when the district court ordered the University of Georgia to admit two African American students, the state had to grapple with the idea of closing the University of Georgia. Recognizing the repercussions of closing its flagship public institution of higher learning, the Georgia assembly repealed the state's anti-integration laws. Subsequently, the Freedom of Choice programs could then be implemented.

Like the Atlanta Public School System, the DeKalb County School System also had a Freedom of Choice desegregation plan. Although adopted in 1966, the Freedom of Choice plan was so restrictive that by the late 1960s, very few African American students had transferred to white majority schools. In 1968, a group of African American parents and their children filed suit in U.S. District Court for the Northern District of Georgia alleging that the DeKalb County School System was still segregated. The following year, the district court ordered the DeKalb County School System to institute a unitary system (a racially neutral school system or one where an unconstitutional dual school system had been dismantled) and assign students to schools in their respective neighborhoods (attendance districts).

Facts of the Case

In a 1983 civil action, *Freeman v. Pitts*, a group of African American parents and their children filed suit in the U.S. District Court for the Northern District of Georgia to stop the DeKalb County School System from building another school facility at Redan High School. At the time of the lawsuit, Redan, a majority White high school, suffered from overcrowding. Since the 1978 to 1979 school term, Redan had been operating with more students than its suggested capacity. In 1983, Redan had been in excess of its capacity for 5 years. In fact, in the 1984 to 1985 school term, the student body had grown to be 808 students over capacity.

As a temporary solution, the DeKalb County School System had added a number of portable classrooms to the campus. Seeing a need for a more permanent solution, the school system developed the Redan II plan in which a new facility would be constructed. Redan's attendance district would remain the same, but the students would be split between the two facilities. Students in the

10th through 12th grades would remain at the older facility while students in the eighth and ninth grades would be reassigned to the new facility. Students in the eighth and ninth grades were grouped together since DeKalb County did not have middle schools.

In their lawsuit against the school system, African American parents filed a motion to stop the school system from adding any more portable classrooms and building a new facility. In particular, the parents argued that the county planned to build another majority White school rather than reassign the White students to other high schools, which had not reached full capacity, but were predominantly African American. The solution to build another facility was considered by the African American parents to be just another way to avoid desegregation. The parents stated that the new building violated a 1969 injunction granted in *Pitts v. Cherry* (1969) that required school construction to be developed with the goals of ending segregation and improving desegregation.

Over the objections of the African American parents, the district court held that the school system's decision to build another facility for Redan was not motivated by discriminatory intent. In addition, the court decided that the school system had also reached unitary status. The parents appealed the decision of the lower court arguing that the DeKalb County School System was not unitary and that the district court erred in making discriminatory intent a factor in deciding the case.

Appellate Rulings

In 1985, the U.S. Court of Appeals for the Eleventh Circuit reversed and remanded the district court's decision. The court of appeals stated that before a federal court could relinquish jurisdiction over a previously segregated school system, it had to hold a hearing to determine if unitary status had been achieved. At this hearing, the other party to the lawsuit should be given an opportunity to demonstrate whether the federal court should still maintain supervision of the school system. Thus, the court of appeals held that the district court did not follow these established procedures.

In addition, the court of appeals stated that the district court could make discriminatory intent a factor only after finding that unitary status had

been achieved. Finally, the court remanded the case to the district court stating that the district court must hold a hearing to determine whether the DeKalb County School System had obtained unitary status.

In 1986, the DeKalb County School System filed a motion in the district court requesting a declaration that it had obtained unitary status and was therefore no longer subject to federal court supervision. In response, the district court partially ruled in favor of the DeKalb County School System when it decided that the school system had satisfied four of the six unitary status factors as identified in *Green v. County School Board of New Kent County* (1968). In *Green*, the U.S. Supreme Court established certain criteria to be used to determine whether unitary status has been achieved. The factors are student assignments, transportation, physical facilities, extracurricular activities, faculty assignments, and per pupil expenditures. In reviewing the request by the DeKalb County School System, the district court held that the school system was unitary for student assignments, transportation, physical facilities, and extracurricular activities.

The court stated that in regard to the student assignment factor, any racial imbalance in the school's student body was due not to discriminatory policies, but to demographic changes in the area neighborhoods. Between 1975 and 1980, approximately 64,000 African Americans had moved into southern DeKalb County, while approximately 37,000 Whites had moved out. In 1969, the African American students were only 5.6% of the student body in DeKalb County. Yet by 1986, that number had grown to 47%.

In response, the school system in the 1980s created magnet school programs located in the middle of the county. The goal of the arts, science, and foreign language programs was to attract African American students from the southern part of the county and Whites from the northern part. Upon hearing the various steps taken by the county, the district court was satisfied that the school system was doing its best to work within the new racial parameters of the county. However, the court held that it would continue to maintain court-ordered supervision in regard to faculty assignments and resource allocation.

Unhappy with this outcome, the African American parents appealed to the Eleventh Circuit.

The court of appeals reversed the district court again, stating that the district court could not relinquish its court-ordered supervision over the DeKalb County School System until all categories of unitary status had been satisfied. The school system subsequently appealed to the U.S. Supreme Court.

After hearing the case, the Supreme Court reversed the court of appeals decision and held that it was within the district court's authority to partially withdraw its court-ordered supervision of the DeKalb County School System. The Supreme Court agreed that the changes in the racial composition of the student body were due to residential patterns and not to policies of the school system. The district court could relinquish its control in incremental stages and did not have to wait for all six unitary status factors to be satisfied at the same time, the justices said. Thus, the school system could concentrate its time and effort on the remaining factors where the effects of discrimination had not yet been eliminated.

Outcome and Impact of the Case

As directed by the U.S. Supreme Court, the Eleventh Circuit remanded the *Freeman* case to the U.S. District Court to evaluate the remaining unitary status factors (teacher allocation and per pupil expenditures) still under federal judicial supervision. On January 4 and March 7 of 1996, hearings were held in the district court where the DeKalb County School System presented evidence that it was in full compliance with the remaining *Green* unitary status factors. After an extensive analysis of various data, the district court held that the DeKalb County School System was in full compliance and no longer subject to federal supervision.

The *Freeman* decision is considered one of a number of cases that began the trend of releasing school boards from judicial supervision. By focusing on the local school board's right to control its school system, the U.S. Supreme Court in *Freeman* stated that federal judicial supervision was meant as a temporary measure. Thus, it was acceptable for a federal court to relinquish supervision in incremental stages.

Today, DeKalb County public schools are 76.9% African American and 10.7% White. Courts

have credited this imbalance to demographics and to the fact that local school boards cannot control where families choose to live. Still, in 1959, when the first group of parents sued the DeKalb County School System, it probably would have been difficult for them to imagine that 48 years later, the majority of African American students in DeKalb County public schools would continue to attend schools that are mostly African American.

G

GEIER V. SUNDQUIST

Geier v. Sundquist (2001) set into motion a series of lawsuits beginning in 1968 and ending in 2004 that culminated in the desegregation of the public education system in Tennessee. As a result of the *Geier* lawsuits, in 1979 the court ordered the once White-only University of Tennessee (UT) to merge with the nearby all-Black Tennessee State University (TSU). Today, the UT survives as an integrated institution of higher education. This entry provides a history of the cases leading to the desegregation of the UT.

Historical Context

From 1807 until 1960, public higher education in Tennessee was segregated by law. The Tennessee Constitution of 1870, article 11, section 12, mandated that all higher-learning institutions be racially segregated. Following the decision in *Plessy v. Ferguson* (1896), which upheld segregation as constitutional and mandated separate-but-equal facilities for African Americans, Tennessee's public education system was racially separate, but highly unequal.

In 1901, Tennessee enacted criminal statutes requiring racial segregation in all public and private colleges. In fact, Tennessee became the first state to enact such a statute. To gain an insight into how segregated Tennessee's educational system was, the UT, from 1807 through 1960, was open to White students only. TSU, from 1912 until

1960, was open to African American students only. TSU was the only university in Tennessee accepting African American students prior to 1960. Hence, the public education opportunities for African Americans were admittedly bleak during this time, with African American students comprising less than 6,000 out of the 57,000 students attending Tennessee's public universities. African American students at TSU received inferior educational opportunities compared to their White counterparts. The faculty, facilities, and educational resources at TSU were inferior to those at UT.

By 1954, desegregation began at the elementary and secondary school level, accomplished by Supreme Court mandate. Unfortunately, however, desegregation for higher education was slow to follow. In 1968, the case of *Sanders v. Ellington* (1968) opened the door to desegregating Tennessee's public universities. It set into motion a series of lawsuits that continued for 30 years, eventually culminating in the desegregation of Tennessee's public higher-education system.

In *Sanders*, the plaintiffs sought to prevent the UT from expanding an all-White, nondegree-granting educational program. The plaintiffs feared that allowing the university to expand its all-White program would perpetuate segregation and interfere with the university's efforts to desegregate its student body and faculty.

The United States intervened as a plaintiff in the lawsuit, requesting that the court order the defendants to create a plan to desegregate all public universities in Tennessee. In response, the court

declared a Fourteenth Amendment duty on the defendants and the State of Tennessee to create a plan to abolish its dual system of higher education. In particular, the court asked for a plan on how to integrate White students into the 99.9% African American student body of TSU. It requested that the school implement an open-door policy and enact new recruiting strategies to attract White students. This was a victory for the plaintiffs, and in the year that followed, the defendants appointed White faculty members, improved TSU's facilities, and increased student financial aid funds. Although the progress was positive, the court was not fully satisfied that segregation had been dismantled effectively.

Facts of the Case

In 1968, a lawsuit was brought by Rita Sanders Geier and several other African American citizens and residents of the State of Tennessee against the governor of Tennessee, the UT, the chairman of the Tennessee State Board of Education, and Tennessee A&I State University. The plaintiffs sought to prevent the all-White UT from constructing an additional educational facility that would perpetuate the school's racial segregation.

As a result of the case, in 1977, the U.S. District Court in *Geier v. Blanton* (1977) ordered the merger of TSU and UT into a single university, governed by Tennessee's Board of Regents. The court stated the merger was necessary because little progress had been made in dismantling the dual system of higher education. In addition, the open-door admissions policy was ineffective, especially since the all-White UT was in close proximity, only 5 minutes away from the all-Black TSU. The court also stated that Tennessee's segregated institutions were in violation of the U.S. Constitution and that the only way to remedy the problem was to combine both universities.

The February 1977 decision by Judge Frank Gray was a victory for both the Geier plaintiffs and for the African American students across Tennessee, who now could have access to a better education. Gray stated the merger would restore the victims of discrimination to where they would be had there been no discrimination. Gray found that the failure to dismantle the dual system of education over the past 10 years warranted a

drastic solution, and merger was the solution. Thus, on July 1, 1979, UT merged into TSU, with TSU becoming the surviving institution.

From 1979 through 2004, litigation continued between the *Geier* plaintiffs and the defendants. The lawsuits asked the defendants to implement more programs to integrate White students into TSU and to create a diverse faculty and staff. In *Geier v. Alexander* (1984), a settlement was reached between the *Geier* plaintiffs and the defendants. The settlement agreement stated that to continue desegregation in Tennessee's schools, the defendants agree to continue to work on (a) integrating White students into TSU, (b) integrating African American faculty and staff into predominantly White institutions, and (c) checking the admissions policies to ensure there is no continuing racism.

In 2001, the plaintiffs filed *Geier v. Sundquist*, one of their final lawsuits, which resulted in a consent decree stating the parties' agreement to continue desegregating all of Tennessee's schools by integrating diverse faculty, staff, and students. In addition, part of the consent decree was a request by the plaintiffs to recoup attorney's fees for their 36-year ongoing suit with Tennessee's higher-education system. On September 27, 2002, the court awarded the *Geier* plaintiffs \$376,587.50 in attorney's fees.

Impact of the Case

Ultimately, *Geier v. Sundquist* set into motion a series of lawsuits, from 1968 to 2004, aimed at desegregating and equalizing the public education system in Tennessee. Exactly 30 years after the first lawsuit, *Sanders v. Ellington* (1968), was filed, Tennessee citizens enjoy an integrated system of public education. In 2001, as a result of the *Geier* case, Tennessee's courts mandated the creation of summer enrichment programs for African American high school students. These programs, aimed at improving test scores and overall college preparation, proved successful. Ironically, many of these programs were offered at historically White-only schools in Tennessee.

Today, about 96 years after it was founded as a Blacks-only university, TSU is thriving as a successful and fully integrated university. TSU currently offers bachelor's, master's, and doctoral degrees. The campus comprises 500 acres, with 65 fully

equipped buildings, which are the combination of the old UT and TSU buildings. There are approximately 10,000 students: 75% African American and 22% White. This change from its 99.9% African American student body in 1960 to its now 75% African American student body exemplifies the school's desegregation progress. Today, TSU proudly stands as a symbol of the dismantlement of the dual system of education in Tennessee.

For a disenfranchised group of Americans, the decisions by the Tennessee courts to desegregate the public education system meant an equal opportunity to get an education they deserved for over 100 years. As a cornerstone of success in society, education and access to institutions of higher learning have allowed Tennessee's African American students to be on par with their White counterparts. Because of Geier and a group of unafraid, pioneering civil rights activists who challenged unequal and dated laws, African Americans residing in Tennessee today have the opportunity to receive an integrated and equal education.

GENDER

In everyday language, *gender* is typically thought of as signifying biological differences between the male and female sexes. However, in the social sciences, gender is considered a social construct, a socially derived label that is indicative of certain behaviors and practices. In essence, females learn to become girls by exhibiting behaviors that are typically associated with the female sex. Likewise, boys learn to exhibit behaviors typically associated with the male sex. As such, society has distinct ideas about what constitutes girl or woman behavior and boy or man behavior.

For instance, girls-women are purely emotional, and boys-men are superior at reasoning. These ideas are often portrayed and thus reinforced through many institutions, including the media, the church, the workplace, and schools. The pervasiveness of such gender distinctions give rise to stereotypes that support gender inequality. As a consequence, gender bias results in such dynamics as unequal pay, inequitable resources, and discriminatory hiring practices and is traditionally considered to favor males and to disparage females.

Gender bias has always been an inherent part of U.S. education since school culture has traditionally been shown to favor males. However, with respect to African American education, gender bias has proved to be a far more complex issue, for research shows that although African American females experience gender bias, African American males are more disadvantaged by traditional school culture than are African American females. This entry offers a historical and contemporary discussion of the concept of gender.

Historical Context

Historically, gender differences have been a major influence on the way U.S. education has been thought about and practiced. It was once not considered important to educate females, and even when they began to seek education in greater numbers, they were limited to education that prepared them for traditionally female professions, such as teaching and nursing. Today, many scholars argue that although gender bias in education is not as

explicit as it once was, it continues to exist on a subtle, but no less harmful level.

In 1992, the American Association of University Women (AAUW) released a report titled *How Schools Shortchange Girls*, which focused less on allocation of resources or blatant acts of discrimination. Instead, the report called attention to the role schools play in socializing girls to believe they are unequal to boys. The report pointed out such dynamics as what kind of behavior girls are rewarded for versus boys and the many other ways teachers interact with girls differently than they do with boys. Throughout the 1990s, other notable work in this area emerged to support the contentions of the AAUW report, and the discrepancies between boys' and girls' school performances became known as the gender gap. Although such findings were assumed to apply to all girls, this line of research often did not take into consideration the impact racial differences might have on how different groups experience gender bias in schools.

The role gender bias has played in the education of African Americans is difficult to understand without taking into account the ways in which it intersects with racial dynamics. Just as education was not considered important for White females, it was also not considered important for African Americans, male or female; it was a privilege reserved mainly for elite White males. Like White females, when African Americans began seeking education in more significant numbers, it was believed that they needed a different kind of education, one that suited them for roles that maintained their subservience to the dominant culture.

In the late 19th and early 20th centuries, as key African American leaders engaged in debates about what kind of education would be appropriate for the millions of newly freed African Americans, they struggled with the significance of gender bias and its impact on the African American situation. Some argued primarily for the education of African American men, others thought that the men should be educated first, and still others contended that educating African American women on par with African American men was vital to the project of racial uplift.

African American girls ended up pursuing education in greater numbers because African American boys were often expected to work in the fields or elsewhere to help maintain the household. This

factor, as many historians argue, has contributed to nontraditional patterns of gender difference in African American education.

Current Situation

Unlike the mainstream trend toward male bias, research on gender differences in African American education shows a number of distinct trends. One of the most significant trends is that African American boys are dropping out and/or struggling with school at much higher rates than African American girls. Subsequently, African American girls are perceived more favorably than African American boys in traditional school culture and perform better. However, research also shows that African American girls are praised more for their social skills while boys are recognized for their cognitive abilities. African American females also pursue higher education in greater numbers, but perform better than African American males only in predominantly White institutions as opposed to historically Black colleges and universities, where African American men are noted to do better academically.

Thus, a more nuanced understanding of the gender gap and how it affects the education of African Americans can be achieved only by taking into consideration the ways race and gender dynamics intersect and interact to bring about distinct advantages and disadvantages for both females and males.

GENDER AND HEALTH EDUCATION

On average, women live longer than men and therefore are more susceptible to functional impairment as they get older. It is imperative that gender and health education is included in the core curriculum of institutions that educate African Americans. These courses can emphasize how race, class, and gender impact health outcomes for African Americans and place them in a position for poorer health outcomes. This entry explores the importance of considering gender in health education and in the African American community.

Most programs focus on racial disparities in health, a focus which is important, but gender disparities are equally deserving of consideration and investigation. Gender impacts health, health care access, and discrimination. Inequalities in access to health care for women negatively impact their health outcomes. For example, regardless of class,

African American women continue to have higher infant mortality rates than their White counterparts. African American men's occupational status and stress can impact their cardiovascular outcomes. Discrimination cumulatively impacts health outcomes for both men and women. It is important to recognize the health disparity gaps for African American women and men.

The African American population is only 13.4% of the noninstitutionalized U.S. population, yet it accounts for high percentages of morbidity and mortality rates in the United States. In 2003, the death rate for African Americans was higher for heart diseases, stroke, cancer, asthma, influenza and pneumonia, diabetes, HIV/AIDS, and homicide than for their White counterparts. African American women are twice as likely to begin late prenatal care and therefore have higher sudden infant death syndrome (SIDS) and infant mortality rates as a result. African American men are 60% more likely to die from stroke than their White male counterparts.

The health disparity statistics are alarming and continue to perplex public health researchers and scholars alike. Gender and health education become important in that continued prevention education can be relayed in the classroom setting and transferred into practice. Courses in sociology, anthropology, public health, women studies, and gender studies are needed to address the growing health disparity problems. Gender places us in unique positions socially, economically, and politically. The challenges faced by African American men and women are different and place them in a social context that dictates their health outcomes. The social ecological model provides the framework for how gender along with other determinants impact health. Factors such as attitudes, knowledge, and cultural beliefs, which are dictated by race and gender, intersect with institutions, organizations, and experiences to determine health behavior and choice, which lead to illness and disease. It is imperative in education to illuminate these intersecting relationships and how they impact health outcomes for men and women. Many of the disparate conditions are reinforced by structural and institutional discrimination.

Educational institutions can either reinforce discriminatory health practices or enlighten those whom they educate. It is imperative that students receive the

knowledge and understanding of gender inequalities in health, health care access, and disparate health outcomes. Practical applications will include community outreach and volunteering with local community-based organizations that serve underserved, underinsured, and disparate populations. Classroom discussions and seminars hosted by students relay the information in ways that are appealing, get them involved, and provide better understanding of the complex nature of gender and health. Practical experiences must provoke students to work on behalf of their counterparts to better their health outcomes and health care experiences. An example of this is the importance of educating African American men on the large disparity of HIV in African American women, thereby creating a sense of responsibility and a commitment to work personally and professionally to help reduce new cases of HIV among African American women. Similarly, African American women can actively participate in helping to reduce the number of African American men with prostate cancer and cardiovascular disease.

Education is key in solving health disparities; however, knowledge alone is not enough to change behavior, institutions, and access. People and institutions must be reached at their core interest, self, and then others. Through education, students become activists in their own interest and the interests of their communities and their people; the legacy of change is passed through active voice and participation. As well stated by bell hooks when she wrote that education is the practice of freedom, and this holds true in gender and health education. Education is equivalent to freedom to act on behalf of those who cannot advocate for themselves—freedom to decrease and ultimately close the health disparity gap and freedom to diminish stereotypical beliefs about gender differences and superiority. Gender and health education courses and concentrations are needed and should be in demand if there is to be a difference and a change.

GENDER IN PRECOLLEGIATE EDUCATION

Gender is defined as the cultural and social characteristics and behaviors assumed based on sex. Empirical descriptions of gender issues for African American students are limited. A number of researchers have pointed out that while results are often disaggregated by race or by gender, they are rarely broken down by race and gender. In studies of race, underrepresented males are the focus, while in studies of gender, White women represent the universal. The intersection of race and gender is underexamined, resulting in very little information comparing male and female African American students. The majority of research that includes African American students in the sample consists of studies comparing them to White students with White students identified as the normative group. This approach ignores group differences, some of which might focus on gender. Similarly, gender research has compared males and females, ignoring race and ethnicity within groups. Whiteness and maleness are the norms in most research on students.

A second limitation of the existing research on African American students is that considerable research on African American students falls within the deficit model that overemphasizes problems and failures of African American students, overlooking coping and success patterns. Relatedly, a large proportion of the research that includes African American students in the sample focuses

on the individual, not the context, thereby identifying the individual as the cause of the failure.

A third weakness in the body of research of the educational experiences and outcomes of African American students is that findings seldom include effect sizes, relying instead on significance testing as the proxy for importance. As a result, race and gender are seldom disentangled, and between-group differences are reported when none exist. This entry summarizes the body of research that examines both gender and race in precollegiate education.

School Achievement

Although findings on academic and career achievement suffer from the lack of intersectionality of race and gender, they are more likely to be reported by race and gender than other areas of study. Within the research on achievement and school effects, African American males are studied more often than are African American females.

Overall, female achievement in K–12 schooling is higher than male achievement. For instance, according to the latest report from the U.S. Department of Education, African American females score higher than males do on the National Assessment of Educational Progress (NAEP) reading tests in Grades 4, 8, and 12. Although scores for both genders have increased in Grades 4 and 8, 12th grade results have gone down, a finding true for all ethnic groups. African American females score higher at all grades in writing, a trend similar across ethnic groups. For math, there is not much difference in NAEP achievement between African American males and females.

College and graduate school entry tests show a different pattern, with males outscoring females in all but the SAT verbal test. African American females score higher than do males in the SAT verbal, and males score higher on the SAT quantitative test. For the Graduate Record Exam, African American males score higher than African American females on all three tests.

Educational Attainment

Although more females than males in every ethnic group graduate from high school, the gap is larger for African American students. According to 2005

U.S. Department of Education data for African American students, the overall high school graduation rate is 55%: 59% of females versus 48% of males.

At the college level, 2005 U.S. Department of Education data report that the graduation rate is 62%: 46% of African American females versus 35% of African American males finish. A higher percentage of both genders are now graduating from college than in 1990, and the gender gap for African American students has increased from 6% in 1990 to 11% in 2005. Among 18- to 24-year-old African American males, the typical college years, a higher proportion is attending institutions of postsecondary education than are in prison, data that contradict street-level folklore. The most recent comparable data for African American males, age 18 to 24, indicate that although 5% of this group is in prison, 31% of African American males are in college.

Higher graduation rates at both the high school and college level do not translate into higher pay. U.S. Census data employment statistics for 1999 report that African American women earn \$85 for every \$100 earned by African American men.

School Environment

A number of researchers point out that differences in achievement between the races can be explained by the treatment African American students receive in schools. Little research has been done to examine the root cause of the gender differences of African American students.

African American children experience school differently than children from other ethnic and racial groups, and these differences affect aspirations and achievement. For instance, within the African American student population, there are gender differences in placements, teacher–student interactions, teacher attitudes, and support systems. The majority of African American students attend schools in which people from underrepresented groups are in the majority. African American students are also likely to be in attendance in areas of schools with the least resources.

A small movement to introduce single-sex education, particularly for African American boys, has been nurtured over the past decade. Although educators argue that all-male and all-Black male

schools provide a setting more conducive to African American male learning, the research is unclear on this issue. However, when single-sex learning does provide benefits for African American students, they accrue only to males. Single-sex schools do not increase female learning and achievement.

Both males and females are disproportionately represented in alternative, vocational, and special education programs. A fifth of all African American students are assigned to alternative programs primarily designed to house students with behavioral problems. A third of African American students are in vocational education or special education programs. African American males are more likely than are African American females to be in these programs.

African American boys are sometimes held back from entering kindergarten, to give them a better advantage in team sports. Smaller boys are likely to be kept from moving into the next grade to provide more time for growth. This practice is not common for girls.

African American male and female students are disproportionately represented in special education. For instance, the Civil Rights Project at Harvard reports that although they are only 17% of the population, 33% of African American children are labeled mentally retarded or emotionally disturbed, 1.5 times the rate of White children. The more wealthy the district, the more likely African American students are to be taken out of the mainstream and assigned to special education classes.

Within-group differences are even higher. African American males are 3 times more likely than African American females to be classified as emotionally disturbed. This does not mean that African American females are being well served. For a girl to receive special or support services, her learning needs must be more severe than those of her male classmates. Girls receive help only in extreme cases, and they are more likely to be placed in restrictive settings. Males are 10 times more likely than females to be placed in self-contained classes because of behavior issues, not learning criteria.

Race and gender comparisons illustrate the differences in special education placement. African American females are 1.1 times more likely as

Table 1 Odds Ratio for Special Education (2002) as Compared to White Females

	Female	Male
Black	1.104	2.729
White	1.000	2.372

Source: Coutinho, M. J., Oswald, D. P., & Best, A. M. (2002). The influence of socioeconomic and gender on the disproportionate identification of minority students as having learning disabilities. *Remedial and Special Education*, 23(1), 49–59.

White females to be in special education, while African American males are 2.73 times more likely than White females to be in special education. The difference between African American females and males (1.624) is much greater than the difference between White females and males (1.372; see Table 1).

At the other end of the special services classes, African American males and females are less likely than their White counterparts to be selected for gifted and enrichment programs. Majority African American schools are less likely to have these programs, and in schools that do offer enrichment, African American children are more likely than other children to be overlooked. Predominantly African American high schools offer fewer advance placement (AP) classes than do White high schools, and AP enrollments differ by both race-ethnic group and gender. White students are approximately 8 times more likely than African American students to take an AP class. Among African American Students, 3.1% of female versus 2.5% of male students are enrolled in AP classes.

Teacher Attitudes and Interactions

Considerable research has documented the differences in the ways in which teachers treat African American children compared to other children. When gender and race are examined, the data indicate that both male and female students are viewed by teachers in less positive ways than are other children, and these characterizations differ by gender. Teachers are likely to describe boys as criminals in the making and treat African American males according to these expectations. Brenda Townsend reports that African American students, primarily

males, receive punishment and suspension at 3 times the rate of males in general and 16 times the rate of White girls. African American males receive 33% of all the suspensions in schools, more than 4 times their representation in the population.

According to a 2004 U.S. Department of Education study, African American students are more likely than any other racial group to be sexually abused by teachers in the school—girls more so than boys. This is true for students in both regular and special education.

A strong body of research documents the lower expectations that teachers have for African American students, although little has been done to understand differences in teacher expectations by gender of student. Teachers are more likely to rate communication styles of African American girls more negatively than the styles of boys, but both genders are viewed more negatively than students in other racial groups. Teachers have lower expectations for African Americans and negative reactions to their communication styles.

African American girls are often perceived by teachers as hypersexual and are believed to be actively seeking pregnancy. Kimberly Scott's research points out that these same girls are described by teachers as hostile, unfeminine, and animal-like. Scott further documents that when teachers do give African American girls attention, it is likely to be about their behavior and social skills and interactions, not about their achievement. Comments on report cards are much more likely to reference social skills than academic strengths and weaknesses. Even among high-achieving African American girls, teachers comment on how nice or polite they are rather than on their mathematical abilities or science achievement. Teachers and other students interact more with African American girls than any other group to resolve social problems. As a result, these girls come to believe that their social skills are how they are valued.

Aspirations

African American girls report more future goals than do African American boys. Although there are no differences in positive self-perceptions, females are more confident than males that they will graduate from high school. Males hold more negative views of the future than do

females and do more short-term as opposed to long-term planning.

Females report more strong feelings of self-efficacy than boys. When queried about the motivation to attend college, African American females are more likely to link college to career success, and African American males report they go to college for sports.

Once in college, males focus their energies on activities related to making money and link success to future earning power. Males are more likely than females to hold a job during college. Females are more likely than males to be involved in campus life, to volunteer, to interact with instructors, and to become part of a community. In her research, Lea Hubbard found more encouragement and connection among females than males. Females provide a different support structure for each other than do males. They help other females academically and provide support for other African American young women to stay away from activities that would interfere with completing college. The bulk of African American male interaction consists of playing sports together and studying for exams.

Parents play a role in aspiration formation, and some studies indicate that mothers have higher aspirations for their daughters than for their sons and are more likely to encourage girls to go to 4-year institutions.

Role as Educator

African American children experience a teaching force that is disproportionately White. For instance, although close to a fifth of the school population, African Americans make up only 8% of K–12 teachers. The gender disparities are great: 10% of the K–12 principalships are in the hands of African American educators. Although women make up a larger proportion of principals (6%) than men (4%), African American men have a greater chance of becoming a principal than do African American women. Although 1% of the teachers, men are 4% of the principals. Women are 7% of the teachers and 6% of the principals. According to the 2000 census, more women are found in elementary and middle schools than at the secondary level (see Table 2).

The National Center for Educational Statistics reports that in 2005 to 2006, 1.6% of bachelor's degrees in education were conferred on males and

Table 2 Representation of African American Educators in PreK–12 Schools

	Percent African American Male	Percent African American Female	Percent African American
PreK–K	.5	13.2	13.6
Elementary and middle	1.8	7.2	9.1
Secondary	2.5	3.8	6.2
Special education	1.2	5.7	6.9
Other	3.0	6.0	9.1
All teachers	1.0	7.0	8.0
All administrators	3.8	8.1	11.0

Source: U.S. Census Bureau. (2000). *Census 2000 Special Tabulation, EEO Residence Data Results for Total United States*. Washington, DC: Author. Available at <http://www.census.gov>

4.8% on females. Among African American graduates in education, 75% were female and 25% male.

As a group, African American educators are more likely than any other racial group to see their job from a social justice perspective. They often describe their motivation for entering teaching in the language of change and justice. Moreover, among African American educators, females are more likely than males to see themselves as trying to make a difference.

African American students experience many of the same gender inequities and disparities as do students in other racial and groups. However, less is known about gender issues for African American youth than for White youth. African American males are more likely to be studied than African American females, and when mixed-race, mixed-gender studies are conducted, results are rarely reported by race and gender.

GENERAL EDUCATION BOARD

The General Education Board (GEB) was founded in 1902 with a \$1 million gift from John D. Rockefeller. The educational role of the GEB has been viewed by several historians as a shining light in terms of furthering educational aims for African Americans or as a plan to keep the former enslaved as second-class citizens. The GEB was incorporated by the U.S. Congress on January 12, 1903. It was the brainchild of Rockefeller, who

along with a who's who of educators, created an organization—a foundation for all intents and purposes—that was to affect education in all areas without distinction to race, gender, or creed over nearly the next 50 years.

The GEB list of directors included such educational leviathans as Charles W. Eliot (president of Harvard University), Abraham Flexner, George Peabody, and Andrew Carnegie. The GEB may be viewed as an umbrella organization that was able to support other organizations engaged in educational work. It cooperated with the Peabody and Slater Funds and the Southern Education Board. It also was able, according to its charter, to create or provide funds for elementary or high schools in any discipline such as industrial or agricultural or for teacher training institutes or even universities. In short, the GEB was able to work in any educational field it chose. It was sanctioned to collect data and report to the federal government on its activities. The GEB was essentially a private foundation that had wide latitude in all matters educational and that cooperated with governmental agencies.

One of the first activities of the GEB was to survey the educational status in the South. GEB agents collected statistics on education matters such as organization and funding of public elementary school systems, training and pay of teachers, private and public secondary schools, and the education of women and African Americans. The initial gift of a million dollars was viewed as seed money to begin the development of its ideas. Rockefeller jump-started the process by donating \$52 million as a permanent endowment to the GEB. The first activity of the GEB was to improve the income of the Southern farmer as the basis to begin self-improvement in the economic status of the Southern population. To this effect, the GEB developed demonstration farms that illustrated to the local farmers how to increase productivity and to turn a profit.

The idea of self-help that was created caused an environment that encouraged increasing educational opportunities for African Americans, especially in the south. The collection of a vast amount of data supported the actions of the board. There was no attempt to eliminate the separate but (un)equal segregation in the South by the board. Instead, the policy was simply to extend Booker T. Washington's concept of manual labor and a slow, steady rise to a separate equality.

This was accomplished by the board funding White supervisors to oversee the segregated educational system.

The board poured millions of dollars into Southern states' educational bureaucracy, funding additional schooling for teachers and administrators at the local and state levels. Fellowships were granted to hundreds of teachers and administrators to obtain additional education to professionalize the teaching and administration of Southern educators. During the Great Depression (1929–1933), the board directly funded White administrators' salaries for monitoring African American vocational education programs. The board continued to function until 1960 when it was disbanded. However, its work on Southern education ended in 1952.

GIFTED AND TALENTED EDUCATION

The idea of a separate kind of education for students identified as gifted and talented began not

long after the Civil War, and its heyday began in the 1950s as segregated education was declared unconstitutional. Yet at no time in the history of gifted education have African American students been proportionately represented; gifted education has always been segregated by race. The most likely explanation is that too few African American students have been identified as gifted and talented. For change to occur, a philosophy of inclusion is essential. Instruments, definitions, theories, criteria, policies, and procedures must be selected with care and modified so that they are culturally sensitive, fair, and equitable. Ultimately, they should appropriately identify all children who are gifted, regardless of race, gender, or income. School personnel, families, and students must be educated about gifted and talented education and about cultural diversity. And educators must be diligent, assertive, and proactive about evaluating—and changing—gifted and talented education in terms of finding ways to recruit and retain African American students in these programs. This entry provides a historical overview of gifted and talented education, describes the identification process and typical programs; then, it looks at the special issues related to African Americans and suggests some potential remedies for ongoing segregation.

Historical Context

Ask any historian about the most significant event of the 1860s and the undisputed answer would include the Civil War culminating in the abolition of enslavement. Ironically, African American people at this time were given their rights to freedom, their right to join in the great U.S. battle for equality. This began the era of Reconstruction, during which millions of African Americans were figuring out where to live, how to eat, and essentially how to survive.

At the same time that Blacks were finding their way in this still foreign land, an educator in St. Louis, Missouri, in 1868, was experimenting with classwork suitable for those students who were above the average student. By the turn of the century (1901), a school in Massachusetts opened for gifted children. And in the next 15 years, testing and measurement would become the foundation for the next 100-plus years.

African American children, however, were not considered in any of these great developments, except for allegations that they were genetically inferior. Nearly 100 years after the first 1868 classes for gifted had begun, the highest court in the land finally struck down the *Plessy v. Ferguson* (1896) ruling with what has become known as the landmark decision *Brown v. Board of Education, Topeka, Kansas* (1954). This year would mark the end of the era of legal segregation and the birth of the National Association of Gifted Children.

With the racial climate of the 1950s to 1970s, African American children were more than left behind—they were ignored. Therefore, gifted education in the United States, especially where African American students are concerned, has a relatively short history. According to some scholars, interest in and increased commitment to gifted students was in response to the launching of *Sputnik*. The launching of *Sputnik* by Russians was a blow, in some ways, to the ego of many U.S. citizens, namely those who viewed the United States as the intellectual elite among developed countries. The United States was not number one in this area. This event caused many U.S. leaders to question the quality of the U.S. educational system and to rethink the extent to which the United States was challenging students in general, but gifted and talented students in particular. From this reactionary perspective, the number of gifted education programs increased in the desire for the United States to regain its status or competitive advantage. Over the years, interest in and commitment to gifted education has waned; most ironically, there is no federal mandate to either identify or serve gifted and talented students. Instead, this decision or discretion is left to state departments of education.

Attention to African American and other minority students in gifted education is not only a recent phenomenon, but also a controversy and a form of benign neglect. Prior to the 1970s, little or no attention was devoted to gifted African American students, their underidentification as gifted, and their underrepresentation in gifted and talented programs. This population was virtually ignored in the literature, theory, research, and practice with one review reporting that fewer than 2% of publications on gifted students focused on African American students. With the consistent works of

trailblazers such as Alexinia Baldwin and Mary Frasier beginning around this time, attention to African American students' underrepresentation in gifted and talented education began to receive much needed and deserved attention.

Identification and Definition

Who are gifted and talented students? It is estimated that some 3% to 5% of the population is gifted and talented, defined most often by intelligence tests. Students with an IQ of 130, representing two standard deviations above the mean IQ of 100, are often viewed as gifted and talented. The first federal definition of gifted was uttered in 1970. Since then, the government has proposed several definitions. According to the U.S. Department of Education (1993),

Children and youth with outstanding talent perform or show the potential for performing at remarkably high levels of accomplishment when compared with others of their age, experience, or environment. These children and youth exhibit high performance capacity in intellectual, creative, and/or artistic areas, and unusual leadership capacity, or excel in specific academic fields. They require services or activities not ordinarily provided by the schools. Outstanding talents are present in children and youth from all cultural groups, across all economic strata, and in all areas of human endeavor. (p. 19)

Schools offer gifted education programs and services to meet the needs of gifted students in one or more of the five areas: intellectual (e.g., based on IQ score), academic (e.g., based on achievement scores or grades), creative (e.g., based on a checklist of creativity), visual and performing arts (e.g., based on performance, audition), and leadership (e.g., based on service and membership in organization). Most schools identify and serve gifted students in the intellectual, academic, and creative areas.

The above federal definition is different from previous ones in at least four ways: It replaces the notion of *gifted* with that of *talent*. The definition focuses on talent development and potential, it recognizes the role of experience and environment in contributing to gifts and talents, and it asserts that no group has a monopoly on gifts and talents.

Other definitions (and theories) have been proposed by such scholars as Joseph Renzulli, Howard Gardner, and Robert Sternberg.

Gifted and Talented Programs and Services

Once gifted students are identified, they can be served in a number of ways. Much has been written about how to differentiate instruction for gifted and talented students, particularly the scholarship of Carol Tomlinson. Consideration is given to changing the pace, depth, and breadth of instruction for gifted students and to using curriculum that is challenging and engaging. A few such programs experiencing successes with African American students appear in the 2004 book by Tomlinson and colleagues. More than in the general education classroom or special education classroom, teachers in gifted classrooms seek to develop and/or nurture critical-thinking skills and problem-solving skills in gifted students. Options include, but are not limited to the following:

1. Gifted education classrooms led by teachers formally trained in gifted education (ability grouping, independent study, and curriculum compacting may be used to challenge students); students in pullout programs, self-contained classrooms, or gifted education centers
2. Programs that offer enrichment and otherwise extend learning opportunities (summer programs, chess teams, debate teams, book clubs, academic competitions, etc.)
3. Subject acceleration (placement in classes with older students for a subject area)
4. Radical acceleration (early entrance into kindergarten and grade skipping)

A Critical Issue: Underrepresentation

Gifted education has received much criticism from both advocates and opponents. There is a great deal of concern regarding charges of elitism. With this charge is the persistent and pervasive issue of African American students' being underrepresented in gifted and talented programs. For instance, as of 2002, African American students represented approximately 17.2% of students in public school districts nationally, but 8.4% of those in gifted programs—a discrepancy of over 50%. Compared

to African American females, African American males are even more underrepresented in gifted education.

Several explanations have been advanced to explain this discrepancy. The first step to being screened for gifted education services is teacher referral. Teachers are underreferring African American students for gifted education services—the opposite of what happens in special education, with overreferral being the norm. The underreferral may be due to a lack of training in cultural diversity, low expectations, or subliminal or overt racism. Teachers are the initial gatekeepers to African American students accessing gifted education. Second, students must often meet arbitrary, cutoff scores on tests to be formally identified. After students are given an IQ and/or achievement test, practices vary across school districts and states regarding the next step. In some cases, parent and student checklists are used; in other cases, students take another round of tests. Finally, a committee makes a decision for placement.

During this process, it is important that school personnel consider policies and procedures to see if they negatively affect the representation of African American students in gifted programs. For example, given that teachers often underrefer these students for gifted education services, it is essential that the efficacy of this policy be (re)considered. Likewise, are the tests, cutoff scores, and criteria defensible? Do they pose unfair barriers to African American students in any way?

Once students are placed, the question becomes how supportive the learning environment is for African American students in gifted and talented programs. Research indicates that gifted African American students often face negative pressures from White and African American peers. They may be teased by, alienated from, and rejected by peers. In addition, African American parents or guardians may also express concerns about their children's social-emotional needs not being met in gifted programs, many of which are predominantly White. Will their children have a social group who supports them and values achievement? Will teachers be fair to their children? Are teachers accepting of African American students' being in their gifted and talented classes? If teachers hold stereotypes about African American students or are prejudiced in any way, they are not likely to have high expectations

for these students or to create a classroom environment that is rigorous and culturally responsive.

Proposed Solutions: Desegregating Gifted and Talented Education

In this time of proposed de facto segregation in education, the road ahead seems as treacherous as those of the 1950s, but to address African American students' underrepresentation in gifted education (i.e., to desegregate gifted education), the concept of recruitment and retention is important. How can the number or percentage of African American students identified as gifted be increased, and how can their remaining in gifted programs after being recruited (identified) be ensured? In addition to educating school personnel, families, and students, several changes are needed to recruit and retain African American students in gifted education. The following strategies are recommended to reverse African American students' limited presence in gifted education.

- Instruments, policies and procedures that have a disparate impact on African American students must be changed or eliminated. Instruments (tests, checklists, nomination forms) must be selected carefully, criteria (cutoff scores, etc.) must be examined carefully, and policies and procedures (e.g., teacher referral) must be evaluated to see if they are educationally useful or harmful.
- A philosophy of inclusion rather than exclusion is necessary; it signals the need to eliminate tools and practices that are designed to exclude African American students from gifted and talented education classrooms and programs (such as rigorous summer programs). When this philosophy exists, a wide net is cast, attempting to serve as many gifted and talented students as possible.
- Definitions and theories need to be developed with cultural groups in mind. Are they responsive to and inclusive of the characteristics of African American students?
- Evaluation must be ongoing, systematic, and systemic. School personnel, particularly administrators, must examine patterns and trends, constantly seeking ways to eliminate gatekeepers, and thus increase

the presence of African American students in gifted and talented education.

- African American students must be introduced to mentors and role models who can share their experiences and provide students with effective coping skills, strategies, and resources.

At the heart of change is education and information. Education, including professional development, is necessary for educators and families and for other decision makers and stakeholders. All parties must be given formal preparation in understanding definitions and theories of giftedness, in recognizing characteristics of gifted and talented students, and in understanding tests, including their purpose and limitations. Equally important, educators must receive formal preparation in understanding culture, including how culture affects learning and test performance. They will need to know more about culturally diverse students in terms of characteristics, learning styles, communication styles, values, traditions, customs, and norms. Characteristics, such as those identified by A. Wade Boykin, for example, should be explained so that educators have a better understanding of verve, movement, communalism, affective orientation, expressive individualism, oral tradition, social time perspective, spirituality, and harmony. With such knowledge, educators may be less likely to view cultural differences as deficits. This can contribute to their seeing strengths in African American students and making referrals for gifted and talented education screening and placement. Essentially, teachers and other school personnel require assistance in creating culturally responsive classrooms, developing multicultural curricula, and modifying their instructional styles and strategies to accommodate diverse learning and cultural styles. Multicultural curriculum, as described by James Banks, holds much promise for engaging African American students.

Educators and caregivers also must understand that the notion of gifted and talented is socially constructed: What is viewed as and valued as gifted in one culture may not be considered gifted in another. One cultural group may value verbal skills; another may prize social skills.

The civil rights movement of the 1860s and 1960s (along with *Sputnik*) all sounded a clarion

call for the best and brightest in the U.S. to come together for a common goal. Undoubtedly, African American and other culturally diverse children possess extraordinary gifts and talents. Like educators and families, African American students must be better informed regarding such issues and topics as the benefits of gifted and advanced placement classes, coping with negative peer pressures, persisting in gifted and talented classes, and improving test performance.

GONG LUM V. RICE

In *Gong Lum v. Rice* (1927), a Chinese immigrant in Mississippi challenged the school district's classification of his daughter as colored and its

refusal to let her attend the White public school. As with other decisions following the *Plessy v. Ferguson* (1896) endorsement of a separate-but-equal policy, the U.S. Supreme Court legally confirmed the exclusive White privilege of public education. The opinion found no need to consider the educational equity of students who were not White. White students remained in a legally separate and privileged education category for decades. Even when legal segregation was abolished, public schools for students from underrepresented groups would continue to be marked by inferior funding, poor facilities, and/or fewer teachers. This entry looks at the historical context of the case, the legal proceeding, and the impact of the case.

Historical Context

The Chinese migrated worldwide in significant numbers between the 17th and 19th centuries, due to political, economic, and geographical transformations occurring in China. Chinese immigration into the United States, mostly males, occurred in large numbers around the mid-19th century. Louisiana plantations recruited Chinese from Cuba, while those in Arkansas and Mississippi recruited Chinese from China. The U.S. gold rush and the 1862 Transcontinental Railroad Authorization Acts also brought Chinese to this country, especially California. These Chinese recruits moved around the west, south and further east to escape anti-Chinese riots in California and the impact of the Chinese Exclusion Act of 1882, which was basically renewed until 1943.

Bringing Chinese people into the Mississippi Delta had an impact on the social and class divisions of the ruling White society, which controlled each city and small town. The Civil War and formerly enslaved Africans imperiled the agricultural economy and society that had been based on owned African American labor. In fact, in the 1850s, there were even calls in the lower southern states to acquire new U.S. territories permitting enslavement to reopen the African enslavement trade and to reenslave free African Americans. Thus, Chinese recruitment from China or California was just another labor strategy using post-Reconstruction laws, or Black Codes, to fuel competition between Chinese and African Americans. The goal was consistently the same: to compel African

Americans to, in this case, voluntarily resume their previous labor relationship to the plantations and White society there.

The U.S. Census of the Mississippi Delta reported the Chinese population grew from 51 to 743 between 1880 to 1940. Many came from areas of vibrant commercial enterprise and trade activity in China or had become service workers after losing their businesses, mining claims, and property rights in the West under anti-Chinese laws. In Mississippi, the Chinese quickly moved out of the fields into service businesses (food, laundry, hauling, importing) and into some prosperity. In their new roles, the Chinese served as the accepted middle man between Whites and African Americans because both frequented Chinese businesses. In addition, Whites rarely viewed Chinese businesses as a serious economic threat, as they were a small population, mainly males, and not presumed to remain permanently.

Generally, prior to 1940, approximately 20% to 30% of Chinese in the Delta cohabitated or married African Americans, and their offspring were classified as colored. Still, Chinese immigrants remained socially apart from African Americans by carving out a third status that would allow them to move closer to the social status of Whites as their businesses flourished. By the mid-1920s, some Chinese businessmen had brought their families from China. And in some cases, one or two of their children attended the local White public schools and the White Sunday schools. Despite the fact that there was no concentration of Chinese, no Chinatown, the increasing number of Chinese children became a concern for school officials and leading White citizens.

By the 1920s and 1930s, there were a number of Chinese children in Bolivar County, Mississippi, where a few Chinese immigrants such as Gong Lum became prosperous. His two daughters attended a White Sunday school, and one sought to join her peers in the Rosedale White public school.

Facts of the Case

In 1924, Lum, a Chinese businessman and immigrant, enrolled his Mississippi-born daughter, Martha Lum, in the White public school in compliance with state compulsory attendance laws requiring her to attend school. Under order of the board

of trustees, the superintendent notified M. Lum at the noon recess that she would not be allowed to return to that school because she was not White.

G. Lum, challenged the expulsion of his child from the district-funded Rosedale Consolidated High School. He argued that his family was pure Chinese and not colored, which usually referred to African Americans, especially in the South. Thus, since his daughter had been wrongly classified as colored by the school authorities, she should be admitted to Rosedale and not have to go to the other public colored school for African Americans, he argued. The lower court agreed and granted G. Lum a writ of mandamus, which would compel the school to reenroll M. Lum in the school.

The Bolivar Board of Trustees appealed to the Supreme Court of Mississippi in *Rice v. Gong Lum* (1927), which reversed the lower court ruling. Thus, M. Lum was barred from attending the district's public White school. The court ruled that Section 207 of the State Constitution of Mississippi permitted separate schools for White and African American children.

G. Lum appealed to the U.S. Supreme Court. Chief Justice William Howard Taft, a former president, wrote the opinion affirming the state Supreme Court ruling and the expulsion. He held that prior court decisions on educational rights supported her classification as non-White. And under the separate-but-equal doctrine of *Plessy v. Ferguson*, there was no violation of her educational rights because M. Lum could attend either an African American public or a private school.

Impact of the Ruling

Chinese settlement in the South was affected by the ruling as Chinese immigrants weighed their choice either to be a sojourner until returning to China or to be an immigrant seeking to gain wealth, status, and education. The Mississippi Delta Chinese viewed the rejection as a denial of public education, which lasted until the 1940s and, in Rosedale, until the 1950s. The Lum family moved to Elaine, Arkansas, to attend public education facilities; other Chinese moved to Memphis or farther north.

This opinion, and others like it, used the separate-but-equal doctrine to ignore any discrimination caused by the racial inequity of education in segregated public schools. But it contributed to a

new strategy that successfully argued—27 years later in *Brown v. Board of Education, Topeka, Kansas* (1954)—that even where a system provides racially separate and equal public education, the fact that the systems are racially separate make them inherently unequal. The *Brown* decisions overturned the *Plessy v. Ferguson* separate-but-equal doctrine and thus also overturned this case.

GORDON, EDMUND W. (1921–)

The career of educational researcher Edmund W. Gordon is an example of the dedication and diligence that are associated with African American pioneers such as Harriet Tubman, Frederick Douglass, Mary McLeod Bethune, and Booker T. Washington. Gordon has dedicated his life to research in the field of education with the aim of

creating better educational opportunities for minorities. The concept of educational capital is used by Gordon to demonstrate reasons and solutions for the African American achievement gap, illustrating his desire for transparency in education. This entry explores the life and work of Gordon.

Gordon holds a bachelor of science degree from Howard University, bachelor of divinity degree in social ethics from Howard University Graduate School of Divinity, masters of arts degree in social psychology from American University, and a doctor of education degree in child development and guidance from Teachers College, Columbia University. He also holds honorary degrees from Yale University, Yeshiva University, Brown University, and Mount Holyoke College. Currently, Gordon is the John Musser Professor of Psychology, Emeritus at Yale University, Richard March Hoe Professor, Emeritus of Psychology and Education and Director of the Institute of Urban and Minority Education at Teachers College, Columbia University. His work can be found in over 175 articles and 15 books.

Linda Darling-Hammond compares Gordon to educator and philosopher John Dewey and luminary W. E. B. Du Bois because of his ability to take concepts from disciplines such as psychology and use them to describe, define, and compare a given student's capacity to learn based on his or her social environment. One example of Gordon's resilience is found in his refutation of the popular 1994 book *The Bell Curve*, in which Richard J. Herrnstein and Charles Murray suggest that race plays a major role in cognitive ability. They also convey the notion of public education as a measure to advance students already perceived as gifted, while time should not be wasted on average or below-average students. The problem is that average and below average students are often African American or are other minorities. If the theory set forth in *The Bell Curve* is correct, these students are genetically incapable of learning at an advanced level, and accordingly, why should educational institutions waste energy and economic resources trying to teach them?

Gordon dedicated an entire chapter of his book *Education and Justice* to debunking the misconceptions conveyed in *The Bell Curve*. Gordon explained that the *Bell Curve's* analysis is incorrect because of the methodologies utilized, inaccurate framing of

social concepts, and the duplicity found in the authors' application of the information examined. Gordon's successful unraveling of the *Bell Curve* is an example of his legacy of institutionally proving that African American children are capable of competing with the most able children in the United States. This legacy is arguably his greatest contribution to the African American community.

An example of Gordon's institutional interpretation of ills plaguing the African American community can be found in the book *The Covenant With Black America*. Gordon illuminates eight forms of educational capital necessary for successful education: health, financial, human, social, polity, personal, institutional, and pedagogical. According to Gordon, the equitable dissemination of these forms of educational capital guarantees academic achievement. Emphasis must be placed on maintaining a proper diet (health) for one's child. However, the problem with sustaining a balanced diet is often financial and family oriented (human). Often African Americans cook and eat what tastes good or what grandparents cooked without consideration to its nutritional value. Gordon's group also includes the importance of establishing social connections (social), which entail the inclusion into certain social organizations (polity). Understanding one's self-worth is also important (personal) as well as being involved in progressive institutions, for instance, attending a competitive university as opposed to a one that is less competitive. Finally, the family must play a role in educating children (pedagogical). Students must receive the support they need from their family and administrators in their school systems to excel.

This account of educational capital was developed by Gordon and associates throughout the years in response to affirmative action. Recently, Gordon's research has focused on helping African American males reach socioeconomic, personal, and political levels in society that their previous life circumstances would not have permitted them to attain.

Gordon's career and his work are extraordinary examples of African American leadership in the African American community. Gordon's dedication to education for minorities represents the continuing role of African American leadership in the fight for equality and equity in the United States.

GOSS V. BOARD OF EDUCATION OF KNOXVILLE, TENNESSEE

Goss v. Board of Education of Knoxville, Tennessee (1963) is one of a number of legally and historically important Supreme Court cases dealing with public school desegregation. Decided in 1963, it reflected a commitment to the principle established in the 1954 decision of *Brown v. Board of Education, Topeka, Kansas*, holding that segregated public schools were inherently unequal and thus violated the equal protection clause of the Fourteenth Amendment to the United States Constitution. This principle was premised on the fact that segregated schools were remnants of enslavement and were maintained to ensure White racial superiority. The *Goss* case expanded the scope of the ruling by overturning a plan that would have allowed students to reverse their school assignment based on racial balance and choose to return to segregated schools. This entry sets the *Goss* ruling in the context of the long history of

school desegregation cases that began with *Brown* and has extended into the new century.

Historical Context

It is not possible to appreciate the present significance of *Goss* without first understanding the context in which it took place. After the Civil War and the invalidation of enslavement, there was a period of reconstruction that put state governments under federal oversight and brought about significant legislation intended to protect the previously enslaved Africans.

The Fourteenth Amendment in particular was intended to guarantee the equal protection of the laws, but its power was quickly undermined by Supreme Court decisions limiting its application to state action only and excluding from its purview much of private conduct, even if that private conduct was necessary for subsistence (e.g., employer behavior, hotel accommodations, etc.) or was supported by governmental funds. By the late 1880s, the federal oversight of the Southern states ceased, and the states were allowed to enact legislation privileging Whites. Jim Crow laws began in Florida in 1887 and soon spread throughout the South. The Northern states, while rarely enacting state-sanctioned laws allowing discrimination against African Americans, nevertheless tacitly sanctioned segregation in public and private contexts.

From a legal perspective, Jim Crow was sanctioned by the Supreme Court in the infamous *Plessy v. Ferguson* (1896) case in which the Court upheld a Louisiana law requiring separate-but-equal railway accommodations for African American and White passengers. Assuming a system of racial superiority, the Court stated that so long as the political rights of the races were equal, the courts could not be concerned with social inequality. The Court not only legitimated racism but also ignored the real condition of inequality, as services for African Americans rarely matched that provided for Whites. And this was particularly true with regard to schools.

The South has always lagged behind the North in the public education of its children, but for African American children, where such education existed, it was inferior if not deplorable. In urban areas, the schools for African American children were often overcrowded, with one school serving a

city's entire African American population. In rural areas, if there were schools at all, they were often in dilapidated, one-room settings.

All this began to change because of the 1954 decision in *Brown*. In that case, the Supreme Court, in a unanimous decision authored by Chief Justice Earl Warren, established the principle that public segregated schools were inherently unequal and thus violated the equal protection clause. It is the continued relevance of this principle that is at stake in the subsequent litigation seeking desegregation.

Unfortunately, establishing the principle unanimously was deemed more important than its implementation. To obtain unanimity on the principle, the Supreme Court deferred the question of remedy until the following year. In *Brown v. Board of Education II* in 1955, the Court accepted that significant problems would occur with an order for immediate desegregation, so it held that desegregation had to take place "with all deliberate speed." Local school districts were also given the responsibility for creating desegregation plans, but were given no clear guidance and an imprecise timeframe. It has been this phrase, "with all deliberate speed," that has led to litigation that led to *Goss* and has lasted even into the present.

Facts of the Case

In 1963, the year in which *Goss* was decided, and almost a decade after *Brown I*, the Supreme Court indicated that desegregation had to end. At the time, only one fifth of Southern African American children attended desegregated schools. The *Goss* case began as two separate challenges to the public school systems in Knoxville, Tennessee, and in Davidson County, Tennessee. Both districts, like many others in the South, were under court orders to desegregate. At issue in the original cases were a number of points in the desegregation plans for the two districts, plans which were approved by the appropriate federal courts. The sole issue before the Supreme Court in *Goss*, however, was the legality of similar transfer provisions in the two plans.

Under the two overall plans, the school systems were to be rezoned without regard to race, rezoning which would permit substantial desegregation. But each of the plans contained transfer provisions that allowed students, solely on the basis of their race and of the racial composition of their schools,

to request a transfer from a new school in which they would be in the racial minority back to their former school where they would be in the racial majority so that, for example, a White child required to attend a predominantly African American school after the rezoning would be allowed to transfer back to his or her predominantly White school. Despite the arguments by the districts that this promoted choice, the transfer provisions did not contain within them allowances for children to request transfers to schools in which they would be in the racial minority. As a result, the transfer provisions were challenged as illegal under the Fourteenth Amendment because they perpetuated the preexisting racial segregation in the public schools.

The Supreme Court agreed, finding that because the provisions served to perpetuate segregation on the basis of race, they were no less unconstitutional than the original race-based assignment to the public schools. *Goss* thus reinforced the judicial commitment to the principle established in *Brown* that segregation was unconstitutional, and it reflected the budding frustration of the Court about the pace of desegregation, a frustration that led the Court to begin requiring immediate desegregation in a series of cases that followed.

Goss, then, was the first of a series of cases in the 1960s and early 1970s in which the Court expanded the power of the federal courts to fashion broad remedies for guaranteeing desegregation. In 1964, the Court held in *Griffin v. County School Board* that the closing of a public school in the county and the opening of state-supported private schools for White children violated the Constitution. And in an important case in 1968, *Green v. County School Board of New Kent County*, the Court struck down the so-called freedom of choice plans allowing students to select the public school they would attend, plans that were a subterfuge for discrimination because they were premised on the knowledge that White families would choose White schools for their children, but African American families would be too intimidated to choose White schools for their children. In holding that these plans were illegal, the Court established criteria that must be considered to determine whether school districts have eliminated their dual system of education and attained unitary status. Desegregation, the Court held, must be

achieved with respect to facilities, staff, extracurricular activities, and transportation.

In the 1960s, the Warren Court (Earl Warren, chief justice), decided in favor of desegregation in a number of public school cases, and it did so in a decade in which this court also expanded individual liberties over and (often) against governmental interests. The *Goss* decision affecting the schools in Tennessee is significant beyond its facts because it was essentially the first public school desegregation case in the Supreme Court since *Brown II*. Viewed historically, the *Goss* case has become relatively minor for two primary reasons. First, other cases that came later were more forceful and far-reaching in requiring desegregation; second, *Goss* is now but a historical note in recent movements rejecting the principle that segregation is unconstitutional.

Impact of the Case

Goss and the other cases in the 1960s did begin to bring about significant change. But in the 1970s, the Supreme Court led by Chief Justice Warren Burger began to chip away at *Brown's* principle. In a surprising decision in 1971, the Burger Court held in *Swann v. Charlotte-Mecklenburg Board of Education* that the federal courts had broad remedial powers to ensure desegregation, including the use of mathematical ratios for determining school assignments of students and teachers and of mandatory busing. This case was the pinnacle of the legal commitment to desegregation, the first case to uphold broad judicial remedies for attaining the principle against segregation in public schooling. Because of this case, widespread desegregation did take place in the South. Indeed, by the mid-1970s, the schools in the South were largely desegregated, surpassing those in the North.

The North was spared of much of such litigation and public concern, but was no less segregated. In the 1970s, cases against Northern public school systems began to appear and with them the establishment of the distinction between *de jure* (by law) and *de facto* (in fact) discrimination. In *Keyes v. Denver School District No. 1, Denver, Colorado* (1973), the Court held that only a showing of intentional discrimination (i.e., *de jure* discrimination) would suffice to require desegregation in areas that were not proven to have existing segregated schools at the time of *Brown*.

In addition to rejecting a notion of *de facto* discrimination for establishing a legitimate legal claim against segregation, the Court in the 1970s also began to limit what the federal courts could do to ensure desegregation, thus undermining its decision in *Swann* earlier in the decade. And in one of its most infamous cases, the Court ruled that multidistrict remedies were for all intents and purposes invalid. In 1974, in *Milliken v. Bradley*, a case involving segregation in Detroit and its suburbs, the Court invalidated a district court's desegregation plan seeking to desegregate the schools of Detroit with its neighboring suburbs, a plan premised on the fact that desegregation was impossible otherwise because there were too few Whites in Detroit to desegregate its schools effectively. The plan included busing children between the city and its suburbs. The Supreme Court held that multidistrict plans are illegal when there is no proof of intentional discrimination by all the districts involved in the plan.

In the 1980s, the Court began to establish another principle that would supersede that of *Brown's*: the principle of local government control of schools. In *Riddick v. School Board of the City of Norfolk* in 1986, the Court held that a district determined to be unitary could now dismantle its desegregation plan because such a plan was supposed to be only temporary and courts must work to return schools to local government control. The 1980s, then, reflected a new era in school desegregation cases. The Supreme Court, first led by Chief Justice William Rehnquist in the 1980s and 1990s and later by Chief Justice John Roberts, illustrates a conservatism that firmly establishes segregation as an accidental historical event about which the courts are powerless to rectify.

The principle of local control is faulty because legal authority has never rested with local government, but with the state, and the Jim Crow and present eras illustrate that states govern greatly what happens in public schools. Yet in *Board of Education of Oklahoma City Public Schools v. Dowell* in 1991, the Court held that desegregation plans need not be maintained in perpetuity, that courts need only determine that the school boards complied in good faith with the desegregation decree, and that districts need only show that the vestiges of past discrimination had been eliminated to the extent practicable. In *Freeman v. Pitts* in 1992, the Court held that judicial supervision may

be withdrawn with respect to the categories in which the school district had achieved compliance and that courts need not exercise active control over every aspect of school administration. In *Missouri v. Jenkins* in 1995, the Court held that programs that sought to attract White students to the inner-city schools were illegal because they essentially involved multidistrict remedies. In 2007, the Roberts Court held that voluntary district plans that sought to use race in the assignment of schools to achieve racial diversity are illegal (see *Parents Involved in Community Schools v. Seattle School District No. 1*, 2005). In all these cases, the Court has indicated that local control of schools is paramount, that desegregation is essentially an accidental and naturally occurring phenomenon, and that the law only prohibits de jure discrimination.

The present significance of *Goss* for African American education thus can be thought of as reflecting an ideal never achieved and which the current political and judicial climates make elusive. In the South, in districts under court orders, the legal standard is that so long as schools comply with desegregation orders for a few years and avoid any explicit attempts at segregation, they will be released from judicial oversight. In districts that were not under court orders, such as those in the North, the legal rule is that judicial remedies will apply only upon a showing of intentional discriminatory policies.

Thus, five decades after the Court held that segregated schools were inherently unconstitutional and after courts were willing to scrutinize de jure and de facto discrimination in cases such as *Goss*, schools remain extremely segregated, structured by race and poverty. Reinforced by current judicial rules converting what counts as a legitimate claim of discrimination, sustained political maneuvering has converted the idea of segregation from one reflecting a practice intentionally used to marginalize African Americans into one that is seen merely as accidental and a natural phenomenon created by the voluntary (and legally sanctioned) choices of individuals to live where they choose. Thus, poverty and race structure the education of African Americans and other ethnic and racial minorities, and little judicial remedies exist to counter the effects of such phenomena.

The irony in all this is that the United States spends much more resources on education than do

other developed nations, relying on a theory of schooling that deems it essential to economic and political sovereignty. But the United States also spends considerably less than other nations in other social welfare provisions that reduce poverty and racism, which are highly correlated to failure in schools. Thus, schools are deemed essential to success, but little is done to ensure the elimination of the underlying poverty and racism that make schools ineffective for most racial and ethnic minorities.

GRADUATE EDUCATION

The graduate degree represents important credentialing and scholarly training that make a range of professional opportunities possible for its recipients. Specifically for African Americans, the advanced degree may represent not only the highest level of individual degree aspiration as a terminal credential required for entrance into professional careers, but also it may signify the

means to needed health, financial, legal, and other professional services to their underserved communities. The focus of this entry is an overview of the status of African Americans in graduate education through an examination of degree trends and factors that challenge and facilitate Black student recruitment, retention, and success in graduate and professional education.

Graduate Enrollments

The limited representation of African Americans among advanced-degree recipients in the United States and related employed professionals remains a concern as graduate enrollment rates for African Americans fluctuate below their commensurate presence in the population and the enrollment and retention rates of comparable nonminority groups.

African Americans increased their graduate school enrollment by 88.4%, from 104,820 in 1994 to 197,482 enrollees by 2004. At 9.1% of all graduate program enrollees, African American enrollment percentages—along with those of American Indians at .6%, Asians at 4.7%, Chicanos and Latinos at 5.2%—consistently remain below enrollments for Caucasians at 58.2%, or foreign students at 12.4%. Among first professionals, American Council on Education data show that African American enrollments grew by 20.7% from 20,170 in 1994 to 24,336 registrants in 2004. By the close of this 10-year period, African Americans represented 7.3% of all first-professional students compared to Caucasians at 66.7%, American Indians at .7%, Asians at 11.9%, Chicanos and Latinos at 4.7%, and foreign students at 2.5%.

Although legislated affirmative action has played a historical role to create a pool of African Americans who enter undergraduate institutions to access graduate study, one study empirically examined arguments that have been used to dismantle or limit the use of affirmative action practices in admissions, namely that institutional policies had little effect and that students admitted through affirmative action would not be prepared to succeed academically in these institutions. Using predictive analyses on National Longitudinal Survey of Freshman data for 28 selective colleges, the study examined the impact of practices that

supported three different types of programs—affirmative action, legacy admission preferences, and recruited athlete preferences. Findings showed where institutional affirmative action was widely practiced that ethnic minorities were the largest percentage of beneficiaries, but had the strongest likelihood to persist in school (compared to recruited athletes or legacy preferences).

Although the continued use of affirmative action to increase the representation of African American graduate students remains under legislative and public debate, the factors traditionally considered in graduate admissions, such as standardized test scores and undergraduate grades, compose the criteria used to select African American and other graduate students. One study found that quantitative admissions, variables such as undergraduate grade point average, Graduate Record Examination Verbal, and Graduate Record Examination Quantitative had only small positive correlations (.20) to graduate school completion. These traditional admissions criteria and subjective variables of interviews and references are the primary factors used to screen graduate applicants. Taken together, the loss of affirmative action consideration in admissions and continued adherence to stringent test score criteria further exclude African Americans from access to graduate school opportunities.

Historically Black colleges and universities (HBCUs) have had a unique role in preparing African Americans for professional employment by way of their undergraduate origins. By the mid-20th century, more than 90% of African Americans enrolled in higher education had been educated at HBCUs. While the proportion of the potential African American graduate applicant pool produced by HBCUs has declined nationally, one study found that there was no differential impact of HBCUs compared to predominantly White colleges on African American undergraduate degree completion for a longitudinal sample, after controlling individual and institutional variables. However, the study suggests a unique benefit for African American students attending HBCUs compared to their African American peers at predominantly White institutions (PWIs) since the former group persisted to degree completion having overcome lower high school academic achievement than their peers and less resources in terms of

facilities, student financial support, and faculty salaries available at HBCUs compared to those at PWIs.

Degree Completion

Graduate enrollments contribute to the potential pool of candidates who may complete degrees in specific programs. Degree completion highlights another critical point of success in graduate education. African Americans are among the groups who earn the majority of advanced degrees at the master's level. In 2004, African Americans received 8.5% of the total 578,812 master's degrees that represented a 134.8% increase from a decade earlier, 5.5% of the total doctorates awarded, and 6.9% of the total professional degrees completed, representing respective growth during this same period of 35.1% in doctorates and 110.8% in professional degrees. Although the increase in actual degree recipients translates to a slight proportional growth for African Americans during this decade observed, the trends for degree completion for this group show consistent gender disparities. African American females complete advanced degrees across all levels at twice the rate of their male counterparts. These differences mirror completion rates at the undergraduate level and reflect additional issues related to male and female socialization and retention for African Americans.

Graduate training received by African Americans shows distinct patterns by major field of expertise. For example, in a study of African American, Hispanic, and Caucasian student undergraduate and graduate attainment patterns, Higher Education General Information Survey data for 1975 to 1976 and 1980 to 1981 degree completion were analyzed and showed that Hispanic and Caucasian males had more similar fields of degree distribution patterns than African American males and that all males in the study had more similar field distribution patterns than their female counterparts. Specifically, higher percentages of African American males completed graduate degrees in business and the social sciences compared to African American females who completed more advanced degrees in education. Both African American females and males completed fewer degrees in selected science, technology, engineering, and mathematics (STEM) fields than their

Caucasian peers across both time intervals examined. These degree completion patterns suggest a limited pool of African Americans available in the U.S. workforce pipeline to engage in STEM careers, or to gain the individual financial resources represented in the highest earnings tiers by professions such as nursing, medicine, and dentistry, reflecting both educational attainment and potential earnings gaps for future generations.

The study's findings also showed a unique impact of HBCUs in graduate degree completion. For example, while HBCUs made up only 9% of the data sample, these institutions accounted for the majority of master's degrees completed in STEM fields of the biological and physical sciences across the 1975 and the 1980 cohorts. These findings suggest an enduring impact of the institutional contexts in which African American graduate students are educated.

Key Challenges

Advancing along any educational path to pursue graduate and professional studies reflects a culmination of achievement at earlier points in higher education, most notably succeeding in undergraduate degree completion. Beyond the numbers, minorities face several challenges to thrive in their graduate study environments. African Americans show lower graduate degree completion rates when compared to their international and White counterparts. In one study that used national data to examine the critical step of advancement to candidacy for doctoral students, African Americans had lower patterns of advancement to candidacy and degree completion than White students, and White students in turn showed rates lower to those of international students.

African American graduate students may be challenged to build critical social supports to persist to degree completion. One examination measuring social connectedness among students and their peers and faculty provides some understanding of how graduate students develop strategies for success amid psychological and environmental stressors. The study findings showed that the lowest social network connectedness existed among African American respondents, and the least social connections existed between African American and other graduate students. Fewer than half of

the African American graduate students and faculty from other groups showed connections, and fewer than one third of the African American students and other students identified networks. Multiple regression results showed that the presence of African American faculty correlated to higher grades and greater psychological well-being for African American graduate students, suggesting a mediating influence of mentors who may help students to translate their life experiences to applicable skills for academic progress.

These differences in performance and outcomes within respective graduate school communities may be tied to ideas discussed by John Ogbu about community forces or the ways in which perceptions of and responses to schooling influenced educational outcomes. Ogbu suggests that the way society treats underrepresented students is mirrored in the schools. He contends that “voluntary minorities”—whose relocation to the United States aimed to improve the living standard—employed dual, but positive frames of reference to compare their current and past status with their places of origin. By contrast to “involuntary minorities”—whose relocation to the United States resulted from enslavement or colonization against their wills—used dual, but negative frames of reference and perceived that their hard work would never be fully rewarded or accepted by Whites given initial conditions under which they came to the United States.

Although measures of graduate student resiliency may be needed to test these hypotheses on the influence of perception and learning contexts, these ideas and empirical evidence discussed in this entry do suggest that additional mentoring and support for African American graduate students may help to mediate actual or perceived stressors to support academic performance and retention.

African American graduate students appear to be at greater risk for failure on the road to achieve advanced education. However, those who completed their advanced education were aided by factors within their institutional environments to support academic achievement, social networking, and mentoring. African Americans who enter graduate study with strong academic preparation from earlier experiences will have the best chance for persistence and achievement at the graduate level. Moreover, mentoring and engagement in the educational environments facilitate educational

progress at the advanced level to promote both professional development and student self-efficacy.

When considering the specific factors that influenced positive outcomes for African Americans in their professional development, it is important to recognize the legacy of HBCUs and to continue to assess how to support African American students from a range of academic preparation to advance in their training. Continued success to ensure graduate student access and retention requires that higher education structures its organizations to focus on inclusion, to affirm student culture valuing diversity, and to demonstrate commitment to students without the same historical traditions of college participation by creating opportunities for their social connection both to faculty and peers.

GREEK LETTER ORGANIZATIONS

Since the early 1900s, African American fraternities and sororities have created what might be the most unique student culture on college campuses. Although the major groups are heavily influenced and driven by graduate members, the undergraduate experience provides the most interesting view of this culture. Early African American fraternities and sororities adopted some of the characteristics of traditional Greek letter organizations, but there was always an emphasis on service to the African American community, and later groups took on a still more distinctively African American character. This entry begins with a historical review; then, it looks more closely at the culture and membership of African American sororities and fraternities.

Historical Background

The modern fraternal movement in the United States began with the establishment of Phi Beta Kappa at the College of William and Mary in 1776. Numerous fraternal organizations would follow the path created by this new secret society, the first being the Kappa Alpha Society founded in 1812 at the University of North Carolina. Incidentally, its founders were members of Phi Beta Kappa.

Within a few decades, the idea of fraternalism spread to college women. The process was slower for women because of their delayed entry into higher education. But after the founding of a woman's college in 1821, the sorority movement took root at Wesleyan College in Georgia in the mid 1800s.

Even more delayed was a critical mass of underrepresented students entering higher education. Although the first African American college students graduated in the early 1820s, it would not be until after the end of enslavement before African American students began a routine entrance into higher education. Certainly, this was aided by the establishment of historically Black colleges and

universities (HBCUs). These factors then created the environment for the beginning of Black fraternalism in the United States.

The Inception Era

It would take several experiments in fraternalism before African American students developed lasting organizations. The first attempt was the organizing of the Alpha Kappa Nu Greek letter society at Indiana University in 1903. This organization lasted only 14 months, but it would later be remembered in the founding of another fraternity on the campus.

In 1905, two additional attempts were made at fraternalism. At Wilberforce University, the Gamma Phi fraternity was organized on May 1. The organization existed as the sole fraternal group on that campus until 1912 and existed off and on into the 1930s. During the same year, the *Chicago Defender* reported on the Pi Gamma Omicron fraternity for African Americans founded at Ohio State University. Yet when members of the social studies club that evolved in Alpha Phi Alpha wrote to inquire about the group, the university reported no knowledge of its existence.

Although students began the fraternal experiment, a group of professional men in Philadelphia founded Sigma Pi Phi Fraternity in May of 1905. The organizer, Dr. Henry Minton, saw the fraternal idea through the experiences of his White colleagues and felt the same kind of association would also benefit African American men. Once founded, the fraternity spread nationally and continues to thrive today, making it the oldest African American Greek letter organization in continuous existence. Its members today often include men who joined undergraduate-based organizations. Although not linked directly to most of the collegiate groups that would come after it, Sigma Pi Phi signifies the transition into the foundation era.

The Foundation Era

Founded on December 4, 1906, at Cornell University, Alpha Phi Alpha Fraternity is generally recognized as the first African American intercollegiate Greek letter organization. The group evolved from a social studies club that met a year before it became a fraternity. The founding of Alpha Phi Alpha becomes the demarcation of the

foundation era for African American fraternalism. Between its founding in 1906 and 1922, eight historically Black fraternal organizations were founded on college campuses. Besides Alpha Phi Alpha, they are as follows:

Alpha Kappa Alpha Sorority	1908	Howard University
Kappa Alpha Psi Fraternity	1911	Indiana University
Omega Psi Phi Fraternity	1911	Howard University
Delta Sigma Theta Sorority	1913	Howard University
Phi Beta Sigma Fraternity	1914	Howard University
Zeta Phi Beta Sorority	1920	Howard University
Sigma Gamma Rho Sorority	1922	Butler University

These eight are important because they have been able to not only grow but also thrive over the years, and for a period of almost 70 years, they were the totality of the African American fraternal experience. These groups collectively became to be known as the big eight or the great eight as they expanded across the nation.

The Expansion Era

Prior to the 1940s, most of the expansion took place in more liberal states located in the Midwest and the Northeast. This meant there would be few chapters for the organizations, with none having more than about 50 chapters by the 1930s. But the groups would benefit by the accreditation of HBCUs in the South and Southwest, which led to a rapid expansion on those campuses.

The *Brown vs. Board of Education, Topeka, Kansas* (1954) decision would open a new frontier for expansion. These organizations were able to start chapters on major predominantly White campuses in the Southern states. For many, there was a sense of excitement about this new frontier. For others, they feared their existence on those campuses would cause them to be challenged for promoting segregation in the midst of desegregation.

Growth would be slow initially during the turbulent 1960s. Many Greek organizations nationally,

both African American and White, saw a reduction in the number of members due to the civil rights movement that occupied the energies of many collegians. However, those African American fraternity and sorority members who were intimately involved in civil rights are known for being some of the most famous and important African Americans in history: Dr. Martin Luther King Jr. (Alpha Phi Alpha), Rev. Jesse Jackson (Omega Psi Phi), Rev. Hosea Williams (Phi Beta Sigma), Rev. Ralph David Abernathy (Kappa Alpha Psi), Rev. Willie T. Barrow (Sigma Gamma Rho), and Rosa Parks (Alpha Kappa Alpha).

The Black Power, Blaxploitation Era

The 1960s provided an opportunity for students to create new models for involvement, some of which were patterned off of the major African American fraternal organizations. In 1963, 12 non-traditional students founded the Iota Phi Theta Fraternity at Morgan State University. Unlike the great eight that were formed by traditional collegians, these men sought to bring a new purpose to African American fraternalism. The fraternity proved to be different from other groups started around that time as it grew into a national group and became the ninth member of the National Pan-Hellenic Council, the umbrella body for the major African American fraternal groups. With Iota Phi Theta, the group became known as the divine nine.

Many other groups started in the 1960s and 1970s, almost as parodies of the mainstream African American fraternal groups. One of the oldest, Groove Phi Groove, was also formed at Morgan State University, but founded in 1962. Although it has been able to continue to exist into the 21st century, most of the groups had short existences.

At the same time, there was a stronger interest in the major groups. The 1970s was a decade of major growth on White college campuses. Groups that added no more than five new chapters in any given year prior to 1970 were now adding at least 10 chapters a year and often adding over 20 chapters in a year. This rapid growth and increased awareness paralleled the increases of African American students in college, many first-generation students. This rapid growth would ultimately create new challenges for these organizations.

The Modern Era

By the 1980s, African American fraternalism was growing consistently. It was during this decade that popular culture would begin to highlight African American fraternalism. A spin-off of *The Cosby Show* in the late 1980s, *A Different World* was the first show to feature African American college life, including a fictional African American fraternity, along with members of the divine nine appearing regularly as extras.

The 1988 film by Spike Lee, *School Daze*, was a landmark piece in that it provided a broad view of African American fraternal life. Although exploring a number of touchy issues, the film dealt with the challenges faced by these groups, particularly regarding the process of pledging and the associated hazing. Although controversial, it exposed these groups to a broader audience, providing the average U.S. citizen with a glimpse into the world of African American fraternalism. Since that time, African American fraternities and sororities have been highlighted regularly in popular culture, including numerous documentaries, television commercials, and special programs.

Although nine groups are recognized as the major organizations, the idea of African American fraternalism today would be incomplete without recognizing several themes that are present as students continue to find new ways to make meaning on their campuses. Besides the nine major groups, over 70 organizations have existed at some point in history. The late 1980s saw the rise of Christian groups. These groups function and appear like the major groups, just with the added emphasis on Christianity.

Beginning in the late 1970s, students developed an Afrocentric mindset with regard to fraternalism. With the formation of Malik Sigma Psi fraternity at the C.W. Post Campus of Long Island University by 15 African American and Latino men in 1977, several students founded groups with an outward ethnic consciousness. Malik members call themselves African fraternalists rather than Black Greeks because of the notion that Africa's contributions to world society predate those of Greece, and this should be honored in fraternal organizations. Many groups were founded as African fraternities and took on the names of Kemet, Auset, Ndugu, and Nzinga, to name just a few.

In addition to these major categories, African American fraternalism has impacted the formation of multicultural groups and of gay and lesbian groups. Many other groups have formed and operated exactly like the divine nine, yet they have not been able to rise to the level of a national organization.

Black Fraternal Culture

For the average U.S. citizen who is familiar with fraternities and sororities, African American fraternal life provides a stark contrast to the older predominantly White organizations. Although White groups on campus may have chapters that exceed 100 members, most African American fraternities and sororities are much smaller, normally less than 20 members. The larger White groups usually have some kind of residential structure, and on many campuses, these large houses may be situated on a Greek row. Very rarely will African American fraternal groups have housing structures, although since the 1990s campuses have made an effort to house their groups, generally with some kind of apartment or lodge structure.

Throughout the history of African American fraternal organizations, a tremendous amount of emphasis has been placed on community service. These organizations generally have as one of their tenets a calling for hands-on service, particularly geared toward the African American community. Through these organizations, one finds a tremendous range of programs, from mentoring programs to scholarship events. The nine major organizations all have their own signature service and community initiatives that provide a focus for their service. This differs greatly from the philanthropy-focused White groups that host entertaining events as fund-raisers.

One of the major differences is the notion of a lifetime commitment by members of African American fraternal organizations. Graduate chapters continue to function as college chapters do, although their membership is made up of those who were initiated in college and by those who joined once completing college. In the language of Greek life, while members of a White group may say that they were members of a particular group in college, the members of an African American group always indicate that they are currently a member.

The culture of African American fraternities and sororities is best highlighted through the outward manifestations of membership. Like all fraternal groups, the use of the Greek letters indicates membership in a particular organization. For African American groups, the use of letters is one small aspect. Members wear paraphernalia that indicate their membership on a variety of clothing items, which include jackets, jerseys, sweaters, hats, socks, and even shoes.

Beginning in the 1980s, the jackets worn by members of the groups have become elaborate statements of membership. These jackets often indicate where the person was initiated, as well as in what term and year. Jackets usually include the collective name of those initiated together, known as a line, and therefore a line name. This 1970s idea started simply (i.e., The 9 Keepers of the Golden Flame), but has become more intricate and complex (i.e., The Tri-Nexus of Tenacity). In addition, the jacket would include a nickname of the member, called his or her personal line name. Further, some jackets may also list the names of the other persons initiated at that time.

Beyond the worn paraphernalia, members have incorporated various hand signs and calls to visually and audibly signify membership. Both of these innovations, started in the 1970s, have become prominent fixtures in African American fraternal culture today. Although these expressions of membership are frequently seen on the college campus, graduate members engage in the behaviors as well, and their frequency of use will increase as more who participated in these activities leave the college ranks.

By far, the most visible activity of African American fraternal groups is the art form of self-expression known as stepping. *Stepping* can be defined as a synchronized, syncopated routine of precise hand and foot movements. This is enhanced by singing, dancing, chanting, and acting in an attempt to offer a completely entertaining experience. The first stepping moves emerged in the late 1960s, but the art form has rapidly grown into a widely recognized activity associated primarily with African American fraternities and sororities, but now used by both Latino and Asian groups, as well as by church and school step teams. By 2006, stepping had grown in stature so that a national championship was broadcast on ESPN2.

Membership

Beginning in the 1920s, African American fraternities and sororities created pledge clubs as a means to train aspirants on the ways of the organization. The process of pledging continued to become sophisticated throughout the years. By the 1940s and 1950s, pledges would participate in a process that included dressing alike and carrying around objects of significance to the organization. During this time, it would not be unusual for persons to be members of a pledge club for up to a year. However, throughout the 1940s there were reports of hazing that was taking place in these pledge clubs.

The groups modified pledging in response to hazing, and the process itself evolved. Going into the 1980s, organizations drastically reduced the amount of time persons would pledge, generally around 6 weeks. After the 1989 hazing death of Joel Harris at Morehouse College, the national presidents of the eight largest organizations met in February of 1990 and unanimously agreed to end the practice of pledging in their respective organizations. This move ushered in the membership intake era, where in theory persons would apply to the group of choice and complete an educational program.

Unfortunately, membership intake did not end hazing, as students continued the practice of pledging underground, which means without approval or knowledge by the national group or the host campus. This dangerous practice has resulted in several deaths and numerous injuries, many of which have led to lawsuits and criminal trials. With suits filed as high as \$100 million, national leaders entering the 21st century continue to contemplate the viability of their organizations especially around the concerns of the undergraduate experience.

GRUTTER V. BOLLINGER

In *Grutter v. Bollinger* (2003) and its companion case *Gratz v. Bollinger* (2003), the U.S. Supreme Court restated its view that racial diversity is a compelling interest for colleges and universities. In deciding cases challenging the consideration of race in college and university admissions, the Court set some new rules for how race can be considered in admissions decisions. These cases were the culmination of years of litigation and advocacy both attacking and in defense of affirmative action programs in higher education. This entry explores the backdrop, the case, and the impact of *Grutter v. Bollinger*.

Facts of the Case

Plaintiffs Barbara Grutter and Jennifer Gratz were represented by the Center for Individual Rights, a conservative organization seeking to end the use of race-conscious admissions policies. The named defendant in the case was Lee Bollinger, who was at that time the president of the University of Michigan; he fought for the university's existing policies with the purpose of achieving racial diversity in the student body.

Grutter, a White woman, applied to attend the University of Michigan Law School and was denied admission. She thereafter sued, alleging that her application was turned down because of the law school's affirmative action program, which required consideration of race and ethnicity in its admissions decisions. Specifically, she alleged that the program violated the equal protection clause of the Fourteenth Amendment and Title VI of the Civil Rights Act of 1964.

The law school's admissions policy, with the stated goal of admitting a diverse corps of qualified students, was designed to comply with the Supreme Court's standards as set forth in *Bakke v. Regents of California* (1978). In that case, the Court struck down an affirmative action program that held that diversity was a compelling interest that could, under some circumstances, justify the use of race in admissions decisions.

At the University of Michigan, law school admissions decisions were based on a composite score, which was compiled based on quantitative criteria such as the applicant's LSAT score and undergraduate grade point average, as well as qualitative factors such as the applicant's leadership and work experience, unique talents or interests, state of residence, quality of admissions essay, the reputation of the undergraduate institution, and difficulty of undergraduate courses taken.

In addition, the admissions policy allowed special consideration for students who had low composite scores, but who exhibited various factors that would enrich diversity at the university. The applicant's race and ethnicity were considered as part of diversity. Specifically, the admissions committee considered the number of minority students and sought to enroll a critical mass of those underrepresented students. However, the school did not set aside seats for students of specific races and did not establish a separate applicant pool by race.

After a trial, the federal district court ruled in favor of Grutter, finding that the law school's admissions policy was equivalent to a racial quota system. However, the U.S. Court of Appeals for the Sixth Circuit, sitting en banc, reversed while at the same time affirming the federal district court's decision upholding the university's undergraduate affirmative action policy in *Gratz v. Bollinger*, another University of Michigan case focused on a race-conscious admissions program at the undergraduate level.

The court of appeals decision was highly contentious, with numerous concurring and dissenting opinions. Gratz and Grutter then appealed to the U.S. Supreme Court, which decided to take the cases.

To decide these cases, the Court employed the strict scrutiny test to analyze whether the use of race violated the equal protection clause of the Fourteenth Amendment to the U.S. Constitution. This test first requires a compelling interest to justify the use of race. Second, the manner in which race is considered must be narrowly tailored to achieve that compelling interest.

To be narrowly tailored to achieve the compelling interest in diversity, a race-conscious admissions program must meet the following four requirements: (1) holistic, individualized review of each applicant where race is used in a flexible, nonmechanical way; (2) serious and good faith consideration of race-neutral alternatives; (3) no undue burden on White applicants; and (4) periodic review of the program's continued necessity.

In *Grutter*, the Court recognized the compelling interest in promoting diversity in higher education. In 2003, the Court spoke at length about the educational benefits of diversity, noting that, among other things, it (a) "better prepares students for an increasingly diverse workforce and society, and better prepares them as professionals"; (b) "promotes cross-racial understanding, helps to break down racial stereotypes, and enables students to better understand persons of different races"; (539 U.S. at 330) and (c) is justified because of the "unique experience of being a racial minority in a society, like our own, in which race unfortunately still matters" (539 U.S. at 333). The Court also held that the law school's interest in obtaining a critical mass of minority students was indeed a tailored use. Thus, the Court affirmed the consideration of race as a factor in the individualized, holistic evaluation of applicants.

Although the Court found the law school admissions policy in *Grutter* to be narrowly tailored, it determined that the undergraduate plan at issue in *Gratz* did not satisfy this test. Key to this finding was that the policy at issue in *Gratz* automatically awarded points to applicants from underrepresented groups. The policy was therefore struck down as unconstitutional.

Impact of the Ruling

The enduring legacy of the *Grutter* and *Gratz* decisions is the Supreme Court's affirmation that diversity is a compelling interest in higher education and that race is part of that diversity calculus. The decision largely upheld the position asserted in Justice Lewis Powell's concurrence, writing for the plurality in *Bakke*, which allowed race to be a consideration in admissions policy, but held that quotas were illegal.

The *Grutter* decision was based as much on legal analysis as it was on a pragmatic view of the purpose of education and the goal of full inclusion of all groups in society. As Justice Sandra Day O'Connor wrote, education is "pivotal to 'sustaining our political and cultural heritage' with a fundamental role in maintaining the fabric of society" and "effective participation by members of all racial and ethnic groups in the civil life of our Nation is essential if the dream of one Nation, indivisible, is to be realized" (539 U.S. at 331).

Justice O'Connor noted, "Race-conscious admissions policies must be limited in time" (539 U.S. at 341–342), speculating that in a matter of 25 years, the use of racial preferences would no longer be necessary to further the diversity interest approved by the court. This desire for a colorblind admissions policy has been taken by some as a warning that affirmative action's legitimacy will somehow expire. This language was mere dicta, however. And ironically, the decision was rendered 25 years after the Court first broached the issue of race-conscious higher-education admissions policies in *Bakke*.

The legacy of the *Grutter* decision was apparent just a few years later in *Parents Involved in Community Schools v. Seattle School District No. 1* (2005) and *Meredith v. Jefferson County Board of Education*, companion cases holding that diversity serves a compelling interest to justify the use of race-conscious decision in the K–12 context.

However, in those same cases, the Court found that the student admissions plans were not narrowly tailored. In so holding, the Court applied an inflexible standard announced in *Grutter*, requiring holistic, individualized review in the K–12 context—something widely recognized a impractical if not impossible.

H

HEAD START

Head Start is a federally funded, comprehensive child development program serving young children and families in poverty. In fiscal year 2007, Head Start served approximately 909,000 children in over 50,000 classrooms with a budget of \$6.9 billion. More than 1 in 3 Head Start children are African American, and the overwhelming majority of African American children in poverty are served by Head Start for at least 1 year. The program has been shown to produce modest improvements in children's learning and development, in health and access to health services, and in parenting. There is also evidence of long-term improvements in economic and social success, particularly for African American children. This entry looks at what the program does, describes its historical background and implementation, and assesses its record.

The Program

Head Start is administered by the U.S. Department of Health and Human Services, Administration for Children and Families. Head Start operates in every state, the District of Columbia, and several U.S. territories. Three branches serve special populations: Migrant Head Start, American Indian-Alaskan Native Head Start, and Early Head Start. Early Head Start was established in 1994 to serve pregnant women and children from birth to age 3. Head Start is the federal government's largest

investment in early childhood education and development. It operates under detailed federal regulations and program performance standards regarding children's health and mental health services, education and development, health and safety, nutrition, and family and community partnerships.

Head Start recognizes the importance of the family's role in children's development and therefore requires that parents are meaningfully involved in program governance and operations. Every program has a policy council or committee that provides a formal structure for shared governance, and at least 51% of the members must be parents of current Head Start students. Head Start also provides services to parents and other family members. The most common services provided to parents are parenting education, adult education or employment training, and health education. Services to children primarily consist of center-based education 4 or 5 days a week throughout the school year, but about 5% of children are served through home visits. Along with education, children are provided health and nutrition services.

Federal regulations require that 90% of Head Start attendees be children in families at or below the poverty level at program entry, and 10% must be children with disabilities. The program serves mostly children at ages 3 (35%) and 4 (51%), with a few children age 5 or older (4%), as well as a growing number of infants and toddlers under Early Head Start (10%). Even after 40 years of operation, enrollment capacity is still an issue as Head Start is funded to serve only about half of the eligible 3- and

4-year-olds and a far smaller percentage of the eligible infants and toddlers.

Historical Background

Head Start began with the launch of President Lyndon B. Johnson's "War on Poverty" and the 1964 Economic Opportunity Act. To develop Head Start, the Johnson administration charged an interdisciplinary panel chaired by Dr. Robert Cook, a pediatrics professor at John Hopkins University, with the task of designing a program to enhance the development and academic achievement of the poor. The panel decided to target the preschool population and their families with a program combining health, education, and social services. The program was designed to enhance children's overall social competence, a broad construct that encompassed a wide range of elements thought to influence school achievement, including cognition and physical health.

This multidimensional approach was broader than other early childhood education programs during the 1960s. Although traditional nursery schools focused on children's social-emotional development in addition to providing learning opportunities through play, they primarily catered to affluent families. Head Start was the first large-scale effort to provide such opportunities, and more, to children in poverty.

Originally, the program was housed in the Office of Economic Opportunity, but in 1969, it was moved to the Office of Child Development in the Department of Health, Education, and Welfare. Head Start's design was strongly influenced by the civil rights movement and by social and political antidiscrimination activism in the African American community. It was also strongly influenced by new scholarship regarding environmental influences on child development, such as Joseph McVicker Hunt's *Intelligence and Experience*. This scholarship challenged popular views that intelligence is overwhelmingly determined by heredity and planted the idea of improving the developmental trajectories of poor children by providing them with rich educational experiences.

The political and intellectual roots of Head Start explain the program's intent to be an education program for children and a community action program in which adults could form local organizations to

eradicate poverty. Like most programs created by the Economic Opportunity Act, Head Start was designed to increase funding and community participation at the local level. Thus, federal policy emphasized maximum feasible participation at both the family and community levels. This emphasis is one reason the federal Head Start agency directly awards grants to local agencies, bypassing state government, which is unusual. Other federal education and child development programs operate through state government.

Implementation

To reach the maximum number of children, Head Start began in 1965 with an 8-week summer program enrolling 561,000 children. A half-day school year program was added the next year, and enrollment jumped to 733,000. Enrollment numbers exceeded 660,000 through 1969 when a study from the Westinghouse Learning Corporation and Ohio University reported the program failed to produce lasting cognitive and social-emotional benefits for children.

Although the Westinghouse study was subsequently found to have serious scientific flaws, there was general agreement that the summer program was too limited to produce significant educational gains for children. Other studies in the early 1970s also came to pessimistic conclusions about Head Start's lasting impacts. As a result, the summer program was cut back, and Head Start enrollment dropped and continued to decline through 1977.

In the 1980s, Head Start experienced a resurgence in enrollment. Yet even though enrollment grew, there was little growth in inflation-adjusted funding. In 1990, Head Start served about 541,000 children with a budget of nearly \$1.6 billion. Substantial increases in funding began in the 1990s during George H. W. Bush's administration. Under the Bill Clinton administration, enrollment growth and funding accelerated as the program's budget more than tripled, and initiatives were launched that included Early Head Start, full-day and full-year services, and revised Head Start performance standards. By 2001, Head Start served over 900,000 children with a budget of \$6.2 billion.

Unfortunately, from 2001 to 2006, the inflation-adjusted budget for Head Start declined. By 2006, the inflation-adjusted Head Start budget was

almost \$1 billion less than it had been 5 years earlier. This decline in Head Start's real buying power is particularly notable because enrollment continued at record highs. Although more children than ever were served, Head Start had less money to serve them, raising questions about the ability to maintain quality and fully meet performance standards.

The majority of Head Start attendees have always been minorities who are disproportionately represented among children living in poverty. By 2006, children in poverty were more ethnically diverse than they were four decades earlier, and the program responded by increasing enrollment among Latino and Asian American children. As a result, the percentage of children in Head Start who are African American has declined steadily. However, the total number of children enrolled in Head Start increased so much that the percentage of eligible African American children served was higher than ever. In 2006, approximately 70% of 3- and 4-year-old African American children in poverty enrolled in Head Start compared to just over one third in 1980.

African American children have the highest poverty rate of any major ethnic group. They are more likely than other ethnic groups to have multiple risks that impede their school success. Factors found to be detrimental to school success include undiagnosed language impairments, a family history of literacy problems, attention deficit hyperactivity disorder, and living in poor neighborhoods. African American children are more likely to experience one or more of these risk factors than are other children. Although the achievement gap between African Americans and Whites has narrowed since the civil rights movement, there is still a substantial gap between the two groups, and much of that gap is evident before kindergarten.

Head Start programs help to narrow the achievement gap by providing early education experiences that focus on language, cognitive, and social-emotional development. Because reading is a key determinant of academic success, Head Start teachers participate in national and university-based training that emphasizes the developmental continuum of emergent literacy. In Head Start, literacy activities are taught in meaningful, print-rich environments where teachers engage children in extended one-on-one conversations as well as

shared reading and early writing activities. In addition, children are provided with opportunities to develop their sensory and motor skills through play activities. Teachers are also trained to encourage parents to engage in home literacy activities, and national evaluations show that Head Start increases the degree to which parents read to their children.

Head Start also narrows the achievement gap by instilling a more positive attitude about school. Many Head Start teachers have experience with children's cultural and linguistic backgrounds because most teachers are ethnic minorities. In 2005, 45% of the Head Start teachers and staff were White, 29% were African American, 27% were Latino, and 7% were Native American, Asian, or Native Hawaiian. Such strides in staff diversity have been achieved because Head Start emphasizes hiring from within the community, particularly emphasizing hiring parents. Even after 40 years of operation, more than 25% of its employees are parents of current or former students. This staff diversity allows children to culturally identify with their teachers and is designed to make them feel more comfortable in a school environment.

Evaluation

Head Start may be the most extensively evaluated early childhood intervention program in the United States. For many years, the most widely publicized evaluation was the 1969 Westinghouse study. This study had serious scientific flaws that may have introduced substantial biases, particularly with respect to measuring lasting impacts on children's learning and development. Later studies often had similar limitations and produced similar findings, indicating that Head Start's initial effects on children's development tended to disappear.

However, public support for Head Start received a boost from more rigorous studies that provided better estimates of the long-term effects of other preschool education programs on children in poverty. Prominent among these are the Perry Preschool, Abecedarian, and Chicago Child-Parent Center studies. The children in these studies were primarily African American. These studies found that although effects on cognitive development declined after children left the programs, some

cognitive and other benefits persisted into elementary and high school. These benefits included increased achievement test scores, fewer grade retentions, decreased special education placements, and higher graduation rates. Follow-up into the adult years found increased employment and earnings, less crime and delinquency, and even less cigarette smoking.

In recent years (2001–2006), several highly sophisticated research studies have investigated whether the kinds of long-term benefits found for other preschool education programs may also have been produced by Head Start. These studies have found evidence that Head Start improved childhood health and lowered childhood mortality, decreased involvement in crime, and increased educational attainment.

In the mid-1990s, Congress mandated two national evaluations of the program: the Early Head Start Evaluation and the Head Start Impact Study. These studies employed rigorous designs in which children were randomly assigned to the program or a control group. The Early Head Start Evaluation found that the program produced modest improvements in children's language, cognitive, and social-emotional development by age 3. By age 5, some of these positive effects had diminished, with no lasting gains in cognitive and language abilities. Parents of children enrolled were slightly more nurturing and supportive and less likely to be depressed than parents in the control group. There are some indications of stronger outcomes for African Americans.

The Head Start Impact Study also found modest gains in the 1st year of Head Start attendance for children's language and literacy, social-emotional development, parent-reported child health services and health status, and parenting. Effects may be underestimated by the Impact Study because some children in the control group accessed Head Start while some assigned to Head Start did not attend. Also, some children in the control group may have received similar services from such other public programs as state subsidized child care and prekindergarten. The study had not reported on the outcomes of 2 years of Head Start participation by mid-2007, but based on other studies, 2 years of Head Start would be expected to have larger effects than 1 year.

Results of recent studies highlight the fact that Head Start alone is not a sufficient remedy for the developmental challenges faced by many African

American children and their families. Head Start is a program that assists children and families for only a few years. It would be unreasonable to expect Head Start by itself to overcome all of the problems of poverty and life in low-income communities. Head Start can be expected to narrow, but not close, the achievement gap between African Americans and Whites. Head Start makes improvements across a broad range of child and family outcomes in fulfilling its mission to enhance the lives of children and families in poverty.

Head Start continues to pursue improvements with the goal of producing larger and longer lasting effects. The federal government has sought to do this by setting aside funds for quality improvement; improving teacher qualifications, training, and mentoring; increasing emphasis on literacy and other academic goals; mandating child assessments; and increasing program accountability. Mandated assessments of Head Start children have been controversial due to issues about appropriate assessment of young children, particularly young minority children. In sum, after more than 40 years, Head Start remains a work in progress, one that produces broad, positive impacts on children and families, but strives to adapt to societal changes and improve its outcomes.

HIGHER EDUCATION ACT OF 1965

Among the emerging challenges of the mid-20th century was the inability of academically prepared high school graduates to enter college due to the lack of affordability; hence, the Higher Education Act (HEA) of 1965 was launched as part of President Lyndon B. Johnson's "War on Poverty." The goal of the HEA was to advance the efforts of colleges and universities while providing initiatives to promote educational, economic, and social mobility across diverse groups; it focuses on assisting students from low-income families—many of them first-generation college students and many of them students from underrepresented groups—to acquire postsecondary education. The HEA is one of several laws that illustrate the emergence of a federal presence in challenging poverty, racism, and sexism as obstructions to equality across the educational pipeline.

In its original version, the act included provisions for support of historically Black colleges and universities (HBCUs), but later amendments expanded its focus to include community colleges, setting up a competition for funding. African Americans also benefited from provisions that offer support directly to students and fund programs that enhance academic preparation. This entry describes the historical context of the legislation and its passage, describes its impact on HBCUs and African American students, and briefly summarizes the current provisions.

Historical Background

U.S. higher education, also referred to as postsecondary education, involves instructional, scholarly, and service activities at two levels: undergraduate and graduate. Historically, the pursuit of a college

degree was afforded exclusively to the White elite, not to the general population. In 1867, the federal government established the Department of Education, not with the intent of making education more universal, but to assist states with developing K–16 school systems that would provide information on effective teaching and learning practices.

One of the unique facets of U.S. higher education, unlike postsecondary systems in other countries, is that the primary responsibility for establishing colleges and universities lies at the state level. The United States largely formalized public education during the 19th century. However, for much of the 19th century and 20th century, racial-ethnic minorities and women were excluded from participating in higher education. Prior to World War II, less than 20% of high school graduates enrolled in higher education.

College enrollment began to increase following the passage of the 1941 Lanham Act, which provided basic legislation for federal appropriations to schools and the 1944 GI Bill of Rights, legislation devised to offer additional opportunities to returning World War II veterans. Despite the institution of key policies of the 1940s and 1950s, barriers to postsecondary access continued for many U.S. citizens, particularly individuals from historically underserved and marginalized groups after World War II; many GIs began college study, while others reclaimed their previous jobs. This left many African Americans and women displaced.

In an effort to remedy uneven access to college, subsequent employment opportunities and strengthen higher education, Johnson presented a charge to U.S. citizens in his "The Great Society" speech of 1964. Johnson urged U.S. citizens to join the battle of attaining equality for every citizen. Attempting to bring each individual into the full fold of participation, Johnson waged a "War on Poverty," expressing a need to address societal inequities, many of which pervade higher education.

Passage of the HEA

Bills H.R. 3220, H.R. 3221, and S. 600 and S. 2302 are the antecedents of the HEA of 1965. Each of the bills was introduced in the House of Representatives and Senate to improve financial aid to students, increase teacher training programs,

and expand revenues for higher-education institutions. Representative Adam Clayton Powell Jr. chaired the House Committee on Education and Labor, which forwarded another bill, H.R. 9567, which expanded features of the previous bills on July 14, 1965. The House and Senate passed Bill H.R. 9567 on October 20, 1965. Bill H.R. 9567 eventually became Public Law Number 89–329, 79 STAT 1219, also known as the HEA of 1965. This key federal legislation was signed into law by Johnson on November 8, 1965.

Among the central aims of HEA was improving entry to college and assessing the condition of postsecondary education relative to the role of higher-learning institutions. More specifically, the 1965 HEA increased federal support of colleges and universities and instituted student grant aid programs. Through HEA, institutions of higher learning were allocated funding to improve library holdings; smaller colleges received greater program assistance and increased resources for community development.

Specific Programs

There are several programs authorized under HEA that include, but are not limited to federally sponsored assistance for colleges and universities, graduate fellowships, international education, student aid, and teacher quality. Since its enactment, HEA has been considered one of the most significant pieces of legislation affecting higher education. HEA is made up of seven titles: (1) General Provisions, (2) Teacher Quality Enhancement Grants, (3) Institutional Aid, (4) Student Assistance, (5) Developing Institutions, (6) International Education Programs, and (7) Graduate and Postsecondary Improvement Programs.

Federal interest in regulation is critically important in generating broad student access and mitigating hurdles to postsecondary attainment. For example, as related to Title I of HEA, the federal government makes general provisions for accreditation, articulation, and the transfer of credit. Title II addresses the need for quality teacher education preparatory programs. Title III, which seeks to strengthen institutional programs, was originally created by Congress to provide grants to low-income, first-generation students at HBCUs and financial support for HBCU facilities and services.

Title IV encompasses federal student assistance in a variety of forms such as campus-based work-study programs, GEAR UP, Upward Bound, Pell Grants, and so forth. The federal role in furthering the development and capacity of institutions of higher learning is the concern of Title V, while Title VI covers federal sponsorship of international education programs such as the Fulbright program. Finally, Title VII pushes for academic quality improvement and effective graduate and professional education through competitive grants programs (e.g., GAANN—Graduate Assistance in Areas of National Need).

Federal Involvement

The federal role in higher education has shaped the landscape of postsecondary colleges and universities. Through the Civil Rights Act of 1964, the 1965 Elementary and Secondary Education Act, HEA, and other laws, federal involvement in postsecondary education has evolved over the decades to guarantee equal access, sustain the national interest, and cultivate basic and applied research in addition to ensuring quality educational experiences for all.

As evident in the seven titles of HEA, the scope of federal influence on higher education illustrates how dependent institutions of higher learning are on the government in a number of areas (e.g., from financial support to guiding admissions policies and regulating protocols for academic research). Although the federal government sets national priorities relative to the educational arena, federally sponsored financial support of U.S. higher education is modest and secondary in comparison to state financing. Yet when it pertains to educational right of entry, academic bias, and uneven outcomes, the federal government takes primary responsibility for equal opportunity compliance.

Significance for African Americans

History has demonstrated how debatable it is to determine whether the federal government has intervened sufficiently in making certain that the playing field is leveled across various social groups. Mechanisms to make public education at all levels available to every U.S. citizen without regard to race, ethnicity, gender, or socioeconomic status

continue to be elusive. Hence, the goal of the GI Bill as a government intervention has been considered a failure by some scholars in terms of closing the racial gap in college attainment. Although educational inequalities persist, the spirit of the 1965 HEA legislation was to enhance the ability of the different racial-ethnic groups in low and middle income brackets to occupy a larger segment of the collegiate enterprise.

U.S. history in the education of African Americans illustrates separatist and exclusive schooling contexts. Very few White institutions readily opened their doors to African Americans despite key programs of the 1940s organized to increase postsecondary participation. In the South, many African Americans had difficulty benefitting from the GI Bill given the racial politics at the local level that often illegally dispensed advantages to White veterans.

During the 1950s and 1960s, the federal government was especially concerned with issues of equality in public K–12 and postsecondary schools. Eligible African Americans were not permitted access at traditionally White campuses and were frequently directed not to pursue higher education. Therefore, the greatest opportunities for African American educational advancement were at HBCUs.

Historically Black institutions are largely concentrated in the South. Most African Americans resided in the South until the great migration of the 1930s, which was the largest movement of African Americans from the South to the North. Congress recognized that HBCUs were paramount in the production of African American college graduates. Subsequently, Title III of HEA was designed to assist HBCUs in surmounting numerous years of disregard from the Southern states.

Aims authorized under HEA that directly impact historically Black postsecondary institutions include the following:

1. Strengthening the capacity of HBCUs in terms of infrastructure, institutional stability, acceptable facilities, capital financing and fiscal management
2. Expanding educational opportunities for low-income African American students
3. Helping HBCUs in the form of endowment challenge grants and minority science-engineering improvement programs

Title III of HEA was originally earmarked as assistance for HBCUs. Over the years, Congress has acknowledged that other institutional types have substantial African American student populations. Community colleges parallel HBCUs relative to a mission to promote access for low-income, first-generation collegians. Since 1875, historically Black 2-year colleges have existed in the United States. Aside from the traditional 4-year HBCUs that practiced open admissions, the 20th century witnessed the growth as well as the deterioration of Black 2-year colleges. There were well over 100 Black 2-year colleges during the early 20th century. By the late 1970s, severe decline occurred, and by the millennium, only 12 historically Black 2-year institutions remained, most located in the Southeast.

By 1980, as a result of lobbying from the American Association of Community Colleges' Black Affairs Council, Title III was broadened to include grant opportunities for 2-year institutions of higher learning. However, the shift of Title III funding allocations from HBCUs to community colleges would eventually include set-asides for all 2-year and minority-serving institutions (i.e., historically Black, predominantly White, women's community colleges, urban, suburban, rural, tribally controlled, and Hispanic serving). Although the history, purposes, and operating structures of community colleges and minority-serving institutions vary considerably, these institutions are in competition for limited resources, most notably federal government support for the development and growth of these institutions via Titles III and V of HEA.

Although HEA has shaped the landscape of postsecondary education institutions, HEA has also directly affected students, especially in terms of extending college affordability (e.g., Pell Grants and subsidized student loans) and protecting student rights to speech and association. HEA helps to maintain and improve financial assistance to postsecondary students, to encourage transparency in higher-education practices and the quality of academic programs, and to promote institutional efficiencies and growth.

Amendments to the Act

One of the finest features of the U.S. higher education system is the diversity of institutional types

and the divergent learners attending the various colleges. Congress reauthorizes HEA every 5 to 7 years on average to ensure that needy institutions have the necessary resources to operate effectively and to ensure that deserving students can overcome financial disadvantages. The HEA was reauthorized in 1968, 1972, 1976, 1980, 1986, 1992, 1998, 2005, and 2008.

Prior to reauthorization of HEA, Congress considers current conditions of postsecondary education, which programs and policies should be amended, and whether new national needs have emerged. On August 14, 2008, Bush signed H.R. 4137, reauthorizing the HEA through September 30, 2014. Among the many changes made to the various titles associated with HEA are the following:

Title I: General Provisions. Changes to transfer of credit and clarification of dual or concurrent enrollment; there was a reemphasizing of protections for student speech and associated rights. Greater institutional flexibility was granted in the percentage of distance education offerings colleges may have and limitations were placed on eligibility for federal student aid for specific international medical schools. The Department of Education will publish information on tuition, fees, and financial aid for students, in addition to state-by-state higher-education spending. Within 1 year of the 2008 reauthorization, institutions will be required to work with the Department of Education in developing a multiyear tuition tool. This multiyear calculator will make the estimated amount of tuition more transparent to students and their families as they make financial plans for college attendance. For the first time under HEA, the Department of Education will identify “diploma mills” to assist students in avoiding institutions operating without supervision of a state or professional agency.

Title II: Teacher Quality Enhancement. State report cards on the quality of teacher programs will be required. To encourage greater accountability in the evaluation of such programs, HEA also requires state reports of pass rates for completing students. It also calls for the enhancement of instructional technology to improve student achievement and for increases in the grants available to improve teacher training, mentoring, and professional development.

Title III: Minority-Serving Institutions. Support for HBCUs, tribal colleges, native Hawaiian-Alaskan institutions, and graduate or professional training at minority-serving institutions was reauthorized.

Title IV: Federal Student Aid Programs. An increase in the amount of the Pell Grant over the next 5 years was approved, raising the maximum award from \$5,100 to \$6,300. Permission given to award Pell Grants year-round and removal of the tuition sensitivity provision that negatively impact financial aid for collegians who attend low-cost institutions (e.g., public community colleges). Reauthorization of TRIO Programs and GEAR UP and reauthorization of services for families of migrant and seasonal workers.

Title V: Hispanic-Serving Institutions. Similar to programs already established for HBCUs, creation of a new grant program to support graduate programs at Hispanic-serving institutions. Removal of stipulation for a 2-year waiting period prior to reapplying for a grant under Title V and elimination of institutional requirement to certify students as low income.

Title VI: International Education. Alterations include reauthorization of international education programs and use of an interagency group to determine the priority for international education. For example, prior to each funding cycle, the Department of Education will request recommendations from various federal agencies regarding national needs for expertise in particular regions of the world and foreign languages. Also, the Department of Education will aid in the development of a survey that institutions will disseminate to students completing programs under Title VI in further identifying the need for postgraduate training and/or employment opportunities.

Title VII: Graduate Education Programs. Reauthorized grant programs that support graduate education particularly in areas of high need, considered a national priority due to shortages in the labor market.

Title VIII: Miscellaneous Provisions. Authorized support for the Teach for America program and

grants for occupational development in high-skill, high-growth areas. Continued support for Native American serving institutions and fellowships in math and science fields of study for minority scholars.

Title IX: Amendments to Other Laws. Reauthorization for federal grant programs at the secondary and postsecondary level under the Education of the Deaf Act.

Title X: Reconciliation. Creation of a temporary mandatory program called the Provisional Grant Assistance Program, which provides \$5.5 billion in grant aid for students over 5 years with the majority of funding allocated for low income collegians as supplemental federal student aid. Shifted fixed interest rates on undergraduate and graduate nonconsolidation loans (converted to 6.8%), increased borrowing for subsidized loans by \$1,000 for 1st- and 2nd-year students and unsubsidized loans for graduate students by \$2,000 per year, and approved longer loan deferment for members of the armed services or for the reserve who serve in a combat zone and have borrowed since July 1, 2001.

HIGHLANDER FOLK SCHOOL

The Highlander Folk School (now the Highlander Research and Education Center in New Market, Tennessee) has a long legacy of providing a space for grassroots activists who were involved in numerous key struggles for social and political transformation in the United States. In its first 30 years, Highlander functioned as an adult education and community folk school for poor, “unlettered,” unemployed mill and miner Appalachians during the Depression as a leadership training center for workers in the southern labor union movement, as an educational and organizational mechanism for members in the Farmer’s Union in the South, and as a meeting place for African American and White civil rights activists. This entry discusses its history and accomplishments, with special reference to its

contributions to African Americans and to the civil rights movement.

Historical Background

Highlander was founded in 1932 by Myles Horton and Don West, in Monteagle, Tennessee. During its infancy, Highlander was concerned about labor injustices and the exploitation of the Appalachian people residing in the surrounding predominantly mill and mining counties. Horton envisioned a school that would enable the mountain people to learn the skills they would need to know so that they would be able solve their own class problems and in turn transform society into an equitable and just one.

For Horton, education, particularly adult education, was a way to cultivate self-advocacy that would ultimately lead to social activism and leadership skills at the grassroots level. Highlander was also a school that sought to cultivate and preserve the Appalachia cultural traditions through music, folk literature, and other cultural mediums.

As a theological student at Union Theological Seminary in New York, Horton was encouraged by his professor, the renowned theologian Reinhold Niebuhr, to establish a school in the Appalachia Mountains. Horton also received advice on how to start his school from Jane Addams, founder of the Hull House. Inspired by Niebuhr's and Addam's suggestions as well as literature Horton read on the Danish folk schools, Horton visited a few Danish folk schools in Denmark during 1931 and 1932.

The Danish folk schools provided free adult education for the rural peasants and farmers in Denmark. The purpose of the schools was to empower the peasants and farmers so that they could break the chains of their exploitation and in turn reconfigure their own realities for a socially just society. Horton returned to the United States armed with the information he needed to open the Highlander Folk School. Horton and West chose the name Highlander because it was reflective of the Appalachian people's culture and the southern mountain geographical location.

In the early years, the overall concern of Horton and his staff was to teach its adult student workers the skills they would need to fight against labor and class oppression. Thus, during the 1930s and into

the mid-1940s, Highlander provided assistance for striking textile mill workers, coal miners, and timber laborers. Highlander also held classes that addressed labor union issues such as labor exploitation and workers rights. The staff conducted workshops on social protest strategies and leadership training for potential labor union leaders.

Highlander also supported textile workers in their organizing efforts to unionize laborers in Tennessee and North and South Carolinas. Working closely with the Congress of Industrial Organizations, Highlander organized and conducted a wide-ranging labor union movement in Tennessee and several other Southern states during the 1930s. During the late 1940s and early 1950s, Highlander began providing support for small struggling farmers in the National Farmers Union in Tennessee.

Civil Rights Accomplishments

By the early 1950s, Horton had become extremely concerned about the entrenched racial repression and oppression African Americans experienced in the South in every aspect of U.S. life due to legalized segregation. Consequently, the school began convening workshops that dealt with discrimination and segregation policies in employment, voting, housing, and schools. The workshop attendees consisted of African American and White activists studying in an integrated setting. This was extremely dangerous due to racist and repressive Tennessee segregation laws that prohibited interracial meetings and interactions.

Despite these laws, these courageous activists studied civil disobedience strategies, interracial dialogue, coalition building, and protest songs such as "We Shall Overcome" before the *Brown v. Board of Education, Topeka, Kansas* (1954) decision, the Montgomery bus boycott, and the civil rights movement. Martin Luther King Jr., Rosa Parks, Ella Baker, and Septima Poinsette Clark were a few of the many Highlander workshop attendees.

Rosa Parks, who began defying segregation policies prior to the Montgomery, Alabama, bus boycott in the 1940s, originally came to Highlander in July of 1955 to partake in a workshop on school desegregation. Several months later, on December 1, 1955, Rosa Parks defiantly refused to give up her seat on a Montgomery city bus. Her civil disobedient stance sparked the Montgomery bus boycott.

Clark, an African American educator and civil rights activist, was recruited by Horton to work as Highlander's workshop director and later director of adult literacy education. Clark conducted workshops for African American and White activists on public school desegregation issues and community activism. As the director of workshops, Clark, along with Esau Jenkins and Bernice Robinson, taught adult literacy classes for the purpose of instructing unlettered African American adults in classes that ranged from reading, writing, and arithmetic to checkbook balancing and registering to vote.

As a result of the unlettered adults training in the citizenship programs at Highlander and later at the Southern Christian Leadership Conference in 11 southern states, many African Americans registered to vote, which facilitated the transformation of the Southern political structure by striking a near fatal blow to state sanctioned segregation voting laws. Also during this period, African American college students began protesting segregation in public facilities. Many of the Fisk University students in Nashville, Tennessee, who were involved in the sit-ins of the 1960s, came to Highlander to brainstorm and organize ways in which to further their struggle for racial justice.

Tennessee's southern segregationists and lawmakers attempted to shut Highlander down when the fight against segregation gained momentum by the 1960s. However, Highlander secured a new charter and relocated the school to New Market, Tennessee, in 1972 and changed its name to Highlander Research and Education Center. Highlander still exists today, supporting activists in their struggle for equity and social justice. The school celebrated its 75th anniversary in August 2007.

HIGH SCHOOL ATHLETICS

Interscholastic sports in the United States have evolved significantly since their inception, becoming a competitive and profitable industry. The African American presence has been a significant part of this growth and expansion. According to data from the Department of Education, in 2006, 51% of African American boys and 40% of girls were competing in interscholastic sports. This has placed a premium on African American academic and athletic performance at the interscholastic level and has put pressure on young people to win.

A major shift that has altered the terrain of interscholastic sports is adoption of a model that closely resembles the performance-oriented model exhibited in elite amateur and professional sports. Interscholastic sports has transitioned from being process-oriented to being performance- and outcome-oriented (i.e., a premium on mastering skill and winning). It has shifted from being a means of socializing youth to adhere to U.S. values into an industry reflecting practices witnessed at collegiate and professional levels of sport participation—athletic capitalism. This has had both positive and negative effects on interscholastic sport opportunities for African American youth. This entry looks at the development of interscholastic sports, the evolution of the underlying values, the impact of capitalism, and the current outlook, all with an emphasis on African American participants.

Historical Background

Informal sporting experiences in the form of playful activities and games have occupied the lives of youth in the U.S. throughout its history. However, organized sporting experiences for youth in the United States had their origin during the early 1900s. Schools, churches, and community agencies organized and funded most of the youth sporting experiences during this period. For example, the Playground Association of America was formed in 1906 by Luther Gulick, and additional organizations, such

as Young Men's Christian Association (YMCA), The Boys Club of America, Amateur Athletic Union, and the Catholic Youth Organization, were major contributors to the development of youth sport programs in the United States. These programs were the foundation for interscholastic sports.

Regarding the origins of interscholastic sports, the New York Public School League was formed in 1903 as the first interscholastic sports program in the United States. The only countries that sponsor interscholastic sport are the United States, Canada, and Japan. Interscholastic programs in the United States were modeled after intercollegiate sports programs where the focus was on providing youth with activities that increased their physical fitness and provided them with a means to acquire positive traits. Interscholastic sports programs were part of the move to formalize youth sporting practices.

Sports have consistently been a part of the African Americans' educational process and pursuit. During the early 1900s, the Interscholastic Athletic Association of the Middle States became the first association for African American boys' basketball; it expanded to include track, football, and baseball under the direction of Edwin B. Henderson, an African American Harvard-trained physical educator. These all-Black high school interscholastic programs became the breeding ground for many historically Black colleges and universities (HBCUs), and they were eventually tapped into by predominantly White institutions once these institutions began to integrate.

Values and Opportunities

According to sport sociologist Harry Edwards, there is a system of values and beliefs that he calls the dominant American sport creed. It consists of ideals and beliefs achieved through sport participation that closely resemble the ideology of the American dream—that if individuals work hard, they will achieve a certain level of economic success and upward social mobility. According to this creed, sport promotes physical and mental fitness, builds character, teaches discipline, enhances competitiveness, prepares individuals for a competitive market economy, and contributes to Judeo-Christian and patriotic belief systems.

This creed was originally used to explain participation and performance in sport in the United

States. However, these ideals became applicable and common beliefs among advocates for interscholastic sport programs in the United States. Thus, interscholastic sports were seen as a practical vehicle to promote patriotism and to disseminate cultural values and socialize youth into having desirable cultural traits while preparing them mentally and physically to be competitive and productive in a market economy.

Furthermore, the tenets of interscholastic sports (e.g., building character, instilling discipline, and developing strong work ethics) coincided with the values African Americans have placed on education. Thus, interscholastic sports have provided many African American athletes with opportunities not only to develop their athletic talents, but also to be awarded athletic scholarships to major colleges and universities throughout the United States. Research has shown that participants in interscholastic sports receive higher grade point averages, and they have greater aspirations to go to college and higher educational achievement rates. Many have attended these institutions of higher learning, and with the values they acquired in interscholastic sports, they obtained college degrees and transitioned into successful careers.

Youth sports have evolved to include opportunities for boys and girls, and participation opportunities across class and racial lines have increased in the United States. It is currently estimated that more than 40 million youth participate in some form of organized sport in the United States. Current youth sporting experiences fall within four major categories: (1) public, tax-supported community recreation organization; (2) public, nonprofit community organizations; (3) private, nonprofit sport organizations; and (4) private commercial clubs. Interscholastic sports generally fit within the scope of public, tax-supported community organizations, more specially public schools, where, according to the National Federation of State High School Association, over 7 million girls and boys compete annually.

The Capitalist Trend

Interscholastic sports have made major shifts to mirror the athletic capitalism that exists in intercollegiate and professional level sports so that sports participation has transitioned from being a

tool for socialization and character development to having as its focus athletic capitalism. This has produced arguments both for and against interscholastic sports.

Increased commercialization of interscholastic sports and the privatization of youth sports are examples of athletic capitalism in youth sports. The design of interscholastic sports has expanded more to accumulate capital at the risk of exploiting the youth participants. Critics argue that this move toward athletic capitalism undermines the educational mission of the school system and efforts of developing character. Sports have changed from a cultural practice that is a means of socialization for youth to a product for capital accumulation and consumption. This transition has adversely affected the African American interscholastic sporting experience. Similar to the intercollegiate African American athlete, a premium is now placed on athletic performance at interscholastic levels and academic performance is given a lower priority.

Proponents of interscholastic sports argue that the increased commercialization is needed to relieve the financial burdens school systems are experiencing because of dwindling state monies. They argue that creative ideas are needed to offset cuts in state funding so that quality sporting opportunities can be provided for youth. The proponents also argue that the benefits of youth playing in better facilities, receiving better coaching, and having the use of better equipment and more opportunity in a variety of sports are justifications for increased commercialization of youth sports. Several areas in which this can be witnessed are the multiple streams of revenue now available in interscholastic sports, including the sale of naming rights of gymnasiums and stadiums, sponsorships, and in a few cases, sale of broadcasting rights.

In Florida and Texas, where high school football is tremendously popular and well supported, several high schools have sold the naming rights to their football stadiums to local businesses. Along with the sale of naming rights, there has been enormous investment in the construction of football stadiums at the high school level. Stadiums for interscholastic sports are now being constructed that include track fields, AstroTurf fields, or natural grass, which have an average cost of between \$17 million and \$22 million with seating capacities ranging from 5,000 to 15,000 people.

To further illustrate this shift to athletic capitalism, there are other means of generating income, which include the sponsorship of football and basketball championship games and the sale of media rights for televising high school sporting events. For example, Toyota donates \$165,000 to sponsor a regional basketball tournament in southern California. Also in California, a high school football championship has been named the San Joaquin Section/Les Schwab Tires Division I Championship because Les Schwab Tire Company donated \$183,000.

Regarding media rights, major networks such as MTV (Music Television), ESPN, and FOX Sports are televising more high school and other youth sports (especially football, basketball, Little League baseball, and girl's softball), which generates revenue for these athletic programs. For example, in 2001, ABC and ESPN signed a 6-year deal with Little League Baseball Incorporated worth \$7 million to televise the championship series. A recent development in the popularity of interscholastic sports has been with NBC converting the story of high school football in Texas, *Friday Night Lights*, into a prime-time show.

Another recent development has been MTV's documentary, which covers the season of high school football at Hoover High School in Hoover, Alabama. Remote Film Production, Inc., paid the school system for the rights to film at Hoover High School—\$20,000 for the first season and \$21,000 for the second. These are a few examples to illustrate the direction and transition interscholastic sports in the United States are making toward athletic capitalism.

Another interesting development regarding interscholastic sports, which is affecting the educational experiences of African Americans athletes, is the creation of high school diploma mills. These programs are basically correspondence academies that enable college-bound talented high school athletes' opportunities to increase their grade point averages, which ultimately assists in improving their transcripts to qualify them for athletic scholarships at National Collegiate Athletic Associations (NCAA) institutions. The illegal practices and abuse of a few of the academies have tainted the academic credibility of them all. The disproportionate number of African American youth affected by this is a reason for concern because it borders on academic neglect in pursuit of athletic achievement.

The NCAA has made strategic efforts to reduce the occurrence of this emerging practice. The development of these diploma mills speaks to the creative mechanisms that are being employed to increase intercollegiate athletic scholarship opportunities for high school athletes.

Looking Ahead

Interscholastic sports have grown tremendously in participation and in focus since the early 1900s. They were originally designed to socialize youth into acquiring values and developing character traits that are ideal for U.S. citizens. The shift to athletic capitalism has not totally annulled the efforts of interscholastic to socialize youth to be socially well-balanced citizens, but it has expanded the scope of interscholastic sports in the United States. Some have argued that this broader scope has been a benefit to many youth by increasing opportunities, providing better equipment and facilities, and providing them with better coaching and athletic preparation.

Because education remains a means of achieving social mobility and is valued in African American communities, the mixture of athletics and academics will provide athletically talented athletes the opportunity to excel academically in institutions of higher education. African American youth will continue to contribute to the growth of interscholastic sports and receive the benefits of being able to achieve a high school diploma and college degree while expressing their athletic talents in various sports. Title IX is slowly showing promise in increasing sporting opportunities for African American females in sports beyond the traditional basketball and track and field. Interscholastic sporting opportunities are expanding for African American females in sports such as soccer and, in some states, competitive weight lifting. As these opportunities increase at the high school level, the presence of African American females will also increase in intercollegiate sports.

The challenge for the future of interscholastic sports in the United States will be the ability of interscholastic sports programs and their supporters to be able to balance the need for capital accumulation, with the need of the educational mission of the school, and with the need to adhere to its original purposes of socializing youth to acquire

positive cultural values of sportsmanship, working hard, competition, character development, and so on. Bringing harmony between the need to accumulate capital, the school's mission, and positively socializing youth can all be achieved to ensure positive sporting experiences for youth while not creating a financial burden on the institutions that provide interscholastic sport opportunities.

HILLIARD, ASA (1933–2007)

Asa Grant Hilliard III was an African-centered educator, historian, and psychologist who wrote more than a thousand publications, inspired numerous students, and was enstooled as a development chief for Mankranso, Ghana, where he was given the name, Nana Baffour Amankwatia II, which means generous one. This seemed particularly fitting for someone whose life's work was firmly rooted in disseminating truth, sharing knowledge, and enhancing a comprehensive curriculum on the contributions of African people. This entry explores the life and life's work of Hilliard.

Childhood and Education

Deeply entrenched in his role as husband, father, and grandfather, Hilliard was a family man who attributed much of his passion and success in education to his ancestors. During interviews and discussions of his life, he shared stories of his great grandparents, grandparents, and parents, all of whom were deeply committed to education.

Hilliard's great-grandparents, Bunk and Mary Hilliard, were formerly enslaved Africans from Georgia. Their union produced 13 children, including Asa Grant Hilliard I, who was born in September 1863. The Hilliards believed in education, and they relocated to Texas and did hard labor in the fields to offer their children more opportunities than they thought were possible in Georgia. Their postemancipation quest and educational goals were fulfilled in their son Asa, who became a great educator and leader in Bay City, Texas, where both an elementary and high school bore his name some years after his death. His son, Asa Grant Hilliard II, became an educator and high school principal and the father of Asa Grant Hilliard III.

Asa Grant Hilliard III was born on August 22, 1933, in Galveston, Texas. His father and mother, Dr. Lois O. Williams, were divorced when he was a young boy. He was the eldest of eight children, and many of his brothers and sisters also pursued

careers in education. After his parents' divorce, Hilliard moved to Denver, Colorado, to live with his mother, who was a Pentecostal minister. He graduated from Manual High School in Denver in 1951. He met his future wife, Patsy Jo Morrison, while they were both students at Manual. Hilliard earned a bachelor of arts degree in psychology from the University of Denver in 1955. He worked various jobs, including bartender, camp counselor in a Jewish Community Center, and teacher in American history and psychology in the Denver Public School System. He joined the U.S. Army in 1955 and served as a first lieutenant, platoon leader, and battalion executive officer in the Third Armored Infantry. He married Patsy Jo on November 16, 1957, in Denver.

Hilliard returned to the University of Denver, where he completed a master of arts degree in counseling in 1961 and a doctorate of education in educational psychology in 1963. While at the University of Denver, Hilliard was a teaching fellow in the Centennial Scholars Honors Program in philosophy from 1961 to 1963. He also worked as the head residence counselor in the men's residence hall from 1962 to 1963.

Over the next 40 years, Hilliard became an esteemed and world-renowned scholar through his scholarship, teaching, and service within and outside of the academy. His academic career began in the 1960s during the turbulent period of civil and human rights battles that were being waged in the United States. It was also during this period that Hilliard began to wage his own war to systematically deconstruct long-held misconceptions about the intellectual capabilities of African American children.

Career and Achievements

Hilliard joined the faculty of San Francisco State University as an assistant professor in the Department of Secondary Education in 1963. He became a consultant and education advisor to the Peace Corps in Liberia, West Africa. As a member of the San Francisco State University Advisory team to the Monrovia Consolidated School System, he served in a variety of roles during his 6 years as a resident of Liberia. He was consultant and school psychologist, advisor to the superintendent of schools in Monrovia, and later acting superintendent of schools in Monrovia.

Hilliard's work with the Peace Corps included the development of the first in-country training program in Monrovia, Liberia. He contributed significantly to the development of Liberia through various local initiatives in corporate and educational institutions during this period. During his tenure, he directed research projects on reading and teaching methods, consulted with the American Cooperative International School in the development of ethnic studies content for the curriculum, and developed a counseling program for Cuttington College.

Multicultural Education

Hilliard returned to the United States in 1970 and became the department chair of secondary education at San Francisco State. From 1972 to 1980, he served as dean of the School of Education. As an expert in multicultural education in the state of California, he was frequently called upon to direct evaluation and research projects on both state and national levels. He served as the project director for a variety of initiatives that assessed teaching methods and practices affecting multicultural and multiethnic groups. From 1972 to 1973, Hilliard served as an expert witness for the selection of gifted African American pupils on behalf of the National Association for the Advancement of Colored People (NAACP) in *Johnson v. San Francisco Unified School District, Selecting Gifted Black Pupils* (1971). He helped secure a temporary injunction in 1972 by challenging culturally biased IQ tests of African American children in the case finally affirmed and decided 10 years later in *Larry P. v. Riles* (1984).

Based on Hilliard's extensive experience, he developed numerous workshops on multicultural education for administrators and teachers in local public school systems throughout California and in cities across the nation. He created and implemented projects related to the development of African and African American history curricula in school systems. He was also invited to participate as a faculty member for the Stanford Institute for Intercultural Communication each summer from 1978 to 1983.

After serving for 18 years at San Francisco State University, Hilliard relocated to Atlanta, Georgia, in 1980, where he joined the faculty at Georgia State University. Never one to forgo more education,

Hilliard received additional training at Yale University in the Center for Child Development under the direction of Reuven Feuerstein and Mildred Hoffman from 1980 to 1981.

The Role of Teachers

Hilliard began publishing on the role of teachers in the educational and psychological development of African American children with his first article titled "Cross Cultural Teaching," published in the *Journal of Teacher Education* in 1966. From that point forward, his scholarship and lectures were in high demand as he strategically and systematically began to challenge previous research about the intellectual strengths and weaknesses of African American children.

Hilliard's harsh criticisms of educational measurements became one of his most enduring legacies. He specifically noted many of the flaws of cognitive and intelligence quotient (IQ) tests. Early speeches including one that he presented to the Pacific Psychotherapy Associates Conference in 1973 titled "Anatomy of Homicide: How Teachers Kill" spoke to his growing focus on holding teachers accountable for the educational disparities that existed among children. That same year, he gave a keynote speech titled "Facing Cultural Pluralism: The Way It Can Be" to the Northern California Conference on Bilingual-Multilingual Education.

Hilliard heavily emphasized the need for teachers to understand their own culpability in situations where their students were failing. He often cited the need for teachers to be cognizant of their own hidden biases and to work to discover ways that they could emulate the best practices of other teachers who yielded high-performing students. Hilliard noted that he also felt personally responsible for the success or failure of his students; he lectured and published from this perspective.

Hilliard's publications during the 1970s continued to address his research on the influences of cultural biases, the dynamics of oppression, and the validity of intelligence testing. An early article that appeared in the *Journal of Research and Development in Education* in 1979 was demonstrative of his work during that period with the title "Standardization of Cultural Bias as Impediments to the Scientific Study and Validation of Intelligence."

Education on African Heritage

Although he had long stressed the importance of infusing African and African American history into the curriculum and instruction of teachers, Hilliard's research began to seriously reflect this during the 1980s. A lecture given at Memphis State University in 1982 was titled "The Maroon Within Us: The Lessons of Africa for the Parenting and Education of African American Children." This speech was published in the *Journal of Negro Education* in 1983. Other publications included "To Be African or Not to Be," published in Mike Harris's *Fever Dream*, and "Kemet Concepts in Education," published in the *Journal of African Civilizations* in 1985.

During the early 1980s, Hilliard began his now well-known study tours on ancient African heritage to various parts of Egypt. During this period, he was also actively involved in organizations including the National Alliance of Black School Educators, the National Association of Black Psychologists, a founding member of the National Black Child Development Institute, and a founding member of the Association for the Study of Classical African Civilizations (ASCAC), where he served as the first vice president. In 1986, he founded the Atlanta Chapter of ASCAC.

Hilliard continued to publish journal articles, magazine articles, special reports, and book chapters throughout the 1980s. He also cowrote with Larry Williams and Nia Damali a book titled *The Teachings of Ptahhotep, the Oldest Book in the World*, published in 1987. In December of 1990, he edited *Testing African American Students, Nos 2 and 3: Special Issue of the Negro Educational Review*. He was also an invited lecturer to the National Aeronautics and Space Administration conference on the occasion of the launch of astronaut Mae Jemison in 1992.

During the 1990s, Hilliard authored two books: *The Maroon Within Us: Selected Essays on African American Community Socialization*, published in 1995, and *SBA: The Reawakening of the African Mind*, published in 1997. He also cofounded Makare Publishing with his daughter Dr. Nefertari Patricia Hilliard-Nunn. He produced video productions on African history through his company Waset Educational Productions. Videos included *Master Keys to Ancient Kemet*, *The Kemet Lectures*

and *Free Your Mind*. He was also the codeveloper of a television series on Ancient Kemet (Egyptian history), which was featured on the Atlanta Public Schools Television channel during this period. He served with Dr. Barbara Sizemore as chief consultant on the *Every Child Can Succeed* television series, produced by the Agency for Instructional Technology. He also cochaired the first National Conference on the Infusion of African and African American Content in the School Curriculum in Atlanta with Dr. Lucretia Payton-Stewart and Dr. Larry Williams.

Later Years

Hilliard went on to become a board-certified forensic examiner and diplomat for the American Board of Forensic Examiners and the American Board of Forensic Medicine. His service included his various roles as lead expert witness in numerous cases over the years including federal landmark cases on test validity and bias, which included the *Larry P. v. Wilson Riles* (1984) in California, *Mattie T. v. Holladay* (1979) in Mississippi, and *Debra P. v. Turlington* (1984) in Florida. He was instrumental as a witness in two Supreme Court cases, *Ayers v. Fordice* (1992) in Mississippi and *Marino v. Ortiz* (1988) in New York City.

Hilliard's later works included the books *African Power: Affirming African Indigenous Socialization in the Face of the Cultural Wars*, published in 2002 and *Young, Gifted and Black: Promoting High Achievement Among African American Students* coauthored with Claude Steele and Theresa Perry and published in 2004. The latter book won the American Education Research Association Award for Excellence.

During his lifetime, Hilliard was the recipient of hundreds of awards including the American Evaluation Association President's Award, the Republic of Liberia Award as Knight Commander of the Humane Order of African Redemption, and the Morehouse College Candle in the Dark Award in Education. He was a fellow of the American Psychological Association and the recipient of the Doctor of Humane Letters from DePaul University and Doctorate of Education from Wheelock College.

Hilliard's dedication and love for his family members never wavered and was often evident in his office at Georgia State University where photos

of his wife, children, and grandchildren covered the walls. He taught for 27 years at this institution, and at the time of his death, he held joint appointments in the Departments of Educational Policy Studies and Educational Psychology and Special Education. He held an endowed chair position as the Fuller E. Callaway Professor of Urban Education.

Death and Legacy

Hilliard gave his final public lecture on August 7, 2007, in Egypt, at the annual ASCAC conference. He became seriously ill and was flown to Cairo, Egypt, where he was hospitalized. Hilliard died suddenly of complications related to malaria on August 13, 2007, 9 days before his 74th birthday. He was scheduled to return to teaching classes at Georgia State University for the fall semester within 2 weeks after his death. After his sudden passing, over 200 members of ASCAC gathered in Luxor, Egypt, and conducted a ritual in the Valley of the Kings at the tomb of Thutmose IV to commemorate his life.

Hilliard died with his wife of nearly 50 years by his side, a former mayor of East Point, Georgia, and former school board member for the South San Francisco Unified School District. He was also survived by his four children—Asa Grant Hilliard IV, Robi Hilliard Herron, Dr. Patricia Hilliard-Nunn, and Michael Hakim Hilliard—and by his seven grandchildren. At the time of his passing, his daughter, Robi Hilliard-Herron, acknowledged that Hilliard was with his favorite person in his favorite place when he made his final transition.

Services for Hilliard were attended by noted dignitaries from around the world and were held at the Martin Luther King Jr. International Chapel at Morehouse College in Atlanta, Georgia. Hundreds of people paid homage to the life of this great educator, and obituaries were published in various newspapers around the world. A giant in the field of African-centered education and a staunch advocate for the process of lifelong learning, since his passing many awards have been created in honor of Hilliard's significant contributions to the educational and intellectual history of African people throughout the diaspora.

HIP HOP STUDIES

Hip hop studies is an outgrowth of hip hop youth culture, which has origins in the African American, African Caribbean, and Latino communities of the borough of the Bronx in New York during the early 1970s. Over the years, it has grown into an educational tool for use among African Americans and is now itself the subject of scholarly research and an academic curriculum at the university level. This entry recalls the origins of hip hop and then looks at its impact on the education of this country's youth and young adults.

Early Years

Clive Campbell, known as DeeJay Kool Herc, the father of hip hop, and his sister Cindy, the mother of hip hop, organized a back-to-school party in 1972 at which Kool Herc played recordings of

soul, funk, and rhythm and blues music on two turntables with amplified speakers by blending the recording playing on one turntable into that of another on the second turntable. Having seen this technique at the dance halls in Jamaica, Herc brought it with him to New York when his family migrated in 1967.

At the same back-to-school party, Coke La Rock, known as the emcee, recited short rhymes and gave shout outs to people present by calling out their names over the music. Posters that advertised the dance organized by Herc and C. Campbell were designed by taggers and writers who are graffiti artists. Because of the success of the first back-to-school party, for Herc's subsequent dances, he added performers such as the twins, Kevin and Keith, to his crew. These break boys or dancers had specific routines with power moves that they performed as specific recordings were played.

Many youth in attendance at Herc's parties studied him and his crew, becoming his participant-observer students and eventually masters of these elements of hip hop. One such person in attendance was DeeJay Grandmaster Flash. Recognized as one of the pioneers of hip hop, Grandmaster Flash also studied electronics at Samuel Gompers Vocational High School in the Bronx and is most noted for advancing the use of technology in hip hop culture and for having a crew of emcees, Melle Mel and the Furious Five, who were the first to pronounce each word syllable of a given message over music in time to the musical beat or a portion of each beat, which distinguishes hip hop rhymin,' rappin,' flowin,' and spittin' from other styles of communicating spoken messages over music.

Another pioneer of hip hop attending Herc's parties was DeeJay Afrika Bambaataa, who was so interested in hip hop that when Herc announced to gang members that they could not rumble at his parties, Bambaataa, who was the leader of the notorious Black Spades, along with leaders of the other gangs in the South Bronx, called a truce, which is still in effect more than 35 years later. Bambaataa organized the Universal Zulu Nation, currently an international organization of social activism, which organizes community programs that now fight social injustice globally and that preserves the positive principles upon which hip hop culture was initially organized.

In the early 1990s, with the overwhelming success of the group NWA's first recording, *Straight Outta Compton*, which used explicit lyrics to describe life in South Central Los Angeles, the music industry began to search for emcees with explicit lyrics that degenerated to such negative messages as the denigration of women, the idolization of thug life and other antisocial activity, and the virtues of materialism. On the other hand, Bambaataa's Zulu Nation has continuously confronted the music industry about its exploitation of hip hop culture and groups of people for capital gain. Moreover, Bambaataa introduced the fifth element of hip hop culture, knowledge.

Up to this point, the rap lyrics of hip hop emcees had been utilized to educate the community for its own survival, a strategy borrowed from the artists of the 1950s and 1960s civil rights and militant Black power movements. Some of the hip hop pioneers were products of these movements and had gained much social and political consciousness from them. A classic example is Grandmaster Flash and the Furious Five's 1982 recording of "The Message," a sociopolitical rap about poverty, police brutality, and poor quality of life for many in the urban areas of the country.

Hip Hop as an Educational Tool

Although the pioneers of hip hop initially began and developed this youth culture for entertainment purposes, it empowered them to forge an alternative identity that they used to negotiate the marginalized status relegated to them by mainstream society because of race, gender, ethnicity, and socioeconomic status. They developed a discourse, which according to James Gee, includes a group's use of language and other symbolic expressions. For the pioneers, this was a secondary discourse, one which they learned after their primary socialization as young children. However, for younger siblings of the hip hop pioneers, their friends, and their neighbors, this hip hop discourse is a primary discourse because it was part of their primary socialization, which they use to learn the secondary discourses of other institutions, including schools, colleges, and universities.

Many contemporary students who participate in hip hop culture use its elements as a study aid. Students who are emcees, in the past and present,

relate how they have taken the messages from their rhymes and rap lyrics, which are written in bars, and rewrote them in paragraphs and essays to complete writing assignments for instructors. Wade Colwell, a graduate of Stanford University and founder of Funkamentals, a company in Tucson, Arizona, that produces educational materials using elements of hip hop, often explains how he and another students studied for a calculus final examination at Stanford by writing the formulas and equations in a hip hop rhyme. Other participants of this culture have similar experiences of using hip hop as a study tool.

Educators in elementary and secondary schools and in colleges and universities utilize instructional aids that employ elements of hip hop to teach skills and other concepts. Examples of commercial materials for elementary schools include commercial audiotapes: MCA's *Nursery Raps Starring Mama Goose*, for listening and reading readiness skills; Twin Sisters Productions of *Rap With the Facts*, for all arithmetical skills; and Rock and Learn Production of *States and Capitals Rap*, for social studies. To teach fire safety, Noble Productions and the Uniformed Firefighters Association of New York City produced the video tape, *Adventures in Fire Safety*, with The Rappin' Fireman. Commercial materials for secondary school students in a variety of disciplines include the CD by Funkamentals, *Education by Any Means Necessary*. The government's space agency, NASA, sponsors a program that includes b-boys and b-girls who teach concepts of physics and physical science through hip hop dancing.

High schools, colleges, and universities around the country now offer courses on the history of hip hop culture, on critical analyses of hip hop, on hip hop as a social and political movement, and on hip hop as a performance art.

People are studying aspects of hip hop in a variety of academic disciplines for master's and doctorate degrees, and many are doing scholarly research on its historical, social, and artistic elements. As an illustration, Professor Cheryl Keyes completed the first doctoral dissertation on hip hop at Bowling Green University during the 1990s in the field of ethnomusicology, followed by Jon Yasin at Columbia University Teachers College in applied linguistics. Although the topic of research has been continuous, Dawn Fisher-Banks completed a PhD

in anthropology in 2008 by writing a dissertation on hip hop in Japan. At Princeton University, Suad Abeer is completing research on hip hop for a doctorate degree.

HISTORICALLY BLACK COLLEGES AND UNIVERSITIES (HBCUs)

Historically Black colleges and universities (HBCUs), according to the Higher Education Act of 1965, are those postsecondary educational institutions established before 1964 with the mission of educating African American students. During the period of Jim Crow segregation, these institutions represented for most African Americans the only realistic opportunity for them to receive a college education. In the aftermath of the Supreme Court's ruling in *Brown v. Board of Education, Topeka, Kansas* (1954), many observers predicted, and called for, the elimination of HBCUs on the grounds that these schools were the most visible vestige of the separate-but-unequal systems of higher education that had served to deny African Americans equal educational opportunities. However, not only have HBCUs continued to exist, but also they still play significant roles in ensuring access to educational opportunity for

African Americans. This entry recalls their history and accomplishments.

Early Years

The first public Black colleges were Cheney and Lincoln Colleges in Pennsylvania and Wilberforce University in Ohio. These institutions were established prior to the Civil War in areas characterized by considerable abolitionist sentiment. During the last third of the 19th century and the first half of the 20th, over 100 additional public and private Black colleges were established. The overwhelming majority of them were concentrated in the 17 Southern and border states. Confronting conditions of massive illiteracy among the formerly enslaved, the primary mission of the early Black colleges involved providing the freedmen and women with a basic education and to prepare teachers to labor within the fledgling African American schools. However, state support for African American education, where it existed, usually was minimal. Hence, Black colleges devoted the majority of their meager resources toward providing preparatory and secondary education to their students. Hence, the term college was actually a misnomer during the formative years at most Black colleges when one considers that the majority of its students were engaged in precollegiate studies (see Table 1).

Racial segregation prevailed in these new Black colleges, regardless of whether the institutions were public or private. Northern philanthropic and religious institutions, the principal sponsors of privately funded Black colleges, felt compelled to acquiesce to the racial sensitivities of the Southern White population who already resented the interference in their internal affairs by outsiders. Where public Black colleges were founded, their existence was partially justified by the need for Southern states to take some affirmative steps (no matter how halfhearted in nature) in order to ward off a reintroduction of federal intervention into local affairs once Reconstruction had come to an end. However, such institutions had to be segregated and decidedly unequal to overcome White opposition to their creation. Consequently, Southern racial fears combined with Northern indifference to the plight of African Americans in the postbellum period gave birth to the development of a

Jim Crow system of public and private higher education.

In 1896, the Supreme Court held in *Plessy v. Ferguson* (1896) that separate public facilities for the race do not violate the Fourteenth Amendment's equal protection clause so long as they were equal. The *Plessy* decision, when applied to education, not only gave legal sanction to existing racial discrimination against African Americans, but also encouraged its expansion. State governments were granted license to codify the official separation of the races in public education without—as it would quickly become apparent—any requirement that African American schools be treated equally when compared to their White counterparts. Not even the creation of Black land grant colleges by the Second Morrill Act of 1890 arrested this tendency; Black land grant colleges were routinely denied their share of federal dollars and other forms of state support that White land grant universities received.

The Supreme Court extended its mandate in *Plessy* to private higher education in 1908 when it outlawed the voluntary racial integration of a private Kentucky college. The precedent in *Berea College v. Commonwealth of Kentucky* (1908) effectively closed the loop as far as establishing a racial caste system in higher education is concerned by permitting states to forbid both voluntary and obligatory contact between the races. Consequently, wide disparities developed between the missions, program offerings, and physical plants of Black higher-education institutions and their White counterparts. Although White colleges and universities were allowed to develop an increasing range of baccalaureate and graduate programs, students at Black colleges were restricted to a narrow range of professional degree options—principally teaching and the ministry. For the overwhelming number of African Americans prior to the decision in *Brown v. Board of Education*, public and private Black colleges represented the only viable avenue for receiving a postsecondary education.

In 1944, Frederick D. Patterson (then president of what is now Tuskegee University), Mary McLeod Bethune, and others incorporated the United Negro College Fund (UNCF). The UNCF's original mission was to raise funds for college tuition for African American students and general scholarship dollars for the nation's historically Black

private colleges. Currently, UNCF-administered scholarships are open to students from all ethnicities; however, the vast majority of today's scholarship recipients remain African American. In 2005, the UNCF supported approximately 65,000 students at over 900 colleges and universities, with approximately \$113 million in grants and scholarships. About 60% of the students supported by UNCF funds are the first in their families to attend college, and 62% of these students come from families with an average income below \$25,000. Since 1972, the UNCF's motto has been "A mind is a terrible thing to waste." This has become one of the most widely recognized slogans in advertising history. Beginning in 1980, singer Lou Rawls began the *Lou Rawls Parade of Stars* telethon to raise funds for the UNCF. The annual event, now known as *An Evening of Stars*, features comedic

and musical performances from various popular artists. The telethon has raised over \$200 million for the fund in 27 shows through 2006.

A Transitional Period

Three major changes in federal law have not only dismantled the legal foundation for Jim Crow in higher education, but continue to shape the environment in which HBCUs currently operate. These include the Supreme Court's decision in *Brown v. Board of Education*, the Civil Rights Act of 1964, and the Higher Education Act of 1965.

First, *Brown* declared that separate educational facilities for the races are inherently unequal. In time, the implications of *Brown* generated heated debates over whether HBCUs were merely unconstitutional vestiges of legal segregation or necessary

institutions essential for preserving access to educational opportunity for African Americans.

Second, among its many provisions, Title VI of the Civil Rights Act of 1964 gave the federal government a greater capacity to enforce the mandate of *Brown* in the nation's public colleges and universities. This change in the law set the stage for decades of contentious political and legal battles within a number of states with a history of segregation in higher education.

Third, the Higher Education Act of 1965 substantially expanded student financial aid assistance and provided direct institutional subsidies to Black colleges through Title III. The increased availability of Pell Grants and student loans increased access to a college education to poor and needy students of all races in the 1960s and 1970s. However, these changes in college affordability occurred in an environment in which racial integration had opened the doors of opportunity to African Americans to attend a wider array of institutions than ever before. As a result, HBCUs were forced to compete with wealthier, more endowed White universities for highly qualified African American students and faculty. Lacking comparable resources to their White counterparts in terms of scholarships, faculty salaries, and research capacity, HBCUs find themselves at a distinct disadvantage in this competition.

The *Brown* decision forced HBCUs to defend their right to exist. Some advocates of integration viewed HBCUs as mere relics of the regime of separate, but equal, which must now be eliminated. Kenneth Clark, the sociologist whose famous doll studies were relied upon by the National Association for the Advancement of Colored People's (NAACP) legal team in the *Brown* cases, considered Black colleges to be educational anachronisms. This problem was particularly acute for public Black colleges. As the federal courts grew weary of the various stalling tactics Southerners had used to delay desegregation in the late 1960s and early 1970s, supporters of Black colleges feared that courts and state legislatures would merge them out of existence.

These fears came to fruition at the same time that many African Americans were having second thoughts about the virtue of desegregation. African Americans endured recalcitrant White resistance when they tried to enroll in previously all-White

public schools. When African Americans were successfully enrolled, they often endured racist treatment from White teachers and classmates, had difficulty keeping up academically with their peers, and were disproportionately classified as disciplinary problems or placed in special education classes.

Desegregation also frequently resulted in the closing of African American schools and the firing or demotion of African American teachers and administrators. Supporters of public Black colleges worried that the same fate would befall their institutions if the Supreme Court's ruling in *Green v. County School Board of New Kent County* (1968; the mandate that school districts should not have White schools or African American schools, just schools) be applied with equal force to higher education. Similarly, the leaders of private Black colleges faced the task of convincing White philanthropic donors that Black colleges were still viable, legitimate institutions within a society at least nominally committed to the principle of racial integration in higher education. The commonality of the concerns among the leaders of Black public and private college leaders led to the formation of the National Association for Equal Education Opportunity in Higher Education in 1969. One of its principal missions is to increase the federal share of higher-education funding received by historically Black colleges.

Today's Achievements and Challenges

Leaders on historically Black campuses developed a vision of their institutions as necessary institutions that needed to be preserved to combat the lingering effects of decades of Jim Crow segregation against African Americans. First, they argued that the legacy of racial discrimination against African Americans in K–12 public education meant that many African American high school graduates were ill-equipped to compete with White students on an equal basis; consequently, if Black colleges ceased to exist, a large proportion of the African American population would be denied access to higher education altogether. Second, they maintained that Black universities offered supportive learning environments and emphasis on African American history and culture that was more conducive to the successful matriculation of African American students.

At the same time, HBCUs recognized that in a post-*Brown* world, they could not afford to portray themselves as simply all-Black institutions. Therefore, they tried to present themselves as institutions that provided a unique educational experience to all students. This tendency was often motivated by legal necessity—especially for Black colleges under court-ordered desegregation plans in which they were obligated to show progress toward the enrollment of other race (or White) students. They emphasized that the tuition costs at Black schools were considerably less than that of their White counterparts, thereby making them an economic bargain for the poor, regardless of race.

Black college leaders also insisted that because of decades of discriminatory treatment, states should financially and programmatically enhance their institutions. Such enhancements, they felt, were necessary to remove the stigma of inferiority that *Plessy* had stamped on these institutions, thereby making them unattractive to White students. Privately, few HBCU leaders believed that their efforts to present their institutions in nonracial terms would net substantial gains in White enrollment—and with rare exceptions, they were proved right. Notwithstanding federally supervised desegregation plans in a number of states that awarded other-race scholarships and established new academic programs on Black campuses, the enrollment at publicly supported HBCUs has remained overwhelmingly African American.

Yet despite a legacy of underfunding and inferior resources that continues to characterize HBCUs when compared to White institutions, the evidence indicates that HBCUs continue to play a critical role in ensuring access to educational opportunity for African American students. During the fall of 1999, HBCUs enrolled approximately 14% of the total number of African Americans enrolled in college, despite that they represent only 2% of the 4,182 colleges and universities in the country. During the 1999 to 2000 academic year, HBCUs awarded a total of 24% of the baccalaureate degrees conferred on African Americans across the entire nation. Furthermore, HBCUs have produced a disproportionate share of graduate and first-professional degrees to African Americans. For example, between 1950 and 1998, 43% of African American doctors have graduated from one of only three Black medical schools in the

country—Meharry Medical School in Nashville, Tennessee; Howard Medical School in Washington, D.C.; and Morehouse Medical School in Atlanta, Georgia. Similarly, the six historically Black law schools—Howard University Law School in Washington, D.C.; University of District of Columbia Law School in Washington, D.C.; North Carolina Central Law School in Durham, North Carolina; Florida A&M University Law School in Tallahassee, Florida; Southern University Law School in Baton Rouge, Louisiana; and Thurgood Marshall Law School in Houston, Texas, have graduated a disproportionate share of the nation's African American lawyers and judges as well as its African American state and national legislators. And although many Black colleges continue to struggle financially to keep pace with White institutions, a few Black colleges (Spelman College, Hampton University, Howard University, and Bethune-Cookman College) have become sufficiently successful at attracting and managing endowment funds so that, on endowment dollars-per student basis, they now are comparable to well-known universities elsewhere. In a 1999 Cambridge Associates study of 344 institutions surveyed, Spelman came in 111th; similarly, Hampton finished 219th, Howard ranked 229th, and Bethune Cookman came in at 324th.

Looking Ahead

Despite their history of overcoming daunting obstacles to their success, HBCUs face an uncertain future. The Supreme Court held in *United States v. Fordice* (1992) that states had an affirmative duty to either justify or eliminate, to the extent possible, policies that are legacies of de jure segregation, which continued to have segregative effects. The *Fordice* standard does not foreclose the possibility of the future merger or closure or merger of Black universities. Court-ordered desegregation plans have expired in Louisiana, Alabama, Tennessee, and Florida; however, several states remain under federal scrutiny for their desegregation efforts. Still, supporters of Black colleges frequently worry that the shrinking budgets that accompany periodic economic crises present new opportunities for proposals to close HBCUs. Just recently, a Georgia lawmaker proposed that Georgia's historically Black Savannah State

University and Albany State University be merged with two nearby White universities in the name of fiscal responsibility and complying with the *Fordice* standard.

The dynamic changes within the global economy provide opportunities for HBCUs to cast themselves as vital institutions that make essential contributions to the nation's international competitiveness. Macroeconomic changes have placed a greater premium on the existence of a highly educated, technologically sophisticated work force. As U.S. workers increasingly find themselves in competition with the rest of the world, the United States can ill afford to tolerate its historic inequalities in access to educational and economic opportunity that have traditionally fallen along racial and class lines. Given their proven record of successfully graduating African Americans, HBCUs remain an essential link to insuring the existence of equal opportunity for all U.S. citizens.

HOBSON V. HANSEN (I AND II)

Hobson v. Hansen, District of Columbia (1967) and *Hobson v. Hansen II, District of Columbia* (1971) are two desegregation rulings in the U.S. District of Columbia that were the first direct challenges to the use of standardized tests as part of a tracking system. In *Hobson v. Hansen I*, a circuit district court enjoined the District of Columbia School Board and the Superintendent Dr. Carl F. Hansen from discriminating against African American students through neighborhood assignment and ability tracking policies. This ruling dismantled the tracking system in Washington, D.C., public schools and imparted a good faith effort by the government to provide equal educational opportunity. In *Hobson v. Hansen II*, 4 years later, the same district court ruled in favor of a more equitable distribution of resources as an additional good faith effort by the state to desegregate the district's 173 public schools. This entry looks at the background of the case, the rulings, and their impact.

Historical Context

The District of Columbia public school system was formally established in 1805; however, it was not until an 1862 act of Congress that public schools for African American children were established. For more than 10 years, the African American public school system in Washington, D.C., was run separately from the Washington, Georgetown, and Washington County jurisdictions, which were for Whites only. Although the African American public school system was eventually absorbed into the larger District of Columbia school system, by the mid-1950s, it became apparent that African American children were not receiving an equitable educational opportunity. Not only were the facili-

ties at African American schools in poorer condition, but also the teachers tended to have fewer credentials. In addition, African American students were disproportionately represented in lower achievement tracks with the possibility of attaining a higher track level virtually improbable.

Julius Hobson, a local Washington, D.C., activist and parent, used his political enthusiasm and savvy to begin what would become one of the most well-known desegregation cases involving tracking. When his 10-year-old daughter was tested and excluded from the college preparatory track, Mr. and Mrs. Hobson pursued a two-phase suit against the District of Columbia School Board and Hansen.

Facts of the Case

In 1967, Hobson filed a lawsuit seeking to enjoin the board from continuing to deny children, primarily African American children, their right to equal educational opportunity. This neglect was proved through the neighborhood school assignment policies, tracking, and a separate and unequal compulsory biracial school system that violated the law. Hansen and the school board were both found in violation of the constitutional rights of the plaintiffs; and the district court required the school board to actively pursue the desegregation of the 173 schools through multiple mechanisms. Four desegregation issues were addressed with the *Hobson v. Hansen* cases: (1) de facto segregation, (2) unequal allocation of resources, (3) compensatory programs, and (4) ability grouping.

The District of Columbia School Board had developed and employed a policy in which students were assigned to schools near their home. Due to rampant housing segregation in the district, this policy simply perpetuated the status quo and manifested as de facto segregation in schools. For example, at the time of the suit, 11 of the 17 predominantly White district schools maintained White populations between 85% to 100% of the total student body. In addition, at 139 of the 156 African American district schools, African American students comprised approximately 90% of the population. According to the expert testimony of codefendant Hansen and agreement by the court, this neighborhood assignment policy forced African American children to

attend predominantly African American schools where they received an inferior education. Although Judge Skeely Wright did admonish, but not eliminate, the neighborhood assignment policy, the ruling suggested that the educational benefit of desegregating White schools outweighed the potential academic detriment to White students.

Second, because the overwhelming majority of students in the District of Columbia were African American, Wright realized that true integration would never be achieved. There simply were not enough White children in the public schools. However, the judge did include other avenues for the school district to provide equal educational opportunity for African American students. Compared to White schools in the district, African American schools were deemed inferior as a result of overcrowding, poorer facilities, teachers with fewer credentials, and a lower median per pupil expenditure.

Likely due to the *Brown* rulings, a construction program was being developed at the time of the suit to improve the African American school facilities. However, since African American teachers were less experienced and less credentialed, they received less pay than their White counterparts. In an attempt to increase the median per pupil expenditure, the judge ordered desegregation of teachers in the public schools. By dispersing African American teachers, who on average had fewer credentials and were paid less, the median expenditure per pupil in the district moved closer to parity.

Similar to the mandate for teacher desegregation, compensatory programs were required to improve the equal educational opportunity for African American and poor children who suffered from de facto segregation. The purpose of these programs would be to provide state-supported aid to African American children who were adversely harmed by the previously declared racial imbalance. These programs were ordered since there would inevitably be many African American children who could not attend desegregated schools.

Perhaps the most well-known element of the *Hobson v. Hansen* cases concerned the use of ability grouping and tracking. Although the court recognized that the tracking system may have been developed to provide opportunity for students at all levels of learning and to decrease heterogeneity within classrooms, simple descriptive statistics

showed that African American children were over-represented among the lower tracks. Hobson successfully argued that the IQ tests used to track students in the district were culturally biased since they had been standardized using a White middle-class sample. Along these lines, Hobson argued that the tests were inaccurate predictors of intelligence or potential achievement for lower class and African American students.

In addition to problematizing the actual test used to track students, Hobson also contested the accompanying policies. There was little maneuvering possible for students to move out of lower track into higher tracks, as evidenced by descriptive statistics. In essence, students relegated to lower tracks in elementary school, students who were predominantly African American, were further relegated to a less rigorous academic curriculum as they progressed through the educational pipeline. Tracking was designed to place those in lower tracks on a path that would provide them an educational benefit through compensatory programs and remedial instruction. Neither of these remedies was deemed adequate in *Hobson v. Hansen*. Together, the test itself and the complementary tracking policies were declared an impediment to African Americans and lower-class students and therefore imparted upon them an inferior educational opportunity.

Impact of the Ruling

Although some saw it as symbolic, Wright's ruling demonstrates how judicial power can influence the development and modification of education policy. Although the rulings of *Hobson v. Hansen I* and *II* did not mandate education policy development, they did require modification by the school board and superintendent that would ensure equitable educational opportunity to all students in the District of Columbia public schools.

The judge's decisions left an indelible mark on the District of Columbia public school system. The elimination of the tracking system was an impetus for the (re)evaluation of IQ testing—test development, implementation, and associated outcomes. Although the use of IQ tests was virtually eliminated, subsequent appeals have allowed other forms of ability grouping (e.g., achievement tests), provided there are no racially deleterious outcomes.

However, the residential segregation that persists in Washington, D.C., continued to perpetuate inferior educational opportunity in the 21st century just as it did in the late 1960s. There continue to be challenges to educational testing and assessment organizations related to the way minority perspectives are presented, portrayed, and perceived in lower- and higher-education arenas.

HOLMES V. DANNER

Holmes v. Danner (1961) was an early lawsuit seeking to gain admission to the University of Georgia for African American students. Although perhaps not as well-known today as cases in Alabama and Mississippi, the Georgia case featured two brave young students and a farsighted district court judge who ruled that the university was unconstitutionally barring African American students. Together, they opened the gates to admission and led the way for many others. The

immediate impact of the ruling, however, was a period of violence and confrontation. This entry looks at the case and its impact.

Historical Context

Georgia became the first state to charter a state-supported university in 1785, and in 1801, the University of Georgia was established in Athens. Except for one incident soon after the Civil War, when African Americans tried to force themselves into the institution, the university remained solidly segregated.

Georgia maintained three public Black colleges offering undergraduate degrees: Fort Valley State College, Albany State College, and Savannah State College. From 1943 to 1967, if African American students wanted a graduate degree, the state paid the difference between out-of-state tuition and Georgia tuition, plus two annual round trips home.

In September 1950, Horace Ward became the first African American student to apply to the University of Georgia School of Law. After his application was denied in June 1951, he refused an out-of-state scholarship and sued in federal court in 1952. Ward was drafted into the Army in 1953, was discharged in 1955, and continued pursuing his case, but he also enrolled in Northwestern University's School of Law in September 1956. After a trial in December 1956, Ward's lawsuit was dismissed in February 1957 on procedural grounds. Ward's enrollment at Northwestern required that he apply to Georgia as a transfer student, making his case for admission as a first-year law student moot. After graduating from Northwestern, Ward joined the Atlanta law firm of Donald Hollowell, local counsel for the National Association for the Advancement of Colored People (NAACP).

By the late 1950s, few public facilities in Georgia were desegregated except Atlanta's seven public golf courses, which integrated in 1955 after Alfred "Tup" Holmes, his brother Oliver, and their father Dr. Hamilton M. Holmes successfully sued the city. An informal group of African American businessmen in Atlanta pressed for greater equality. Jesse Hill, a member of the local NAACP's education committee, recruited applicants to integrate Georgia State College of Business Administration in Atlanta. In 1956, three African American women volunteered to apply to Georgia

State and sued to be admitted. A federal court did not order the women to be admitted, but found the college's requirement that applicants be endorsed by two alumni to be unconstitutional because there were no African American alumni of the University System of Georgia's White institutions.

The legislature responded by adopting new laws to preserve segregation. In Georgia, students over the age of 21 could not start as undergraduates, and students over 25 could not start a graduate program. Hill refocused on recruiting outstanding seniors within Atlanta's African American high schools.

In the spring of 1959, Hill found Hamilton Holmes and Charlayne Hunter at McNeal Turner High School. Holmes—the son of Tup Holmes, who integrated Atlanta's golf courses—was valedictorian, cocaptain of the football team, and senior class president. Hunter finished third in her class, was editor of the school paper, and was voted Miss Turner High. Holmes and Hunter looked over Georgia State, but preferred the University of Georgia.

Facts of the Case

Holmes and Hunter, after graduating Turner High in 1959, submitted applications on July 15, 1959, for that fall's freshmen class. The University of Georgia required all freshmen to live in dormitories, and University Registrar Walter N. Danner denied both applications because of limited facilities. Holmes entered Morehouse College in Atlanta, and Hunter enrolled at Wayne State University in Detroit, but they continued corresponding with Danner between August 1959 and June 1960 to transfer to the university, first as freshmen in the January 1960 Winter Quarter and then as sophomores and juniors.

Hunter and Holmes received various reasons for not being admitted. The university said it was not considering any applications for future quarters, was denying admission to many qualified transfer students, and required transfer applicants to provide their transcripts and have a personal interview. In Hunter's case, the university cited "limited housing facilities. We stopped accepting women students for the Fall [1960] Quarter over a month ago" (191 F. Supp. at 388). Holmes was

told the university admitted a few junior transfers and many former students.

Holmes and Hunter retained the same team of attorneys: Constance Baker Motley of the NAACP Legal Defense and Educational Fund, Donald Hollowell, Vernon Jordan, and Horace Ward, who tried to integrate the university's law school a decade earlier. Through the summer of 1960, they appealed the denial of Holmes's and Hunter's applications up the university's administrative ladder: first to President O. C. Aderhold; then to Harmon Caldwell, the chancellor of University System of Georgia; then to Robert O. Arnold, chairman of the board of regents. On August 30, Arnold informed counsel that the board would meet on September 17, 1960, to consider Holmes's and Hunter's appeals.

Administrative Remedies

On September 2, Holmes and Hunter filed for an injunction in federal court enjoining Danner from refusing to consider applications solely on the basis of race. On September 25, Judge William A. Bootle denied the injunction because Holmes and Hunter had not exhausted their administrative remedy: The board of regents had not yet acted. Holmes and Hunter also needed to complete interviews.

On October 21, 1960, the board of regents concluded that Holmes and Hunter did not complete required procedures, and the university could not consider their applications. To comply, Hunter had her interview on November 5th with Danner and two of his staff members. Despite showing she was fit to be admitted, Hunter was informed on November 29th that transfer applicants again faced limited facilities, and she would be considered for the fall 1961 quarter.

On November 18th, Holmes interviewed with Danner and the same two staffers. He was asked questions that Hunter did not face and that Bootle, in his ruling, believed probably had never been asked of any previous applicant. Holmes was asked if he had ever been arrested; if he knew and had ever attended the tea houses, coffeehouses, or Beatnik places in Atlanta; if he knew about the red light district in Athens; and if he had ever attended houses of prostitution. Holmes answered no to all these questions, but on November 29th, he was

informed he did not qualify as a suitable applicant and was denied admission.

The Court Order

After a 4-and-a-half-day trial in December 1960, Bootle issued a permanent injunction on January 6, 1961, ordering the university to admit Holmes and Hunter. Bootle found the university's administrative remedies for appealing admissions decisions inadequate for two reasons: (1) University officials were not truly free to act because the state constitution required segregated schools and that the state appropriations act would cut off funding if university facilities did not remain segregated, and (2) university officials had unlimited time to act under their appeals policy.

The crux of Bootle's decision was a finding of discrimination: "Plaintiffs . . . are otherwise qualified, but have been denied admission solely because of their race and color" (191 F. Supp. at 402). Bootle focused on three categories of evidence to find discrimination. First, he noted the rejection of all other African American applicants, including Ward and Ida Rose McCree, who applied in June 1960. Second, Bootle found the university's excuse of limited facilities to be untrue because the university sometimes allowed housing facilities to be oversubscribed and at other times had vacancies. As a smoking gun, Bootle noted a handwritten letter dated June 15, 1960, from Caldwell to Aderhold saying Caldwell had written to a member of the board of regents who had requested help getting a White applicant admitted "that it is my understanding that all of the dormitories for women are filled for the coming year. I have also indicated that you are relying on this to bar the admission of a Negro girl from Atlanta" (191 F. Supp. at 406).

The third area of evidence of discrimination was Holmes's and Hunter's interviews. Bootle noted that the university loosely applied the interview requirement for most applicants, and the use of a three-person panel was most unusual. In Holmes's case, the judge found the interview was conducted to find a reason to reject him.

Bootle permanently enjoined the university from refusing to consider applications from Holmes, Hunter, and other African American applicants on the same terms and conditions applicable to White applicants. He also found Holmes

and Hunter to be fully qualified for admission and enjoined the university from refusing to enroll them immediately for the winter quarter of 1961.

Campus Response

On the night of the January 6, 1961, decision, 150 to 200 students gathered by the university's archway entrance and hanged an effigy of Hamilton Holmes. They also burned gas-soaked crosses and threw firecrackers. On January 7th, Georgia Attorney General Eugene Cook filed a motion for a stay of Bootle's order. Holmes and Hunter registered for classes on January 9th, escorted by Ward and Jordan. Although Hunter was in the School of Journalism picking her classes, news arrived that Bootle had issued a stay of his own order to allow the state to appeal. Within a couple of hours, however, Chief Judge Elbert P. Tuttle of the Fifth Circuit Court of Appeals overturned the stay.

Rumors spread the morning of January 9th that Governor S. Ernest Vandiver was going to close the university, and about 1,000 students protested in the streets of Athens. A group of freshmen burned crosses near the campus tennis courts and track, and two students were arrested. At midnight on January 9th, Vandiver released a statement ordering the University of Georgia to close in accordance with the budget provision to cut off funds.

Aderhold did not receive official word from the governor, so the campus remained opened on January 10th. Later that day, the U.S. Supreme Court denied the state's motion to overturn Tuttle's desegregation order, and Bootle prohibited the governor from cutting off or refusing to furnish funds appropriated to the University of Georgia.

University rules required women under 23 years old to live on campus. Hunter was assigned her own private suite in Center Myers Hall so she would not be placed with a White female student. Holmes lived off campus with one of Athens' most prominent African American families, the Killians, who owned a local restaurant. On the night of January 10th, students outside Hunter's dorm chanted, "Two, four, six, eight, we don't want to integrate."

On the night of January 11th, a riot organized by several law school students occurred outside Hunter's dormitory. A crowd that expanded from

500 to 2,000 students—it grew after the men's basketball team lost to Georgia Tech in overtime—descended on the dorm, spread a bed-sheet banner saying, "Nigger Go Home," and threw bricks and bottles through the windows of the dormitory, aiming for Hunter's room on the ground floor. Organizers of the riot told the dorm's residents to turn off their lights that night so Hunter's windows would make an easier target.

Rioters set fires in nearby woods, threw rocks and cherry bombs at reporters, and tangled with police while cheering, "Two, four, six, eight, we don't want to integrate." The entire Athens police force of 39 officers was eventually called out, and they finally disbursed the mob with fire hoses and tear gas. Several police, at least one female student in the dorm, and Dean of Men William Tate—who was confiscating IDs from students—were injured. Hunter was not hurt, but 60 windows of the dorm were broken. The Georgia State Patrol was called, but troopers did not arrive, according to some estimates, for 2 1/2 hours, about an hour after the riot ended.

Vandiver ordered the university to suspend Holmes and Hunter. Dean of Students Joseph Williams wrote them letters indicating he was withdrawing them in the interests of their personal safety and for the safety of the University of Georgia's more than 7,000 other students. The Georgia State Patrol escorted Holmes and Hunter from the university to their homes in Atlanta.

On January 12th, Bootle issued injunctions to overturn the governor's order closing the university, ruling that the sections of the appropriations act cutting off funds to desegregated institutions were unconstitutional. The judge also enjoined the governor from cutting off funds to the university because of the admission of Holmes and Hunter.

On January 13th, Bootle—saying he would not allow violence to interfere with a court order—issued a temporary injunction requiring the university to reinstate Holmes and Hunter by 8 a.m. on Monday, January 16th. Holmes and Hunter returned to campus on January 16th, escorted by plainclothes officers and with reporters banned from campus. Bootle later affirmed Hunter's and Holmes's right to eat in the campus cafeteria and swim in the campus pool, ruling that African American students were entitled to use all university facilities.

Impact of the Ruling

The desegregation of the University of Georgia reverberated from Athens to Atlanta. African American residents of Athens, emboldened by Holmes and Hunter, protested against the city's segregation laws and staged sit-ins at the local Woolworth's. In Atlanta, the Georgia Institute of Technology decided to integrate voluntarily. In May 1961, Georgia Tech announced it had admitted three of 13 African American applicants for the fall, making it the first university in the Deep South to integrate peacefully and without a court order. Similarly, the Atlanta public schools peacefully fulfilled a court order to integrate by September 1961.

Ward became Georgia's second African American state senator since Reconstruction, serving from 1965 to 1974. He became Georgia's first African American trial court judge in 1974 and Georgia's first African American federal judge in 1979.

At the University of Georgia, Mary Frances Early became the third African American student, transferring in June 1961 from the University of Michigan. She graduated in August 1962 with a master's in music education, the first African American student to earn a degree from the university. Five other African American students arrived in the fall of 1962.

Holmes and Hunter graduated on June 1, 1963. Holmes, elected Phi Beta Kappa, was the first African American student at Emory University's School of Medicine and became a prominent orthopedic surgeon in Atlanta. He died in 1995 at age 54, soon after heart bypass surgery. Hunter, now Hunter-Gault, has enjoyed a distinguished career in journalism with the *New York Times*, PBS, CNN, and NPR. In 1991, the building where Holmes and Hunter registered was renamed the Hunter-Holmes Academic Building.

HOMESCHOOLING

Educational research has documented a positive relationship between parents' involvement in their children's education and student outcomes. Today, involvement has evolved to include a federal mandated policy of parental choice. Homeschooling is one of the fastest growing trends in educational choices among African American families. In choosing to homeschool, parents assume personal responsibility for their children's schooling. Reports suggest that an estimated 2 million families chose to homeschool their children nationwide.

According to Dr. Brian Ray, president of the National Home Education Research Institute, between 110,000 and 140,000 African American children (Grades K–12) were homeschooled during the 2005 to 2006 school year, and the numbers increase each year. Moreover, African Americans parents have established several national organizations to support their home education such as the African American Homeschoolers Network and the National Black Home Educators Research Association. In addition, Black home educators have created local support groups in almost every state. These organizations report increasing memberships. African American children may be homeschooled from birth through high school graduation. However, the laws surrounding home education vary from state to state. This entry explores the

range of homeschooling that occurs in the United States, the reasons that parents homeschool, and the challenges such parents face.

Forms of Home Education

African American home educators' approaches to homeschooling varies. Some parents choose the unschooling method, which requires no time frames for instruction and no specified content. Instead, children direct their own education through their interests. Home educators then facilitate their children's learning. Conversely, some African American parents choose more traditional approaches to their homeschool. At times, parents adhere closely to textbooks, or they pick and choose from among numerous curricula to tailor an educational program to their children's needs. In addition, some home educators have developed practices that represent modified elements of both unschooling and traditional schooling methods of instruction.

African American home educators occasionally join co-ops where each parent agrees to teach a subject for the children whose families are represented by the co-op. In addition, certified teachers frequently offer classes in the advanced subjects. Church groups and local organizations have also developed their own homeschools where home educators can select courses for their children in a variety of areas including advanced mathematics, sciences, and international languages.

Motivation to Homeschool

Many African American families choose to homeschool because they believe the public schools have failed their children. School failure includes the declining test scores of public schools in African American families' communities. In addition, home educators sometimes perceive inequity in special education services, teachers' low expectations, and a disregard for the specific learning interests of African American children as examples of school failure. However, African American families are not just leaving public schools. Some parents had previously enrolled their children in private or Christian schools, but they removed their children from these institutions due to financial, curricular, pedagogical, or administrative reasons.

Similar to White home educators, African American parents report religious reasons for their choice. Religious explanations not only include actual beliefs but also a decision to isolate their children from exposure to negative influences found in public schools such as profanity, violence, sex, drugs, and an overall disregard for schooling among other children. Homeschooling provides a method to instill religious beliefs in their children while they provide them the best possible educational experience, but it is not necessarily a mandate from a higher power. Multiple faiths and multiple denominations of religions are represented among African American home education communities.

Many times, the decision to homeschool requires African American families to change from a dual-income family to a single-income family. However, single parents and working mothers and fathers have also found ways to participate in homeschooling. Regardless of family structure, the decision to homeschool often represents a major sacrifice of the homeschooler's income and career. African American homeschool mothers and fathers are not usually former teachers. Therefore, homeschooling their children represents a major career change for them. Some African American fathers are sometimes referred to as the principal of a homeschool. They often provide financial support and disciplinary action as needed. Some fathers also share teaching with their spouses, especially if they possess knowledge in a particular subject.

Challenges and Supports

African American home educators face numerous challenges as they transition to the homeschool lifestyle. Aspects of home life are sometimes sacrificed for the homeschool. Homeschoolers have to get used to being with their children all day, making it difficult for them to have time to themselves. Conversely, homeschooled children need to socialize with children outside of their family. Educational responsibilities may impede regular household duties. Parents also have to take time to understand how their children learn. Home educators must select the best curriculum for their children from among dozens of possibilities. Moreover, as their children increase in grade levels, the content areas get more challenging.

To address the challenges facing African American home educators, they often participate in support groups. Support groups function in face-to-face contexts as well as via the Internet. Through the support groups, African American homeschoolers learn about curriculum, instructional strategies, and legal implications of the homeschooling experience. Support groups also become avenues for children to socialize with other children (churches and recreational sports as well). Homeschool support groups also provide a vehicle for exchanging curriculum materials. Although African American parents have been homeschooling their children for decades, the research in this area is extremely limited. Further research is needed to document the practices, challenges, and successful outcomes of African American homeschooled children.

HOWARD UNIVERSITY

Howard University, in Washington, D.C., is a private historically Black university that currently provides undergraduate, graduate, and professional education through 12 schools and colleges to a student enrollment of about 11,000. It has granted PhDs to more African Americans than any U.S. university.

Howard University has produced such great U.S. citizens as jurist Thurgood Marshall, Diplomat Ralph Bunche, United Nations Ambassador Andrew Young, philosopher Alain Locke, actresses

Phylicia Allen Rashad and Debbie Allen, opera singer Jessye Norman, and presidential cabinet member Patricia Roberts Harris. Celebrated professors who spent time teaching at Howard include historians Carter G. Woodson, Rayford Logan, John Hope Franklin, and John Blassingame; writers Paul Laurence Dunbar, Sterling Brown, Benjamin Brawley, and Toni Morrison; scientists Ernest E. Just, Percy Julian, and Charles Drew; librarian and bibliophile Dorothy B. Porter Wesley; social psychologists Kenneth B. Clark and Mamie Clark; and artists James Porter and Lois Mailou Jones Pierre-Noel. Many among the first string of civil rights lawyers during the 20th-century civil rights struggle were Howard students or professors, including Charles Hamilton Houston, Marshall, James Nabrit, Spottswood Robinson, Wiley Branton, and many more.

Howard University students—both graduate and undergraduate students—have won many national and international awards and fellowships. Some students have been selected as Rhodes Scholars, Pickering Fellows, Truman Scholars, White House Fellows, and Fulbright Scholars.

Howard University embraces the schools of Arts and Sciences, Business, Communications, Dentistry, Divinity, Education, Graduate, Law, Medicine, Pharmacy and Social Work, and Engineering, Architecture and Computer Sciences. It offers studies in more than 120 areas. Howard has a television station, WHUT-TV, and a radio station WHUR-FM. The student newspaper, *The Hilltop*, is now available online. The Founders Library houses the Jesse Moorland, Arthur Spingarn, and Channing Pollock collections on African American Literature and history in the world-famous Moorland-Spingarn Research Center. The center also includes the Howard University Archives and the Howard Museum. This entry examines the origins of the university and then traces its history through its successive presidents, focusing on the years after 1926, when its first African American president was named.

Organizational Foundations

Named after its founder, Union General Oliver Otis Howard, Howard University was established in 1867. Dubbed in its early years as the capstone of Negro education, Howard University's mission

was to provide teacher and ministerial education for all interested students, but especially for free-born and emancipated African Americans. The idea for the university began in November 1866, when a group of White members of the First Congregational Society in Washington, D.C., decided to establish a seminary to train African American pastors to minister to the needs of the newly freed population. Between November and January 1867, the group decided that a seminary was not enough, and they proposed a university, named after Howard who was then serving as the commissioner of the U.S. Bureau of Refugees, Freedmen, and Abandoned Lands, familiarly known as the Freedmen's Bureau.

Some of those at the planning meeting contacted members of the U.S. Congress. Together, they drew up a bill and presented it to Congress; it passed. President Andrew Johnson signed the act providing for the incorporation of Howard University on March 2, 1867. Designated as a University for the education of youth in the liberal arts and sciences, it would include normal, collegiate, theological, law, medicine, and agriculture departments. In 1868, the collegiate department and the departments of law, pharmacy, and medicine were opened, followed by the theological department 1871, dentistry in 1882, music in 1883, and engineering and architecture in 1910.

The first two presidents of the university were Charles B. Boynton, who served in 1867 and Byron Sunderland, whose term lasted from 1867 to 1869. Howard was the third president from 1869 to 1874. Howard found himself and the university embroiled in several financial scandals. Faculty members received half pay, buildings erected with bricks from a company partially owned by Howard were crumbling, and the university was deep in debt. Many friends of Howard University were outraged.

A June 22, 1873, headline in the Washington, D.C., paper *The Capital* dubbed Howard "The Profit of Godliness—a Pious Brigadier." Though the committee cited much mismanagement, it did not believe that Howard behaved fraudulently. After a military investigation by a special court of inquiry upon charges against Howard, Howard was cleared of negligence and dishonesty, but was criticized by General William T. Sherman as "credulous, easily used, and influenced" (Dyson, 1941).

To help with the university's support, the U.S. Congress awarded Howard University a special appropriation in 1879, but money continued to be a problem. Finally, in 1928, the Congress amended Howard University's charter to authorize a yearly federal appropriation for construction, development, improvement, and maintenance of the university. About 55% of Howard's budget continues to be provided by federal government funding.

Early African American Leaders

Howard University has always been associated with famous African Americans. For example, Frederick Douglass became a trustee of Howard University while Howard was president of the institution. Douglass's tenure on Howard's trustee board overlapped with the service of John Mercer Langston, an Oberlin graduate. Langston and Douglass both had been recruiters for the U.S. Colored Troops. Langston, son of a White father and an enslaved mulatto mother, was a lawyer; he was appointed a professor at Howard on October 12, 1868, and became dean of Howard's law department in 1870. He was elected vice president of the University in 1873 and was nominated for the presidency along with Douglass in 1874. Both men lost. Langston served as acting president of the university in 1875, but his tenure both as vice president and acting president was tumultuous. The first African American president of Howard was not elected until 1926.

During the university's first three decades well-known graduates at the preparatory, collegiate, and graduate levels included Congressman George White; Howard Dean Kelly Miller; Diplomat John Henry Smythe; Charlotte B. Ray, the first female graduate of the law department; Judge Robert H. Terrell; and Mary D. Spackman, the first woman to graduate from the medical department.

Howard University honored Douglass's contributions to the university and to the nation by naming a classroom building in his honor in 1935—the Frederick Douglass Memorial Hall—during the presidency of Dr. Mordecai Wyatt Johnson. In 1926, when Johnson became Howard's first African American president, the university was composed of eight schools and colleges, none of which held national accreditation. The institution's enrollment during this year stood at 1,700 and its budget at \$700,000.

Growth of the University

By the time Johnson retired 34 years later, the university had 10 schools and colleges, all fully accredited; 6,000 students; a budget of \$8 million; 20 new buildings including an expanded physical plant; and a greatly enlarged faculty that included some of the most prominent African American scholars of the day. Another key indicator of the university's enhanced academic status was the 1955 inauguration of graduate programs that had the authority to grant the PhD degree.

During Johnson's tenure, historian Walter Dyson wrote about the university in a book titled, *Howard University, the Capstone of Negro Education: A History, 1867-1940*, published by Howard University press in 1941. Dyson had previously published reports relating to the founding of the university and a history of federal appropriations to Howard.

Johnson's successor was Dr. James M. Nabrit Jr. who was previously secretary of the university and dean of the law school. He had previously served as a U.S. representative on the UN Security Council and as Deputy Representative, Minister Extraordinary and Ambassador Plenipotentiary to the United Nations. A leading constitutional lawyer and educator, Nabrit established at Howard in 1938 what is generally considered the first systematic course in civil rights in a U.S. law school. As a part of its centennial celebration Dr. Rayford W. Logan was commissioned by the university to write *Howard University: The First Hundred Years, 1867-1967*. It was published for the university by the New York University Press in 1969.

In 1969, Nabrit was succeeded by Dr. James E. Cheek, who had previously served as president of Shaw University in Raleigh, North Carolina. Cheek named Dr. Lorraine A. Williams as vice president for academic affairs; she was the first female vice president in the history of the university. It was also during Cheek's tenure that WHUR-FM and WHUT-TV, Howard's radio and television stations, began their operations. Established in 1980, Howard University Television is the first African American owned and operated noncommercial television station in the United States. Cheek retired in June 1989. He was followed by an interim president, Dr. Carlton P. Alexis, a physician and administrator who had

been the university's executive vice president and before that, its vice president for health affairs.

On December 16, 1989, the board of trustees announced the appointment of Dr. Franklyn G. Jenifer to head the university. Upon his inauguration, Jenifer became the first Howard alumnus to head the university in its 123-year history. Jenifer served through May 15, 1994, when the board of trustees appointed Dr. Joyce A. Ladner as interim president. Ladner, the former vice president for academic affairs, had also served as a professor in the School of Social Work.

Current Leadership

On April 22, 1995, H. Patrick Swygert became the 15th president of Howard. At that time, Howard was the only historically Black college and university (HBCU) designated as one of the nation's Research I universities by the Carnegie Foundation on Teaching. By 1996, Howard had awarded almost 84,000 degrees during its almost 130-year history. The university ranked first in the nation in the number of PhD degrees conferred upon African American students. The university enrollment was just over 10,000 students in 16 schools and colleges located on four campuses. In 1996, 13% of the students were from the District of Columbia, 74% from other states, 11% were international students representing 104 countries, and 5% were international students who were permanent U.S. residents. Just over 2,200 students were members of the graduating class of 1996. The endowment was almost 160 million dollars, and the university staff numbered almost 4,000.

At this time, Howard administrators stated that the university's vision was to be a comprehensive research institution demonstrating excellence in instruction, research, and service with an ongoing commitment to educating youth. The institution continued to focus on African Americans and other students from underrepresented groups in particular for leadership and service to the nation and the world.

The focus of the institution was to be a comprehensive, research-oriented historically Black private university providing a quality education to African Americans and other students of high academic potential. The university continued to try to attract and sustain faculty members who are, through their teaching and research, "committed to the

development of distinguished and compassionate graduates and the quest for solutions to human and social problems in the United States and throughout the world” (<http://www.howard.edu>).

Swygert and his staff designed a 5-year strategic plan for the university. The president articulated several challenges for HBCUs in the March 1998 edition of *Black Issues in Higher Education*. He was aware that high-scoring African American students were actively recruited by majority-White universities—after all, that was something he did successfully at State University of New York at Albany—but he did not agree that students got a better education at these institutions than they did at Howard.

He emphasized that to provide the quality education good students desired, he had to recruit talented faculty members and be able to pay them competitive salaries. He promised the faculty that Howard would do its best to provide them with the tools of their trade including personal computers for every faculty member. Swygert was particularly interested in supplying the university community with a technologically rich environment.

The 2000 Howard University *Annual Report* demonstrates that in Swygert’s first few years as the university chief administrator Howard underwent substantive growth and development, including the creation of the Louis Stokes Heath Sciences Library, a new School of Law Library, and the university’s iLab. The iLab is a technology learning center comprising more than 200 computer workstations, distance learning classrooms, and a Webcasting facility. The iLab station, open 24 hours a day, has voice, data, and video capabilities. Students had the ability to connect with the Internet without using a telephone line. In addition, Oracle Corp. donated 4,000 workstations for computer centers in the residence halls. Rapid changes in technological capabilities also led to an increase in distance learning programs available at the university. However, Swygert continued to struggle with finances for the university.

Swygert ended his tenure at the university in 2008 after 13 years. On August 1, 2008, Sidney A. Ribeau became the 16th president of Howard. Unanimously selected by the board of trustees in May, Ribeau formerly served as the president of Bowling Green State University in Ohio.

HYPERACTIVITY

Hyperactivity is a symptom, along with impulsiveness and inattention, of attention deficit hyperactivity disorder (ADHD). The term *hyperactivity* refers to an excessive amount of activity or excessive behaviors that are disruptive and maladaptive. The presence of ADHD in childhood is associated with a number of impairments that can persist into adulthood, including problems with school achievement, family, peers, and future occupational performance. Because of the problems associated with ADHD, concerns about the diagnosis of children with ADHD and with overmedication of the disorder have been raised. Some of these concerns include the role of gender, ethnicity, and socioeconomic class on the diagnosis

and treatment of ADHD and the influence these factors have on outcomes for children and adolescents on school achievement and long-term well-being. Because hyperactivity is nearly always discussed in connection with ADHD, discussion of ADHD will be considered to refer to hyperactivity unless hyperactivity is specifically contrasted with impulsivity or inattentiveness. This entry includes an overview of diagnosis and treatment with attention to issues related to African Americans.

Diagnosis and Prevalence

Criteria for diagnosis are outlined in the American Psychiatric Association's *Diagnostic and Statistical Manual of Mental Disorders, 4th Edition, Text Revision (DSM-IV-TR)*. When evaluating the presence of ADHD, hyperactivity and impulsivity are generally considered as a single category, in contrast to inattentiveness. To be diagnosed as hyperactive-impulsive, six or more symptoms must be present for at least 6 months to a degree that is maladaptive and inconsistent with normal developmental level. These symptoms must be present before age 7 and present in two or more settings, for example, at school and at home. Hyperactivity is characterized by behaviors that are excessive and disruptive, such as excessive talking, running about, or climbing excessively; often fidgeting, leaving one's seat, on the go, or "driven by a motor"; and difficulty with quiet leisure activities.

Diagnosing ADHD in children often begins with information from the parent. The parent can provide information about the age of onset, the symptoms that are exhibited in various settings, how long the symptoms have been present, and the level of impairment. Rating scales, questionnaires, and verbal and written interviews are all necessary components to collect the necessary data. Examples of common instruments for diagnosing and assessing ADHD include the Child Behavior Checklist, Conners Parent and Teacher Rating Scales, ADHD Rating Scale-IV, and Wender-Utah Rating Scale, among others. Interviewing the child may add information, but is often not sufficient by itself because children tend to underreport their symptoms and not be aware of their condition. Multiple sources of information are important for identifying the characteristics of ADHD, identifying comorbid psychiatric conditions, and eliminating

differential diagnoses (i.e., other conditions that might be present with similar symptoms as ADHD). As a result, it is useful to collect data from the schools, especially from the child's teacher. The teacher can also provide information about the symptoms being exhibited, the level of impairment, and other conditions that are demonstrated in the classroom. Most teachers do not have the authority or expertise, however, to diagnose children with ADHD. A diagnosis of ADHD may be made by a pediatrician or primary care provider based on collecting a personal history of the child from the parent. Because these care providers are not trained psychologists or psychiatrists, the diagnosis of ADHD may not necessarily conform to the *DSM-IV-TR* criteria.

Studies of ADHD prevalence rates have shown wide variation worldwide, ranging from 3% to 20% across different countries, but these variations seem to be related to the diagnostic criteria used rather than to any real cultural differences in the incidence of ADHD. In contrast to the *DSM-IV-TR*, which is used in the United States, the *International Classification of Diseases, 10th Revision (ICD-10)* has historically been used in Europe and other countries to diagnose hyperactivity under the label of *hyperkinetic disorder (HKD)*. The criteria for the *ICD-10* diagnosis of HKD are more stringent, requiring that a child exhibit all of the following: at least six inattentive symptoms, at least three hyperactive symptoms, and at least one impulsive symptom. These differences are suggested to explain the differences in the prevalence rates, and cross-cultural studies that have employed the *DSM-IV-TR* criteria have found similar prevalence rates across countries. Based on *DSM-IV-TR* criteria, the prevalence of ADHD is estimated to be 3% to 10% of the population. There are three subtypes of ADHD: (1) hyperactive-impulsive only, (2) inattentive only, and (3) combined types. The combined type is the most prevalent (about 80% of patients), with inattentive only next (about 10–15%), and hyperactive-impulsive only least prevalent (about 5%). Although originally thought of as a childhood disorder, it is now understood that ADHD persists into adolescence and adulthood for many patients diagnosed in childhood.

Diagnosis of hyperactivity in adolescents and young adults is more difficult than in children for

a number of reasons. The criteria for diagnosing ADHD are biased toward children so that physical hyperactivity in childhood is often replaced by mental restlessness in adolescence. In adulthood, only the inattentive symptoms tend to be present, which complicates recognition of adult ADHD. In addition, in adolescence there is less oversight by teachers and parents of the adolescent's behavior compared to a child's behavior. In secondary schools, an adolescent has between five to eight teachers, and the parent usually has less contact with the adolescent as the adolescent begins to assert independence and spend more time with peers. In addition, ADHD in adolescence and adulthood often occurs with other psychiatric disorders that can mask its effects, such as oppositional defiant disorder, conduct disorder, mood disorders, and anxiety disorders. Finally, adolescents do not self-report their symptoms well, tending to underreport their symptoms, and do not cooperate with the diagnostic process as well as younger children. The consequences of not accurately diagnosing ADHD in adolescence or adulthood are profound, for those with ADHD are at greater risk for not completing high school, being suspended or expelled from school, substance use, incarceration, and dismissal from a job than are adolescents and adults without ADHD.

Controversial Issues

There is controversy concerning the diagnosis of ADHD. Although there is widespread belief among the public that ADHD is uniformly overdiagnosed, epidemiological studies have suggested that widespread overdiagnosis is not occurring. Evidence suggests, however, that regional differences, as well as age, gender, and ethnic differences, in the diagnosis and treatment of ADHD exists so that overdiagnosis may occur in some communities while underdiagnosis may occur in other communities.

Boys are generally diagnosed between 3 to 6 times more often than girls in elementary school, although the gap in diagnosis decreases with increasing age so that by adulthood the diagnosis of males and females is almost equal. This gender gap in diagnosis is the subject of controversy, for it has been suggested that boys are being overdiagnosed and girls are being underdiagnosed. Boys are more likely to exhibit disruptive behaviors than

girls, a tendency which may account for the bias toward diagnosing boys with ADHD. In addition, boys are more likely to demonstrate hyperactive-impulsive symptoms, whereas girls are more likely to exhibit the inattentive symptoms. Because they exhibit the inattentive type, girls are less likely to be diagnosed with ADHD, which puts them at greater risk for having poor academic performance. Therefore, the greater prevalence of boys being diagnosed may be a result of both difficulties with accurate diagnosis and true gender differences in the prevalence of different subtypes of ADHD.

Ethnic differences in the diagnosis of ADHD exist, although the relationship between ethnicity and ADHD is complicated. Some evidence suggests that White children are diagnosed at a higher rate than African American children, while other evidence suggests that African American children are diagnosed at a higher rate. One reason for this disparity may be the source of the information. When parental ratings of children's behavior are compared, African American parents are less likely to label the behaviors as indicating hyperactivity than White parents. This disparity may result from the perceptions that African American parents, and the African American community as a whole, have about ADHD. African American parents are more likely to question the legitimacy of ADHD as a diagnosis, to worry about the social stigma connected with a diagnosis, and to believe that the diagnosis is used as a form of social control of their children. In contrast, teachers rate African American children as exhibiting more hyperactive behaviors than White children. This disparity may be related to a cultural bias in rating behaviors, especially when the teacher is White and applying a White norm to judge behavior. There may also be a cultural bias in the rating scales themselves, as they are developed based on Western norms of behavior. These differences suggest strongly the importance of multiple sources of information for making a diagnosis of ADHD.

A diagnosis of ADHD can be complicated by the presence of other conditions that overlap or resemble the symptoms of ADHD. Estimates vary widely on the prevalence of comorbid conditions with ADHD (40%–75%), but correct diagnosis of comorbid conditions is necessary to develop an appropriate treatment plan. The most common comorbid conditions are conduct disorder,

oppositional defiant disorder, mood disorders (major depression, dysthymia, bipolar disorder), adjustment disorder, learning disabilities (dyslexia, writing-reading problems), and anxiety disorders (panic, obsessive-compulsive, social phobia). For some of these disorders, it is not clear whether these conditions are complications of ADHD or completely separate conditions that coexist with ADHD. Other conditions that have also been comorbid with ADHD include tic disorders (e.g., Tourette syndrome), mental retardation, substance use disorder (in adolescence and adulthood), and autism spectrum disorders. Because of the high prevalence of these comorbid conditions, ADHD may be masked and go undiagnosed. It is recommended that attention be paid to possible symptoms of ADHD when these comorbid conditions are noticed.

Twin studies and adoption studies have suggested that there is a genetic component to ADHD. Monozygotic (i.e., identical) twins exhibit greater concordance for ADHD than dizygotic (i.e., fraternal) twins, and children with ADHD are more likely to resemble their biological relatives rather than their adoptive relatives. Other biological factors have also been linked to ADHD, including reduced activity in the frontal lobes, reduced size of the basal ganglia, dysfunction of dopamine function, dysfunction of serotonin activity, and overactivity of norepinephrine systems.

In addition to these factors, other environmental factors have been associated with ADHD, which suggests that they may be risk factors for developing ADHD. Complications during pregnancy and delivery have been associated with increased risk of ADHD, as has low birth weight. Prenatal exposure to alcohol and/or tobacco has also been associated with increased risk of ADHD. Environmental toxins have also been associated with increased risk of ADHD, including lead exposure and manganese exposure. Factors in the family environment have been shown to be related to ADHD in children, including low social status, parental psychopathology, and marital discord.

Care and Treatment

Treatment for ADHD generally follows the chronic care model, indicating that treatment is a long-term strategy. Treatment for ADHD can involve

pharmacological interventions, nonpharmacological interventions, or a combination of the two. The most common pharmacological treatment for ADHD is stimulant medication, with the two most common being methylphenidate (Ritalin, Concerta) and dextroamphetamine (Dexedrine, Adderall). Stimulant medications for ADHD are effective on the core symptoms (hyperactivity, inattention, impulsivity) and are recommended for ADHD without comorbid conditions. Two issues are raised in connection with stimulant medication: stimulant medication leading to later addiction and misuse and diversion of stimulants. Evidence suggests that untreated ADHD leads to an increased risk of later substance abuse, but that stimulant treatment does not increase the risk of substance use above that of non-ADHD controls. There is an issue of misuse and diversion of prescribed stimulants, especially when used by high school and college students. The most common reasons for misuse included to improve concentration and alertness for study purposes, to get high, and to experiment.

Nonstimulant medications are also used to treat ADHD, which include tricyclic antidepressants (e.g., desipramine), alpha-2 adrenergic agonists (e.g., clonidine), bupropion (Wellbutrin, Zyban), modafinil (Provigil), and atomoxetine (Strattera). With the exception of atomoxetine, the other nonstimulant medications were not developed primarily to treat ADHD so that their use to treat ADHD is considered off-label. In general, these medications are less effective than stimulants in treating the core symptoms of ADHD and may carry side effects that preclude their use with some people with ADHD (e.g., those with tic disorders, liver problems, or epilepsy). These nonstimulant medications are often used when comorbid conditions exist with ADHD, especially depression, oppositional defiant disorder, conduct disorder, and anxiety disorders or when stimulants are ineffective (which occurs for about 20% of children with ADHD).

Nonpharmacological interventions are not often recommended as the first-line treatment for ADHD, but may be useful in connection with pharmacological treatment for dealing with school problems, substance use, family stress, social impairment, and other problems. Examples of nonpharmacological interventions include behavioral interventions, cognitive behavioral therapy, parental

interventions, and academic interventions. Behavioral interventions are used to reduce problematic behaviors and increase desirable behaviors, whether at home or at school. Techniques include positive reinforcement of desirable behaviors, punishment of undesirable behaviors, response cost analysis, time management, prioritization, limit setting, and socialization training. To be most effective, feedback needs to be immediate, powerful, tangible, and frequent. Cognitive-behavioral therapy (CBT) helps the person with ADHD to develop self-control of his or her behavior and manage impulse and attention problems. Techniques include self-talk, self-monitoring, self-instruction, and self-reinforcement. Although effective in well-defined situations and environments, the effects of CBT may not generalize well to times and settings in which the technique was not specifically applied, and classroom-based CBT has been shown to be less effective than clinic-based CBT. Parental interventions are used to teach parents how to develop the necessary skills to manage ADHD-type behaviors in their child. Common techniques include teaching parenting skills and attending family therapy. Parent training has been shown to increase child compliance and observed parenting skills. Academic interventions are used to increase the likelihood of a child's academic success. Techniques include classroom academic management (e.g., maintaining structured lesson plans), arrangement of the learning environment (e.g., having the child sit in the front of the class to reduce distractions), tutoring, and adaptation of educational methods (e.g., allowing for oral exams). School systems are responsible for providing special services for a child diagnosed with ADHD under provisions of the Individuals with Disabilities Education Act and Section 504 of the Rehabilitation Act of 1973.

Pharmacological treatment alone, specifically stimulant medication treatment, has been shown to be more effective than behavioral-psychological treatment alone for treating the core symptoms of ADHD. Combining stimulant treatment with behavioral-psychological treatment, however, has been shown to be more effective in improving social outcomes and provides the benefits of the pharmacological treatment with lower doses than needed for pharmacological treatment alone. Pharmacological treatment alone, however, has not been shown to produce long-term changes in school

achievement, social skills, academic skills, or peer relationships, whereas school-based psychological and/or educational interventions have been effective in improving general cognitive abilities.

Research Findings

Research has been conducted to investigate whether stimulant and nonstimulant drug treatment differs as a function of ethnicity. In general, African American children are treated for ADHD at almost half the rate of White children. This is true even when comparing groups of children that have been diagnosed with ADHD. Although socioeconomic status, access to health insurance, and geographic region account for some differences in treatment patterns, the ethnic difference in treatment patterns persist when these variables are controlled for. The reasons for this disparity include biases in referral services for minority populations, lack of adequate health care services, and attitudes in the African American community about the treatment of ADHD. Among the attitudes that may cause parents not to seek treatment for their children include a fear that stimulant treatment could lead to addiction, the concern that drug treatment is a means for exerting social control over the community, and the worry that the drug will alter their children in a fundamental way that causes them to lose their identity.

Research has also suggested that there are gender differences in the prevalence of treatment for ADHD. On average, girls are less likely to have their needs met by services than boys. This gender disparity may be related to the differences in the types of symptoms that girls exhibit, for example, internalizing behaviors, compared to boys, for example, externalizing behaviors, a disparity which makes it less likely that girls will be diagnosed and adequately treated for ADHD.

I

IDENTITY DEVELOPMENT

Identity can be defined as the set of characteristics individuals recognize as belonging uniquely to themselves. Identity development often considers how an individual forms that set of characteristics and the emotional connection associated with being identified with that set of characteristics. African American identity development can focus specifically on the active and dynamic racialized processes through which people come to identify themselves; these developmental processes are often shaped by how others in society identify and perceive African Americans.

Identity and identity development are often conceptualized from psychological and sociological perspectives. Psychological perspectives of identity and identity development concern the basic mental activity involved in developing a sense of self. Sociological perspectives of identity and identity development consider how contexts shape the ways that individuals come to know and represent themselves.

Although there are numerous sources that can contribute to African American students' identity and their identity development, this entry discusses African American racial and ethnic, class, and gender identity development. The focus is on these three areas of identity development because African American students' racial and ethnic identity, their class identity, and their gender identity seem to play central roles in how they participate in and experience education in the United States.

Race and Ethnicity

Race has been used by social scientists and others to refer to distinctions drawn from physical appearance (skin color, eye shape, physiognomy), while ethnicity has referred to distinctions based on national origin, language, religion, and other cultural markers. In the United States, both terms may be insufficient for describing the identity of African Americans because they do not encompass the diversity of physical characteristics or nations of origin represented in the African American population. Race has been socially construed to embody more than skin color, eye shape, or physiognomy; the term has been debated as a factor to maintain or deny access to power to certain groups of people. African Americans, in particular, are often denied access to power because of the ingrained nature of race and racism in the United States.

One of the most influential models to describe the development of African American racial-ethnic identity continues to be William E. Cross's Black identity model. This model conceptualizes identity development for African Americans as a continuum in which individuals undergo a racialized experience that encourages them to move from an unexamined, devalued, or denied racial identity toward a valued racial or ethnic identity.

For African American students, progressing from a state of not belonging to a state of recognizing and valuing membership in a racial or ethnic group seems to play an important role in their academic success. For example, research has shown that

African Americans who value their ethnic group membership and who have a strong academic self-concept have higher grades in school. Other research shows that having a strong racial identity serves as a protective factor against racial stereotypes in academic settings. In the United States, where race and racism are endemic and purposeful, school contexts rarely provide an environment for the development of African American students' positive ethnic or racial identities or that progression towards recognizing and valuing their group membership. Admittedly, teachers are often ill prepared to address issues of race and in the attempt to treat all children fairly, often ignore opportunities to bridge understanding of racial issues for all students, inadvertently becoming part of the system that perpetuates racial and ethnic oppression of students from underrepresented groups.

Class

The position that individuals place themselves on a continuum with poverty on one end and wealth on the other is based on issues of education, parenting, leisure, and consumption and includes the social outlook one develops based on self-identification with that group. Class identity is particularly salient in understanding African American experiences because of its close ties to race and its overarching effects on the development of African American identity. The lines between race and class have been blurred over time, with conscious and deliberate actions taken by many to depress the economic status of African Americans.

Today, African Americans have more wealth and education than ever before; however, African Americans are simultaneously experiencing the largest equity gap between White Americans and all other racial groups in the United States. As of 2007, the National Urban League's Annual Equity Index ranked the economic status of African Americans at just 57% of that of White Americans.

Class identity is important to consider when discussing the educational experiences of African Americans, particularly when schools have become the social institution by which class structure is reproduced from one generation to the next. High-poverty schools are more likely to have inadequate funding, unsuitable learning conditions, and few resources. Teachers in high-poverty schools are

more likely to be new, unqualified, or awaiting positions at schools perceived to be more desirable. The hidden curriculum is based on class so that skills leading to wealth and social power are made available to the advantaged, but withheld from the working classes.

Gender

Although gender is defined as the biological differences between men and women, gender identity can be conceived as an individual's psychological self-conception of being male or female. Thus, gender roles are used to describe the set of perceived behavioral norms associated with being male or female as defined by a particular social group. For African Americans, racism and sexism are intertwined in social contexts where gender mediates racial experiences, and race mediates gendered experiences.

Consequently, being an African American male or African American female has explicitly different meanings, just as African American womanhood will be experienced differently than White womanhood. This combined social context influences the ideologies African American men and women have about their own gender roles and influences and the ideologies others attribute to African American men and women. These projected ideologies might play a role in determining differential academic outcomes of African American male and female students.

Some scholars suggest that African American males have developed gender roles that conflict with an identity of school success. However, many researchers and theorists reject these theories because the theories may suggest that African American males reject school success altogether; the theories fail to account for the enormous role of context. There are African American male valedictorians, academicians, and even a U.S. president. Still, there is a dueling reality of the African American man in which African American boys must merge multiple identities relating to manhood, education, and social expectations to navigate a world with increasing and unyielding familial, occupational, and social demands.

INDUSTRIAL EDUCATION

As African Americans emerged from enslavement, one of their chief concerns was obtaining a quality education to advance themselves. This concern manifested itself in myriad ways, one of the most well-known being in the form of industrial education. Industrial education taught youth the requisite knowledge and skills needed to perform agricultural and mechanical labor. The goal was to design an education system that taught African American youth a trade so they could accordingly find work and establish themselves in the U.S. social order. Proponents of industrial education, most prominently Booker T. Washington and his mentor, Samuel Chapman Armstrong, deemed it the best way of efficiently instructing African Americans following the Civil War. Notwithstanding their lofty expectations, however, few African Americans benefited from being schooled in an industrial-based curriculum. This entry looks at how both men contributed to the development of industrial education.

Armstrong's Ideas

By the end of the 19th century, the foremost spokesperson for the utility of industrial education among African Americans in the South was Washington, but Armstrong was the first to articulate the necessity of African Americans being schooled an industrial-based curriculum.

Armstrong was born in 1839 in Maui, Hawaii. In 1860, at the age of 21, he left Hawaii to attend Williams College in Williamstown, Massachusetts. He graduated from Williams in 1862, and with the nation in civil war, he volunteered his services to the Union Army. In this context, Armstrong was first introduced to enslavement and African Americans. His brigade fought extensively in the eastern campaigns of the war, and by 1863, Armstrong had achieved the rank of lieutenant colonel and was placed in charge of the Ninth Regiment of United States Colored Troops (USCT). Soon thereafter, he was promoted to the rank of colonel and placed in charge of the Eighth Regiment of USCT, and following the war, he would be promoted to the brevet rank of brigadier general.

Armstrong's military experiences among these all-Black regiments deeply impacted his interest in the general welfare and education of African Americans. So much so, when the Civil War ended (1865), Armstrong in conjunction with the American Missionary Association sought to establish an institution of higher education for formerly enslaved Africans and their children. In 1868, Armstrong founded the Hampton Normal and Agricultural Institute in Hampton, Virginia.

A principal goal of Hampton was to provide a postsecondary education to African Americans yearning to become teachers. Still, the primary goal of Hampton was to train these teachers to understand and teach the value of hard work through industrial education. Accordingly, the curriculum at Hampton was thoroughly industrial. Scholars who have studied the curriculum at Hampton offer an excellent summation. Students worked as manual laborers in the morning and studied as students in the afternoon and evening. Young men worked the farm, while young women performed domestic tasks. Small farms and shops were established as laboratories for students to learn industrial, agricultural, and mechanical skills.

Similarly, prospective teachers training at Hampton (often in their best school clothes) were compelled to do fieldwork to internalize the value of hard work. The primary objective was to work these future teachers long and hard so that they would unconditionally learn and accept an ethic and dignity of hard work. Then, and only then, could graduates from these industrial schools develop the appropriate values and character to teach African American children in the South.

There were ulterior motives to these curricular decisions, however. Although he did not believe in enslavement, Armstrong firmly believed that African Americans were inferior to Whites and therefore undeserving of equal treatment and consideration. If African Americans were to exist as free men and women, then they would need the right training to be so. Armstrong felt African Americans needed to be taught to understand their designated subordinate place in the U.S. social order, and Hampton with its emphasis on the training of teachers for the Black South would be the perfect place to inculcate proceeding generations of young African American minds. The teachers that would emerge from Hampton would go to their respective communities and teach African American children the value of hard work and subordination through an industrial curriculum. Arguably the most famous alum of Hampton was Armstrong's prized student, Booker T. Washington.

Washington's Contributions

Washington was born in 1856 as an enslaved African in southwestern Virginia. At the age of 17, as a freed man, Washington applied to Hampton, where he met Armstrong and developed an appreciation of Hampton's model of industrial education. For 3 years (1872–1875), Washington learned firsthand the value of learning to work with one's hands for self-advancement, and upon graduation from Hampton, he took his training and appreciation for industrial education into the classroom as a teacher.

In 1881, when Tuskegee University was founded in Tuskegee, Alabama, Washington became its first principal and immediately instituted a curriculum that emphasized industrial training. Thereafter until his untimely death in 1915, Washington became the chief spokesperson for industrial education as a way to educate African American children.

To Armstrong and Washington alike, an industrial education not only provided students with a sound education for gainful employment but also instilled in them a respect for practical knowledge, or knowledge that can be directly applied to one's own existence and advancement in everyday life. Through industrial education, Washington deduced, African Americans would learn the difference between being worked and working. Being worked meant degradation to Washington, whereas working meant improvement and progress. Equally important, from this foundational knowledge of industrial education, Washington concluded, African Americans would develop good habits of thrift and property ownership and a strong ethic for work and individual responsibility.

As a model, industrial education prepared African Americans for a life of subordination and servitude. On the whole, the curriculum never adequately prepared African Americans to achieve the ideals of economic independence and citizenship envisioned by Armstrong or Washington.

INDUSTRIAL VERSUS LIBERAL ARTS EDUCATION

Despite the fact that enslavement had been abolished for nearly 40 years, the question, "What

shall be done with the Negro?" remained an important query in the first decade of the 20th century. This was especially true in the realm of education. Countless theorists and practitioners debated the most appropriate curriculum to educate African American children in the U.S. South, but two in particular—Booker T. Washington and W. E. B. Du Bois—stood out. Washington was an advocate of industrial education, while Du Bois advocated a classical liberal arts education. This entry looks at their contrasting ideas.

Washington's Ideas

Washington, born in 1856 as an enslaved African in southwestern Virginia, was a strong advocate of industrial education. Industrial education taught youth the requisite knowledge and skills needed to perform agricultural and mechanical labor. The goal was to design an education system that taught African American youth a trade so they could accordingly find work and establish themselves in the U.S. social order.

Washington first learned to appreciate industrial education as a student at Hampton Industrial Training School under the guidance of Samuel Chapman Armstrong. After spending 3 years (1872–1875) learning the importance this educational strategy, he graduated and took his appreciation for industrial education into the classroom as a teacher. In 1881, Washington became the first principal of the new Tuskegee University in Tuskegee, Alabama, and implemented an industrial training curriculum. For the rest of his life, he was the chief proponent of industrial education as the appropriate form of schooling for African American children.

Washington thought that an industrial education gave students a sound education for gainful employment and a respect for practical knowledge, information that could be used in everyday life. With this knowledge, he believed that African Americans would develop a love of work and thrifty habits along with the means to achieve regular income and property of their own. He argued that an industrial education would show African Americans the difference between being worked and working. As he saw it, being worked was demeaning and working implied advancement.

Du Bois's Ideas

Not everyone agreed with Washington. W. E. B. Du Bois, born in 1868 in Great Barrington, Massachusetts, was an outspoken critic of Washington and his philosophy of industrial education. Du Bois earned his BA at Fisk University and his PhD at Harvard University; both institutions emphasized a classical liberal education. Although he did agree that industrial education was a good curriculum in itself, Du Bois did not believe it should be the only curriculum available to African Americans. He was convinced that some African American children should be taught a classical liberal arts education, or an education that emphasized the learning of languages and Western arts, history, politics, and philosophy so that they could be groomed to be the future leadership of the race.

Du Bois was not opposed to industrial education. He believed that only the founding and perpetuation of institutions of higher education were more important than the developments occurring in and around industrial education. Notwithstanding, Du Bois firmly insisted that the primary purpose of education was not to make men and women into tradesmen and women, artisans, or everyday laborers; the primary purpose of education was to make these artisans and laborers into men and women.

Du Bois insisted that students taught in a school that emphasized a classical liberal arts education would be best prepared to address the major issues facing them and those like them in society. These students would emerge from their learning with the knowledge, skills, and confidence necessary to debate and challenge a nation that firmly believed African Americans to be genetically and intellectually inferior, that deemed African Americans a subservient people deserving of second-class treatment, that denied African Americans their constitutionally protected liberties (such as the right to vote and equal treatment under the law), and that established a social order that legally segregated African Americans in all public accommodations.

Given such oppressive times, going to school to learn a trade to make money or gain an appreciation for the ideal of work was impractical to Du Bois. African Americans needed leaders for their race; the United States needed leaders to advance

its democratic ideals. Schools could produce both. Du Bois reasoned that if the goal of school was to make money or simply gain a technical skill, then African Americans who emerged from school would have learned a good trade, but not much more. However, if schools were designed to teach African Americans about themselves and their existence within the U.S. social order, how to be sympathetic to the needs of others, and to be knowledgeable of the world and its developments, the nation would produce not only future leaders to advance its democratic ideals but also future leaders who could specifically address and resolve issues impacting African American life in the United States.

The Debate

Although at the time most African Americans were attending missionary colleges that emphasized a classical education, White industrial philanthropists and advocates of African American education rallied behind Washington. They viewed industrial education as the ideal curriculum for the training of future generations of African Americans destined to live and labor in the segregated American South and viewed Washington as someone who was willing to concede the civic and social advancement of African Americans for the racial and economic expectations of Southern and Northern Whites. Accordingly, for many years, the majority of African Americans who lived in the South were educated for a life of agricultural, industrial, mechanical, and domestic labor and second-class citizenship.

INROADS

INROADS is a nonprofit organization that uses a talent development approach in the placement of minority youth in U.S. corporations. Founded by Frank C. Carr, a White corporate executive, INROADS was established to address racial inequalities poignantly noted in Dr. Martin Luther King Jr.'s 1963 "I Have a Dream" speech. Carr's vision included teaching minority students how to successfully enter, navigate, and survive in corporate United States. through leadership, professional and personal development training, counseling, and community service. The best-known aspect of the INROADS program is the placement of students in consecutive summer internships with corporate sponsors. In 1970, INROADS consisted of 25 college student interns and 17 corporate sponsors in one Chicago, Illinois, office; as of 2007, INROADS consists of more than 5,000 alumni, 50 locations, and 600 corporate partnerships.

INROADS strives to and succeeds in facilitating placement of graduating INROADS interns with corporate sponsors. In fact, between 2004 and 2006, approximately 90% of INROADS interns accepted offers of full-time employment from their sponsoring organization. Furthermore, a significant proportion of remaining INROADS interns accepted positions with other INROADS corporate partners. This entry explores how students get involved in INROADS, INROADS' collaborations with corporations, and the outcomes of the program for alumni.

Recruitment and Placement

INROADS specifically recruits African American, Hispanic-Latino, and Native American high school and college students with high grade point averages and standardized test score composites and/or who rank among the top 10% in their class. Prospective students are invited to attend the Talent Pool, a 2-day training seminar that prepares students with professional skills needed to obtain placement within INROADS. Students then apply through submission of counselors or teacher nominations and essays for subsequent interviews with INROADS.

INROADS participants are typically matriculating undergraduates interested in pursuing professional careers in allied health care, business, computer and information sciences, engineering, health care management, marketing, and retail management careers. As a result, the program has been historically limited to students pursuing college degrees in business or technical disciplines, but more recently, the program has expanded to include qualified students with a strong academic and professional commitment to INROADS.

INROADS is most well-known for student participation in multiyear summer internships and job placement upon graduation; however, similar to its preadmission standards, academic and professional requirements exist until completion of an undergraduate degree. To ensure high academic standards, all INROADS students are expected to maintain college grade point averages of 3.0. All students are expected to enroll in or be enrolled in 2- or 4-year colleges as full-time students. For students accepted as high school students, supplementary academic instruction and standardized test-taking preparatory courses are offered; INROADS college students are provided help in the identification of appropriate local resources for academic assistance. In addition to academic standards, students are required to attend INROADS workshops and training sessions throughout the year to continually expand their business and professional skill sets.

After participating in the Talent Pool, applying, and being accepted to INROADS, students interview with corporate sponsors. Upon receipt of a summer internship offer, students are placed in 2- or 4-year internships and begin participation in mandatory year-round programs. Even after placement, students are provided ongoing support and guidance for both academic and professional development until graduation. The INROADS curriculum provides continual training and development using interactive activities, skill-building workshops, and career guidance including business simulations, seminars, and other opportunities to comprehend teamwork in a corporate setting.

In addition to working in full-time internships, participants benefit from the concentrated training offered by the Summer Business Institute, a multi-day regional gathering. Students are brought together to network and obtain progressively

pertinent professional development training. Although the Summer Business Institute provides training to all INROADS interns, the Retail Management Institute was recently established to streamline the preprofessional training of INROADS students that aspire to corporate management jobs in retail at the departmental, store, or district level. This recent addition includes internship and mentoring opportunities at department stores, mass merchant discount stores, specialty stores, consumer electronic stores, supermarkets, and ready-to-wear specialty stores.

Corporate Partners and Alumni

Because INROADS requires high standards of its students, it holds corporate sponsors to a similar standard. In providing companies with direct access to well-trained, committed, high-ability minority students, INROADS presents organizations with opportunities to diversify and strengthen their workforce. To establish and maintain this connection, corporations support INROADS programmatic endeavors in addition to extending well-paid, real-life management-track jobs to INROADS students.

INROADS has developed a 30-year reputation in helping businesses hire and place talented minorities. In fact, INROADS interns receive and accept offers of employment at higher rates than their non-INROADS colleagues, likely due to their extensive and longitudinal preprofessional training and internships.

The INROADS National Account Partners, corporations whose strategic support exemplify consistent growth and innovation, quality, partnership, and sustainability of performance include Target Corporation, PricewaterhouseCoopers LLP, United Technologies Corporation, Deloitte Touche Tohmatsu, Ernst & Young International, MetLife, Inc., Pfizer Inc., Liberty Mutual, and the General Electric Company.

As of 2006, INROADS alumni numbered over 19,000. Eighty percent of INROADS alumni agree that INROADS training and development programs made them better prepared for their full-time job than their non-INROADS peers. Furthermore, among INROADS alumni, 36% have either completed graduate degrees or are enrolled in graduate programs.

Although INROADS is highly preparatory for industry placement, there are also a number of services available to alumni. In addition to recognizing high-performing alumni on academic and professional achievements nationally, there are local chapter clubs that support ongoing professional development and networking opportunities. The INROADS alumni database, publications, and Career Resource Center are established forums for social and professional networking. As a result of INROADS alumni placement in national organizations, alumni have played an instrumental role in the development and establishment of additional offices. Through mentoring and workshop facilitation, INROADS alumni are able to actively fulfill Carr's vision of community service. In addition, INROADS has consistently conducted alumni surveys to update existing databases and to improve on the INROADS experience and process.

INSTITUTE OF THE BLACK WORLD

The Institute of the Black World (IBW) was an African American think tank that emerged out of the Black power movement and the movement for African American studies of the 1960s. IBW was established in Atlanta, Georgia, in 1969. At its inception, the full-time and research staff and Fall Seminars of the Institute of The Black World

included Dr. Vincent Harding, chairman and historian; Lerone Bennett, historian and *Ebony Magazine* senior editor; Chester Davis, professor of education; Dr. Stephen Henderson, professor of English; Dr. Joyce Ladner, professor of sociology; Dr. William Strickland, professor of history; Dr. Sterling Stuckey, professor of history; and Dr. Robert Browne, professor of economics.

In addition to its research component, the institute also offered several African American studies-oriented classes. The listed class offerings during the fall of 1969 included Black Reconstruction in America; Building Black Curriculum in Public Schools; Blues, Soul and Black Identity; The Socialization of the Black Child; and Racism and American Social Analysis. IBW conducted several projects that were designed to teach, document, and validate the Black experience. One such project was IBW's *Report for the Black Studies Curriculum Project*. This project was a 58-page critique of course outlines that focused on the African American experience; it was conducted by several African American studies specialists.

IBW was originally housed in the Martin Luther King Jr. Center and operated in partnership with both the King center and the Atlanta University Graduate Center. Functioning as a component of African American studies, IBW was established as an institute whose mission was to encourage and support advanced scholarship in the discipline of African American studies and to contribute to the validation of the African American experience and a fresh appreciation for the past, present, and future conditions of African people around the world, with a primary focus on the U.S. experience.

The institute was initially composed of scholars, artists, teachers, community activists, and organizers of African descent. The advisory council (the governing body of IBW) consisted of Walter F. Anderson, Margaret Walker Alexander, Lerone Bennett, Horace Mann Bond, St. Clair Drake, Katherine Dunham, Vivian Henderson, Tobe Johnson, Julius Lester, Frances Lucas, Jesse Noel, Rene Piquion, Eleo Pomare, Pearl Primus, Benjamin Quarles, Bernice Reagon, William Strickland, Council Taylor, E. U. Essien-Udon, C. T. Vivian, Charles White, and Hosea Williams. The organizers of the institute were committed to providing the African American community with the best of their intellectual and creative talents.

Intent on working in cooperation with several colleges and universities, IBW identified 10 key objectives:

1. The definition and refining of the field now loosely called African American studies
2. The development of a new consortium for African American education
3. The encouragement of basic academic research in the experiences of the people of African descent
4. The encouragement of African American artists, especially those who are searching for an aesthetic, which will contribute to the struggle for the minds and hearts of our people
5. The development of new materials and methods for the teaching of African American children
6. The development of a Black policy studies center
7. The establishment of creative links with our counterparts in other areas of the Black world
8. The preparation of a new cadre of men and women who are at once precisely trained in the scholarship of the African American experience and fully committed to the struggles of the Black world
9. The sponsoring of short-term seminars and of vacation and summer workshops and conferences, both independently and in concert with one or more of the cooperating institutions
10. The development of a publishing program

In 1970, IBW split with the King Center as a result of ideological and other reasons. The King Center made its sole focus the legacy of Dr. Martin Luther King Jr. and demonstrated a more integrationist focus than that of the leadership of IBW, which demonstrated more of a Black nationalist perspective.

Major funders of the institute included the Ford Foundation, Wesleyan University, the Cummins Engine Foundation, and the Southern Education Foundation. By 1980, the institute's funding sources decreased significantly. By 1983, the staff was greatly reduced and the main office was moved to Washington, D.C. Exactly when IBW closed its doors is unclear. However, in an effort to rekindle

the historic legacy of IBW, Dr. Ron Daniels recently established a similar organization called the Institute of the Black World 21st Century.

INTERDENOMINATIONAL THEOLOGICAL CENTER

The educational ministry of the Interdenominational Theological Center (ITC) to African American people in general and the Black church in particular should be viewed in several larger contexts. These include interinstitutional cooperation among African American schools of higher learning, ecumenical ministry among the historic Black denominations and the African American constituencies of historic predominantly White denominations, and the relevance of graduate theological education of Christian leaders for ministry and service in the church and the global community. The ITC seeks to educate and nurture women and men who commit to and practice a liberating and transforming spirituality; academic discipline; religious, gender, and cultural diversity; and justice and peace. This entry looks at its history and current challenges.

Historical Background

Gammon Theological Seminary, a United Methodist graduate school of theology, was the first and only predominantly African American

seminary in the nation, located in Atlanta, Georgia. Dr. Benjamin Elijah Mays and others at the School of Religion at Howard University in Washington, D.C., gained membership in the American Association of Theological Schools in December of 1939. Therefore, Gammon and Howard were the two leading postsecondary theological lights for African Americans.

Mays became president of Morehouse College in Atlanta in 1940. The School of Religion there had almost been phased out. Mays wanted some kind of affiliated arrangement with Gammon and the Turner Theological Seminary at Morris Brown College, an African Methodist Episcopal (AME) institution named after Bishop Morris Brown, who had conspired with Denmark Vesey's revolt plot in Charleston, South Carolina, in 1822. Whites closed the AME Church in Charleston from 1822 until the end of the Civil War, 1865. The seminary was named after Bishop Henry McNeal Turner, a radical Pan Africanist who had fought in the Civil War; preached an 1892 sermon, "God is a Negro"; and created an organic union between the AME church and the Ethiopian Orthodox Church of South Africa in 1896.

Gammon was the only accredited seminary among the three and the only one with a plant and an endowment of its own. Morehouse and Turner needed Gammon, but if the United Methodists desegregated the Candler School of Theology at Emory, Gammon would probably also need Morehouse and Turner. In the early 1930s, cooperative theological education ideas for African Americans in Atlanta surfaced. There were cooperative Gammon-Colored Methodist Episcopal (CME) programs and then, in the 1940s Gammon-Morehouse programs. Also throughout the 1940s, Mays; Dr. Willis King, president of Gammon; and Dr. William A. Fountain, president of Morris Brown (representing Turner) discussed some future plan of cooperation. At Morris Brown, Fountain was followed by Dr. John H. Lewis, then Dr. Frank Cunningham, and finally Dr. John A. Middleton. Mays was at Morehouse until 1965. King of Gammon was succeeded by Dr. John W. Haywood.

Coming Together

The key personnel shift leading to the founding of the ITC was the ascendancy of Dr. Harry

Richardson as president of Gammon in June of 1948. President Rufus Clement of Atlanta University wanted more seminary cooperation. Gammon did not like the idea, feeling that Clark College's entry into the Atlanta University complex had not worked out too well and that Morehouse was a relatively weak potential contributor.

Gammon needed to move its physical plant. The Sealantic Fund, a Rockefeller Foundation beneficiary, was not interested in denominational seminaries, but was interested in interdenominational work in November, 1955. The general education board, another Rockefeller Foundation beneficiary, granted money to form a plan of cooperation between Gammon, Morehouse, and Turner. Dean Rusk, head of the Rockefeller Foundation and later secretary of state, conducted an inspection.

Phillips School of Theology of the CME church had been at Lane College in Jackson, Tennessee, since 1944. They came on board. The African Methodist Episcopal Zion Church declined participation to protect and preserve Hood Theological Seminary at Livingstone College in Salisbury, North Carolina. Edward C. Miller, the first African American architect to be licensed in Georgia, planned the campus buildings. All four schools voted in 1957 to join. Six teachers came from Gammon and three each from Morehouse, Turner, and Phillips. Richardson became the first president. The general education board gave \$500,000. The Sealantic gave \$1.75 million. The seminaries had 5 years to raise a \$250,000, and they did it in less than 1 year.

Teaching began in September of 1959. There were 21 faculty and 97 students. They were (and remain) of diverse racial backgrounds, international, and interdenominational. The first graduation was held at Gammon with the master's of divinity degree in May of 1960. There were 40,000 books in the initial library. President John Fitzgerald Kennedy sent a telegram of appreciation at the inaugural convocation in 1961. By then there were 124 students, and the initial \$1 million endowment had grown to \$2.5 million by 1968. That was the year Richardson retired.

He was succeeded by Dr. Donald Bronson, who had written his doctoral dissertation on ITC. The Presbyterian Church, USA moved Johnson C. Smith Seminary from the undergraduate Charlotte campus to ITC in the 1969 to 1970 school year.

The Church of God in Christ opened the Charles H. Mason Theological Seminary at ITC later in 1970. The Absalom Jones Theological Institute of the Episcopal Church was a member of ITC from 1972 to 1979, closing due to costs and small numbers of students.

Bronson was followed by Dr. Grant Shockley in 1976, Dr. J. Deotis Roberts in 1980, Dr. James H. Costen in 1983, Dr. Robert M. Franklin in 1997, and Dr. Michael A. Battle in 2003.

Strengths and Challenges

Because of financial struggles, there is a heightened need for interinstitutional cooperation among (especially private and church-based) African American schools of higher learning. Three of the ITC constituents are historically Black denominations (AME, CME, and the Church of God in Christ). Two are predominantly White denominations: United Methodist (Gammon) and Presbyterian Church, USA (Johnson C. Smith). Morehouse is funded by both African American and White Baptists.

The African American denominations bring not only history and heritage to the table, but also a radical autonomy of institutional, systemic, and cultural space away from a ubiquitous presence of White sociopolitical and economic power. The African American constituencies in White denominations bring access to exponentially more money than the African American denominations can muster, a thorough commitment to ecumenical ministry and a more uniformly high valuation on a formally educated clergy. Morehouse, as well as Gammon and Smith, bring an insider-outsider view on the politics of gaining financial access to White denominations and on pushing those White denominations to racial, social, economic, political, and cultural justice.

All of these schools combat a long-standing strand of anti-intellectual elements in the Black church community in particular. These historic and contemporary anti-intellectuals have argued for a mutual exclusion, if not outright antagonism, between piety on the one hand and formal learning on the other. For African American anti-intellectuals, the former should always be chosen over the latter. Indeed, many have argued that as formal education goes up, the power of piety inevitably goes down. The six constituent members of ITC

strenuously disagree and remind the Judeo-Christian world that there is a Hebraic admonition to love God with all one's heart, mind, soul, and strength.

INTERNATIONAL STUDENTS OF AFRICAN DESCENT

Students from other nations, many of African descent, have been migrating to pursue a college or university education for many years. This entry looks at the factors that contribute to the ongoing enrollment of students from Africa and the Caribbean, some of the challenges they face, the outcomes of their studentship, and the perceived tensions that exist between these students and African Americans, particularly in regard to education.

Political, economic, and technological developments, along with the needs and demands of the new knowledge-based economies, have led to increased concerns about the availability, accessibility, and quality of higher education in countries of sub-Saharan Africa and the Caribbean. College or university education is now considered the key to economic development, modernization, and the reduction of poverty in these countries and to the overall health and well-being of their people.

Because human capital is seen as the most valuable entity in the economic development equation, developing nations have made large investments in

primary education and to a lesser degree in secondary and postsecondary education where there is less support from international lending institutions. The numbers, quality, and varieties of higher-education institutions in the United States have outstripped those of countries in the Caribbean and the African regions.

With the increasing attention to primary education, an increasing number of students from African and the Caribbean have the qualifications for colleges and universities. As U.S. educational institutions seek to satisfy diversity requirements, they often see these countries as ideal sites for marketing the educational opportunities they offer. The most recent data from the Institute of International Education show that of the 564,766 international students enrolled in 2005 to 2006 in U.S. colleges and universities, 49,998 came from African and Caribbean countries.

Liberal legislation initiatives such as the Immigration and Nationality Act of 1965 have accounted in part for the initial increase and heightened visibility of international students from the Caribbean and African regions. At the same time, students there are motivated through increasing globalization, internationalization of education, and access to knowledge about U.S. institutions and the wider range of academic opportunities they offer.

The flight of human capital from these areas has been referred to as the "brain drain." Caribbean economists and historians bemoan the fact that instead of being of benefit to the local economies, the investment in the education of their citizens has benefited the North Atlantic countries. Although a U.S. education may benefit the individual, it is more often than not detrimental to the economic and social development of the sending countries. Open Doors reported that 61.8% of all international students relied on personal and family funds for their U.S. studies, taking their resources out of their homelands; only 25% of their funding came from U.S. colleges or universities. Overall, international students have contributed over \$13 billion to the U.S. economy. Many of the students who study in the United States do not return to their home countries and instead bring with them their extended families. As a result, the economic and social costs to Africa and the Caribbean will be difficult to recover.

Challenges Abroad

Colleges and universities have instituted policies and established services to meet the diverse needs of international students. Faculty and staff, however, may have difficulty understanding the cultural diversity of students who come from such a wide variety of countries. As a result, the institution's services may seem inadequate to the students. Indeed, faculty attitudes make the difference in how welcomed students feel. Having obtained the funds to finance their education and living expenses, students then face the realities of living in an environment that is far different from what they have seen on television.

Although all students have to deal with issues of adjustment, those from Africa and the Caribbean face additional challenges, classified not only as international students but also as Black or African Americans. Their status in the United States is far different from their status in their home countries, which in Africa often have a Black majority and a Black leadership. In the Caribbean, class and color play a more significant role in stratifying the society than in Africa, but the racialization process is different than it is in the United States. Those whose first language is not English also experience language problems. Thus, the challenges to students from Africa and the Caribbean may come not so much from academics as from life outside the classroom and a new physical and social environment that does not differentiate among people of similar color and racial characteristics.

Stigma tolerance and anticipated risks of seeking counseling may prevent these students from seeking help from persons who have the specialized training to assist them. Students who can form national and regional networks find themselves better able to adjust and survive the exigencies of being international, Black, and an alien resident in a country that they likely thought regarded and valued diversity.

Students from countries in Africa and the Caribbean who are classified as Black have become embroiled in a debate on the issue of who is benefiting from colleges and universities that still ascribe to affirmative action policies. The largest fraction of immigrant students of African descent is from the Caribbean, and a sizable fraction is from Africa.

This situation has given rise to some measure of hostility between immigrant students of African descent and native African Americans who sometimes view the immigrant student as a threat and as someone who is taking the places intended for the native African Americans whose parents fought for them. The question then becomes, “When are you going back?”

In addition, the academic performance of the immigrants from Africa and the Caribbean and their high completion rates continue to make them stand out in the community. Although these achievements put a solid nail in the coffin of scientific racism, they also create distinctions and divisions and feed the good–bad binaries that benefit neither of the groups—African American or overseas Africans—that need to be working together and not against each other.

JIM CROW

“Jim Crow” was the name given to laws and practices originating in the late 19th century that in effect extended the enslavement of Africans and maintained a legal second-class citizenship status for free and newly freed Africans. The goal of Jim Crow was to physically segregate and discriminate against African Americans. By this means, the actions and future possibilities of African Americans were limited from the 19th through the middle of the 20th century. Although Jim Crow laws have now been dismantled in the United States, the residue of these segregationist laws continues to limit African Americans in various areas, including education. This entry looks more broadly at the origins of Jim Crow and examines its impact on education.

Overview

Beginning during the colonial period and intensifying throughout the antebellum era, the precursors of Jim Crow were the Black Codes, which were often used in the North and East to limit African Americans’ participation in voting, jury duty, militia service, employment, and education. The term *Jim Crow* has its roots in a minstrel show created by Thomas “Daddy” Rice in the early 19th century, which presented a distorted caricature of African American life. Whereas Rice recited the ditty, “Weel about, and turn about / And do jis so; / Eb’ry time I weel about, / I jump Jim Crow,” for

the entertainment of Whites, it was not entertaining, nor did it depict the lived reality of African Americans.

The Jim Crow system of oppression was the southern version of Black Codes; it began in earnest as customary practices during Reconstruction, with legal enforcement beginning late in the 19th century. The major difference, however, is that Jim Crow laws enforced mandatory segregation of the races, whereas Black Codes curtailed African American access but were not always applied or enforced in all situations.

After the Civil War and Reconstruction, Jim Crow created a system of legally imposed U.S. apartheid. Historian C. Vann Woodward has argued that Jim Crow was a result of the reconciliation of divided Whites during Reconstruction. Whites resolved their economic and political conflicts at the expense of African Americans, resulting in the institutionalization of a perceived inferiority of African Americans in every facet of southern life. Consequently, Jim Crow provided the sanction of law to racial ostracism that was extended to churches, schools, housing, jobs, and eating and drinking establishments. Either law or custom further extended racial discrimination through public transportation, sports, recreation, hospitals, orphanages, prison, asylums, funeral homes, morgues, and even cemeteries. Even the use of water fountains was restricted.

At the end of the 19th century, Jim Crow was bolstered by legal decisions such as *Plessy v. Ferguson* (1896), which mandated segregated equal facilities by race for both African Americans and

Whites. The so-called separate-but-equal doctrine was applied throughout the South and the District of Columbia. In practice, however, Jim Crow was always practiced as separate and *unequal*.

Impact on Education

Before the Civil War, most southern states criminalized the education of free and enslaved Africans, although between 1800 and 1835, South Carolina provided segregated education for African Americans. Research by historian Heather A. Williams explains how African Americans attained an education in spite of these legal measures.

With the passage of the Constitutional Conventions in the South after the Civil War, all education became segregated by law. The impact of Jim Crow on African American education has been chronicled by many historians, including Horace Mann Bond, Henry Bullock, and James D. Anderson.

Despite the principle of separate but equal, schools for African Americans curtailed African American access to equitable educational opportunities in elementary, secondary, and higher education institutions. Segregated schools received less funding, curricular opportunities were unequal, and African American teachers and principals were provided with less compensation—indeed, there were limited opportunities for them to be employed in the South. African American children were subjected to overcrowded classrooms, inadequate facilities, shorter school hours and calendars, unequal curricular resources, and poor physical recreational facilities. Moreover, African Americans were required to support public schools with their taxes while their children received less than their share of tax revenue collected for the education of all children. This practice often resulted in the double taxation of African Americans, who raised additional funds to establish and support educational systems for their children.

Consequently, the impact of Jim Crow education in 17 southern states, the developing western states, and the nation's capital was to provide African Americans with unequal opportunities throughout the K–12 and higher education system of schooling. The goal of Jim Crow education was to prepare African American youth for less than full participation in a democratic society. An unintended benefit

of segregated education, however, was that some African American teachers and principals sought to educate African American students for full citizenship. In this process, they utilized resources such as the *Negro History Bulletin* to teach African American children about their contributions as African people to the world. As a result, many African American children, even within a segregated context, learned that they could achieve beyond the confines of Jim Crow.

The system of Jim Crow education was dismantled as a result of the civil rights movement, and the efforts of the National Association for the Advancement of Colored People (NAACP) legal campaign against segregated education. This culminated with the *Brown vs. Board of Education, Topeka, Kansas*, decision on May 17, 1954, declaring that separate education was inherently unequal. Without African Americans' persistence to develop schools beyond the principles embodied in Jim Crow, there would not have been a civil rights movement. African American schools, though segregated, served as a bulwark against the structure of Jim Crow. Although Jim Crow is legally dead, urban areas often have schools attended predominantly by African Americans, schools with inadequately prepared teachers, poor facilities, and poor educational opportunities. Consequently, Jim Crow's legacy lives on in second-generation segregation. Recent scholars have questioned the long-term effectiveness of *Brown* in securing first-class citizenship for African Americans. Without it, however, African Americans would still be relegated to legally segregated and unequal education.

JOURNAL OF BLACK STUDIES

The *Journal of Black Studies* (JBS) is a refereed scholarly journal founded by Molefi Kete Asante and Robert Singleton in 1969 and published by SAGE Publications since its inception. During the height of the Black Power movement, Asante, who was a young professor of communications at University of California, Los Angeles (UCLA), and Singleton, a doctoral candidate in economics at UCLA, joined forces to create a framework for a journal that would have rigorous standards; would focus on what was then called the "Black perspective," which soon became Afrocentricity or African-centeredness and would have relevance to social justice. When this idea was presented by Asante and Singleton to Sara Miller McCune and George McCune of SAGE, it was accepted as a progressive idea in the academy, and preparation was soon under way to publish the journal. This entry looks at its origins and current operation.

A New Publication

Among the key influences on the journal during its early years were editorial board members Vincent Harding of the Institute of the Black World; C. Eric Lincoln of Union Theological Seminary; E. U. Essien-Udom of the University of Ibadan; Clyde Taylor of UCLA; Lerone Bennett, senior editor of *Ebony*; Orlando Taylor of the Center for Applied Linguistics; Charles Hamilton of Columbia University; Harold Cruse of the University of Michigan; and Henry McGee of UCLA.

When the journal started, the editor, then called Arthur L. Smith (soon to be Molefi Kete Asante),

wrote that "seldom in the history of academic disciplines has an area of study been born with so much pain and anguish as Black Studies." The author went on to say, "Discussions initiated, for the most part by university students, produced significant re-evaluations of curricula, research and pedagogy." It was clear to the editor that scholars would not be able to sustain the field merely by awakening rhetoric. It was then that the call for papers went out to the entire world of African and African American studies. As editor of JBS and director of the UCLA Center for African American Studies, Asante was able to encourage veteran scholars to send their manuscripts to the journal and to enlist their support in suggesting younger scholars for the journal.

Seeing the creation of the journal as an important juncture in the synthesis of the field, the editorial board sought to involve as many scholars as possible, regardless of their fields, who felt a need to do research from the standpoint of African agency. To that end, the first issue had four African American writers and three White writers from five different fields of study. Marcus Alexis, a prominent African American economist, dealt with African American patterns of consumption, and Orlando Taylor, later to become the graduate dean and the communication dean at Howard University, wrote "New Directions for American Education: A Black Perspective." Other scholars, such as Patrick Kennicott, Robert Scott, and Harlan Hahn, were published in the journal.

Among the members of the advisory board were significant scholars in several disciplines. Much like the editorial board, this board was stellar and included Ronald Takaki, Gary Nash, Irving Bernstein, and Alice McGaughey of UCLA; Ewart Guinier of Harvard; St. Clair Drake of Stanford; Martin Kilson of Harvard; Price Cobbs of Pacific Psychotherapy Associates; Lee Rainwater of Harvard; Agnes Jackson of Pitzer College of Claremont; Frank E. X. Dance of the University of Wisconsin; and Anne Allen of Allen Associates.

In its first volume, the journal published some of the young scholars who would become major figures in U.S. scholarship. There were articles by Boniface Obichere, Edward Brathwaite, and Kofi Asare Opoku to underscore its Pan African approach, as well as articles by Hanes Walton, Maurice Jackson, and Joanna Zangrando and Robert Zangrando, who initiated some of the

earliest work in politics, history, and social studies. Robert E. Hemenway, Douglas Glasgow, Eugene Grigsby, Letitia Alston, and Lawrence Crouchett, Myron Ross, William Loren Katz, and Frank Kofsky made their contributions to the intellectual tradition that was to become *JBS*. By the end of the first year, new scholars were attracted to the editorial board, including Jack Daniel of the University of Pittsburgh, Carlton Molette of Spelman College, Roy Simon Bryce-LaPorte of the Woodrow Wilson International Center for Scholars, and Edward Isibor of Cleveland State University.

Growing to Maturity

In 2007, *JBS* was ranked by the Thomson Scientific Journal Citation Reports as 9 out of 9 in Ethnic Studies and 54 out of 57 in Social Sciences, Interdisciplinary, making it the highest scoring journal in its field with an impact factor of 0.144. *JBS* is a leading source for dynamic, innovative, and creative research in the African world. It remains in the forefront of new and relevant scholarship under the leadership of Molefi Kete Asante and Ama Mazama, associate editor.

JBS is published six times per year. While the journal can normally publish only one fourth of the manuscripts received, it has become the favorite intellectual home of thousands of readers. Areas of coverage include society, media, economics, communication, literature, language, heritage, history, and Afrocentric theory. *JBS* welcomes contributions from both established and younger scholars working in any area of the African experiences, transcontinentally and transgenerationally. Articles may have a critical, historical, analytical, or empirical focus. The journal particularly appreciates cutting-edge work on the theoretical debates in the field. All research articles published in the journal have undergone a rigorous peer review, based on initial editor screening and refereeing by two or more anonymous referees. In addition, no article is published in *JBS* without detailed review of the article's writing style and reference consistency.

JOURNAL OF NEGRO EDUCATION

The *Journal of Negro Education (JNE)*, established in 1932 at Howard University, has for nearly 75 years served as one of the most significant vehicles for the critical analysis of African American education. Consequently, *JNE* is one of the oldest refereed scholarly periodicals continuously published by and about African Americans. From its first publication to the present, each issue introduces the aim of the journal to be threefold:

First, to stimulate the collection and to facilitate the dissemination of facts about the education of African American people; *second*, to present discussions involving critical appraisals of the proposals and practices relating to the education of African American people; and *third*, to stimulate and sponsor investigations of issues incident to the education of Black people.

The fact that the journal was established the same year that the infamous Tuskegee Experiment was started, less than 70 years after the end of the enslavement of Africans, highlights both the significance of undertaking such a publication in the United States in the 1930s and the lofty aims of its inceptors. It was born amid a dire need for increased study of the general aspects of African American life, and the *JNE* attempted to address this need as far as educational matters were concerned. Besides providing a reference, the journal also fulfilled the role of a beacon for African Americans during the Jim Crow era. Through the leadership of the journal's founder and first editor, Dr. Charles H. Thompson (1932–1963), the establishment of *JNE* was envisioned as an avenue for “stimulating Negroes to take a greater part in the solution of the problems that arise in connection with their own education.” This entry examines the journal's historical background and describes its participants and contents.

Historical Background

Although there were some publications that focused on certain aspects of African American life at the time, none of them focused exclusively on education. The inaugural edition of the *JNE* outlined its unique purpose when compared with other African American publications. As Thompson wrote,

The Crisis and *Opportunity* . . . are organs specifically devoted to discussions of the Negro's civil rights and social and industrial opportunities. . . . *The Journal of Negro History* is what its name implies—it is a journal of Negro history . . . [and] *The Bulletin* does not pretend to present primarily, critical discussions and the results of the scientific investigations of educational problems.

The journal was established with the intent to remedy a severe lack of literature concerning African American education and to provide much needed support to those wanting to study these issues.

The decision to house the *JNE* at Howard University in Washington, D.C., has proved to be both a matter of necessity and prudent planning. The fact that during the early years of the journal, Howard was one of the most prestigious institutions of African American higher education was noteworthy. Presently, Howard University is supporting the only publishing house in the United States owned and operated by a historically Black institution. The journal was established in what came to be the longest-lasting venue for African American scholarly literature. Howard's press was not officially established until 1972 (roughly 40 years after the *JNE* started); since then, in addition to publishing *JNE*, Howard University Press has also published other important periodicals and books closely associated with the African American community, such as the *Journal of Religious Thought* and the *Howard Journal of Communications*.

Another important factor in the relationship between the *Journal* and Howard University is that historically the ranks of faculty at Howard have constituted somewhat of a "Who's Who" of African American scholars. Notable members of the Howard University community include individuals such as physician Charles Drew, sociologist E. Franklin Frazier, historians Carter G. Woodson and John Hope Franklin, attorney Ralph Bunche,

Supreme Court Justice Thurgood Marshall, and writers Zora Neale Hurston and Toni Morrison.

Discussing the faculty in the College of Education at Howard, Thompson wrote,

The Faculty of the College of Education of Howard University, consisting of the largest single group of professionally trained Negroes in the field of education in the United States, feel that one of their first responsibilities as a part of a University, devoting its major efforts to the education of Negroes, is to make a concerted attempt to study some of the problems arising out of educational efforts among Negroes.

Howard was the perfect place for the *JNE* to be effectively managed and nurtured.

Authors and Articles

Despite these early connections between Howard University and the *JNE*, it was neither the original nor is it the current intent that the journal be provincially grounded. From its early years, members of the editorial board have included scholars from outside the Howard University community, including Horace M. Bond and Charles S. Johnson of Fisk University to more recently Walter R. Allen of the University of California or Rodney K. Hopson of Duquesne.

From its beginnings to the present, *JNE* has played a major role in providing a forum for national and international dialogues and articulations about African American education. An examination of the topics addressed over the journal's seven decades shows that no major issue concerning African American education has been left out or unduly chronicled. Examples of the articles and topics addressed over the decades by the journal include W. E. B. Du Bois's "Education and Work" (1932), James A. Atkinson's "Negro Educational Institutions and the Veterans' Educational Facilities Program" (1948), Leslie F. Fishel's "Can Segregated Schools Be Abolished?" (1954), Ralph Goldman's "The Politics of Political Integration" (1964), Wilson Record's "The White Professional Educators and the Black Ghetto Schools" (1970), James A. Banks's "Black Youth in Predominantly White Suburbs" (1984), Preston C. Green's "Can State Constitutional Provisions Eliminate De Facto

Segregation in the Public Schools?” (1999), and Dawn Williams and Roderick Land’s “The Legitimization of Black Subordination: The Impact of Color-Blind ideology on African American Education” (2006).

The continued success and relevance of the journal is evident through its strong readership. The current readership includes educators, students, and researchers in areas from sociology, history, and cultural studies, to political science and women’s studies as well as students of education at all levels. The emergence of other successful periodicals about African American education such as the *Journal of Blacks in Higher Education* and *Black Issues in Higher Education* is proof of the continued need for similar venues to conduct conversations started in the *Journal of Negro Education*.

JOURNAL OF NEGRO HISTORY

The *Journal of Negro History* was founded in 1916 by Carter Godwin Woodson, a Harvard-trained historian, who said, “If a race has no history, if it has no worthwhile tradition, it becomes a negligible factor in the thought of the world, and it stands in danger of being exterminated.” His idea was to create a journal that would bring to the U.S. consciousness the history of African Americans and the African Diaspora. In Volume 10, Woodson explained that the journal was established for the compilation of sociological and

historical data on the African American experience and for the study of people in the wider African Diaspora. Inaugurated during World War I, when the United States was fighting to make the “world safe for democracy,” the journal has been one of the most enduring scholarly works about African Americans. Woodson’s profound influence on authenticating and interpreting the African American experience earned him the appellation of “the father of Black history.” This entry chronicles how the journal came about and describes its contributions.

Founding a Publication

In 1912, Woodson earned a PhD from Harvard, becoming the second African American to earn the PhD degree in history. He was resolute in his belief that conventional scholars disregarded or misrepresented the role of people of African descent in U.S. history and in the history of other cultures. On September 9, 1915, Woodson met with George C. Hall, James E. Stamps, William B. Hartgrave, and Alexander L. Jackson at the Wabash Avenue Young Men’s Christian Association in Chicago to establish the Association for the Study of Negro Life and History (ASNLH), which was later renamed the Association for the Study of African-American Life and History (ASAALH). Its purpose, according to Woodson, was the scientific study of disregarded facets of African American life and history.

A year later on January 1, under the auspices of ASNLH, Woodson published the first issue of the *Journal of Negro History*. The scientific academic periodical provided scholars, from all racial groups the opportunity for research and publication of articles giving voice to and about the African American experience. Woodson firmly believed that historians had a responsibility to collect, preserve, and publish the records of African Americans to prevent them from becoming an insignificant factor in the assessment of humankind.

As one of the most influential members of what historian Joe W. Trotter describes as the “second generation of African American historians” (between World War I and the 1920s), who used the research methodology of the ever-evolving history profession, Woodson employed a more scrupulous, methodical, and analytical approach to

the systematic search for the truth about African American history, especially that of African Americans. Through the journal, he challenged the racist bias of majority studies on the enslavement of Africans, Reconstruction, and African history.

Correcting History

Few topics captured the attention of historians as those of the Old South, the Civil War, and Reconstruction. Southern defenders of the enslavement of Africans contended that Reconstruction had been an experimentation destined to fail by the intrinsic inferiority of African Americans. Influenced by the William A. Dunning and John William Burgess School of History (now discredited) and their adherents, such as pro-enslavement historian Ulrich B. Phillips, historians had interpreted the Old South and its Cotton Kingdom as a region of benevolent planters and contented and happy enslaved Africans.

For a period, the *Journal of Negro History* was the only agency for the dissemination of new points of view on the enslavement of Africans, the Civil War, and Reconstruction. Covering a wide range of topics, the journal led to a shift in the focus of historians from the master's perspective to that of the enslaved African. Woodson, as editor of the journal, emboldened scholars to pursue subjects previously disregarded by conventional historians.

In freeing African American history from the bonds of White intellectual narrow-mindedness, contributors to the journal presented African Americans as active participants rather than passive observers in history. Its authors, through their scholarly articles, underscored the ways that African Americans wrought their lives within the oppressive environments of their enslavement and Jim Crow and how the contributions of labor and culture shaped the life, history, and progress of the United States.

Other Contributions

ASNLH and the *Journal of Negro History* foreshadowed the birth of the Negro Renaissance in the early 1900s. As historian Lawrence Levine noted in his article, "Marcus Garvey and the

Politics of Revitalization," which appeared in *Black Leaders of the Twentieth Century*, the Renaissance and the rise of Marcus Garvey reflected African Americans' longing for a greater appreciation of culture and liberation from external influences. Serving as a scientific medium for highlighting the positive side of African American participation in the culture and history of the nation, the journal served as a means of both combating White racist portrayals of African Americans and as a means of implanting racial pride. With urgent admonition, Garvey emboldened African Americans in the 1920s to "canonize [their] own saints, create [their] own martyrs, and elevate to positions of fame and honor African American men and women who made distinct contributions to their racial history."

Preparatory to Garvey's remonstrations, historian Woodson had already begun the process of recording the contributions of African Americans and others in the African Diaspora through both ASNLH and the *Journal of Negro History*. Woodson's work also opened the scholastic door for future generations of African American historians to cross the threshold into the mainstream of the historical profession.

The journal became one of the most significant means of expression for recording and promoting the history and contributions of the diasporic people, especially in the United States. As a result, African Americans became cognizant of their influence in the intellectual domain. Woodson's leadership spanned more than three decades, as he continued to edit the *Journal of Negro History* until his death in 1950.

After Woodson's death, the *Journal of Negro History* was edited by Rayford W. Logan (1950–1951). He was followed by William M. Brewer (1952–1970); W. Augustus Low (1970–1974); Lorraine A. Williams (1974–1976); and Alton Hornsby Jr. (1976–2001). The *Journal of Negro History*, so named at its founding in 1916, was renamed the *Journal of African American History* in 2002. It presently is edited by V. P. Franklin and remains one of the discipline's premier journals.

KELLEY v. NASHVILLE BOARD OF EDUCATION

Kelley v. Nashville Board of Education was filed in 1956, 2 years after the first *Brown v. Board of Education, Topeka, Kansas* (1954) decision, seeking to desegregate the schools of the City of Nashville, Tennessee. A similar case, *Maxwell v. Davidson County Board of Education*, was filed in 1957. Following the adoption of the metropolitan form of government and the resulting creation of the Metropolitan Government of Nashville and Davidson County in 1964, the cases were consolidated. The initial goal of these cases was to secure equal access to public education for African American children in a system segregated by law. The progress of the cases throughout the 50 years since their filing paralleled the evolution of school desegregation law at the U.S. Supreme Court level as well as political and societal debate on the continuing effort to secure “colorblindness” in public education. On a local level, the various desegregation plans adopted by the Court responded to significant political and demographic changes and sought the elusive goals of stability of the system and permanency of what desegregation was able to be achieved.

Background of the Case

The plaintiffs in *Kelley* were led by A. Z. Kelley, a humble man, a barber by trade, whose son, Robert, had to walk past East High School every day to

Pearl High School, located across the Cumberland River in North Nashville. The lead plaintiff in *Maxwell* was the Reverend Henry Maxwell, a resident of Antioch, in the southern part of Davidson County, whose children were bused every day to Haynes School in North Davidson County. Far from being “caught up in the moment” of the national desegregation effort, these were real people, facing real issues of how to secure the best education for their children, particularly with regard to the disparity in resources between the “White” and the “colored” schools. It was no accident that these persons became the lead plaintiffs in the case. Their economic independence allowed them to be free of the fear of retaliation for their participation in the case. The distances their children had to travel to attend school were the longest in the city and county.

When the suits were filed, there were two African American high schools in the city, one serving students in the east and north and the other serving those in the south; elementary and junior high schools were smaller and more numerous and fed into the high schools. Robert Kelley and African American high school students living in East Nashville had to cross the Cumberland River and pass through downtown Nashville before arriving at Pearl High School, located across a train track from Fisk University. There was one African American high school in the county, located on the northern edge of the city. The Maxwells were a prominent family in Antioch, an unincorporated suburban community in southern Davidson County with a small African American

population. The daily ride to Haynes High School took between 45 minutes and an hour and bypassed the all-White Antioch High School.

The first desegregation plan adopted by the Court was a “grade-a-year” plan, under which the schools were to be desegregated one grade per year, beginning with the first grade. This plan was typical of desegregation plans of the era in which school boards adopted plans that would comply tacitly with the law of the land while granting reassurance to nervous and sometimes hostile White parents and school patrons. The holding of *Brown I* and *Brown II* that local boards of education were uniquely situated to develop plans reflective of local realities and that such plans should be developed “with all deliberate speed” allowed recalcitrant boards to delay the adoption of effective desegregation measures and local political forces to adopt measures to preserve the societal norm.

In Nashville, as in other places, “segregation academies” had sprung up overnight, leading to an exodus of White students—and the political support of their parents—from the systems. “Freedom of choice” plans as well as student assignment plans that permitted any student in the racial majority of a school to transfer to a school in which that student would be in the minority became popular. The desegregation gains of such plans, dependent as they were on voluntary action on the part of parents, were negligible.

As a result, the second wave of Supreme Court decisions began to come down, including the 1968 case of *Green v. School Board of New Kent County*, holding that school boards had an affirmative duty to desegregate and could not rely on voluntary measures, and *Swann v. Charlotte-Mecklenburg County Board of Education* in 1971, holding that the use of busing to achieve racial balance was constitutionally permissible.

The First Nashville Plan

By its very nature, the “grade a year” plan adopted in Nashville would take 12 years to be implemented. In 1971, after extensive hearings on the failures of the original plan, and in light of intervening Supreme Court decisions (most notably *Swann v. Charlotte-Mecklenburg County Board of Education*), Judge L. Clure Morton ordered a plan that involved busing of children for the purpose of

achieving racial balance. At the elementary grade level, African American children were bused 4 of their 6 years, while White children were bused for 2 years, reflecting the approximate two-third White, one-third African American racial composition of the elementary school-age population.

Similar ratios obtained for the junior high and high school grades, although the enrollment in schools at the higher grade levels was larger, leading to a decrease in busing (as measured by miles bused) for students in these grades. The development, beginning in 1970, of large comprehensive high schools built or developed in a ring through the middle of the county, achieved the highest degree of racial balance in the system.

The busing plan ordered by the Court also “froze” attendance lines, resulting over time in what became known as “court-ordered” and “non-court-ordered” schools. The practical effect of the frozen attendance zones was that many schools in the suburban and rural parts of the county remained virtually all-White. As new housing was built in areas that were not subject to the busing plan, Nashville began resegregating, particularly at the elementary school level. A prohibition on new construction or expansion of existing schools, also ordered as part of the 1971 desegregation plan, created considerable space problems in the “non-court-ordered” schools, leading to the widespread use of portable buildings. These portables became a symbol of substantial dissatisfaction of White families with the desegregation effort.

Continuing Litigation

As a result of the resegregation of the system under the 1971 plan, the plaintiffs filed a motion for further relief in late 1976, leading to hearings addressing the effectiveness of the 1971 plan and the possibility of substantial modifications to it (or the creation of a new plan). The board took advantage of the opportunity to ask the Court for relief from the prohibition on new school construction and renovation as well. Following protracted hearings, the Court ordered the board to develop a new plan that incorporated the entire county and that limited the time and distance children were bused. Because the parameters of the plan developed under the new guidelines substantially resegregated

the system, plaintiffs appealed the order and were successful in reversing the decision.

When the case came back from the U.S. Supreme Court, which had denied review, lead counsel for the plaintiffs and the chair of the board of education (also a lawyer) engaged in negotiations that resulted in the presentation to the district court of a new desegregation plan, which the Court approved and which remained in effect until the board voted to seek unitary status.

Prior to going to federal court to receive such a declaration, the board, the plaintiffs, and the mayor appointed the members of the Equity and Excellence Committee and charged the committee with the responsibility of establishing a long-range vision for the public educational system in Nashville (the "Vision for the Future"). Following that committee's work (a period of 18 months), the board's staff incorporated the various recommendations of the committee with the demographic realities of Nashville and existing school facilities to show what the system would look like if all the recommendations were adopted.

After much study and debate, the board agreed on a long-range plan, denominated the "Commitment to the Future," and invited the plaintiffs to discuss the possibility of agreeing on such a plan and agreeing not to contest the board's application to the Court to be declared unitary and to have the case dismissed. Following precedent set in the negotiation of the existing plan, representatives of the board and the plaintiffs spent many hours discussing modifications to the Commitment to the Future plan and ultimately reached accord. Under the plan, the public education system went to a three-tiered grade structure (K–4th grade, 5th–8th grade, and 9th–12th grade) with the schools divided into nine clusters, one for each of the nonmagnet high schools. Pupil assignment became as integral a part of school planning as did facilities and curriculum. Some school choice was made available to parents in each cluster. Judge Thomas A. Wiseman Jr. approved this plan, declared the system unitary, and dismissed the case in 1998.

Later Outcomes

Kelley and *Maxwell* were two of a relatively small number of southern desegregation cases that were initiated by private parties rather than the U.S.

Department of Justice. Over a period of many years, with plaintiffs dying, boards changing, demographic shifts, political tides and trends, the objective originally sought by the plaintiffs remained the same—equality of opportunity. The resistance to effective desegregation tools and remedies was formidable. The persistence of these plaintiffs, at times with great personal sacrifice and loss, over the years was nothing short of remarkable.

As the federal judiciary became more conservative in the 1980s, the importance of public school desegregation as a laudable and worthy objective waned. The passage of laws prohibiting discrimination in employment and housing resulted in a larger and more mobile African American middle class, with the resulting gradual deterioration of traditional African American neighborhoods. The concentrated poverty that has resulted in such neighborhoods presented considerable and continuing challenges for boards of education, like Nashville's, in the postunitary era. It is, as always, a question of access to educational resources.

KILLINGS ON HBCU CAMPUSES

Several young people were killed and dozens were injured in confrontations between students and law enforcement officers at historically Black colleges and universities (HBCUs) related to civil rights and antiwar demonstrations in the late 1960s and early 1970s. Student unrest was widespread on college and university campuses of the era. HBCU students agitated against White supremacy, as had their predecessors in organizations like the Student Nonviolent Coordinating Committee (SNCC), and also battled against

racism and discrimination off campus. In what was the Black Power era, they also turned their attention to the vestiges of the racial hierarchy on campus and accused their universities of complicity in the racial status quo.

Administrators, state officials, and the federal government attempted to curtail activism through threats, regulations, and intimidation, and HBCU students were subjected to harsher and more punitive forms of punishment even when employing the same tactics as students at other types of institutions. The presence of law enforcement officers on campus became part of the dynamic in this situation, and it resulted in violence on more than one occasion. No officers were punished in connection with these killings, which this entry describes.

South Carolina State College

The first killing of African American college students occurred at South Carolina State College at Orangeburg in February 1968. The Black Awareness Coordinating Committee, in conjunction with members of the Student Nonviolent Coordinating Committee and students from Claflin College (a private Black college nearby), organized a boycott in 1966 against a local bowling alley because of the manager's refusal to allow African Americans to patronize the establishment. The boycott lasted for 2 years, in which time students also issued a list of demands including that the bowling alley and drive-in theaters be desegregated, that the mayor establish a biracial committee to examine problems in Orangeburg and create a fair employment commission, and that the city comply with the 1964 Civil Rights Act barring segregation in public establishments.

African American vandalism of White stores and Whites shooting into the campus heightened anxieties, causing the administration to close the campus in early February 1968. Shortly thereafter, White law enforcement officers arrived on campus under the guise of keeping control of the situation, which escalated in reaction to White police presence on a Black college campus. Although an investigation found no evidence to support their claim, officers told investigators that they were responding to sniper fire when they shot into a crowd of demonstrators, killing Henry Smith, Delano Middleton, and Samuel Hammond Jr. and

wounding 27 others—almost all of whom were shot in the back. Though the investigation charged the officers with neglect and willful disregard for life, they were never punished.

Jackson State College

Events at Jackson State College (Jackson, Mississippi) in May 1970 mirrored the events at South Carolina State. In this case, however, the escalation of the Vietnam War, the draft, and the police murder of four students at Kent State heightened the tensions on campus. On May 13, students held a rally to demonstrate their disgust with the expansion of the Vietnam War and a long-standing pattern of racism and violent White supremacy that affected the daily lives of African Americans in Mississippi. White officers from the city of Jackson sealed off the campus with roadblocks to contain the students.

The next day, students continued to demonstrate and gathered on Lynch Street, a major thoroughfare running through the center of campus, near a women's residence hall. Without warning, students heard that shooting was being contemplated, and without an order to fire, police and highway patrolmen fired nearly 400 rounds into the crowd and the women's residence hall, killing a Jackson State student, Phillip Lafayette Gibbs, and a high school student, James Earl Green, and wounding 12 others.

A highway patrol investigation and a Hinds County grand jury absolved the officers of wrongdoing. A federal grand jury also returned no indictments. The President's Commission on Campus Unrest, however, found that officers used excessive force and fired on African Americans because they knew there would be no repercussions.

Southern University

Two years later, police shot and killed Leonard Douglas Brown and Denver A. Smith, students at Southern University and A&M College (Baton Rouge, Louisiana) as they demonstrated on campus. That October, students in a group called Students United protested the resignation of a well-liked faculty member and submitted a list of other grievances to the president. Initially reluctant, the president agreed to review their demands.

When the administration issued its response, however, students rejected it and initiated a march to the state board of education and then to the state capitol, only a short distance from the campus. Students then initiated a boycott of classes and another demonstration, at which time the administration closed the campus with the aid of the all-White sheriff's deputies.

When law enforcement officers arrested several campus leaders a few days later, students initiated a sit-in demonstration in the president's office in what reports called a peaceful protest. At that time, untrained deputies with no riot control training were called to campus, and their superiors devised a plan to get students to evacuate the building. The lack of training and miscommunication among law enforcement created a crisis situation. They attempted to use tear gas to force students to vacate the building along a particular corridor, but tear gas canisters exploded over several law enforcement officers and led to massive confusion.

Without an order to fire, police shot into groups of students as they ran away from the building

along the escape route law enforcement agencies planned, killing two and injuring several others. Though the Louisiana attorney general found fault with the officers for their actions—as at South Carolina State and Jackson State—none were punished for the deaths.

L

LAND GRANT COLLEGES AND UNIVERSITIES

Land grant colleges and universities ushered in a revolution in the development of higher education in the United States. They were originally created with the primary purpose of fostering the scientific study of agriculture, the mechanical arts, and military science. Eventually, these institutions would significantly transform the role of higher education in U.S. society and increase the degree of access that students from historically underrepresented groups in the United States have to a college education. At the same time, however, the development of the land grant colleges also illustrated one of the most striking examples of the underdevelopment of higher education for African Americans during the era of legal racial segregation. This entry reviews the history of land grant institutions and their impact on the educational progress of African Americans

Origins

In 1862, Congress authorized the creation of land grant colleges through the Morrill Land-Grant Act of 1862. This act provided that large tracts of federal land would be granted to states that were willing to establish land grant colleges. According to the legislation, the proceeds from the sale of these lands in each state were to be used as follows:

For the endowment, maintenance, and support of at least one college where the leading object shall be, without excluding other scientific and classical studies and including military tactics, to teach such branches of learning as are related to agriculture and the mechanical arts in such a manner as the legislatures of the states may respectively proscribe. (U.S.A., Title 20, Education 81–1686, cited in Alexander & Alexander, 1985, pp. 55–56)

Prior to the Civil War, higher education, to the extent that it existed in the United States, had been restricted overwhelmingly to private, sectarian institutions that served only the wealthy and professional classes. These colleges offered classical liberal arts curriculum designed principally to train the children of the privileged to assume leadership positions in society. These colleges were vestiges of the aristocratic practices that had been imported to the United States from England where wealth and privilege accrued to individuals as a function of inheritance and social status.

The land grant colleges stood as a radical departure from the traditional classical liberal arts curriculum. Although the classical curriculum emphasized subjects such as history, law, theology, and philosophy, the land grant colleges gave a new legitimacy to a practical curriculum that emphasized subjects such as agriculture, engineering, and other scientific disciplines. Moreover, they articulated a role for colleges that seemed more apt to the needs of a growing nation

taming a wilderness—namely, the development of scientific farming techniques and newer and more sophisticated industrial technologies and business practices.

From these humble beginnings, universities would evolve into institutions that did more than educate students; they also would develop a research mission that dedicated them to the production of practical scientific knowledge that could be utilized by both industry and government. Finally, the establishment of the Reserve Officer Training Corps programs at land grant institutions expanded the pool of available talent for the nation's armed forces.

An Important Addition

African Americans derived practically no benefit at all from the early land grant programs. State legislatures had exclusive authority to distribute the Morrill funds. Most Southern states simply did not dedicate the federal land grant monies to institutions that educated Black students. As of 1890, nearly 30 years after the passage of the Morrill Act, only three states (Mississippi, South Carolina, and Virginia) had shared Morrill funds with Black institutions.

These patterns of discrimination prompted Congress to pass the Second Morrill Act in 1890. Its original sponsors intended that the new law require states to ensure an equitable distribution of land grant funds for the benefit of African American and White students. It specifically forbade the federal government from appropriating land grant funds to institutions “where a distinction of race or color is made in the admission of students” (Samuels, 2004, p. 36). Yet to assure passage of the measure, its proponents were forced to compromise with segregation. Thus, the law also reads (in the same paragraph) that “the establishment and maintenance of such colleges separately for white and colored students shall be held to be in compliance with the provisions of this act if the funds received in such State or Territory be equitably divided as hereafter set forth” (Morrill Act of 1890, chap. 841, sec. 1, cited in Preer, 2004, p. 36).

Thus, 6 years before the U.S. Supreme Court held in *Plessy v. Ferguson* (1896) that separate public facilities for Blacks and Whites in the United States did not violate the Fourteenth Amendment,

the principle of “separate but equal” had already been enshrined in federal law by virtue of the Second Morrill Act. The states made sure that the Black land grant colleges (see Table 1) would not only be separate, but be unequal as well. Though federal law required an equitable division of funds between Black and White land grant schools, states routinely denied funding to the Black land grant colleges. When Black land grant colleges did receive Morrill funds at all, they received only a fraction of what they were legally entitled to.

Moreover, even if federal funds had been divided among the institutions in accordance with the proportion of African Americans within the population of the states (as the federal law required), it would not have resulted in equity between Black and White colleges. Morrill funds were comparatively small in comparison to state appropriations, the lion's share of revenue for state universities. Therefore, in a state where one third of the population was African American, simply allocating one third of Morrill funds to the Black land grant colleges would not have been enough to overcome the state's blatant pattern of racial discrimination against these institutions with respect to funding.

In addition, other forms of federal aid collaborated with the Second Morrill Act to further relegate Black land grant colleges to an inferior status. For example, the Black land grant colleges were handicapped by the wholesale refusal of the states to establish experiment stations at the Black institutions. Authorized by the Hatch Act of 1887, the experiment stations involved the land grant universities in collaborative research projects with the U.S. Department of Agriculture and private industry. The experiment stations played a significant role in developing scientific research methods in higher education. Often the experiment stations were staffed by members of the faculty; thus, through research and federal employment, the stations afforded White faculty members a bounty of opportunities for professional development. The stations became the first form of graduate education at the land grant universities.

In addition to the experiment stations, Congress passed the Smith Lever Act in 1914, authorizing the creation of agricultural extension programs whereby the land grant universities would disseminate the results of their scientific research to farmers within their states. However, because the

legislation gave the states the discretion to decide which schools received the funds, state legislatures appropriated little, if any, federal aid to Black colleges under this program.

Thus, Black land grant colleges, their faculties, their students, and their larger constituencies were excluded from the benefits of both the experiment stations and the agricultural extension services. African American faculty was excluded from the nexus of research and employment opportunities that the experiment stations afforded. African American farmers and sharecroppers, who sorely needed the information amassed by the scientific work of the experiment stations, were, for the most part, denied the benefits of the research on scientific farming techniques.

Moreover, while White universities were able to develop some diversified curricula offerings, instructions in the physical sciences at most Black colleges did not exist until the 1940s. Instead, the teaching of manual skills substituted for a truly collegiate curriculum appropriate for the purported mission of the land grant college. As late as the 1950s, Fred Humphries found that about 90% of the graduates of Black land grant institutions were still prepared to enter the field of teaching as

opposed to the natural science professions and engineering.

Modern Evolution

Black land grant universities have made remarkable strides since the era of Jim Crow. Southern state legislatures during the 1940s and 1950s began to belatedly enhance the curricula at Black colleges in response to legal challenges to admissions policies at all-White state universities that excluded African Americans. In addition, the passage of federal civil rights legislation enabled Black land grant universities to receive a substantially larger share of Morrill funds than they had previously received under the Jim Crow regime.

Substantial gaps remain in the research capacity and services offered by Black land grant universities and their White counterparts. However, Black land grant universities have carved out for themselves a significant role in providing access to higher educational and research opportunities for African Americans.

LAW SCHOOLS

In 1869, George Lewis Ruffin became the first African American to graduate from Harvard University Law School. He went on to become the first African American appointed to the Massachusetts judiciary. In 1883, Governor Benjamin F. Butler appointed Ruffin to the Charlestown Municipal Court, making him the first African American to serve as a judge in the state of Massachusetts. However, in spite of Ruffin's accomplishments, during his day, African Americans typically were barred from receiving a legal education.

To remedy that inequity, one of the nation's first institutions of higher education, Howard University, created a law department to serve the needs of previously enslaved Africans. The graduates of that law school led the fight for racial justice that allowed more and more African Americans of both genders to attend not just Howard's law school, but any in the land. That history is recounted in this entry.

The Howard School

In November 1866, Howard University was established to educate African Americans in the liberal arts and sciences. The institution bears the name of its founder General Oliver O. Howard, a Civil War veteran and commissioner for the Bureau of Refugees, Freedmen, and Abandoned Lands. On January 6, 1869, the university created the law department to "provide a legal education to Americans traditionally excluded from the profession" (<http://www.law.howard.edu/19>).

The first class was made up of six students who attended evening classes in the homes and offices of part-time faculty members. By June 30, 1869, the student body increased to 26. Two years later, 10 students completed the program and were granted bachelor of law degrees (LL.B).

Eight of the 10 graduates were immediately admitted to practice law in the District of Columbia. In 1872, the law department granted Charlotte E. Ray an LL.B, making her the first African American woman lawyer. Ray is also noted for being the first woman "to practice law before the Supreme Court of the District of Columbia" (Tushnet, 1994, p. 6).

In 1929, Mordecai Johnson, Howard University's first African American president, appointed Charles Hamilton Houston (a Harvard Law School graduate) academic dean of the law school. Under his leadership, the law school was transformed into an institution that trained lawyers to assist African Americans in their quest for justice and equality. He endeavored to produce lawyers who would become agents of social change and who would challenge racial discrimination. According to U.S. Supreme Court Justice Thurgood Marshall, one of Howard University Law School's most recognized alumni, Houston was "hell bent on establishing a cadre of Negro lawyers, dedicated to fight for equality...[both] to do something for Negroes as such and...to raise the image of the Negro lawyers" (*Murray v. Pearson*, 1936).

Fighting for Justice

During Houston's tenure, Howard University's law school did produce a cadre of lawyers who engaged in the struggle to overturn the legal doctrine of separate, but equal established by *Plessy v. Ferguson* (1896). In 1933, Marshall graduated from law school and immediately sought cases that challenged segregation in professional schools. In 1935, Marshall represented Donald Murray, an African American graduate of Amherst College who had been denied admission to the University of Maryland's law school. Marshall reveled in the opportunity to take on the university as that academic institution had rejected his law school application a few years earlier. In *Murray v. Pearson* (1936) the Maryland Supreme Court ordered the University of Maryland law school to admit African American students. Houston and Marshall, working with the Baltimore branch of the National Association for the Advancement of Colored People (NAACP), won an unprecedented victory.

In 1946, Marshall argued before the Supreme Court the case of *Sweatt v. Painter* (1950). Herman Sweatt was denied admission to law school solely based on race. The University of Texas Austin Law School barred African Americans, and they proposed that African American students attend segregated institutions. To comply with *Plessy*, the Texas state legislature created Texas State University for African Americans in Houston.

The school was temporarily housed in the basement of a building located in Austin, and three professors were hired to conduct classes. In *Sweatt v. Painter* (1950), the Supreme Court ruled that segregated law schools for Negroes were void of “those qualities which are incapable of objective measure but which make for greatness in a law school” (339 U.S. at 629, 635). In 1950, Sweatt was admitted to the University of Texas Law School.

Marshall, along with Howard law alumni Oliver Hill and Spotswood Robinson II, worked to dismantle segregation in all facets of U.S. society. They successfully challenged separate, but equal in graduate and professional programs. And ultimately, they prevailed in their efforts to overturn *Plessy* as it pertained to education when the Supreme Court ruled in *Brown v. Board of Education, Topeka, Kansas* (1954) that “in the field of public education the doctrine of separate but equal has no place” and deprived “plaintiffs and others similarly situated...equal protection of the laws guaranteed by the Fourteenth Amendment” (347 U.S. at 483).

Current Enrollment

These Supreme Court rulings paved the way for a racially marginalized people to gain access to a legal education. African Americans increasingly enrolled in law schools. Throughout the 1970s, there was a steady growth in African Americans pursuing law degrees. In 1971, there were 1,715 African American first-year law students compared to 2,212 in 1985. From 1986 to 1994, the enrollment of African American students leaped from 5,894 to 9,271—more than a 60% increase in less than a decade. This was followed by a slow, but steady increase over the following years (except for a slight decrease in 2005–2006). By 2007, the number of African American students attending law school reached a high of 9,529, exceeding an earlier high of 9,488 in 2004 to 2005.

In the last two decades, a disproportionate number of African American students enrolled in law schools have been women. This is ironic considering that women have historically been excluded from obtaining law degrees and practicing law. For instance, the same year that Ray received an LLB from Howard University’s law department, the Supreme Court heard arguments in the case of

Bradwell v. Illinois (1873). Myra Bradwell applied for a law license in the state of Illinois. The Illinois Supreme Court denied her application in *Bradwell v. Illinois*, stating “that God designed the sexes to occupy different spheres of action, and that it belonged to men to make, apply, and execute the laws” (83, U.S. at 130, 132). Bradwell appealed that ruling to the U.S. Supreme Court. The Court held that Bradwell’s constitutional rights were not violated, and in rendering the majority opinion, Justice Joseph P. Bradley contended that “the paramount destiny and mission of women are to fulfill the noble and benign offices of wife and mother. [And] this is the law of the Creator” (83 U.S. at 141). In upholding the lower court’s ruling, the Supreme Court allowed states to ban women from practicing law.

In 1956, Harvard University Law School, one of the first institutions to admit African Americans, but one of the last to accept women, graduated Lila Finwick, its first African American female law student. Finwick earned a law degree from Harvard University almost a century after Ruffin graduated from one of the nation’s most prestigious institutions. However, more recent statistics suggest that African American women have outpaced their male counterparts in U.S. law schools. In 1998 to 1999, 63.7% of African Americans accepted to law schools and 64.7% of first-year African American law students were women. According to one study, 59.6% of African Americans attending the 50 highest-ranked law schools were women.

Researchers have produced several studies that address the gender and the racial gaps visible in U.S. law schools. Reginald McGahee, Howard University Law School’s dean of admissions, suggests that there is a universal decline in African American male applicants. According to one study, African American women are more likely to earn bachelor’s degrees; hence, their opportunities to enter law school are greater than those of African American men. This same study maintains that African American women typically completed undergraduate programs with a higher grade point average than did African American men. These, along with other factors, are said to greatly contribute to the imbalance of African American women versus African American men in U.S. law schools.

Recently, studies critical of affirmative action in law schools have garnered attention. Opponents of affirmative action argue that schools who employ racial preference in determining the demographics of their student body cripple African American students who traditionally score lower on the Law School Admissions Test (LSAT), have a significantly lower attrition and matriculation rate (as compared to their White counterparts), and have a lower bar passage rate. However, affirmative action proponents argue that the LSAT is culturally biased and that if schools eliminate racial preference as one of their criterion, the enrollment of African Americans in law schools will decrease, as will the number of African American lawyers. As this intense debate continues, most who are for or against affirmative action as policy agree that it is critical for law schools to maintain diversity within their student bodies. However, there is much disagreement as to how law schools should achieve that diversity.

LEARNING DISABILITIES

Learning disabilities make up the largest of all of the special education categories. In 2004, 47.2% of the students who received special education services were served under the learning disabilities category. More boys than girls (approximately 3 times as many) are identified as having learning disabilities. Although African American students represent 16.8% of the school population, they make up 18.3% of the learning disabilities population, 26.4% of the emotionally disturbed population, and 34.3% of the mentally retarded population.

Many argue that since only 6% of the U.S. teaching force is African American, cultural misunderstandings of African American students by White teachers contribute to high rates of teacher referrals of African American students for special education services. These referrals translate to overrepresentation of African American students among students classified as learning disabled. This entry defines learning disabilities and looks at the implications of relevant law for African Americans.

Definition

Most students diagnosed with a learning disability have a severe discrepancy between potential and achievement (i.e., have an average or above-average IQ score, but score low on standardized achievement tests). Furthermore, it must be determined that their learning problems are not caused by other disabilities. The causes of learning disabilities are still debated. However, four factors that are suspected to cause learning disabilities are as follows: (1) environment, (2) brain damage, (3) heredity, and (4) biochemical imbalance.

The landmark case *Brown v. Board of Education, Topeka, Kansas* (1954) challenged the segregation of students, determined that separate was not equal, and proclaimed that all children were to be educated on equal terms. Although this case was paramount for African American students, many African American students with learning disabilities continued to be excluded from certain educational settings or served in segregated venues.

In 1975, Congress passed the Education for All Handicapped Children Act, Public Law 94–142, which said that students with disabilities, including

those who were African American, would be provided with a free, appropriate public education. This law has been reauthorized and amended five times. It was renamed the Individuals with Disabilities Education Act (IDEA) in its 1990 reauthorization.

The passing of the IDEA Improvement Act of 1997 required special educators to hold a full state certification as a special education teacher. If teachers do not have a license, a state special education teacher licensing examination would have to be passed for them to obtain a license to teach within the state. The passing of the No Child Left Behind Act of 2001 required that all children be proficient in all subject areas by the year 2014. This law also mandates that all teachers are highly qualified. Furthermore, it requires that all curricula utilized within the classroom be validated by scientific research. All school districts are expected to make adequate yearly progress toward the goal of being proficient in all areas. Failure to make progress toward the goal of proficiency after intervention would result in the ultimate restructuring of the entire school district.

Implications

The IDEA definition of learning disabilities indicates that students with learning disabilities have difficulty in one or more of the basic psychological processes. These students may have difficulty understanding what is being said to them or expressing what they may want to say. They may also have problems with retaining information, reasoning, attending to a task, or choosing or focusing on significant information.

In school, students with learning disabilities also struggle with reading and written language. They often underachieve in math, exhibit hyperactivity and poor social skills, have behavioral problems, and have deficits in the area of attention.

A majority of the students identified as learning disabled are referred for special education because they are having trouble reading. Dyslexia, also called specific reading disability, is a persistent deficit. Students with dyslexia often have difficulty with accurate or fluent word recognition and exhibit poor spelling and decoding abilities. Students with learning disabilities usually fare more poorly than their nondisabled peers in most

written expression areas, including vocabulary, grammar, and punctuation. They also consistently perform lower than typically developing students in the area of math.

LEE V. MACON COUNTY BOARD OF EDUCATION

Lee v. Macon County Board of Education (1964) concerns the first statewide desegregation ruling in the United States. In this ruling, a federal district court first enjoined the state board of education and the governor of Alabama from interfering in desegregation efforts and later ordered the desegregation of all of Alabama's 118 school districts. This entry covers the background, the facts, and the aftermath of the *Lee v. Macon County Board of Education* ruling.

Historical Context

It has been said that no other Supreme Court decision has affected so deeply and so immediately the daily lives and emotions of so many U.S. citizens as did the striking down of school segregation in *Brown v. Board of Education*. Within weeks of the declaration by the United States Supreme Court in

that case that racial segregation of public schools was illegal and unconstitutional, a White Southern resistance movement emerged, and it burgeoned into a massive force crystallized around and organized against desegregation. When a year after the 1954 *Brown I* ruling the Supreme Court declared in *Brown II* that it was now time for compliance, White resistance escalated.

This private White resistance took civic shape largely in the form of citizens' councils, primarily in the Deep South states of Alabama, Georgia, South Carolina, Florida, Louisiana, and Mississippi. The first council was formed in Mississippi. By October of 1954, White segregationists in Alabama started its first citizens' council in Selma, just after African American members of the National Association for the Advancement of Colored People (NAACP) had signed a petition seeking admission to a White school. Dozens more citizens' councils sprang up in Alabama after the Montgomery bus boycott in late 1955 and the attempt by Autherine Lucy, a young African American woman, to gain admission to the University of Alabama in early 1956.

The citizens' councils exerted resistance to desegregation in the early post-*Brown* years through economic and political pressure; meanwhile, the Ku Klux Klan, which began in Tennessee and whose membership overlapped with that of the councils, exerted force through violent means. By the late 1950s, there were hundreds of these local White organizations throughout Southern towns with hundreds of thousands of members united in the goal of resisting desegregation.

White defiance was officially expressed at the legislative level in the form of the Southern Manifesto, signed onto by almost all of the U.S. senators and representatives from the South. The manifesto denounced the *Brown* decisions as unconstitutional, pledged their reversal by all lawful means, and asserted the intention to defy any effort of the federal government to implement desegregation by force.

Facts of the Case

This solidified and pervasive White resistance to desegregation worked to ensure that not one single public school in Alabama had desegregated by 1960, regardless of the new law of the land handed down in *Brown I* and *II*. Schoolchildren in

Alabama attended schools exclusively of their own race. The state of Alabama, in fact, maintained an official policy favoring racial segregation in public education and purposefully operated a dual school system with one set of schools for African Americans and another for Whites. George C. Wallace, in his successful gubernatorial campaign in 1962, pledged his opposition to all attempts to desegregate Alabama's public schools; he would, he promised, refuse to abide by any such court order and physically bar the entry of African American students into White schools.

This intentional dual system, in complete defiance of the *Brown* ruling, was evident in the facts and figures of the annual report of the Alabama Department of Education, which set forth statistical and financial data for the 1961 to 1962 school year. Virtually every school, student, teacher, and piece of equipment in every public school throughout Alabama was designated in the report as White or African American and separated on that basis.

In January 1963, in Tuskegee, Alabama, a group of African American children and their parents filed suit against the Macon County Board of Education, seeking to enjoin the school board from continuing to assign children to schools on the basis of race and continuing to operate a compulsory biracial school system that violated the law. The Macon County Board of Education was found to be in violation of the constitutional rights of the plaintiffs. The district court's initial order required the school board to begin desegregation of its county school system in September of 1963.

In compliance with the court order in this case, 13 African American students were assigned to begin the new school year at Tuskegee High School, previously operated as an all-White school. When those children arrived for their first day of classes at Tuskegee High, they were met with more than 200 Alabama state troopers, acting at the direction of Wallace, who had declared the school to be closed for the ensuing week. When the African American students returned to Tuskegee High 1 week later, state troopers again barred their entry, but permitted White students to attend the school.

Within days, however, every White student registered to attend Tuskegee High had withdrawn; these White students were transferred to two other all-White Macon County high schools and a newly formed private school that was limited to White

students. Soon thereafter, the state closed Tuskegee High and required the African American students who had remained there to transfer to an all-African American high school.

After Macon County's failure to desegregate and the state's interference therein, the plaintiffs in this case amended their complaint to include the Alabama State Board of Education, the state superintendent of education, and Wallace, the ex officio president of the state board of education, who, through their establishment and enforcement of rules and policies, exerted extensive and specific control over the operations of local Alabama school systems. These state-level defendants had used their considerable authority and control—via finances and funding, school construction, provision of textbooks and educational materials, local school bus transportation, and placement of students and teachers—to sustain the statewide dual system of segregated schools.

In this instance, these state actors had directed the closing of Tuskegee High, the transfer and transportation of White and African American students to other White and African American high schools, and the transfer of teachers to accommodate these racially segregated student transfers. The evidence clearly established persistent, willful, obstructionist acts by the governor, the state superintendent of education, and the state board of education to prevent the Macon County school system from carrying out its court-ordered desegregation responsibilities.

District Court's Order of 1964

With the original lawsuit extended to include the state officials, the district court in 1964 enjoined them from interfering with court-ordered desegregation anywhere in the state of Alabama. The court's order of 1964 is in several aspects an exercise of judicial restraint, an effort to encourage, guide, and accommodate a constitutionally required and court-ordered process that could yet be driven to a great extent by the school systems themselves, with all due support from the state, rather than by the judiciary. There were four major statutes and legislative decisions critical to the school system defying the *Brown* decisions.

First, in its consideration of Alabama's grants-in-aid statutes, by which it provided funds to

establish and maintain a private school in Macon County, the district court refrained from declaring these statutes unconstitutional on their face. Rather, the state was enjoined from using such statutes to pay tuition grants to schools that discriminate on the basis of race, but the court left open, for the time being, the possibility that such statutes and private school options could be employed on a nondiscriminatory basis.

Second, the district court considered the Alabama School Placement Law, which had been employed by the state clearly as a means of thwarting desegregation, by requiring testing only for African American students, but not White students, who sought transfer. Again, while the defendants were enjoined from this unconstitutional application of the law, the court held open the possibility that such a placement law could be put to good, nondiscriminatory use.

Third, the court considered the plaintiffs' argument that, in view of the state-level defendants' extensive power and control over the local school systems, the order to desegregate Macon County ought to be enlarged to a desegregation order for all of Alabama. Although the court admonished the state against any future interference—subtle or outright—it chose not to order statewide desegregation, assuming instead that the governor, the state superintendent, and the state board of education would comply in good faith with the injunction prohibiting their interference with local school systems. In hindsight, this was a faulty assumption and further thwarted the intent and promise of *Brown*.

Fourth, in light of *Brown*'s requirement for all deliberate speed in the effectuation of desegregation, the court acknowledged that it could, and possibly should, order an immediate cessation of state funding for this purpose of operating segregated schools; instead, the 1964 order issued clear notice to the local and state school officials that the state must, within a reasonable time, begin distributing public funds only to those Alabama school systems that had proceeded with deliberate speed to desegregate.

District Court's Order in 1967

Two and a half years later in 1967, however, the district court considered anew the plaintiffs' repeated request for a statewide desegregation

order and injunctive relief against the use of state funds to support a dual school system based on race. This time, in view of the state's utter failure to comply with its affirmative constitutional duty to desegregate Alabama's public schools, the court was no longer reluctant to grant the relief to which the plaintiffs were entitled from the beginning.

The opinion of the court in this case reviews in great detail the ways in which the state of Alabama, through its state board of education, its governor who was also ex officio president of the state board of education, and other officers and individual members of the state board of education, had exerted control to maintain the racial characteristics of the segregated Alabama public school system. In many instances, the state used its authority both as a threat and through a system of punishments and rewards to obstruct the desegregation efforts and obligations of local school officials.

Numerous local school systems throughout Alabama had, in fact, submitted compliance plans for desegregation of all 12 grades for the 1965 to 1966 school year. State officials had adamantly contested such plans, causing local districts to revoke their own desegregation initiatives. Similarly, Alabama school districts that attempted to assign teachers across racial lines had been faced with the proclamation by Wallace that it contravened Alabama law and public policy to have White children taught by African American educators and that he would use state police power to enforce it. The state board of education had backed up this position with promises of generous funds for additional classrooms and additional paid (White) faculty positions for districts that allowed White children to choose White teachers and opt out of African American teachers' classrooms.

In many other instances, the state had continued to perform its own functions in such a way as to maintain racial separation, as exemplified by the state's earlier interventions with Tuskegee High. The state had pervasive control over school construction and consolidation, faculty and staff assignment, and transportation. The state board of education had funded school construction where it would thwart desegregation, locating new schools so as to perpetuate the dual system and controlling the financing of construction so that African American children were assured of markedly inferior school facilities. They had disallowed

consolidation where it would have a desegregating effect and conversely consolidated schools in ways to maintain segregation.

It was an affirmatively stated public policy in Alabama that African American teachers not teach White children, and the state board of education had worked to thwart desegregation of faculty and staff in Alabama's public schools. In its micromanagement of the school transportation system, the state board had provided markedly inferior buses for African American children and transported them past closer White schools to segregated African American schools farther from their homes.

The court imposed a statewide, freedom-of-choice desegregation plan. According to the court, there was at this point no other conceivable way to assure that school desegregation could be achieved than to create a uniform plan, applicable to each local school system not already under court order to desegregate with the onus on the state to implement it. Under this order, subsequently affirmed by the Supreme Court in *Wallace v. United States* (1967), the state defendants would bear responsibility for the various categories of desegregation.

Later Litigation

A year after the Supreme Court affirmed the uniform, statewide desegregation plan set forth by the Middle District of Alabama, the plaintiffs returned to the district court, this time to assert that the freedom-of-choice approach was an unfeasible and inappropriate one for achieving desegregation. The court took this opportunity to order minimum faculty desegregation requirements and minimum student standards, but it reaffirmed its freedom-of-choice plan at that time.

Later, however, the court overturned the freedom-of-choice remedy and proceeded to make the individual school boards and their members and superintendents formal defendants in the statewide litigation. By 1970, the case was divided into individual lawsuits for each school district, creating numerous separate school desegregation cases for the school systems located within the three federal judicial districts of Alabama with each case to be supervised by the district court for the geographic area in which the school system was situated.

In 1997, nearly 35 years after initiation of *Lee v. Macon County*, all but two of the approximately

40 school desegregation cases in the Middle District of Alabama still lingered in the court system with very little recent activity. The court then began to issue orders in the desegregation cases for detailed discovery regarding what particular steps were necessary to bring each school system into full compliance as a unitary school district. Soon thereafter, partial unitary status—on the various areas traditionally targeted for desegregation, including facilities, transportation, faculty and staff assignment, student assignment, and extra-curricular activities—was declared where warranted in each individual case, and consent decrees were entered for all aspects of the school districts that required additional desegregation work.

These decrees encompassed specific quality-of-education issues—including tracking and ability grouping, special education, discipline, drop-out prevention, graduation statistics, resource allocation, curriculum, and salary—all with the goal of eliminating the vestiges of past discrimination and assuring future compliance with constitutional requirements. Through thorough and strict oversight by the court, nearly all of the school districts in the Middle District of Alabama have achieved full unitary status, bringing *Lee v. Macon County* finally to a close in those areas.

LIDDELL V. MISSOURI

Racial segregation in St. Louis schools and the poor quality of schools that served mostly African American students were the main issues that arose in *Liddell v. Board of Education of the City of St. Louis, State of Missouri* (1984). This case has a lengthy and complex judicial history and illustrates many of the difficulties in remedying urban school desegregation cases. The outcome in *Liddell* was the implementation of one of the largest and most expensive school choice programs in the nation. This entry reviews the historical events that led to the initial lawsuit in *Liddell* and the subsequent developments in the case. It then examines the impact of the case on desegregation in St. Louis.

Historical Background

Prior to 1865, Missouri prohibited the creation or maintenance of schools for teaching African American children to read or write. Yet in 1865, the state legislature passed laws requiring that separate schools be established for African American students and incorporated the substance of this legislation in the Missouri Constitution of 1945. Thus, separate schools were maintained by the St. Louis Board of Education in accordance with this law. However, in 1954, the U.S. Supreme Court struck down the separate-but-equal doctrine in public education in *Brown v. Board of Education, Topeka, Kansas* (1954, *Brown I*). Yet almost 20 years after *Brown v. Board of Education* (1955, *Brown II*) ordered that schools be desegregated with all deliberate speed, St. Louis and other Missouri cities were still failing to provide school systems that remedied the continuing effects of past discrimination and barred future discrimination.

The integration of African American children into White schools was not the only dilemma that faced the courts in St. Louis and beyond. Schools attended primarily by African American students often had inferior textbooks and curricula and inadequately trained teachers and administrators. During this time, many city and county schools in Missouri were busing African American students to White schools, only to place them in separate classrooms. *Liddell v. Missouri* was among the cases in which the federal courts labored to formulate a remedy that would minimize the effects of segregation to constitutionally permissible limits.

Facts of the Case

In 1972, St. Louis resident Minnie Liddell, along with other North St. Louis residents, filed a discrimination suit against the St. Louis Board of Education and the state of Missouri. This class action suit was filed on behalf of Craton Liddell, (Liddell's son), and other African American students in the city. The plaintiffs charged the St. Louis Board of Education and the state of Missouri with maintaining racially segregated schools in violation of the equal protection clause of the Fourteenth Amendment of the U.S. Constitution. In the initial litigation proceedings, a federal trial court in Missouri entered a consent agreement between the *Liddell* plaintiffs and the defendants that provided for an increase in the number of African American teachers and a pledge by the board of education to seek racial balance in the schools.

The case was reopened in 1977 when the court allowed the National Association for the Advancement of Colored People (NAACP) to be added as a plaintiff-intervenor and the state commissioner of education to be added as a defendant. In 1979, the federal trial court ruled that the plaintiffs failed to prove that the St. Louis Board of Education and the state of Missouri had intentionally caused student segregation and further held that none of the board of education's actions had the foreseeable effect of causing or maintaining segregation. The court added that regardless of whether the board of education or the state had committed a constitutional violation, the parties were still bound by the consent decree in which the board agreed to desegregate the schools wherever possible.

Dissatisfied with the outcome, the plaintiffs sought further review. In 1980, the U.S. Court of Appeals for the Eighth Circuit reversed and remanded the case in favor of the plaintiffs. The appellate court found that the St. Louis Board of Education had not effectively desegregated the schools and that its policies and actions furthered segregation in the school districts. To satisfy its constitutional duty to disestablish its dual school system, the appellate court ordered the St. Louis Board of Education to develop a systemwide plan for the desegregation of its schools; the plan had to offer African American students substantially equal opportunities to attend desegregated schools.

In 1980, the trial court, on remand, determined that since the state of Missouri was primarily responsible for providing schools that met constitutional requirements, it had the duty not only to participate in remedial desegregation efforts, but also to provide funding for such programs. In addition, the trial court decided that since the state of Missouri and the St. Louis Board of Education were liable for the segregated conditions as a matter of law in the schools, they had to participate in a desegregation remedy that was multifaceted. Ultimately, this mandated desegregation plan survived multiple rounds of litigation and contained multiple remedies. Generally, the program called for the following: (a) student reassignments within the district, (b) the opening of magnet schools, (c) the creation of budgets that would fund the costs associated with improving the quality of public education for African American students who remained in the St. Louis district, and (d) the hiring of African American staff in the county school districts.

The *Liddell* litigation went on to generate a lengthy series of related cases, consisting of more than 65 separate legal actions beginning in 1983 with voluntary interdistrict remedies. *Liddell* finally culminated in 1999 when the trial court declared that the public schools in St. Louis had attained unitary status because they had done everything necessary to eliminate the vestiges of legal segregation and would not return to these discriminatory practices.

The Impact of the Ruling

By 2001, more than 10,000 African American students in the city of St. Louis boarded school buses

each morning heading to suburban schools in the county, and another 700 White suburban students attended city magnet schools. The state of Missouri and the St. Louis Board of Education had spent more than \$2 billion to implement this desegregation plan.

Over the years, the Missouri desegregation plan has provided for a voluntary city-county transfer program, where students are allowed to transfer from inner-city schools and to other county schools; the plan has also expanded the magnet school program. The voluntary transfer program is optional, but there has not been a shortage of students willing to face hour-long bus rides just for the opportunity to attend county schools. Students are also flocking to magnet schools; yet the placement through the annual magnet school lottery is limited to the number of available seats.

Although the plan created by the St. Louis Board of Education and the state of Missouri has helped to alleviate the initial concerns caused by school segregation, many educators argue that the plan has had an adverse impact on African American teachers and students. Specifically, scholars argue that the push to transfer students from the city to the county has stigmatized African American educators teaching in city schools as inferior. Consequently, the desegregation plan has fueled the pre-*Brown v. Board of Education* belief that African American teachers are unqualified and incompetent. The effects of this stigmatization can be seen in the low number of African American educators teaching in county schools; if they are not qualified to teach African American children, they are deemed to be ineligible to teach White students in racially mixed or predominantly White schools.

In addition, it has also been argued that the desegregation plan has had negative effects on African American students who transfer to county schools and on those who remain in schools in the city. African American students in all-White or racially mixed county schools have reported that they feel isolated and were treated unfairly, while African American students who remain in the city have been disadvantaged by the removal of the top students from the classrooms and the transfer of state funding from the city to county school districts.

The full effects of the decision in *Liddell* have yet to be seen. In 1998, the report of the Voluntary

Interdistrict Coordinating Council reported that the test scores for African American transfer students were relatively the same as those for African American city students. By 2003, the number of children in the inner-city schools decreased by 64%. The dropout rate of African American students left in schools in the city has fallen, and the graduation rate has increased, but their test scores are still below statewide educational statistics.

Difficulties within the St. Louis School District continue, and conflict over educational issues continues to be at the forefront of political and social debates. Yet in spite of this, St. Louis has sent more African American high school graduates to college than in the past. For example, Craton Liddell graduated from Yeatman Middle School and Northwest High School and then attended Lincoln University in Jefferson City and Harris Stowe State College in St. Louis. He died on December 6, 2002, and shortly after, Yeatman Middle School was renamed Yeatman-Liddell Preparatory Junior High in his honor.

LINCOLN UNIVERSITY (PENNSYLVANIA)

Lincoln University, located in southern Chester County, Pennsylvania, is the oldest of the bachelor of arts degree-granting historically Black colleges and universities (HBCUs). From its beginning, it had a relationship with Africa that was unmatched by any other learning institution in the Americas. In the 20th century, it was the only university that could boast of graduating two of Africa's most influential leaders: Nnamdi Azikiwe (class of 1930) and Kwame Nkrumah (class of 1939, 1942 seminary). During the first century of its existence, Lincoln graduated approximately one of every five future African American physicians and more than one of every 10 future African American attorneys in the United States.

Its graduates have gone on to lead over 35 colleges and universities and an impressive number of prominent churches. At least 10 of its alumni served as U.S. ambassadors or mission chiefs while others became federal, state, and municipal judges. There have also been mayors and city managers that acknowledge Lincoln University as their alma mater. Lincoln is also renowned for the African American business persons and African American

military who received their undergraduate education there, but it is most known for the early cadre of ministers and missionaries that it prepared.

Lincoln shares the similarity of producing African American leaders with other historically Black colleges and universities (HBCUs), but its special role as a trailblazer in liberal arts education for African-descended males and its Presbyterian-Quaker roots set it apart. Lincoln's early and continued relationship with Africa also helped to mark it as an institution of Pan African importance that only few HBCUs can claim. Indeed, Africa and the condition of the African descendants in the United States were at the center of the institution's origin.

Since 1972, Lincoln has been formally associated with the Commonwealth of Pennsylvania as a state-related, coeducational institution. Lincoln University is accredited by the Middle States Commission on Higher Education. Lincoln offers academic programs in the arts and sciences for undergraduate students at its main campus and graduate programs in human services, education, and administration at its urban center in Philadelphia. The Middle States Association of Colleges and Schools is the agency that accredits Lincoln University. The university's spring semester 2008 enrollment was approximately 1,900 undergraduates and 500 graduate students. This entry looks at the university's historical roots and evolution.

Founding Rationale

Lincoln University's origin, which antedates the demise of chattel enslavement in the United States by almost a decade, is both amazing and peculiar. Lincoln is the first institution of higher learning to support U.S. colonialism in Africa. The institution's support of colonization of Liberia pleased both abolitionists and those who enslaved Africans.

The motives for these two social forces were different, yet their conclusions were the same. Abolitionists saw the institution as an incubator for African missionaries who would be able to spread the gospel in Liberia and other parts of Africa. For those who enslaved Africans, an African colony was a preferable locale for the settlement of free Africans at that time residing in the United States. The American Colonization Society (ACS) was the organization that brought these two

forces together, and the founder of Lincoln University was an active member of the ACS.

In 1853, one of New Castle, Pennsylvania's presbyters received an approval for beginning an institute to provide scientific, classical, and theological education to African American male youths. That recipient was Dr. John Miller Dickey (1806–1878), who was a Presbyterian minister from 1832 to 1856 and an active member of ACS. Sarah Emlen Cresson, Dickey's wife and a member of a famous Philadelphia land-owning Quaker family, figured largely in the institute's founding. Dickey served as the director of Princeton's seminary, his 1927 alma mater, and president of its board from 1856 until his demise in 1878. This would also figure largely in the institution that he was to help mold as it would provide a constant source of faculty for the endeavor.

The institution was initially chartered on April 29, 1854, by the Commonwealth of Pennsylvania as Ashmun Institute, named in honor of the early administrator of the U.S. colony of Liberia, Jehudi Ashmun (1794–1828). Ashmun's effectiveness in establishing Liberia earlier in the century earned him the naming honor. Liberia would later become a training ground for graduates from the Lincoln University seminary as well as a significant feeder of students near the close of the 19th century.

Early Years

On December 31, 1856, Rev. John Pym Carter was installed as the Ashmun Institute's principal, and on the next day, the institute began instruction. The 1857 inaugural class was made up of four students, two enrolled in the preparatory track of the institute and two enrolled in the missionary training track. By 1859, three students graduated and were ordained by New Castle's Presbytery. They then were commissioned by the Presbyterian Church's Board of Foreign Mission and expeditiously took positions in Liberia as missionaries. James Ralston Amos, who in 1852 had originally sought Dickey's assistance for an education that would allow him to serve as a minister, was one of these graduates. By 1867, the institution officially launched its theological department as a 2-year course of study.

The 1860s, a tumultuous decade punctuated by the Civil War, led to increased enrollment of newly freed Africans, primarily from the southern region of the United States. With the increasing enrollment

came economic challenges, which Dickey responded to by mortgaging his house in 1860 to defray operating costs. Ashmun Institute was renamed Lincoln University in 1866, in honor of the slain president, and was changed into a full-fledged university that sought to offer professional training and liberal arts curriculum. The professional fields were law, medicine, and pedagogy (education).

The seminary remained prominent and was now joined with a College of Liberal Arts. All enrolled students were required to belong to one of the two literary societies on the campus. Lincoln's ambition did not stop at curricular offerings; the university's leadership sought to introduce a racially integrated student body. Lincoln University's six 1866 bachelor of arts degree recipients were made up of four African American and two White students. By 1896, Lincoln University had graduated 515 students.

The liberating atmosphere of the Reconstruction era (1865–1877) helped to illuminate opportunities and generate hope for matriculating students at Lincoln University. Lincoln's graduates had a profound impact on the African intelligentsia generally, but the alumni's self-awareness was remarkable and is worth noting. The Lincoln University Alumni Association was launched during Lincoln's 1872 commencement. Its goals were twofold: increase enrollment and strengthen the unity of the alumni.

In 1875, under the presidency of Rev. Charles Hedges (class of 1869), the association launched a petition demanding that African Americans be fairly represented among the faculty. In June of 1876, the board returned their negative reply, explaining that teaching at Lincoln was a form of penitence for Whites who had committed the collective sin of enslavement. Since African Americans were not guilty of this sin, they had no need to repent. This response only galvanized the opinion of the alumni, but with the waning of the federal commitment to the Reconstruction and Lincoln's growing economic problems, the absence of African American faculty would have to wait for another 55 years for a resolution.

Hard Times

Lincoln's administration and trustees were less concerned with the growing militancy of some of its alumni than it was with the changing climate in

the country. Conservative forces were reversing the policies of the Reconstruction and blaming the reformers for the economic downturns resulting from the Civil War. Such a turn of events led to decreased giving. The economic crisis of 1873 eventually reached Lincoln University and economic shortfalls caused it to scale back its academic programs. The schools of law and medicine were closed in 1873 and the business and normal departments were phased out in 1875. The seminary, however, continued.

The alumni association continued to assist in outreach and began to fund-raise for the university. From 1884 through 1885, the Lincoln Alumni Association published the first alumni magazine produced in the United States. The publication, titled *The Alumni Magazine*, was published by Nathan F. Mossell (class of 1879) and helped to develop the self-worth of the alumni by regularly reporting on advances made by Lincoln's alumni in their professional and personal endeavors. The magazine also contained hard-hitting articles and book reviews challenging European cultural arrogance with a specific aim at White supremacist attitudes in educational institutions.

A series of articles, which included a tract authored by Fredrick Douglass, took on the colleges and universities that taught African Americans, but refused to employ them as faculty. One of the most noteworthy contributing authors to the magazine was Solomon M. Coles (class of 1872), who made a strong case for African American teachers and professors. Coles also included a thorough article on the need to teach all students about the accomplishments of the Africans in ancient Egypt, Sudan, and Ethiopia.

Although Lincoln University was ahead of other HBCUs in its awarding of bachelor degrees to African American men, it lagged in trustee and faculty representation from its targeted cohort. This resulted from the paternalistic ideology of its founders and sponsors. By 1928, however, the first African American trustee was elected to the board. This change of heart was influenced by the rising influence of the alumni and its financial support and the criticisms from scholars such as W. E. B. Dubois, who were publicly challenging the sincerity of HBCUs that did not place African Americans in faculty or leadership positions. Howard University had appointed its first African American

president in 1927 and that added pressure to Lincoln's leadership to catch up to the times.

African American Leaders

Horace Mann Bond reported that Lincoln University hired its first African American faculty in 1931, which is the year that future Nigerian president, Nnamdi Azikiwe, was hired as a part-time instructor. Azikiwe initiated Negro studies into Lincoln's curriculum by teaching the first course of its type at Lincoln. Bond was probably referring, however, to Theodore Frederick Hawkins (class of 1931), who taught chemistry and obtained the rank of a full-time instructor upon his graduation. Lincoln catalogues, however, listed Bond as an instructor in pedagogy at an even earlier date than these other two alumni. He is listed as teaching three education courses during the 1924 to 1925 academic year. Like Azikiwe and Hawkins, this was the next year after his graduation from Lincoln.

At a more influential level of the university, in 1945, Bond became Lincoln University's fifth president, the first alumnus and first African American to hold that position, and he served through 1957. One year after serving as Lincoln's president, Bond achieved another milestone by becoming the first Lincoln University official to participate on the African continent in the African Liberation Movement. Bond was listed as the only college president to attend the African Freedom Fighter's conference in Accra, Ghana, in 1958. It was also during Bond's presidency that Kwame Nkrumah, as leader of government business of the Gold Coast, was given an honorary doctorate at Lincoln University. Bond's presidency not only strengthened the African American leadership voice at Lincoln, it also ushered in the era of women's matriculation toward graduation.

As of this writing, there have been four African American presidents of Lincoln University: Horace Mann Bond, 1945 through 1957; Herman Branson, 1970 through 1985; Niara Sudarksa, 1987 through 1998; and Ivory Nelson, 1999 through present. This list excludes acting presidents.

Women's Role

In 1873, Lincoln's board decided to admit women as that was a requirement to win certification for its

normal department. Pennsylvania did not allow for such status if access to enrollment in the requesting institution was denied based on race or gender. The state turned down Lincoln's application, and the board returned to its original enrollment policy. Lincoln had no female faculty members until 1943, when Grace Hughes Rivero began to teach Latin. She was the wife of the famous Lincoln University coach, Manuel Rivero. During 1934, the female enrollment barrier was broken temporarily for Marjorie Martin, wife of Coach Julius Fitzgerald Martin. The policy was also relaxed in the summer of 1934 when Lincoln officially offered coeducational courses targeting teachers.

Females were not graduated, however, until the year 1953, as Lincoln's charter had prohibited female matriculation toward graduation. The prohibition prevented Ruth Fales, wife of Philosophy Professor Walter Fales, from graduating in 1952 though she had completed the proper credits for a bachelor's degree. To resolve this problem and to keep the university solvent during a slump in enrollment, Lincoln's Board of Trustees announced in the early 1950s its intention to extend the university's mandate beyond its Negro focus and its male exclusiveness.

There would eventually be much more success with the enrollment of women than of students of other races. The university admitted women students in 1952, amended its charter in 1953 to allow women to receive degrees, and outfitted the campus for female residential matriculation by 1965. By the 1970s, female student enrollment surpassed male enrollment, and it still does.

The most outstanding presence of females at Lincoln University came with the inauguration of Niara Sudarkasa, Lincoln's eighth president from 1987 through 1998. During her presidency, Lincoln University instituted its mandatory African American Experience course, which continues to be required for all matriculating students. Sudarkasa's presidency continued Lincoln University's prestige on a Pan African level, and during her tenure, Lincoln enjoyed an increase of faculty and students from the African continent.

LITERACY

Literacy is broadly understood as one's ability to read and write, especially in the dominant language of one's society. In the African American tradition, however, the mastery of the English language is also often demonstrated in oratory. Thus, African American culture reflects the symbiosis of literacy and orality. In the context of African American education, in particular, literacy is ostensibly more political in connotation. Historically, literacy for African Americans has been linked to notions of freedom—especially freedom from enslavement—and empowerment. Many scholars have characterized the attainment of literacy as an assertion of African American humanity. Literacy remains a critical sociopolitical and academic issue for African Americans—particularly in light of achievement gap discourse. Thus, literacy is quite a contentious topic in African American education. This entry looks at the history of the issue and its current status.

The earliest demonstrations of the politics of literacy are found in the publications of enslaved and formerly enslaved Africans. Phyllis Wheatley, writer of "On Being Brought From Africa to America," for instance, invokes the humanity of the enslaved by serving as an example of and testifying to the potential for change and refinement of the enslaved. Furthermore, slave narratives such as *The Narrative of the Life of Frederick Douglass*, while simultaneously condemning chattel enslavement in the United States, also celebrate the humanity of the enslaved. The narratives of the enslaved reveal not only the drastic measures taken by the enslaved to escape bondage, but also the risks taken to secure literacy. The authors of narratives of the enslaved used their stories as abolitionist texts and as an assertion (or insertion) of their—the African Americans'—place in history.

Because literacy for the enslaved was illegal and frowned upon by masters who thought it would distract their laborers, learning to read and write was life-threatening work. The enslaved risked being sold, beaten or whipped, and even killed to become literate. They viewed literacy as the key to emancipation because it enhanced their understandings of their sociopolitical worlds, which allowed them to actively participate, for instance, in the abolitionist movement, political debates of their time, and the shaping of U.S. history. Thus, after becoming literate, many of the enslaved sought immediate emancipation from bondage.

After the ratification of the Thirteenth Amendment (1865), which abolished enslavement in the United States, literacy in the African American community remained a preeminent concern. Debates over the rights of and place for African Americans were commonplace, and although no longer enslaved, African Americans continued to experience social, political, and economic inequity. In other words, though free from physical bondage, they were not free from oppression. African Americans in the United States did not become citizens until after the ratification of the Fourteenth Amendment (1868), and the right to vote was not extended to African American men until the ratification of the Fifteenth Amendment (1870). Nonetheless, as a result of the efforts of the Freedmen's Bureau and the missionary work of many Christian churches, separate schools were built to educate freed African Americans.

Although literacy efforts improved and increased with the opening of grade schools and colleges for African Americans, the African American condition in the United States remained plagued by racist ideologies and discrimination. Literacy was used as a weapon to combat these challenges. Many African American leaders used their mastery of the English language in both writings and speeches of protest against discrimination and political and economic disenfranchisement. Because literacy was viewed as a privilege in the African American community, those who obtained literacy were thought to have the responsibility to impart knowledge to the rest of the African American community. Thus, the combining of oral traditions and literate practices resulted in prolific speech-making as a mode of resistance.

Noteworthy speeches given by African American leaders include Booker T. Washington's (1895)

"Atlanta Compromise Speech" and Mary Church Terrell's (1906) "What It Means to Be Colored in the Capital of the United States." These speeches demonstrate the power of literacy as a tool to address issues concerning African Americans and protest the injustices of the day. In addition, continued access to higher education, which enhanced the literacy skills of many African American leaders, led to myriad publications on the nature of race and solutions to the problem of racism. Among them was W. E. B. Du Bois's (1903) *The Souls of Black Folk*, which particularly addressed the place of education in the improvement of the condition of African Americans in the United States.

In addition to speeches and individual publications, the "Negro Press," a system of African American news publications, became an invaluable resource in the struggle against social injustices. Although the first African American newspaper was published 1827, the Negro Press grew tremendously after the emancipation of the enslaved. The dependence on print media as a communication network for information exchange and celebration of achievements within the African American community made literacy essential. African Americans were educated about local and national politics, informed about community issues, and exposed to the talent present within the community through African American newspapers and magazines.

But literacy, along with other modes of resistance, was met with opposition. The Jim Crow South in particular was a site of great challenge to African American rights and to African American humanity. In an effort to disenfranchise African Americans, literacy tests were implemented at voting polls throughout the South. Upon arriving to vote, African Americans were made to read a text (most notably a section of the U.S. Constitution) and demonstrate comprehension. Comprehension was determined by the poll administrator and was based on his definition of proficiency. Failure to prove one's competence resulted in the rescinding of one's right to vote at that poll. Thus, literacy as a fight against oppression was more than mere ideology during the Jim Crow era; it was an actual practice. It would not be until the passage of the Voting Rights Act of 1965 that literacy tests became illegal. This act outlawed any acts of terrorism used to intimidate African American voters.

The mid- to late 1900s witnessed increased rates of poverty in the African American community and the growing density of low-income African American communities in urban areas. Among the challenges facing these communities was education. The 1954 *Brown v. Board of Education, Topeka, Kansas* decision ushered in a new wave of school equity concerns for African Americans. The *Brown* decision reversed the 1896 *Plessy v. Ferguson* decision that required separate-but-equal facilities for African Americans and Whites and called for school desegregation and equity. However, school desegregation did not quell the social injustices experienced by African Americans in education, and literacy remained an academic concern. As discrepancies in the achievement of African American students and White students increased, theories of cultural deficiency emerged. Cultural deficit theory is an extension of Darwinian reasoning and suggests that failure of a group to succeed in particular contexts is the result of natural inferiority. As this pertains to schooling of African Americans, it suggests that African Americans are naturally inferior intellectually and that African American culture inhibits African American student success.

In 2001, the reauthorization of the Elementary and Secondary Education Act, also known as No Child Left Behind (NCLB), called for enhancing efforts to minimize the gap in achievement between White students and those in particular subgroups—African American being one of the said subgroups. Literacy attainment in NCLB rhetoric is often quantified as the score received on particular sections of state-mandated standardized tests. Literacy in the African American community, however, is about more than passing standardized tests in the K–12 school systems of the United States. It is what grants access to higher education, as all students must demonstrate writing and reading competence to be granted admission to degree-granting programs. Literacy attainment also has implications for the distribution of wealth in the African American community and the rate of employment. Furthermore, literacy continues to be viewed as a form of empowerment—an effective strategy for overcoming oppression based on race, gender, and class. Yet literacy has become more complex in the 21st century.

LITTLE ROCK NINE

The Little Rock Nine were nine African American students and their families who bravely challenged segregation in the public schools of Little Rock, Arkansas. These trailblazers are etched in the annals of U.S. history and the nation continues to celebrate their contribution to the civil rights movement. In 1958, Melba Pattillo, Ernest Green, Elizabeth Eckford, Minnijean Brown, Terrence Roberts, Carlotta Walls, Jefferson Thomas, Gloria Ray, Thelma Mothershed, and Daisy Bates received the National Association for the Advancement of Colored People's (NAACP's) Spingarn Award for their courage. This entry provides the legal context and describes the developing crisis in Little Rock, the response of the nine students, and the aftermath.

Legal Background

The National Association for the Advancement of Colored People (NAACP) was integral in confronting Jim Crow segregation. In 1940, the organization

established the Legal Defense and Educational Fund (LDF) and launched a full assault on the separate-but-equal principle set forth in *Plessy v. Ferguson* (1896). Prior to addressing this landmark decision in primary and secondary education, the LDF effectively dismantled segregation in professional and graduate schools. No longer content with agitating for equalization, they shifted their strategy and focused on a plan of desegregation. The court's opinion in *Missouri ex rel. Gaines v. Canada* (1938), *Sweatt v. Painter* (1950), and *McLaurin v. Oklahoma Regents for Higher Education* (1950) provided the foundation for the LDF to challenge the constitutionality of state-sanctioned segregation in primary and secondary education.

In 1952, lawyers argued five cases in succession, *Brown v. Board of Education Topeka, Kansas*; *Briggs v. Elliot* (South Carolina); *Davis v. County School Board of Prince Edward County* (Virginia); *Gebhart v. Belton* (Delaware); and *Bolling v. Sharpe* (first filed in 1951; District of Columbia). In 1954, the U.S. Supreme Court combined these cases (although *Bolling* was decided separately), rendering its landmark opinion that "in the field of public education the doctrine of separate but equal has no place" and deprived "plaintiffs and others similarly situated...equal protection of the laws guaranteed by the Fourteenth Amendment" (347 U.S. at 483, 486). The following year, in *Brown II* the court ordered that schools desegregate with all deliberate speed. As a result, school districts across the nation were saddled with the challenge of implementing the court's mandate.

Events in Little Rock

In 1955 (days before the court's decision in *Brown II*), the Little Rock, Arkansas, school board swiftly moved to formulate a desegregation plan. Virgil Blossom, the city's superintendent of schools, adopted a gradualist approach. He proposed that the city's two high schools under construction open as integrated facilities. Blossom's plan would desegregate the city's junior high schools the following year. Several years later, elementary schools were to be desegregated.

The school board, however, altered Blossom's plan. They proposed that Central High School desegregate in September of 1957 and the city's junior high schools 3 years later. The school

board's revised plan, known as the Blossom Plan and the Little Rock Phase Program, did not set a firm date for desegregating the city's elementary schools. The plan also allowed students to transfer to schools where they were not in the minority, thus ensuring that Black schools would remain segregated.

The local NAACP, led by Daisy Bates, challenged the school board's desegregation plan. They protested the board's decision to open the city's new high schools on a segregated basis. Moreover, the NAACP objected to the school board's delay tactics. The organization encouraged African American parents to enroll their children in Little Rock's all-White schools. In 1956, school officials denied admission to those who applied, and the NAACP filed suit in the federal court of the Eastern District of Arkansas. The NAACP maintained that the school board violated students' constitutional rights by implementing a gradualist plan that sustained segregated schools. However, in the case of *Cooper v. Aaron* (1958) the school board successfully argued that they were working within the framework of the Supreme Court's all-deliberate-speed mandate. The LDF, led by Thurgood Marshall, appealed the trial court's decision. But, in April of 1957, that judicial body's decision was upheld by the Eight Circuit Court of Appeals.

In the meantime, the Arkansas State Legislature organized to resist the desegregation of Little Rock's public school system. They passed a bill that established the State Sovereignty Commission. The commission was charged with investigating persons who encouraged desegregation, removing mandatory school attendance requirements at desegregated schools, registering individuals and organizations (such as the NAACP), requiring them to routinely report to the commission and empowering the school board to make use of school funds to challenge desegregation. Furthermore, state legislators placed a 3% sales tax on the election ballot with the expressed purpose of collecting revenue to defy the Supreme Court's ruling.

Local Whites also organized to oppose school desegregation. For instance, the Capital Citizens Council (CCC) formed in 1956 and engaged in a racially divisive campaign. The CCC plastered local newspapers with inflammatory advertisements suggesting that school desegregation would

lead to miscegenation. They argued that African Americans had adequate educational facilities and that local African Americans were being unduly influenced by outside agitators. They blamed local members of the NAACP and the Urban League for carrying forth their organizations' national agenda.

In addition, the CCC helped establish the Mothers League of Central High. This organization was composed of lower-middle-class and working-class White women. In October of 1957, they staged a student walkout. In addition, these mothers routinely harassed local and state officials. That same year, the Mothers League of Central High filed suit, and they were granted a temporary injunction, which threatened to halt desegregation. However, Federal District Judge Ronald Davies invalidated that injunction and ordered Little Rock to proceed with its desegregation plan.

The Confrontation

When the Little Rock, Arkansas, academic year began on September 3, 1957, the African American students who became known as the Little Rock Nine were supposed to attend classes at previously all-White Central High School. However, the pro-segregationists' threat of extreme violence compelled school officials to encourage the African American students not to attend the first day of classes.

On September 4, the African American students—who ranged in age from 14 to 16 and were top-performing students—attempted to enter Central High School. They were prohibited from doing so by Governor Orval Faubus, who used the National Guard to block the school's entrance. He declared that "blood will run in the street" if these students were allowed to enroll; thus, the eight students and their escorts retreated. But Elizabeth Eckford, who was not informed of plans to assemble at Daisy Bates's home that morning (her family did not own a telephone), arrived after the other students had departed. Upon her arrival, she was confronted by an angry and hostile mob. Eckford was turned away by the National Guard, and she was left alone and unprotected. The unruly crowd assailed her with racial epithets and threatened physical violence. Eventually, Eckford boarded a

public bus and left behind the mob gathered outside of Central High School.

Immediately after this incident, Davies commenced hearings that lasted for over 2 weeks. At the conclusion of the hearings, the Little Rock School Board was again ordered to proceed with its desegregation plan. The judge also instructed United States Attorney Herbert Brownell Jr. to file an injunction against the governor that would prevent him from further interfering with the desegregation process.

President Dwight Eisenhower was also disturbed by the actions of Faubus. He regarded his use of the National Guard to thwart a court decision as an affront to the federal government's power. The president insisted that "mob rule cannot be allowed to override the decisions of our courts." On September 14th, the president hosted Faubus at his vacation home in Rhode Island. During that meeting, the governor agreed to use the National Guard to protect the African American students. On the contrary, however, he removed the National Guard, leaving the Little Rock Nine to confront a riotous mob.

On September 23rd, the African American students returned to Central High School, and White rioters responded by attacking African American reporters, hurling bricks through school windows and demanding that their children vacate the building. As the protesters occupied themselves with beating the African American reporters, the Little Rock police escorted the students into the school through a side door. Once the mob became aware of what had transpired, the violence reached its zenith. For that reason, school and police officials agreed that for their own protection, the African American students should be removed.

Pattillo recalled that people were running after the African American students as they entered the side of the building. She reported that after only 2 hours, it was clear that the mob was taking over the school and that the police were throwing down their badges and refusing to protect the African American students. According to Pattillo, someone suggested that they sacrifice one African American student so that the police could escort the other students to safety. She asserted that officials suggested that students draw straws to determine who would be left behind. Eventually, all the African American students were put into two cars and

instructed to keep their heads down as they were swiftly driven away.

Little Rock's Mayor Woodrow Mann requested assistance from the federal government to prevent further violence. On September 25th, Eisenhower dispatched 1,200 members of the U.S. Army 101st Airborne, and he assumed control over the Arkansas National Guard. Initially, the 101st Airborne provided the African American students with protection accompanying them throughout the school day. In October, the federalized National Guard assumed that responsibility.

Aftermath

The African American students remained vulnerable to verbal and physical attacks from fellow students. Beal sustained injuries to her right knee when a bottle was broken and she was thrust upon the shattered glass. Brown responded to constant taunting by dousing one of her aggressors with a bowl of chili. The school board suspended her, and they began expulsion proceedings. A number of White students celebrated Brown's dismissal, and some vowed to drive out the remaining eight.

That academic year, Bates remained active in the daily affairs of the Little Rock Nine. For instance, Bates accompanied Brown's mother to a meeting with the school principal and assistant principals. Brown's mother and Bates confronted school officials who allegedly rejected Brown's request to join the school's glee club. Bates also pressured school officials to suspend and expel students who verbally and physically attacked the African American students. On one occasion, she criticized officials for giving only a 3-day suspension to a White student who had seriously injured an African American student, and on another occasion, she successfully argued for an indefinite suspension of another White student who attacked another African American student.

Bates maintained constant contact with the NAACP's New York headquarters, the organization's president, Roy Wilkins, and federal officials. However, due to her role as spokesperson for the Little Rock Nine and her continued agitation for public school desegregation, Bates became the primary target of local segregationists. On several occasions, Lucious Bates and D. Bates, who together published the *Arkansas State Press*, were

forced to protect their home from attackers. In spite of this, Bates remained steadfast in her support of the African American students. Throughout that turbulent year, her dedication and determination helped the Little Rock Nine survive their first year at Central High School.

On May 27, 1958, Green became the first African American graduate of Central High School. Dr. Martin Luther King Jr. attended the graduation ceremony, and he sat in the audience with Green's mother and Bates. Just 3 months later, Faubus closed Little Rock's public high schools, and they remained closed until 1959. Hence, African American high school students had to seek educational opportunities elsewhere. Brown moved to New York after being expelled by the school board. She took up residence in the home of psychologists Kenneth and Mamie Clark. The Clarks's research had been integral to the NAACP's argument in *Brown vs. Board of Education*. Brown attended and received her high school diploma from New Lincoln School in 1959. Ray and Mothershed finished high school in Missouri. Pattillo and Roberts completed their high school years in California. Eckford earned her diploma by completing correspondence and night classes. Thomas and Walls returned to Central High School and graduated in 1960.

Forty years later, Little Rock Central High School was designated a historic site. And in 1997 and 2007, national, state, and local officials gathered at Central High School to reflect and honor the Little Rock Nine.

LUCY V. ADAMS, DEAN OF ADMISSIONS, UNIVERSITY OF ALABAMA

Lucy v. Adams (1955) is the legal battle that involved Autherine Lucy's and Polly Anne Myers's attempts to attend the University of Alabama, which had denied them admission based on their race. Lucy, with the aid of the National Association for the Advancement of Colored People (NAACP) Legal Defense Fund, represented by Thurgood Marshall, pursued her claim against William F. Adams, the dean of admissions of the University of Alabama, all the way to the U.S. Supreme Court. The extended litigation that followed was a turning point in the progeny of cases that laid the foundation to desegregate educational institutions.

The U.S. Supreme Court decision on Lucy's motion to reinstate the injunction of the U.S. District Court for the Northern District of Alabama also has significance in the desegregation efforts of the 1950s. In Montgomery, Alabama, Rosa Parks's refusal to yield her seat in a bus on December 1, 1955, led to desegregation in Montgomery and elsewhere throughout the United States. The long legal conflict between Lucy and the University of Alabama was similarly noteworthy in the context of the civil rights movement because its influence extended beyond the realm of education to all aspects of African American life. This entry looks at its historical context, the details of the case, and its long-term impact.

Background

Segregation in Education

Segregation had become the norm of southern social policy after the Democrats regained power following the Reconstruction era (1865–1877). In

1896, the U.S. Supreme Court upheld the state laws that allowed segregation as constitutional (e.g., *Plessy v. Ferguson*, 1896). However, Justice John Marshall Harlan, in his dissenting opinion in *Plessy*, emphasized that segregation interfered with the full enjoyment of the blessings of freedom and placed African Americans in a place of legal inferiority.

With the formation of NAACP, the challenges to the culture of segregation increased. The establishment of the NAACP Legal Defense Fund facilitated challenging segregation in the federal courts. The Legal Defense Fund, led by Charles Hamilton Houston, Marshall, Spottswood William Robinson III, and Oliver W. Hill, challenged the constitutionality of the laws that segregated African Americans from Whites in all areas of life, including education.

In 1932, the NAACP had one of its first victories in desegregating the U.S. educational institutions. In *State ex rel. Gaines v. Canada* (1932), the U.S. Supreme Court held that the University of Missouri, an all-White institution, must admit in-state African American students as well. In *Sipuel v. Board of Regents of University of Oklahoma* (1948), the Supreme Court held that the equal protection clause of the Fourteenth Amendment mandated that a state law school for White students also provide legal education to African American applicants. Similarly, in *Sweatt v. Painter* (1950), the Supreme Court held that substantial equality in education could not be found in separate institutions.

Lucy

Lucy was born in Shiloh, Alabama, on October 5, 1929, one of 10 children. She attended Shiloh public schools through junior high school, and graduated high school from Linden Academy in 1947. Lucy also performed farm labor to help her family during her school years. She attended the Selma University in Selma, Alabama, and earned a 2-year teaching degree. Then she attended Miles College in Fairfield, Alabama, and graduated in 1952 with a bachelor's degree in English. Both these universities were historically Black colleges and universities (HBCUs).

For her graduate studies, Lucy decided to attend the University of Alabama. University of Alabama was an all-White college, and Lucy knew that attending this institution would be a struggle. On

September 4, 1952, Lucy, together with Myers, applied to the University of Alabama. On September 5th, the university sent Lucy and Myers application forms and requested dormitory registration fees. On September 10th, Lucy and Myers were assigned dormitories, and on September 13th, the applicants received a form letter welcoming them to the university.

However, all this happened because the university did not know the ethnicity of the applicants. On September 19th, the university received the application forms from Lucy and Myers that indicated their ethnicity. When the university learned that Lucy and Myers were African American, the university asserted that the state law did not allow African Americans to attend the institution. Lucy and Myers arrived at the university on September 20th. The dean of admissions returned their dormitory deposit and advised there had been a mistake in accepting Lucy and Myers as students.

Lucy and Myers turned to the NAACP for help with their attempt to enroll at the University of Alabama. NAACP Legal Defense Fund laid the groundwork for Lucy's struggle to enroll in the university. Marshall, Constance Baker Motley, and Arthur Shores were assigned to represent Lucy's and Myers's case. On September 24th, Shores appealed to the president of the University of Alabama, Dr. John M. Gallalee, demanding that Lucy and Myers be admitted. Gallalee attempted to persuade Lucy and Myers to attend Alabama State College or Tuskegee College, both Black institutions. However, the university did not grant Lucy or Myers admission.

Shores then appealed to Governor Seth Gordon Persons, president ex officio of the board of trustees of the University of Alabama. The petition was placed before the board of trustees on June 1, 1953, at their annual meeting. On July 6, 1953, the board of trustees wrote to Shores indicating that they were deferring final action on these applications pending the U.S. Supreme Court decision in *Brown v. Board of Education of Topeka, Kansas*; again, Lucy and Myers were urged to seek admittance at Alabama State College or Tuskegee College. The legal proceedings began in July of 1953. NAACP Legal Defense Fund attorneys filed for declaratory judgment in the U.S. District Court for the Northern District of Alabama.

Brown v. Board of Education of Topeka, Kansas

Meanwhile, *Brown v. Board of Education of Topeka, Kansas*, had been pending before the U.S. Supreme Court since June of 1952. On May 31, 1955, the U.S. Supreme Court announced its decision on *Brown*. The Court held that racial discrimination in public education was unconstitutional. This decision opened the doors to desegregation in public education, and Lucy's and Myers's legal challenge of the practices of the University of Alabama was the first test of the application of *Brown*.

The Legal Battle

Trial Court Proceedings

Lucy filed suit with the U.S. District Court for the Northern District of Alabama, alleging that the university's refusal to grant admission to Lucy and Myers was unconstitutional under the equal protection clause of the Fourteenth Amendment to the U.S. Constitution. The Fourteenth Amendment bars a state government from denying any person within its jurisdiction the equal protection of the laws. Further, because the University of Alabama was a state institution, its acts and policies came within the purview of the Fourteenth Amendment limitation on state government.

In preparation for trial, the University of Alabama did all they could to justify their denial of admission to Lucy and Myers on legal grounds. Because Myers had been unmarried and pregnant at the time of her application to the university, she would have been ineligible for admittance to the university under the moral codes then in place. Myers was disqualified as a candidate to the university, and Lucy had to continue alone with the lawsuit.

The U.S. District Court for the Northern District of Alabama pronounced its decision on June 29, 1955. The court found that, even though there was no written policy that excluded students based on race or color, there was a tacit policy to that effect. The district court further held that in conformity with the equal protection clause of the Fourteenth Amendment, Lucy and Myers were "entitled to equal advantages and opportunities available at the University of Alabama at the same time and upon the same terms and qualifications available

to other residents and citizens of the State of Alabama” (Lucy v. Adams, 134 F. Supp., 235, 239). Therefore, the tacit policy that denied the African American candidates admission to the university offended the Fourteenth Amendment’s right to equal protection under the state laws.

The court issued an order of injunction prohibiting Adams, the dean of admissions, his servants, agents, assistants, and employees, and those who might aid, abet, and act in concert with him from denying the plaintiffs from enrolling in the university solely on account of their race and color. On July 1, 1955, the district court amended its order of injunction to apply to all African American students who apply for admission to the University of Alabama.

Appellate Court Proceedings

The University of Alabama appealed the district court’s order of injunction to the U.S. Circuit Court for the Fifth District. Further, the university filed a motion with the district court to suspend the application of the injunction pending appeal. The district court granted the university’s motion.

Motion to Vacate the Order of Suspension

In response, Lucy filed a motion with the circuit court to vacate the district court’s order suspending the injunction pending appeal. In an unpublished opinion, the circuit court denied Lucy’s motion. Thereafter, Lucy petitioned the U.S. Supreme Court to vacate the order suspending the injunction. On October 10, 1955, in a unanimous decision, the Supreme Court reinstated the injunction to the extent it enjoined the university from denying admittance to Lucy and Myers. However, the Court did not reinstate that part of the order of injunction that enjoined the university from denying admittance to all African American applicants.

Motion to Hold Adams in Contempt of Court

Lucy attempted to register for classes after the Supreme Court’s order reinstating the injunction. However, the university denied Lucy enrollment. The university justified the denial on the basis that the last day to register for fall classes was October 6th. Lucy petitioned the U.S. District Court for the Northern District of Alabama to find Adams in

contempt of court. The court initially ordered Adams to show cause why he should not be found in contempt of court. However, in an unpublished opinion, the district court found that Lucy was not denied registration for fall classes solely because of her race because the registration deadline applied to both African American and White students equally. Therefore, the district court did not find the university had done any act in violation of the injunction. Lucy’s petition to find the university in contempt of court was dismissed. Lucy appealed the district court’s dismissal of her petition to find the university in contempt of court.

Appellate Court Holdings

On December 30, 1955, The U.S. Circuit Court of Appeal for the Fifth Circuit ruled on the university’s appeal from the injunction of July 1, 1955. The court as a whole affirmed the district court’s order enjoining the university from denying admission to Lucy, Myers, or any other minority.

On the same day, the circuit court also ruled on Lucy’s appeal challenging the district court’s finding the university had not violated the injunction by denying Lucy registration for fall classes and dismissed her petition to find the university in contempt of court. Once again the circuit court as a whole found that the evidence supported the district court’s finding that the university did not violate the injunction.

The University of Alabama sought to appeal the circuit court’s opinion affirming the injunction and petitioned the U.S. Supreme Court for a writ of certiorari. However, on May 14, 1956, the Supreme Court denied the university’s petition for writ of certiorari ending the long-fought legal battle.

Aftermath of the Legal Battle

Lucy Enrolls

Following the U.S. Supreme Court 1955 decision, Lucy enrolled at the University of Alabama on February 3, 1956, becoming the first African American student to ever attend. The University of Alabama allowed Lucy to attend spring semester classes, but prohibited her from eating or living on the campus. Lucy’s daily commute was no small distance, as she was forced to travel from Birmingham to Tuscaloosa in Alabama. Hundreds

of observers, journalists, and reporters gathered at the university's Tuscaloosa campus to witness her enrollment.

In 3 short but hectic days of attendance, a mob had assembled on the school grounds to violently protest Lucy's admission and presence on the campus. The angry demonstrators staged an anti-desegregation rally that included burning a cross, chanting racial slurs, and throwing eggs, bricks, and rocks at her as she walked to class. Threats to Lucy's life were screamed aloud and repetitiously made by the violent mob. She was locked in a classroom for 3 hours to avoid aggressive contact with the mob. The unruly scene escalated to such a level that police were forced to escort her off school grounds. Adams and other university officials held a meeting to address the mayhem and voted to suspend Lucy from attending because of the apparent threat to her safety.

Retaliation

Lucy's attorneys, Marshall and Shores, sued the University of Alabama, seeking to have a court mandate the institution to reinstate her. The filed complaint contained allegations that the university had encouraged and aided the mob in pursuing their objective of disrupting Lucy's education by failing to properly provide for her protection and safeguard her well-being. The allegations, lacking any evidentiary or factual support, could not be upheld. As a result, Lucy's attorney amended this portion of the complaint.

Nonetheless, the court instructed the university to reinstate her. The university president and other school officials utilized the lawsuit and its conspiratorial allegations as grounds to permanently expel her. The university reasoned the suggestive and slander-like comments reflected poorly on Lucy's fitness as a student at their institution. The university maintained they acted lawfully when expelling her and filed a motion on November 6, 1956, to vacate the court order requiring the institution to show cause to not be held in contempt of court. The university also expelled Leonard Wilson, a student who was the leader responsible for the anti-desegregation forces on campus.

After all of the turmoil Lucy had endured and the failed prospect of the precedent on segregation

set forth in *Brown* being applied in her case, it turned out she would be hindered from attempting to complete her educational aspirations. She made the decision not to press the lawsuit any further. The volatile social-political climate following the days of her expulsion caused Marshall to become concerned for Lucy's safety. He invited her to stay with him at his home in New York City until the excited climate settled.

Impact of Expulsion

Although no longer attending school, Lucy immersed herself in the civil rights movement for a few months after being denied her opportunity to study at the University of Alabama, but over time her active participation faded. Lucy felt the negative consequences and real-life repercussions of her publicity as she tried to find a job as a teacher, but was repeatedly turned down. In 1971, 15 years later, she was finally hired as a teacher by the Alabama public school system. Three months after the expulsion, Lucy married Hugh Foster, whom she had met while attending Miles College during her undergraduate studies.

Paving the Way for Educational Equality

The University of Alabama did not accept a single African American student for 7 consecutive years in the aftermath of her expulsion. In 1963, James Hood and Vivian Malone were the first African American students accepted since 1956. Hood and Malone were able to benefit from Lucy's strife of paving the way for such progress. The two represented the university's first sustained enrollment of African American students. Elsewhere in the nation during this period of desegregation, the NAACP aided African American students who were determined and courageous enough to enroll in all-White schools.

Malone was the first African American student to graduate from the University of Alabama in 1965. She transferred from the University of Alabama A&M, a historically Black college and university (HBCU), to study accounting at the University of Alabama. Malone and Hood gained widespread national attention on June 11, 1963, when they were escorted by a detail including the federal marshals and the U.S. Deputy Attorney

General, Nicholas Katzenbach, as they walked to register for classes. Alabama Governor George Wallace attempted to block the entrance of the school auditorium to prevent Malone and other African American students from entering. The governor then issued his infamous speech standing in the schoolhouse door in which he declared segregation had thrived and would continue to do so. This resulted in a face-to-face encounter with the federal troopers.

The governor's stand was symbolic of the deeply rooted sentiment against racial desegregation and the scene was amplified on a national scale. The governor stood down, and Malone was allowed to enroll. She graduated with a bachelor's of arts in business management and joined the U.S. Department of Justice civil rights division. In 2000, the University of Alabama bestowed her with the accolade of a doctorate of humane letters.

Hood faced similar discrimination as Malone when he attended. His movements around campus were chaperoned by the National Guard. The main concern for university officials 10 years later was to avoid a repeat of what happened in Lucy's case by keeping any displays of violent protest to a minimum. Hood enrolled the same day as Malone, but left after merely 2 months. He would return in 1995 for doctoral studies that he successfully completed in 1997.

Decades Later

Two professors at the university invited Lucy to speak about her experiences 30 years prior. In April of 1988, following her emotional account of the tumultuous events surrounding her admission and brief attendance, the university's board of regents revoked her expulsion, and she rematriculated in the university's graduate program. Her daughter, Grazia, was simultaneously attending the university as an undergraduate at the time. Lucy graduated on the same day as her daughter in 1992, receiving her master's of arts degree in elementary education as her daughter received her degree in corporate finance.

In November 2002, Lucy returned to the University of Alabama to give a speech titled "Braving the Uncertain Future With Certainty," to commemorate the 46th anniversary of the

university's desegregation that began with her progressive spirit and bravery. Reflecting on her experiences, Lucy (now with the married name of Foster) said,

Vision, education, [and] determination form the hallmarks of maneuvering through an uncertain future. History is marked by countless endeavors that did not begin as planned. We will all contribute something to history. The question is, what will it be? (Hicks, 2003)

Lucy expressed that her interpretation of the word *fear* was to push forward and do something regardless of one's subjective feelings about it.

In October 2006, the University of Alabama's African American Alumni Network honored Lucy for her role in desegregating the school and allowing for the admission of African American students. The honorary ceremony was called a "Tribute to the Trailblazer." During the ceremony, students from each decade that had passed since her landmark admission expressed the inspirational appeal and life-altering impact her resiliency and determination had had on their lives. A portrait of Lucy proudly hangs in the university's Ferguson Center.

Lucy helped lay the foundation for the University of Alabama's minority record enrollment rate. In the 2005 fall semester, 2,465 African American students attended the university. The 2005 entering freshman class included more than 300 African American students, which increased from 265 in 2002—an increase of 43%. The University of Alabama at Tuscaloosa currently has 21,081 students in its the student body, of which African Americans make up 11.15%. The University of Alabama was the state's flagship university and the state's first public college, founded in 1831. The university has had an outreach program in place to bolster the admission of minority students.

Conclusion

Lucy's unwavering determination to receive an education comparable to that of any White student from an all-White graduate school, which was notorious for its flagrant racial beliefs and practices, set a precedent far greater than any

court could ever render. Microscopically, her individual objective was to receive her master's degree for the purpose of being equipped to battle the social obstacles entailed in being African American and female during this era. However, her daily strife gained a significance far greater than just a diploma. In the greater social, economic, and cultural context, Lucy's educational and legal endeavors marked the early stages of a movement toward educational equality. She would later serve as a reminder to all future African American students of the struggle to have the inalienable right to be equal and educated recognized. Her life is the embodiment of personal courage, determination in the face of grand adversity, and the difference one person can make in effectuating change to a long-standing doctrine of thought.

M

MAINSTREAMING

In education circles, the term *mainstreaming* became widely circulated through the implementation of Public Law 94-142, the Education for All Handicapped Children Act of 1975. Although there are several definitions of *mainstreaming*, two aspects seem to remain constant throughout: normalization and least restrictive environment (LRE). Normalization means that children with disabilities should have school experiences as close as possible to those of nondisabled individuals. The LRE refers to the educational placement of children with disabilities. It answers the question, “Where will the students receive educational services?” The intent of Pub. L. 94-142 was that children with disabilities should be educated in a setting that was closest to normal and still meet the special needs of the individual. Therefore, one definition of *mainstreaming* is the practice of placing handicapped students in educational settings that best meet their needs and that best approximate the experience of nonhandicapped students. To highlight mainstreaming as the intended vehicle for equal educational opportunities, this entry considers how special populations were treated in the United States, reviewing the examination of the events that led up to the federal law supporting mainstreaming. It then examines issues of race and class in special education identification and placement.

Historical Treatment of Special Populations

In the United States during the early 19th century, debates emerged about how and where to serve special populations. Whether the social need was to deal with troubled youth in reformatories or criminal adults in penal institutions or treat those with physical and mental illness in asylums, a primary emphasis was always on the location or setting in which the services would be provided. Though general attitudes toward those with handicaps were intolerant, the type of exceptionality often brought about specific reactions.

Depending on the era and geographic location, disabled persons were viewed as subhuman, insane, possessed by demons, or involved in the occult. Many thought that changing the location of those groups from an urban to rural environment would be the best plan of action. In colonial times, social services for those in need were concentrated in public institutions, such as local jails and almshouses. By the early 1800s, voluntary groups and the federal government began to provide more specialized, public services for particular populations in social institutions. Social reformers began to categorize the social problems by name, such as criminality, juvenile delinquency, mental illness, deafness, blindness, and mental retardation (then termed “idiotcy”) and separate institutions were built.

Several decades after the initiation of this residential-institutional plan, disturbing evidence began to surface. By the latter part of the 19th

century, social reformers sought to scale down large social institutions and transfer their duties to smaller settings, such as community-based care. Eventually, environmental beliefs about human nature and the necessity of social institutions caring for the less privileged gave way to Social Darwinism and beliefs that some people are born good while others are born evil. The premise emerged that how we are and what we are able to do is wired into our intrinsic nature, and nothing can be done to change that. This thinking supported the warehousing of special populations to specific places where little happened to improve the lives of the poor and the disadvantaged.

The Evolution of Mainstreaming

Toward the end of the 19th century, the National Education Association formed a Department of Special Education. This new department spurred the growth of local community institutions and special classes that serviced handicapped populations during the first half of the 20th century. Before its formation, most facilities resembled the earlier isolated residential models. New policies of compulsory school attendance and teacher preparation programs that focused on handicapped populations were developed as the demand for this type of expertise grew. For three quarters of the 20th century, public school opportunities for those designated as retarded or assigned a special group label such as deaf or blind were primarily in categorical, self-contained classes. Many of these classes closed due to their inability to meet the students' needs.

The condition of returning World War II and Korean War veterans indirectly led to the expansion of both the number and quality of services for children with disabilities. Public attitudes became more sensitive to the plight of the military veterans who returned home with visible physical as well as psychological disabilities. Rehabilitation programs became available, along with a spurt of research that addressed the needs of these "special" populations. Eventually, public schools and children with disabilities became the beneficiaries of this research and public opinion shifted.

Between 1945 and 1970, the number of students receiving public school exceptional children's

services increased by about 700%. In the 1950s, the departments of special education gained momentum in public schools, colleges, and universities. During this period, parents of children with disabilities formed interest groups that increased their lobbying power. Toward the end of the 1960s, special education programs began to flourish, with learning disabilities becoming both a catchall term for those students who did not fit into the other established categories and an additional category requiring special services or methods.

The mainstream movement came into being due to a variety of historical and political forces. Wars, litigation, legislation, economic landscape, and scientific advances led to public policies that championed the equal educational rights of all handicapped children. Perhaps, the movement that contributed most profoundly to this changed sentiment toward individuals with disabilities was the civil rights movement and the landmark school desegregation case, *Brown v. the Board of Education of Topeka, Kansas*, in 1954. These litigations for civil and human rights paved the way for U.S. citizens to recognize and appreciate the isolation and neglect that certain segments of the U.S. population had experienced historically and were facing on a daily basis.

In 1975, Congress passed Pub. L. 94-142, the Education for All Handicapped Children Act. It was amended in 1990 by Pub. L. 101-476 and became the Individuals with Disabilities Education Act (IDEA), as amended in 1997 by Pub. L. 105-17. The IDEA was again amended in 2004, by the Individuals with Disabilities Education Improvement Act of 2004. It has been the hope of many that, through the federal laws that have their roots in Pub. L. 94-142, all students, but especially students with disabilities, would be guaranteed educational equity and deliverance from chronic exclusion. IDEA made provisions for extending to millions of children federal tax dollars for an appropriate public school education. First, the movement was called "mainstreaming," and later it became known as "inclusion." The concept of inclusion attempts to distinguish itself from mainstreaming by emphasizing that the LRE is not a place, but an attitude or belief system. Inclusive education moves toward the idea of creating learning communities whereby a constellation of services becomes available to students. For inclusion

to work, all involved must commit to the education of each student, regardless of his or her special needs. Unfortunately, there were unintended negative consequences of IDEA (Pub. L. 105–17). One was the redirection of financial resources from general to special education and the overrepresentation of students from underrepresented groups, primarily African American students, identified as having special needs.

Issues of Race and Class in Identification and Placement

According to the 26th Annual Report to Congress on the Implementation of IDEA, African American students are about 3 times more likely than other students to be identified as mentally retarded, and more than twice as likely to be identified as emotionally disturbed. Poverty is a critical variable that influences the occurrence of disabilities. Poverty rates among African American children are more than twice those of their White counterparts. Poverty has been associated with factors such as increased childhood exposure to lead, increased prenatal exposure to toxins such as tobacco and alcohol, lack of prenatal care, and poor nutrition. These factors have been associated with increased disability rates. However, once socioeconomic differences are accounted for, disproportionality still remains significant. Beyond the effects of poverty, other variables, including educator and assessment bias, also are believed to be contributing factors to the overrepresentation of African Americans in special education.

There are no other racial or ethnic groups for whom disproportionate representation was shown to be as severe. The 26th Annual Report to Congress also included data based on the educational environments in which students with disabilities are served. These data reveal another interesting trend. Hispanic and African American students tend to receive services in special education placements that separate them from their nondisabled peers more often than is the case for other groups. For example, more than 52% of White students served under IDEA spend 80% or more of their school day in general education settings. Native American and Asian students also were close to this figure. Approximately 45% of

Hispanic students spend 80% or more of their school day in general education settings. However, only about 37% of African American students with disabilities were in general education settings for 80% or more of the school day.

MALCOLM X ACADEMY (DETROIT, MICHIGAN)

The Malcolm X Academy in Detroit, Michigan, which admitted its first students in September 1991, was established in response to problems relating to the education of African American males in Detroit. Some of those problems included the high dropout, suspension, and expulsion rates and numerous acts of violence among African American males. Despite considerable controversy, and opposition to the school from both the National Organization for Women (NOW) and residents of the neighborhood at its site, the Malcolm X Academy has been successful in educating African American males. In 1992, the students at the Malcolm X Academy scored at or above the national mean on the California Achievement Test. The academy also had higher student attendance than comparable schools and the Detroit public schools. The Detroit Malcolm X academy has served as a model for the reeducation of African American males. This entry looks at the story of its beginnings.

Addressing a Problem

A community meeting served as the springboard for the Detroit Malcolm X Academy. It was called on a Saturday morning with below-freezing temperatures, and the organizers expected a small turnout. When the doors opened, organizers were surprised to find 500 people who were concerned with the plight of African American males in Detroit public schools. The theme of the meeting, "Improving Self Concept for At-Risk Black Students, with an Emphasis on Saving the Black Male," reflected the concerns of its participants.

The outpouring of community support led the Detroit public school system to form the Male Academy Task Force, which was guided by the work of Dr. Clifford Watson, who was familiar with academic programs for African American males. The board requested that the task force submit a proposal with implementation strategies for the male academy.

While some felt that naming the school after Malcolm X was a bit too radical, supporters of the name insisted that Malcolm X's life history could serve as an inspiration to African American males who had problems similar to those of Malcolm X. They argued that Malcolm had been involved in a life of crime, had dropped out of school at the eighth grade, and was imprisoned, but in spite of the negative circumstances that surrounded his life, he was able to become one of the greatest leaders in U.S. history.

In an effort to set up an academy that would truly be transformative, those drafting its curriculum started with the essential teaching of Malcolm X's teacher, Elijah Muhammad. Elijah Muhammad had espoused that one of the main handicaps facing African Americans was the lack of knowledge of self. This lack of self-knowledge was debilitating to African Americans in their efforts to truly become free. Muhammad had further espoused that a properly educated people would result in them being courteous, spiritual, and well mannered. This type of education would form the basis for producing a great civilization.

The knowledge of self stimulated the mind of Malcolm X, who as a student of Elijah Muhammad began to study and trace the historical points revealed by his teacher. Malcolm's studiousness was transformative, propelling him to become a

positive image for change, and proponents hoped that the academy could do the same thing for African American males in Detroit. As a result, it was decided that the proposed curriculum at Malcolm X academy would be African centered.

The initial controversy around naming the school Malcolm X was eased as a result of vocal outcry by the community. The community vehemently argued that the name Malcolm X would personify the school's mission of being transformative and life changing for African American males.

Opposition

The proposal for a male academy met with strong opposition from the National Organization for Women, which argued that the academy would result in segregation similar to what existed prior to the 1954 *Brown v. Board of Education, Topeka, Kansas*, case. They (NOW) insisted that a male academy was discriminatory. The issue was brought before Judge George E. Woods, who ruled in favor of NOW, deciding that having a males-only academy would amount to sexual discrimination. The Detroit public schools, in an effort to reach a compromise with the judge, decided to open the school to any student desirous of attending.

The first classes were held on the first floor of Woodward Elementary School, but the number of students requesting admittance soon outstripped the available space there. The Detroit public schools decided to move the school to an unused facility in the Warrendale community, which was a predominantly White community at the time. Its residents were angered that the academy would be placed there and argued that students might bring weapons to school or perhaps burglarize homes in the area.

In addition, Warrendale residents demanded that the school have metal detectors. When the school opened, law enforcement agencies were on heavy patrol in the event that some community residents might commit acts of violence. The school day ended without any major disturbances until the bus ride home, when some White males attacked the buses with eggs.

The Malcolm X Academy has withstood the controversy that surrounded its beginnings. It continues to operate—now with male and female students. As of 2007, the Malcolm X Academy in

Detroit (there are others, including those in San Francisco, California, and Milwaukee, Wisconsin) has consistently had around 500 students, with more than half of those male.

MARSHALL, THURGOOD (1908–1993)

Throughout his life, Thurgood Marshall was intimately and passionately involved with issues pertaining to equal rights for all men and women, regardless of race, ethnicity, or creed. Marshall's activism extended from his time at the National Association for the Advancement of Colored People (NAACP) (1932–1961) through his time as the first African American U.S. solicitor general (1965–1967). It can also be seen in the opinions and dissensions he issued on the country's highest court (1967–1991). His NAACP tenure was a pivotal time for the organization, when overturning racial segregation and investigating race riots were two of its primary mandates. As lead counsel, Marshall was involved not only in the litigation of discrimination and segregation cases but also with the investigation and cases associated with race riots. He is perhaps best remembered for his historic appointment as the first African American U.S. Supreme Court Justice and as attorney in the 1954 high court case, *Brown v. Board of Education*, *Topeka, Kansas*, which led to desegregated education.

Marshall's most direct and lasting contributions to the advancement of his race came in the years before the civil rights movement. As an activist and lawyer for the NAACP, Marshall laid

the groundwork for the movement and the attainment of civil rights for African Americans. As a direct result of efforts by Marshall and other civil rights leaders to uplift the race by overturning their subordinate legal status, African Americans have earned political influence and arguably a stronger sense of community. This entry looks at Marshall's life, his work with the NAACP, and his time on the Supreme Court.

Early Years

Marshall was born Thoroughgood Marshall (a name he shortened legally while in second grade) to Norma and William Marshall. He graduated from two historically Black universities, Lincoln University (Pennsylvania) in 1930 with a bachelor's degree and Howard University School of Law in 1933. Marshall attended Howard only after being denied admission, based on his race, to the University of Maryland Law School.

Early in his career, Marshall began to work on his first segregation case, *Murray v. Pearson* (1935), to open admission at the University of Maryland Law School to African Americans—the same institution that had denied him admittance only a few years earlier. The gains made by the *Murray* decision were small, for it opened only the law school; other graduate programs would be sued in the following decade. However, *Murray* was a significant step toward the larger educational accomplishments of Marshall and the NAACP. While most of his cases dealt with educational equality, the future Justice also fought for African Americans' right to vote in Texas primaries (*Smith v. Allwright*, 1944), the right to rent or buy any place of residence (*Shelley v. Kraemer*, 1948), and for equality of pay (*Alston et al. v. School Board of City of Norfolk*, 1940).

Race Riots

As race riots were breaking out across the country, Marshall often found himself arriving at the center of the disturbance within hours of its beginning in order to help the African American community. He saw this portion of his job at the NAACP as publicizing the inequalities between African Americans and Whites and the role that police forces played in the violent uprisings. Three

of the best-known race riots in which Marshall represented the NAACP were in Detroit, Harlem, and Columbia, Tennessee.

The exact cause of the 1943 Detroit race riots is not known. There are both African American and White accounts as to why the violence began. Marshall found himself (along with Walter White, the NAACP executive secretary) responding to the official riot report that was submitted to the governor of Michigan by, among others, then-Detroit Police Commissioner John H. Witherspoon. The committee found that it was solely actions of the African American community that incited the riot. Marshall's rebuttal indicated that social inequalities in the long term and other violence and rumors in the short term were the reason for the escalation of violence. Marshall was critical of the police's role, or lack thereof, in the ending of the riot.

Marshall did advocate for use of "persuasion" as long as it was more evenly applied. For instance, he praised the actions of the New York City Police Department when he arrived at the Harlem race riots. Marshall and his team went in with loudspeakers and persuaded the people to remain calm and cool down.

While Marshall praised police work in New York City, he believed that the police in Columbia, Tennessee, planned to lynch him while he worked on his investigation into the race riot in that town. In 1946, at the conclusion of World War II, relations between African American veterans and Whites were tense. As a result, in Columbia, Tennessee, a riot led by White civilians and law enforcement officers destroyed the African American commercial district. More than 100 African American men were arrested, resulting in 27 being charged with rioting and attempted murder.

Marshall was the lead defense attorney. Fearing for their lives while in Columbia, Marshall and the other lawyers stayed in Nashville, nearly 75 miles away. Despite the circumstances, Marshall, along with Howard University law professor Leon Ransom, received acquittals for all but one of the defendants by an all-White jury.

The Fight Against Segregation

Beyond investigating race riots, Marshall challenged segregation in case after case for the NAACP. During the next two decades leading up

to *Brown*, which overturned *Plessy v. Ferguson*'s (1896) separate-but-equal doctrine, Marshall's cases challenged the foundation of U.S. law itself. His goal was not merely to remind the nation to adhere to the Fourteenth Amendment—equal protection—but to demonstrate that the rules that he fought to overturn were themselves wrong.

Two such cases were *Sweatt v. Painter* (1950) and *McLaurin v. Oklahoma State Regents for Higher Education* (1950). Marshall argued both *Sweatt* and *McLaurin* in front of the Supreme Court. In *Sweatt*, like *Murray*, Marshall was arguing on behalf of an African American man who was denied admission to law school based on his race. The high court unanimously ruled that the University of Texas Law School must admit Sweatt to the school because the law school that Texas was creating for African Americans had quantitative differences in facilities, faculty, and library volumes. Additionally, for the first time the court held that intangibles, such as isolation from interaction with future lawyers, must be considered in "substantive equality."

The Supreme Court ruled in *McLaurin* that a university could not place restrictions on a student that would deny him or her the ability to interact with other students because of race. Prior to the Supreme Court ruling, the University of Oklahoma first admitted McLaurin to a graduate program under a U.S. district court order; however, the regents forced the newly admitted student to use a special row in his classes, a designated table in the lunch room, and a separate area in the library to study.

The Brown Case

In 1954, Marshall argued *Brown v. Board of Education, Topeka, Kansas*, in front of the U.S. Supreme Court. The *Brown* case encompassed five school segregation cases in Virginia, South Carolina, Delaware, Kansas, and Washington, D.C. After 17 years of success in opening postsecondary and graduate education through a series of court cases, Marshall, the Legal Defense Fund, and the NAACP were ready to take on educational segregation on a primary school level. Separate was clearly unequal. This inequality was apparent in Clarendon County, South Carolina; for example, per capita spending for White students was \$179 compared to spending

on African American students of \$43, and the student-to-teacher ratio in the White schools was 28:1, while in the African American school system it was nearly double, 47:1.

Topeka, Kansas, was different. The facilities were equal. Marshall's argument in *Brown* went further than the need for equal facilities; otherwise the Court could uphold *Plessy* and again rule that school segregation was permissible as long as facilities were equal. Marshall wanted educational integration. He focused on testimony presented by experts about the terrible effects of state-sponsored segregation upon African American children. The case was not easily won; it was nearly a year and a half after the Court began hearing the case that Chief Justice Earl Warren read the Court's unanimous decision: "Separate educational facilities are inherently unequal."

The Supreme Court extended the *Brown* decision beyond education by expanding the principle to desegregate other public facilities. Through a series of signed and per curiam opinions, the Court ordered equal access to public parking lots, restaurants, cemeteries, hospitals, parks, golf courses, buses, beaches, and amphitheaters.

Marshall realized the impact of the *Brown* decision. He believed that *Brown* "probably did more than anything else to awaken the Negro from his apathy to demanding his right to equality" (Williams, 1990). The 1954 decision can be seen as part of the foundation for the civil rights movement; however, Marshall did not think *Brown* alone made the movement.

On the Supreme Court

Marshall's work in his early career, on behalf of the African American community during these race riots, was a precursor of a life committed to advancing the race. As the NAACP's lead attorney, Marshall appealed, advocated, and convinced the U.S. Supreme Court to reform constitutional law in order to treat all U.S. citizens equally, regardless of race. By the time Marshall joined the bench of the Supreme Court, he had argued 32 cases, mostly in the name of racial desegregation and other civil rights causes, before that body and won 29 of them. As a Supreme Court Justice, Marshall continued to further people's rights through rulings such as extending "double jeopardy" to

state prosecutions in *United States ex rel George Hetenyi v. Wilkins* (1966), giving women the right to choose and the right to privacy in *Roe v. Wade* (1973), and extending defendant's rights through *Gideon v. Wainwright* and *Miranda v. Arizona* (1964). Toward the end of Marshall's time on the bench, he became known as the "great dissenter" within a conservative court, continuing to advocate for African Americans and for the poor through his dissenting opinions.

Perhaps the most famous education case to reach the U.S. Supreme Court, while Marshall was an Associate Justice, was *Regents of the University of California v. Bakke* (1978). In the case, Allan Bakke, a White applicant, contended that the University of California–Davis Medical School violated his rights under the equal protection clause of the Fourteenth Amendment, the California Constitution, and Title VI of the Civil Rights Act of 1964 by using quotas and a different admissions process for minority applicants. Bakke was rejected by the school 2 years in a row, although minority applicants who were accepted had significantly lower GPAs and entrance exam scores. Regarded as a landmark case on affirmative action, the Court in a narrow, 5 to 4 ruling found that the use of race in the admission of minority applicants for college and graduate school was constitutional; however, quota systems were unconstitutional.

Marshall stepped down as Associate Justice on June 28, 1991, after serving 24 years. He was succeeded by Clarence Thomas, the second African American justice. Justice Marshall died on January 24, 1993, of heart failure. His personal papers and notes are housed at the Library of Congress.

MARTIN LUTHER KING JR. ELEMENTARY SCHOOL CHILDREN V. ANN ARBOR SCHOOL DISTRICT

Martin Luther King Jr. Elementary School Children et al. v. Ann Arbor School District (1979) involved a lawsuit brought on behalf of several African American students at the school who at home and

in their communities spoke a dialect referred to as “Black English.” It asserted that the school district and the teachers in the school were not taking this language background into account in their instruction in the school, in violation of the Equal Opportunity Education Act of 1974 (Section 1703(f) of Title 20, U.S. Code). The question was whether the Ebonics, Black English, Black vernacular, and Black dialect that African American children spoke at their homes and in their communities impeded their equal participation in the instruction programs of the school and whether the school had taken appropriate action to overcome this barrier. In a ruling issued on July 12, 1979, a U.S. district court required that the school identify children who spoke Black English and implement a plan to provide these students with more effective instruction in reading standard English.

This statute mandating equal educational opportunity was in effect the codification of *Lau v. Nichols*, decided by the U.S. Supreme Court in 1974, regarding school districts’ responsibilities toward limited-English-proficient children. In the *King* case, the court concluded that “Black English” had been shown “to be a distinct, definable version of English, different from standard English of the school and the general world of communications. It has definite language patterns, syntax, grammar, and history.” The court went on to observe the following:

“Black English” is not a language used by the mainstream of society—black or white. It is not an acceptable method of communication in the educational world, in the commercial community, in the community of the arts and science, or among professionals. It is largely a system that is used in casual and informal communication among the poor and lesser educated.

This entry reviews the legal context of the *King v. Ann Arbor* case, the Court’s finding, and the relevance of the decision to the quality of education for African American children in the United States today.

Legal Background

The pertinent statutory language of the Equal Educational Opportunities Act (enacted 1974) involved in the *King* case read as follows:

No state shall deny equal educational opportunity to an individual on account of his or her race, color, sex or national origin, by...the failure by an educational agency to take appropriate action to overcome language barriers that impede equal participation by its students in its instructional programs.

While this legislation was enacted by Congress, the act itself was predicated on the equal protection clause of the Fourteenth Amendment of the U.S. Constitution.

When President Richard M. Nixon urged enactment of the law that became Section 1703, he indicated that the statute should set “standards for all school districts throughout the Nation, as the basic requirements for carrying out, in the field of public education, the Constitutional guarantee that each person shall have equal protection of the laws” (118 Cong. Rec. 8931 [1972]). This effort went far beyond requiring standards of equal education for formerly segregated dual systems of education. It was intended to embrace all school systems under the equal protection clause of the Fourteenth Amendment and the authority granted in that amendment to enforce, by appropriate legislation, the provisions of the amendment.

The Court’s Decision

In his Memorandum Opinion and Order, Judge Charles W. Joiner emphasized the importance of developing children’s communication skills in standard English—“the language used by society”—so that they can participate fully in the activities of that society, including politics, business, science, the arts, and culture. Given the importance of communication in each child’s development, Joiner held that “a major goal of a school system is to teach reading, writing, speaking and understanding standard English.”

Judge Joiner further noted that the lawsuit represented an “a cry for judicial help in opening the doors to the establishment.” As he put it:

The plaintiffs have attempted to put before this court one of the most important and pervasive problems facing modern urban America—the problem of why “Johnnie Can’t Read” when

Johnnie is black and comes from a scatter low-income housing unit, set down in an upper middle class area of one of America’s most liberal and forward-looking cities.

The plaintiffs’ counsel described the case as an attempt to keep another generation from becoming functionally illiterate.

In *King*, the court concluded that the inability to read at grade level because of the exposure to, and immersion in, Black English or vernacular outside the school impedes children’s equal participation in the education program of the school. The school board’s failure to take appropriate action to address this barrier constituted a denial of equal educational opportunity on account of race, and thus the board had a duty to take appropriate action to overcome the language barrier. What is “appropriate action”? Judge Joiner concluded that “the courts are not the place to test the validity of educational programs and pedagogical methods.” Designing a program of education to meet the standard of “appropriate action” was the responsibility not of judges but of educators, linguists, and psychologists. Nevertheless, his opinion did provide some guidance:

School Boards and Teachers may not act blindly, callously and thoughtlessly, without care. They must have as their goal the congressional requirement, the elimination of existing language barriers, and the steps that they take must be rational and logical in light of the situation confronting them and the knowledge reasonably available to them.

Judge Joiner suggested that the defendant school board should provide leadership and help for its teachers in learning about the existence of “Black English” as a home and community language of many African American students and in finding ways and means of using that knowledge in teaching the African American children what he called “code switching skills in connection with reading standard English.”

Implications of *King v. Ann Arbor*

The issue of communication skills in standard English is of equal, if not greater, concern today,

given the high dropout rates of African American and Latino youth from schools in inner cities, where a majority of the school's students are African American and/or Latino poor youth. Several core concepts and principles of *King v. Ann Arbor* are highly relevant in the U.S. educational system of 2009.

First, today's educators are aware that black English, vernacular, or dialect is used in African American homes and racially segregated communities, where there are high rates of illiteracy and many may have limited contact and interaction with people of diverse backgrounds. African American language emerged during the period of their enslavement and continued through the Jim Crow era. Even after the *Brown v. Board of Education* decision of 1954, segregation has continued, in part as a result of continued poverty, diminished job opportunities, and segregated housing patterns. An underground economy that often involves criminal activity is related to a high incarceration rate for African American males. Illiteracy becomes a vital issue among young African American men when they sign statements they may not understand or be able to read later in court.

Although teachers may be unaware of what they are conveying to students, a negative attitude toward the home language of a child may cause the child to feel inferior and create a psychological barrier to learning. The student feels rejected and criticized and "turned off" to the learning process. This lowering of self-esteem causes the child to think, "Why bother? This teacher does not care about me. She feels she is wasting her time with me." As a result, as Judge Joiner recognized in his opinion, the child may withdraw, act out of frustration, and not even try to learn to read.

Another concern is the lack of parental or other home support for developing reading skills in standard English, including the absence of persons in the home who enjoy reading and benefit from it. Television may provide the passive entertainment and "babysitting" function for the child, and programs may not promote reading and comprehension of standard English. Lacking home support for developing reading skills in standard English, the child may just drift through school until reaching the eighth or ninth grade and then decide to drop out and never finish high school.

Involvement from either parents or members of the extended family who may be raising the child is crucial in broadening reading skills and comprehension of school activities. Inadequate time spent with children is detrimental to their progress. All of these challenges of poverty, lack of economic resources, and social concerns may provide a fertile environment for the continued use of the Black vernacular and dialect in the home and contribute to the absence of support for children in learning to employ standard English in their communications with others in school and in the world at large.

Linguistic experts have shown that children experience difficulty in hearing and making certain sounds used discriminatively in standard English when they are not exposed to these discriminative sounds in everyday lives at home and in their communities. Students may view input from teachers in this regard as criticism of their vernacular or speech style, suggesting that they are inferior. They may rebel against being forced to conform to the speaking style of standard English.

Placed in the context of today's schools, the *King v. Ann Arbor* ruling suggests that school-teachers convey a culturally sensitive approach to African American children and inspire them to want to expand their use of the English language. In addition to conveying an appreciative and caring and attitude toward language used in children's home environments, it is constructive for teachers to avoid criticizing or disciplining students for use of the Black vernacular or dialect. Rather, it is important that teachers encourage the efforts of children, of all backgrounds, to increase their proficiency in standard English, and reward them for achievements and accomplishments in this respect. Such an approach may reduce the number of children who perform below grade level and help them meet the standards implemented under the federal No Child Left Behind (2001) legislation.

Further, it is the responsibility of teachers to help children to appreciate the importance of proficiency in standard English in the development of literacy, mathematical, and technological skills needed for participation in the competitive world of the 21st century.

MATHEMATICS EDUCATION

Today, mathematics is the “gatekeeper” to students’ success in high school and beyond. Subjects like biology, psychology, government, and history require students to be competent in their mathematics abilities. All students need to be proficient in mathematics and to enroll in advanced mathematics courses to gain entry into college and many careers. Unfortunately, there are significant gaps in mathematics performance and participation among African American students and other racial groups. Standardized achievement tests and course-taking patterns are indicators of students’ progress in mathematics. Results from the National Assessment of Educational Progress (NAEP) suggest that while African American students are improving, they continue to score below the national norm on mathematics achievement tests. Moreover, White and Asian American students continue to outperform African American students, resulting in a persistent achievement gap. This entry examines the current status of African American students in mathematics, factors that contribute to their participation in mathematics, and strategies to maximize their mathematics learning and achievement.

Participation in Mathematics Education

Studies have shown that students who complete Algebra II experience more success in college and earn more. Similar reports suggest students

who take advanced mathematics courses, such as calculus, score higher on standardized tests. However, African American students are not enrolling in advanced high school mathematics classes at the same rate as their White and Asian American peers. In 2005, the NAEP reported that 5.5% of African American students took calculus in high school, compared to 15.3% and 29.8% of White and Asian American students, respectively.

Several factors contribute to the participation and achievement of African American students in mathematics education, including teacher competence, cultural incongruence between African American students and their teachers, and tracking students into low-level mathematics courses. Research suggests that teachers with strong mathematics backgrounds generally produce higher student achievement. The current shortage of mathematically proficient teachers is most problematic for African American students in high-poverty schools with underrepresented populations. In a 2006 report published by the Education Trust, nearly half of the high school teachers and more than 70% of middle school teachers in these schools lacked a minor in mathematics or a math-related field.

Cultural incongruence also contributes to the achievement of African American students. Students enter school with cultural and cognitive orientations. Research suggests that classrooms that value and incorporate students’ culture have a positive impact on student achievement and their willingness to learn. When teachers do not understand and value African American students’ cultures, this leads to disengagement and underachievement.

Tracking students into low-level mathematics courses has a negative effect on their achievement. African American students are disproportionately placed in low-level mathematics courses that teach more drill and practice, focus on basic computational skills, and expose students to less sophisticated mathematics. In contrast, White and Asian American students are more often placed in high-level mathematics classrooms where problem solving, analytical thinking, and college preparatory activities are emphasized. These placements can begin as early as elementary school and tend to follow students throughout their schooling careers. Teacher competence, cultural incongruence, and tracking exacerbate the achievement gaps in mathematics.

Strategies for Change

Several strategies—reforming mathematics curriculum and teaching, encouraging more culturally relevant teaching, and preparing future educators—are being implemented to improve the mathematics education of African American students. Leading the reform efforts, the National Council of Teachers of Mathematics (NCTM) recommends that all students have opportunities to learn meaningful mathematics, have access to a coherent, challenging mathematics curriculum, and be taught by competent and well-supported teachers. An affiliate of NCTM, the Benjamin Banneker Association, aims to improve the education and development of African American children by making the vision of reform a reality in all schools.

Culturally relevant teaching or culturally responsive pedagogy is an approach that has shown promise in improving the education of African American students. This pedagogy empowers students intellectually, socially, emotionally, and politically by using cultural referents to impart knowledge and skills. It encourages teachers to value and build upon the knowledge that students bring the school.

Teacher education programs are also taking steps to better prepare teachers for culturally diverse schools. Some programs are reassessing admissions procedures (that is, selecting more prospective teachers from underrepresented groups or students possessing certain experiences, knowledge and dispositions), incorporating cross-cultural immersion experiences, and restructuring methods courses. Other programs help White preservice teachers develop awareness, insights, and skills to effectively teach in multicultural settings and strive to recruit and retain African American teacher education scholars.

African American students have made great strides in mathematics education but still have a long way to go. Modifications in school policies and practices are needed for African American students to reach their true potential. Further research is needed in the areas of curriculum, assessment, tracking, and culturally relevant teaching to inform the current reform efforts.

MAYS, BENJAMIN E. (1894–1984)

Benjamin Elijah Mays was the consummate Renaissance man, in that he was proficient as an educator, scholar, preacher, philosopher, and advocate for social change. The longtime president of Morehouse College was born in 1894, two years before the historic *Plessy v. Ferguson* decision by the Supreme Court of the United States, which established the concept of “separate but equal.”

Mays tirelessly worked to raise himself and his fellow citizens from a life of discrimination perpetuated by a White majority that embraced a concept of freedom that included only people who emanated from Western Europe. He believed that he had been placed on Earth to provide guidance and leadership for descendants of Africa who had been brought to this country as enslaved people to build it for free. Mays set a high standard for himself and expected others who came into his orbit to accept the same challenge for themselves.

Mays was a tall and distinguished man who always carried himself with class, grace, and dignity. He had such presence that people would change their behavior if they heard that he was approaching. It seemed that Mays was conscious that others, especially young African American men, were watching his actions; accordingly, he was always on stage. He received the prestigious Spingarn Medal and some 45 honorary doctorate degrees. The Spingarn Medal was created by and named after NAACP president Joel Elias Spingarn to annually honor African Americans whose acts represent distinguished achievement.

Professional Career

No one could have forecast that Mays would rise from his humble beginnings to become an internationally known educator, theologian, and philosopher of the movement to gain civil and human rights for African Americans during the latter half of the 20th century.

Mays attended South Carolina State College in Orangeburg, South Carolina, and later received his BA degree from Bates College, in Maine, where he graduated Phi Beta Kappa with honors. He received his master's and PhD degrees from the University of Chicago. Dr. Mays held many important positions during his professional career, including stints with the YMCA and the National Urban League and as dean of the Howard University School of Religion in Washington, D.C. He also served as president of the Atlanta School Board.

However, his most important position was that of president of Morehouse College in Atlanta, Georgia. He held this position for 27 years and was the "trainer of trainers" for aspiring young African American men during his tenure. His most famous student, of course, was Martin Luther

King Jr. Moreover, there were innumerable others who came under the influence of Mays while matriculating at Morehouse.

During Mays's tenure at Morehouse, his philosophy and leadership skills influenced thousands of young men who left the college with a mission not only to do well for themselves but also to make a contribution to uplifting the downtrodden African American. His philosophy was akin to that of W. E. B. Du Bois, who was a friend and comrade in the struggle for equal justice. Mays believed that men who graduated from Morehouse had a unique responsibility to provide leadership to the rest of the world and demonstrate that an African American man could perform any job as well as any White man. He once said, "Many of you will be physicians; others will acquire a PhD. Some will be educators, but if fate intervenes, and you become a ditch digger, then be the very best ditch digger that there has ever been. Do your job so well while here on Earth that only God almighty could do it better."

Morehouse Men

While Dr. Mays was at Morehouse, chapel was a daily requirement. He used the chapel as a forum for many prominent people to come and discuss contemporary issues of the day. On Tuesday mornings when he was in Atlanta, he spoke to the student body, and most of his messages were devoted to "brainwashing" the young and impressionable students. He often related that the story of freedom and democracy was incomplete, and that it was the responsibility of Morehouse Men to devote themselves to expanding the umbrella of freedom to include people from the continent of Africa. It is hard to measure the impact of these messages; however, he imbued in the Men of Morehouse that there was no job on Earth that a Morehouse man could not perform. And if you want a job well done, then get a Morehouse man to do it.

Armed with this philosophy, thousands of young men spread out throughout the world and carried this message forward. In many communities, they were known as "Morehouse Men." This designation meant something, and untold numbers of parents throughout the United States and many parts of Africa would send their bright young boys to Morehouse so that they could come under the

influence of the “Black Moses” named Benjamin Elijah Mays.

Another admonition that Mays exhorted to his students was never to “sacrifice a principle for peace.” Segregation was morally wrong and repugnant in the sight of God. Therefore, Morehouse Men must prepare themselves to meet this challenge. He added that a man should not pay for the privilege to be segregated. In other words, if you must engage in activities that perpetuate segregation, then do so only if you have no choice. Never, ever voluntarily pay for segregation. “If the buses are segregated, then walk. If the restaurant is segregated, then do not eat,” Mays exhorted. Dr. Mays practiced what he preached, and often walked to an appointment rather than ride the segregated buses of Atlanta, Georgia. These sermons at Morehouse, and throughout the world, made Mays a civil and human rights philosopher and catalyst for confrontation with White racism in the United States.

Writing Career

Benjamin Elijah Mays was the author or coauthor of several books, including *The Negro’s Church*, a sociological study of 609 urban churches in 12 northern and southern cities and 185 rural churches in four southern counties; and *The Negro’s God as Reflected in His Literature*. In his highly acclaimed autobiography, *Born to Rebel*, he used empirical data to contextualize his quest to be looked upon first as a human being and to trace his life journey through various venues throughout the world. A second autobiography is titled *Lord, the People Have Driven Me On*.

In addition to dozens of scholarly articles on racial, educational, and religious issues, Mays also wrote a weekly column in the *Pittsburg Courier* titled “My View,” which he used to reach a national audience. Using this medium, he was able to carry on a conversation regarding his rationale for educational advancement and equality for African Americans. Moreover, he was able to expound on his intense distaste for the duality of Whites who preached liberty, justice, and freedom for all yet enslaved and segregated millions of Africans in order to buttress their quest for global economic and political domination of the world.

McDANIEL V. BARRESI

McDaniel v. Barresi (1971) was a challenge to a school board plan in Clarke County, Georgia, where African American students were reassigned to schools away from their neighborhood to achieve greater racial balance. The U.S. Supreme Court ruled that it was constitutional for school officials to consider race when assigning elementary school children to specified schools, with the goal of implementing a desegregation order.

In 1877, the State of Georgia’s Constitution stated that separate but equal schools shall be provided for “white and colored children.” The clause was again restated in the State Constitution of 1945. As in every state with separate school systems, the funding over the years was anything but equal. Rather, in the dual system, everything—textbooks, facilities, and teacher’s salaries—was unequal. The African American school system received the least. In *Brown v. Board of Education, Topeka, Kansas*, the U.S. Supreme Court intended to end this disparity and unify the school system. The *Brown* case was decided in 1954; however, not

until the U.S. Supreme Court heard the case of *McDaniel v. Barresi* was integration achieved.

The first school in Clarke County to desegregate was the University of Georgia. In 1961, a federal court ordered the admission of two African American students to the university. This event had no impact on the public schools. In 1963, led by the National Association for the Advancement of Colored People (NAACP), the Clarke County Board of Education approved the enrollment of five African American girls at previously all-White schools.

A freedom of choice plan had been instituted in 1959 to allow parents to choose any school in their districts; however, these five students were the first students to desegregate the public schools. The move was prompted by the passage of the 1964 Civil Rights Act, which changed the way the government enforced the *Brown* decision. The act directly tied federal school funds to a school system's progress on desegregation. It imposed an affirmative duty on the Clarke County Board of Education to dismantle its dual system of public schools. Before the passing of this act, the only relief available to African Americans was through the courts. Now, before receiving federal funds to operate, the plans for desegregation had to be approved by the Department of Health, Education and Welfare (HEW).

In 1968, Clarke County was still using the "freedom of choice" plan. Eight-hundred African American students had enrolled in previously all-White schools. Not only did this bring overcrowding in the school system, but five of the system's schools were either all African American or all White. This was not acceptable to the Department of Health, Education and Welfare.

The desegregation plan for the 1968–1969 school year was desegregation based on geographical location. The school board required students in the suburban areas to attend designated schools, while the inner city would have freedom of choice. The freedom of choice plan was applied to the junior high schools and the two senior high schools. This in essence left Athens High School desegregated and Burney-Harris High School all African American.

In 1969, the Clarke County School Board completed a redistricting plan in which no school would have its enrollment restricted to one race.

The geographical districting plan (plan A) would have as many elementary school students walking to school as possible. The two high schools were divided so that each school's racial breakdown was 50% African American and 50% White. Plan A was taken to Washington, D.C., for the Health, Education and Welfare Department's approval on May 1, 1969. On July 2, 1969, after some indecision, the department rejected plan A and submitted a second plan (plan B). This plan B called for the elementary schools to be reorganized. Schools were separated by grades, and every school would have 20% to 40% African American students. There would be no majority African American schools. The elementary schools' reorganization required departure from traditional elementary school grade ranges of Grades 1 to 6. Under the reorganization plan, some schools would house Grades 1–4 and some schools would house students in Grades 5–6.

The school board, after a heated session, voted to reject HEW's plan B and to stick with plan A with some modifications. The biggest concession was the busing of both African American and White students. The compromise plan used a feature called pocket busing. Pocket busing involved, in this case, busing or having African American students walk to White schools and in a reverse process, busing or having White student replacements walk from those same schools to the African American schools those African Americans left. As a consequence, the geographical areas where these students resided bore the brunt of the burden for the compromise plan because a double disruption occurred in each neighborhood: local students bused out and other race replacements bused in.

On August 13, 1969, the school board met to reconsider the compromise plan. Parents, both African American and White, obtained attorneys to petition the board to reconsider the compromise plan. The parents were not pleased with the plan, which required their children to be bused longer distances to school, bypassing neighborhood schools. The parents also argued that the Civil Rights Act of 1964 did not require busing to achieve integration. Despite the parents' concern, the school board voted to keep the compromise plan.

A group of both African American and White parents filed a petition in the Clarke County

Superior Court for injunctive relief. If granted, the injunction would stop the board from implementing the compromise plan. The superior court ruled that the board had an affirmative duty to achieve desegregation. The board had an obligation to end the dual system of education, and therefore the court denied the parents' request.

The parents appealed to the Georgia Supreme Court, which granted the parents' request for an injunction. The Georgia Supreme Court in its decision stated that the board of education had violated the equal protection clause because students were treated differently because of their race. The court also ruled that busing to achieve racial balance was not permitted under the 1964 Civil Rights Act.

The Clarke County Board of Education sought a writ of certiorari review from the U.S. Supreme Court, and review was granted. The Court ruled that school systems that had historically participated in dual school systems are clearly charged with an affirmative duty to take whatever steps necessary to end this dual system. Racial discrimination should be eliminated in its entirety. The board was to take whatever steps necessary to meet this goal. The U.S. Supreme Court reversed the State of Georgia Supreme Court's decision to enjoin the Clarke County School Board from implementing its plan of busing to achieve desegregation.

Throughout the legal appeal process, the board continued the implementation of its plan. Schools opened on September 2, 1970, without incidents or protest. The school board achieved a racial mix of 30% African American and 70% White for all the elementary and junior high schools. Burney-Harris remained the only all-African American high school in the system.

In the spring of 1970, the Department of Health, Education and Welfare was pressing the board to desegregate the high schools. A new high school was proposed; however, the site had not been determined. Burney-Harris was not only historically African American, but it held a significant role in the African American community's development. Since 1868, the school had served as the center for the African American community.

The school board set in place a plan to desegregate Burney-Harris. Starting in 1970, there would no longer be a majority African American school. Once the African American students at Athens

High School and Burney-Harris High School realized what had been decided, they became angry about not having a say in their future. A month-long protest ensued. Despite the warnings of the school superintendent, April's absenteeism lasted through May. Since the African American students' complaints revolved around losing the Black school's identity, the board found it difficult to address these complaints. Belatedly, the board put together a committee of students from the two merging high schools to work on problems that were facing the desegregated school. The students made recommendations concerning school personnel and policy, and after several meetings with the board changes were made.

Sixteen years after the *Brown* case in 1970, Clarke County schools were finally desegregated. Over the years, the school system has lost White students and has become more diverse. Many programs have been undertaken to improve educational achievement, but nothing has seemed to work.

McKISSICK, FLOYD (1922–1991)

Floyd B. McKissick, the first African American to study law at the University of North Carolina,

used his skills on behalf of desegregation and civil rights over a lifetime. An early member and the second national director of the Congress of Racial Equality (CORE), he later became an advocate of Black power.

McKissick was born March 9, 1922, in Asheville, North Carolina, to college-educated parents who instilled in him a critical need for education. With his strong family grounding, McKissick's earliest involvement with the civil rights movement began as an early teen, as he became an active member of the National Association for the Advancement of Colored People (NAACP) youth division.

McKissick attended Morehouse College in Atlanta, Georgia, and became involved on campus and around the community of Atlanta in the struggle for desegregation. After receiving a law degree from the University of North Carolina, he practiced law in the Durham, North Carolina, area. McKissick continued to fight Jim Crow by helping to desegregate a previously all-White public school in which he would represent his own daughter.

McKissick's most notable efforts as a lawyer would be used for the benefit of a segregated African American local in the Tobacco Workers International, an AFL-CIO member. McKissick pressed to have African American workers admitted to the skilled scale without loss of their seniority rating.

McKissick served in the U.S. Army and earned the rank of sergeant. After World War II, he began working with the Fellowship of Reconciliation organization, out of which CORE would evolve. McKissick worked with both African American and White liberals in the cause of desegregation of social institutions as a member of CORE.

As college youth began the courageous "sit-in" movement with the historic actions of the four North Carolina A&T students at the Woolworth's lunch counter, McKissick acted as a mentor and adult adviser to the NAACP Youth Council for college students who were motivated to participate in the sit-ins. The movement would also involve the collaborative participation of CORE and the Southern Christian Leadership Conference (SCLC) organizations. The efforts involved sit-ins at various public facilities such as parks, hotels, and bus stations. By 1959, CORE affiliates sponsored sit-ins in Charleston, West Virginia; Lexington,

Kentucky; and Miami, Florida, and even began sit-ins in South Carolina.

In early 1966, McKissick would take the leadership of CORE from James Farmer, to become the second national director of CORE. This change of organizational leadership for CORE marked the beginning of an ideological shift from the "integrationist" approach of the civil rights movement. Under McKissick, CORE began to espouse Black nationalism within the organization's aims and objectives.

In June 1966, the monumental "March Against Fear" came to signify the restlessness of African American youth in the emergence of a separate ideation in the call for "Black Power" by Stokely Carmichael and the Student Non-Violent Coordinating Committee (SNCC). McKissick's evolution from "social integrationist" to Black Power advocate reached the point of maturation during the march; he expressed support with Carmichael that the Black struggle needed a new rallying cry and Black Power was the same kind of group power that had been sought by other ethnic groups, such as Indians, Irish, and Ghanaians.

Later that year, McKissick would criticize civil rights leaders such as Bayard Rustin, A. Phillip Randolph, Roy Wilkins, and Dorothy Height for attacking the slogan of "Black Power" and for denouncing the organizations and younger leadership that began to mobilize in the spirit of Black Power. McKissick felt that the more "appropriated" civil rights leadership aided in propagating the consensus belief of "violence" that was being attached to the then-emerging Black Power movement.

McKissick became an outspoken advocate for Black Power, and he provided an explicit definition of Black Power, with critical points that included self-determination, political power, and economic improvement under Black capitalism.

McKissick eventually left CORE with plans to start a new community, "Soul City," in Warren County, North Carolina, on a vast amount of farmland. McKissick received financial backing from the U.S. Department of Housing and Urban Development and First Pennsylvania Bank for development of the project. The project encountered difficulties, however, causing McKissick to abort his original plans for the community that was to be erected in the spirit of Black self-determination

and Black Power. The project of Soul City eventually was taken over by the federal government in 1980. McKissick later became a pastor and worked for Soul City's First Baptist Church until his death on April 28, 1991.

McLAURIN V. OKLAHOMA STATE REGENTS FOR HIGHER EDUCATION

McLaurin v. Oklahoma State Regents for Higher Education (1950) was one of the last legal cases in a long line of lawsuits that blazed the trail for the landmark 1954 U.S. Supreme Court ruling in *Brown v. Board of Education, Topeka, Kansas*, which eradicated the legality of racial segregation in public education and pointed toward a new era of racial equality in public arenas. Prior to the *Brown* case, numerous lawsuits, mainly in higher education, had begun to dismantle the Jim Crow laws and legalized segregation of the South. *McLaurin* and several other legal cases that preceded it were orchestrated and litigated by a masterful legal team composed of Charles Hamilton Houston and future Supreme Court Justice Thurgood Marshall. This entry looks at the background of the case, its passage through the courts, and its long-term impact.

Historical Context

In 1933, Walter White, acting secretary of the National Association for the Advancement of Colored People (NAACP), appointed Charles Hamilton Houston, the dean of Howard University Law School, as special counsel to the NAACP. Charles Hamilton Houston immediately coordinated a litigation plan to fight against racial segregation. Houston implemented a three-pronged strategy, which included (1) solidifying a nationwide network of African American lawyers to file "test case" litigation against segregation practices; (2) building the support of precedents for a direct constitutional attack against segregation through

carefully targeted litigation; and (3) organizing local African American communities in broad, unified support of legal, political, and social action against ongoing discriminatory practices.

Houston believed that lawsuits related to graduate and professional education programs would create the legal path to end segregation. The advantage of bringing segregation lawsuits against graduate and professional programs was that they would effectively advance the goals of community mobilization and precedent building without making waves. Houston predicted correctly; southern Whites did not protest to protect the racial integrity of graduate programs, as they later would to protect their children from the perceived threat of educational integration in public schools.

Throughout the mid-1930s and 1940s, Houston, along with his former law student, Thurgood Marshall, built organizational support in the South and motivated people to bring lawsuits against segregated colleges and universities. Several plaintiffs, who were interested in pursuing graduate and law school degrees but were discriminated against because of the color of their skin, brought their stories to the courts, including the U.S. Supreme Court. Graduate and professional educational programs became the hotbed for the constitutional fight against Jim Crow segregation.

Facts of the Case

George W. McLaurin was a 68-year-old African American man with a master's degree and a strong desire to earn a doctorate in education. Mr. McLaurin applied to the University of Oklahoma to pursue graduate studies, but he was denied access solely on the basis of his race, in accordance with Oklahoma statutes that made it illegal for both Whites and African Americans to attend the same school. Mr. McLaurin filed a complaint in an Oklahoma district court alleging that the University of Oklahoma's actions and the Oklahoma statutes were unconstitutional and deprived him equal protection of the law under the Fourteenth Amendment of the U.S. Constitution.

The district court held that the state of Oklahoma had a constitutional duty to provide McLaurin with an education as was provided to other groups. Additionally, if Oklahoma statutes denied

McLaurin's admission into the University of Oklahoma because of his race, the statutes would be unconstitutional and void. In response to the district court's opinion, the state amended the statutes to allow the admission of African American students into institutions of higher education attended by White students in cases where courses were not offered at African American institutions, as long as instruction occurred on a segregated basis.

Accordingly, the University of Oklahoma admitted McLaurin into the graduate college to pursue a doctorate in education. Given the newly amended state statutes, McLaurin was not permitted to sit in the classroom with the White students; he was assigned to an adjoining classroom separated by a rail and specifically designated for African American students with a sign reading "Reserved for Colored." He was also assigned to a special table in a secluded part of the library, and he had to eat at a different time than his White classmates in the cafeteria.

McLaurin filed a motion with the district court requesting to have the previous order modified to remove the restrictive conditions. The court denied the motion because it determined that the university's treatment of McLaurin did not violate the Fourteenth Amendment. Therefore, McLaurin filed an appeal with the U.S. Supreme Court. Prior to the Supreme Court's hearing of the case, the University of Oklahoma relaxed some of the restrictions on McLaurin. The university permitted McLaurin to sit in a designated row within the classroom. He was also allowed to eat at the same time as his classmates in the cafeteria at a special table and to study at a table in the main floor of the library with the other students. Despite the university's slight modifications, the Supreme Court addressed the specific legal question of whether a state may, after admitting a student to graduate instruction in its state university, afford him different treatment from other students solely because of his race.

The Supreme Court reversed the lower court's decision and found that the conditions deprived McLaurin of his right to the equal protection of the law. The Court noted that the state-imposed restrictions deprived McLaurin the opportunity to intellectually come in contact with and to be accepted by his fellow students. Furthermore, the Court found the unequal treatment would hamper McLaurin's

development as an educational leader and trainer of others, which could have a detrimental effect on those students who might later come under McLaurin's guidance and training. Thus, the state-imposed restrictions would perpetuate inequalities. Given these circumstances, the Supreme Court held that the University of Oklahoma violated the Fourteenth Amendment by treating George W. McLaurin differently based on his race.

Impact of the Ruling

Concurrently with the *McLaurin* case, the Supreme Court decided a similar discrimination case in higher education, *Sweatt v. Painter* (1950). That case involved the University of Texas Law School's refusal to admit an African American man because of his race. The U.S. Supreme Court concluded that under the equal protection clause, the African American man was entitled to a legal education equivalent to that offered to White students; the separate law school created for African Americans was not equal.

The law school for African Americans had five full-time professors, 23 students, a library of 16,500 volumes, which, according to the Supreme Court, did not compare to the University of Texas Law School's 16 full-time and 3 part-time professors, 850 law students, a library of 65,000 volumes, and access to many distinguished alumni. The Court acknowledged that the law, similar to education, is a highly learned profession, and a legal education requires the interplay of ideas that cannot occur in an academic vacuum or in isolation from other individuals.

In spite of the Supreme Court's 1950 decisions in *McLaurin* and *Sweatt*, the Supreme Court did not reexamine the constitutionality of the separate-but-equal doctrine held in *Plessy v. Ferguson* (1896). The opinions were carefully written by Chief Justice Frederick M. Vinson, who welcomed revisions from his Court colleagues, such as Justices Stanley Reed and Felix Frankfurter, to get the wording just right, so as to not offend or overturn the longstanding separate-but-equal doctrine. A unanimous decision was reached, and separate but equal remained intact.

Four years later, however, the U.S. Supreme Court recognized the injurious effects of racial segregation, particularly on young children.

Consequently, in the landmark 1954 *Brown v. Board of Education*, the U.S. Supreme Court held that “in the field of public education the doctrine of ‘separate but equal’ has no place. Separate educational facilities are inherently unequal.” With mounting resistance abounding in school districts across the South, the Supreme Court followed up with a second *Brown* decision in 1955, requiring defiant schools and school districts to desegregate with all deliberate speed.

Desegregation was a painstakingly slow process. Therefore, in 1961, President John F. Kennedy stepped in and exerted his power with Executive Order 10952. In short, the executive order stipulated that all institutions, organizations, and projects receiving federal money could not discriminate on the basis of race, color, creed, or national origin. President Kennedy stressed that the issue was not merely eradicating discrimination, but eradicating as well the oppressive economic and social burdens imposed on African Americans by racial discrimination; thus, the expansion of educational opportunities was necessary.

Following the enactment of Executive Order 10952 in 1961, the court ordered the University of Georgia to admit African American students, after more than 175 years of racial discrimination; the university admitted only two students. President Kennedy wanted more action than the University of Georgia and other universities and agencies were willing to take. The president then proposed legislation to implement a civil rights act to ensure appropriate measures would be taken to guarantee that the right to equal opportunities would prevail.

In 1963, five days after President Kennedy’s death, President Lyndon Johnson and some members of Congress arduously worked to pass the Civil Rights Act of 1964. Prior to the implementation of the Civil Rights Act of 1964, several southern senators opposed the act, claiming that the federal government was overstepping its authority by denying U.S. citizens their basic economic, personal, and property rights for the sole benefit of the African American population. In spite of this opposition, Congress voted to enact the Civil Rights Act.

Title IV of the Civil Rights Act of 1964 permits the U.S. attorney general to investigate school districts and university systems that may be engaging in racial segregation. Additionally, Title VI of the

Civil Rights Act of 1964 specifically prohibits discrimination based on race, color, or national origin in any program, activity, or institution receiving federal financial assistance (42 USCS 2000d et seq., 1964). Title VI is applicable to all public schools and colleges and most private educational institutions.

MEDIA LITERACY

Media literacy is the ability to understand and critique messages via radio, film, television, the

print media, and the Internet. On average, people in the United States spend one third of their lives immersed in media, whether this takes the form of watching television, film, or videos; listening to music; reading print magazines and books; or surfing on the Internet. Given this media saturation, it is important to explore the tools needed to effectively navigate these media—all the more important when considering that corporate-sponsored and government-controlled media have historically been used to spread propaganda, to generate bias, and to create a culture of consumerism.

Media literacy is particularly important for African Americans, considering the various ways that mainstream media have portrayed (or entirely excluded) African Americans. In addition, it is important to understand the various ways that African Americans have used the media as a form of resistance through their innovative work in film, television, music, and increasingly cyberspace.

Media literacy is closely tied to education, where the necessary skills of such literacy are often developed. There are several important reasons to focus on media literacy education in K–12 settings, but three stand out as primary. First, as the nature of communications technologies changes rapidly, the nature of what it means to be literate also changes. Citizens of the 21st century must be equipped to process and produce information in the new media age for their own social, economic, and political welfare. Second, as targeted consumers and as victims of bias and ideological oppression, young people need to be able to separate themselves from the often-problematic representations they encounter when they engage mainstream media. Third, with the changing nature of media production, consumers are exerting more control over new media information as they acquire the power to program Internet content and even to produce film and music. This entry describes media literacy, discusses its importance to African Americans, and touches on teaching strategies.

Defining the Term

Traditionally, *literacy* has been defined as possessing the ability to read and write. Historians of literacy, however, have revealed that the term has always been associated with the most recent advances in communications technologies. Prior to

the invention of the Gutenberg printing press in the 15th century, the most “literate” citizens in communities were often the bards, or oral historians. In West African cultures, *griots* served as poets and musicians who operated largely in the oral tradition. Classic Greek philosophers such as Socrates and Aristotle championed the skill of oral arguments (rhetoric), though the former was initially skeptical of written language.

It is important to historicize a term such as *literacy*, to situate it clearly within a particular moment and within a set of social and cultural arrangements, as we now consider expanding and transforming this term to include the navigation of new media content. The 20th and 21st centuries have witnessed a massive transformation in the ways that information is created, processed, and shared, rivaled only by the Gutenberg press in its impact on social arrangements. This transformation has yielded important modes of information exchange such as radio, film, television, and the Internet. As we are bombarded with these new media, we are also confronted with the changing nature of literacy and literate behavior. Recently, the term *media literacies* has arisen to account for these changing representations and to suggest possible implications of these changes for traditional literacy education.

Media and African Americans

The media have represented interesting sites of contestation for the African American community, existing simultaneously as a site of problematic representations and as a site of resistance against racism and structural oppression. Media literacy for African Americans must consist of developing the critical tools necessary to read messages that are sent via the media. It must also consist of the development of the tools to produce critical media content.

Critical Reading

Problematic representations of African Americans via the media are as old as electronic media themselves. The first full-length movie, D. W. Griffith’s 1915 film *Birth of a Nation*, depicts African Americans (played by Whites in blackface) as uncontrollable mobs that needed to

be held in check by the Ku Klux Klan. Despite its overtly racist themes, the movie, one of the largest-grossing films in history, was and continues to be hailed as a classic.

Such problematic representations have continued throughout the history of film and television. African American males have been frequently portrayed as criminals and hustlers, and African American women have been cast as either maternal caretakers (Aunt Jemimas) or as oversexed vixens (Jezebels). The overt stereotyping of African Americans in the Hollywood film industry is humorously critiqued in Robert Townsend's 1987 film *Hollywood Shuffle*, where the lead character (played by Townsend) confronts the challenges facing African American actors.

Developing media literacy means developing the language and tools necessary to make sense of these images. As literacy itself expands to encompass signs and images, African American media literacy must expand to critically read these new texts, to decipher hidden meanings, to ask larger questions about the metanarratives that the corporate media creates to foster a system of beliefs that perpetuates class, race, and gender hierarchies. Those who have been traditionally alienated in this hierarchy must be skeptical of all information they receive via sanctioned avenues of information exchange. The media represent only a small portion of these outlets, though they are very powerful ones. It is important to consistently ask, How are African Americans portrayed via this outlet? Who is making the decisions? What are their interests? Where are African Americans absent in the media? Where are they overrepresented?

Making Media

Of course, African Americans have not been merely passive recipients of media. Groups and individuals have consistently manipulated the media to expose racism and prejudice and to celebrate African American culture. African American men and women, for instance, have been directing Hollywood films for more than 80 years. In 1919, writer and motion picture director Oscar Micheaux made *The Homesteader*, the first full-length film directed by an African American. The film, based on Micheaux's own novel, depicts the adventures of a self-made African American settler in the U.S.

West. Tressie Souders directed the first film by an African American woman (*A Woman's Error*) in 1922.

Ivan Dixon's groundbreaking 1973 film *The Spook Who Sat by the Door* advocates the use of armed militant resistance against racist oppression. Acclaimed filmmaker Spike Lee has produced 20 feature-length films during the 20-year period from 1986 to 2006. These films include fictional biographies of famous leaders (*Malcolm X*), explorations of race and racial relations (*School Daze*, *Do the Right Thing*, *Jungle Fever*, *Bamboozled*), and documentaries of significant events in African American history (*When We Were Kings*, *When the Levees Broke*). In television, the creation of the cable network Black Entertainment Television (BET) in 1980 significantly increased the amount of programming featuring African Americans on both sides of the camera.

Although always prominent in U.S. music as singers and players of musical instruments, African Americans are heavily involved in the production of music as producers and studio engineers who use new media literacies to manipulate sophisticated equipment to create tracks that define the contemporary urban music sound that is also currently the popular music around the world. Entrepreneurs such as Jay-Z, Doctor Dre, Jermaine Dupri, P. Diddy, and Jimmy Jam and Terry Lewis oversee multiple aspects of songwriting and music production that encompass these new media literacies.

Teaching Strategies

As educators consider strategies to incorporate media literacies into the traditional school curricula, it will be important to consider how to help young students to critically read mainstream media texts and to acknowledge and create spaces for students to learn the various media literacies that are needed to produce films, television shows, music CDs, and Internet sites. Of particular concern, however, are the digital divide and the fact that schools with high numbers of urban and rural poor underrepresented populations have far fewer of the technological resources that are needed to foster these new media literacies. As new media continue to contend with print media as the dominant avenues of information exchange, the issue of inequitable technological resource distribution

across U.S. classrooms (often defined by race and class) will only loom larger.

MEDICAL EDUCATION

Historically, U.S. medicine has been a profession dominated by White males. Extraordinary barriers to medical education for people from underrepresented groups have been overcome in pursuit of academic and professional excellence. Yet, despite years of effort at increasing diverse representation, African Americans remain significantly underrepresented in the field of medicine. While making up 13% of the total population, African Americans currently account for less than 4% of the total physician workforce in the United States. This gap symbolizes an issue of equity in educational opportunity, and it also has broader public health implications. The scarcity of African American physicians in this country threatens health care access and the delivery of quality health care for many communities.

Solid secondary school and college-level preparation is necessary for African American students to be competitive in the medical school admissions process. Comprehensive and specific undergraduate academic advising is critical in preparing students for the Medical College Admission Test (MCAT). Additional obstacles include the costs of the application process and the years required for medical education and training. To explore the current status of African Americans in medical

education, this entry examines the historical context, including the impact of the social, political, and economic climate of the country.

Some Firsts

The first African American to receive the coveted MD degree was James McCune Smith in 1837. Refused admission to medical schools in the United States on the basis of race, he earned his degree from the University of Glasgow in Scotland. The first African American student to graduate from a U.S. medical school was David J. Peck in 1847, from Rush Medical College (Illinois). By 1860, only nine northern medical schools had admitted one or more African American students to their lectures. These included Bowdoin Medical College (Maine), Medical School of the University of New York, Castleton Medical School (Vermont), Berkshire Medical School (Massachusetts), Rush Medical College (Illinois), Eclectic Medical School (Pennsylvania), Homeopathic College of Cleveland (Ohio), the American Medical College (Missouri), and the Harvard University School of Medicine (Massachusetts). Rebecca Lee Crumpler, the first African American woman to graduate from a U.S. medical college, received her degree from the New England Female Medical College in 1864. During the Civil War (1861–1865), the Army Medical Corps appointed eight African American physicians. This reflected both the shortage of African American practitioners and the reluctance of the government to commission them in the military.

In 1865, the Bureau of Refugees, Freedmen, and Abandoned Lands was established to help emancipated Africans adjust to freedom. During the 4-plus years that it existed, the bureau was responsible for opening more than 100 hospitals and dispensaries (including the Freedmen's Hospital in Washington, D.C.) for African Americans. During the revolutionary fervor of the Reconstruction years, many White doctors joined with their African American colleagues to advance the cause of equal rights by establishing schools for medical education and hospitals for internship and residency training, as well as facilitating the appointments of African American doctors to hospital staffs and admission to medical societies.

In 1868, Howard University College of Medicine was established for the education of both White

and African American students. Meharry Medical College was established in 1875, solely for the instruction of African American doctors. During the next three decades, a number of other medical schools, either church-related missionary institutions or proprietary operations, were founded to supplement these efforts.

In 1895, there were just 385 African American physicians in the United States; 7% of them were graduates from White medical schools. The role of the historically Black colleges and universities in educating large numbers of African American physicians was critical during this era. By 1905, the number had risen appreciably to 1,465 African American physicians; 14.5% had attended White medical institutions.

A New Century

The Carnegie Foundation for the Advancement of Teaching commissioned a review of U.S. medical education in 1910. All 155 medical schools operating in the United States and Canada were evaluated for educational entrance requirements, the size and training of faculty, the size of the school endowment and tuition, the quality of laboratories, and the availability and quality of clinical teaching facilities and staff. The resultant Flexner Report (1910) set forth standards for accreditation that changed the face of U.S. medical education, particularly for African Americans. In addition to other recommendations, the report proposed decreasing the number of medical schools and medical graduates in the United States.

By 1935, fewer than half of all U.S. medical degree-granting institutions remained (66 total), most of them affiliated with a university. The schools that closed included five of the seven historically Black medical schools that still existed at the time of the report; only Howard University College of Medicine and Meharry Medical College survived.

A complete listing of African American medical schools in the United States during the late 19th and early 20th centuries includes Howard University, Lincoln University, Straight University Medical Department, Meharry Medical College, Leonard Medical School/Shaw University, Knoxville College Medical Department, Knoxville Medical College, State University Medical Department,

Chattanooga National Medical College, University of West Tennessee College of Physicians and Surgeons, Medico-Chirurgical and Theological College of Christ's Institution, New Orleans University Medical College, Louisville National Medical College, and Hannibal Medical College.

Despite a largely segregated educational system, no additional provisions or institutions for educating African American physicians were explored in the Flexner Report. In the years that followed, the number of African American physicians decreased, and it was more than 50 years before another African American medical school was founded.

Civil Rights Gains

In 1965, 11 years after the *Brown v. Board of Education, Topeka, Kansas* (1954) decision calling for an end to racial segregation in public schools, barely 2% of U.S. medical students were African American. Most of these African American medical students (75%) attended one of the two African American institutions, Howard University College of Medicine or Meharry Medical College. At predominantly White medical schools, the numbers of African American students were small, and those admitted often faced an unwelcoming and unsupportive institutional climate.

Additionally, there remained U.S. medical schools (primarily private institutions) that would still not admit African Americans. Duke University School of Medicine (1966) and Wake Forest University School of Medicine (previously Bowman Gray School of Medicine) were among the last schools in the South to admit an African American student.

By the late 1960s, African Americans accounted for only about 3% of the total U.S. physician workforce. Based on the premise of equity and access to educational opportunity and bolstered by sweeping civil rights legislation, hundreds of initiatives were started to increase the number of previously excluded African American students entering careers in science and medicine. The American Association of Medical Colleges (AAMC) and other groups encouraged member institutions to improve outreach efforts, and specific programs were targeted at students from minority groups. In affiliation with the University of California, Los Angeles (UCLA), School of Medicine, the Charles

R. Drew University of Medicine and Science was incorporated in 1966 and became the first African American medical school founded since the Flexner Report. It was named in honor of Dr. Charles Drew, an African American physician famous for his pioneering work in blood preservation.

Private philanthropic groups (that is, the Josiah Macy Jr. Foundation, Pew Charitable Trust, the Commonwealth Fund) and government-sponsored agencies founded programs focused on providing academic enrichment for undergraduate and post-baccalaureate students, financial assistance, and support services. By the mid-1970s, there were more than 50 summer academic enrichment programs for students from minority groups at medical and undergraduate schools across the country. For example, the MEdREP program at Tulane University School of Medicine and the Health Career Summer Program at Harvard University offered students an opportunity to enhance the prospect for admission to medical school through intensive academic experience and exposure to professional work.

The U.S. Public Health Service (USPHS) through the Bureau of Health Professions funded the Health Career Opportunity Program (HCOP), which provided millions of dollars to medical schools for minority student support services, recruitment, and enrichment programs. The USPHS also provided research opportunities administered through the National Institutes of Health and unique programs to provide students with financing for medical education.

At the same time, there was a major increase in the number of accredited medical schools in the United States and an increase in the acceptance rate of students from minority groups. As a result, the 1970s and 1980s witnessed a dramatic increase in the number of African American students enrolled in and graduating from U.S. medical schools. Those numbers went from 188 in the 1970s to 785 in the 1980s.

By 1974, 10% of all students entering U.S. medical schools were from underrepresented minority groups. This included 5% who were African American and most of whom now attended White or majority institutions. In 1975, Morehouse School of Medicine (Atlanta, Georgia) was founded to further address the shortage of African American doctors in Georgia and throughout the nation.

Presently, there are 125 accredited MD-granting medical schools in the United States, including four that specifically target African American students. The list of current historically African American medical schools includes Howard University, Meharry Medical College, Charles Drew Medical School, and Morehouse School of Medicine.

Retrenchment

The U.S. Supreme Court's *Regents of the University of California v. Bakke* decision in 1978 ruled it unconstitutional to use fixed quotas for minority group applicants to professional schools in order to maintain diverse enrollment. The case centered on the admission policy at the University of California, Davis, medical school, which required a certain number of students from minority groups and had twice denied entrance to an otherwise qualified White candidate. The quota program was outlawed because it violated the equal protection clause of the Fourteenth Amendment of the U.S. Constitution. The ruling allowed for the use of race as a factor in making admission decisions. Nonetheless, the *Bakke* case marked the beginning of a period of legal attacks on affirmative action across the country.

An initiative in 1990, the AAMC's "Project 3000 by 2000" resulted in increased numbers of medical school matriculants from minority groups. Between 1990 and 1994, the number of students from underrepresented minority groups entering medical school increased by 36.3% to 2,014 students, or 12.4% of the total. This included African American students, who represented 8% of total medical students in 1994. Beginning in 1995, however, a disturbing shift occurred. An increase in the acceptance rate of nonminority compared to minority medical school applicants resulted in a decline in the percentage of students from minority groups entering medical school. Possible explanations included a less competitive minority applicant pool and/or a change in how admissions committees evaluated minority applicants.

In 1996, the Fifth U.S. Circuit Court of Appeals found in the case of *Hopwood v. Texas* that any consideration of race in admission to professional school, even as one factor among many, was unconstitutional. The U.S. Supreme Court declined to review the decision, and it effectively ended all

affirmative action admission policies to public universities in Texas. The decision also affected admissions procedures in the states of Louisiana and Mississippi. The same year, California Regents decided to ban race- or gender-based preferences in their admissions process.

In 1997, passage of the California Civil Rights Initiative—Proposition 209 and Initiative 200 in Washington State resulted in many institutions of higher education abandoning the consideration of race and gender in the admissions process. These policy decisions had a traumatic influence on the hard-earned gains in medical school diversity of the preceding decades. Public medical schools in California, Texas, Louisiana, and Mississippi accounted for nearly half (44%) of the decrease in enrollment of students from underrepresented minority groups that followed. More modest declines were observed in private medical schools and in other states across the country. For example, the incoming class at state-funded Medical College of Georgia (in a state where 30% of citizens are African American) included only 1 African American student out of 180 in 1997. In 2000, the “One Florida” initiative aimed at ending affirmative action in the state of Florida was approved.

Three years later, *Grutter v. Bollinger* (2003) proved to be one of the most significant affirmative action decisions in 25 years. In *Grutter*, the U.S. Supreme Court upheld the University of Michigan Law School policy, ruling that race can be one of many factors considered in the admissions process. However, the Court also ruled that a more formulaic approach, used by the Michigan undergraduate program, had to be modified to provide more “individualized consideration” of applicants. Nonetheless, it modified a shadow of ambiguity that had beleaguered affirmative action in institutions of higher education since the *Bakke* decision.

The Current Situation

African Americans have made remarkable achievements in the fields of science and medicine during the 20th century. Yet despite extraordinary efforts to enhance diversity, African Americans remain underrepresented, accounting for fewer than 5% of practicing physicians in the United States. Of 15,925 total graduates of U.S. medical schools in 2006, 7% were African American (1,122 African

American graduates). Consistent with recent trends, in 2006, even fewer entering medical students (only 6% or 1,155) were African American, the majority of whom were women.

In sharp contrast to the 1960s, most African American medical students (more than 85%) currently attend predominantly White medical institutions. In addition to teaching responsibilities, faculty and administration at medical schools are key in creating a supportive and nurturing environment for all students. They also serve as role models and mentors and enhance persistence to graduation. While the number of medical faculty from minority groups in the United States in total has tripled over the past two decades, only 3% of the total faculty are African American. The rising costs of medical education and financial debt create an additional concern for students from lower- and middle-socioeconomic families.

In summary, equity and equal educational opportunity are largely assumed at U.S. institutions of higher education. Current strategies to improve participation of African Americans in medical education include continued emphasis on academic preparation and enhanced competitiveness of the applicant pool. Presently, renewed focus is on the value of a diverse physician workforce to address the health care needs of an increasingly diverse U.S. population and to eliminate racial and ethnic disparities in health care and health outcomes.

MEHARRY MEDICAL COLLEGE

Meharry Medical College, in Nashville, Tennessee, has played a prominent role in promoting access for African Americans to careers in the health fields. The Southern Association of Colleges and Schools (SACS) has accredited the medical school since 1972; the American Association of Medical Colleges and the American Dental Association also accredit it. Meharry offers the doctor of medicine (MD), doctor of dental surgery (DDS), master of science in public health (MSPH), master of science (MS), and doctor of philosophy (PhD) degrees.

The medical school has about 202 full-time faculty and 723 students. Meharry has long-term partnerships with the Metropolitan Nashville General Hospital and Vanderbilt University

Medical Center. The school has graduated approximately 15% of all African American physicians and dentists working in the United States, 70% of whom work in underserved areas of the country. Since 1970, Meharry has graduated 10% of African American PhDs in biomedical sciences. At present, Meharry consists of schools in medicine, dentistry, and graduate studies. This entry looks at its history and accomplishments.

Early Years

Meharry Medical College was founded in Nashville in 1876 as the medical division of Central Tennessee College. The Meharry brothers—Samuel, Hughes, David, Jesse, and Alexander—the Methodist Episcopal Church, John F. Slater Fund, and the Freeman's Aid Society contributed toward the school's establishment. Initially, the school was called the Medical Department of Central Tennessee. Subsequently, the school's name was changed to Meharry Medical Department.

The impetus for establishing Meharry was to train caregivers to provide services to newly emancipated African Americans and others deprived of and needing medical attention. The formerly enslaved or descendants of the enslaved were among Meharry's first students. After graduating, many practiced in the post–Civil War South, where disease and poverty ravished the cities and countryside. Some of these alumni were at the frontiers of prevention, diagnosis, and therapeutics.

Dr. William Joseph Sneed (1891–1976), a Confederate surgeon, and Dr. George Whipple Hubbard (1841–1924), a member of the Union Army's Christian commission, started a school that would train African Americans in nursing and other health subjects. Hubbard's vision was launched when the Meharry brothers collectively donated \$15,000 for the school's establishment after one brother, Samuel Meharry, was rescued by African Americans following a road accident. Dr. Hubbard, a native of New Hampshire, completed his medical training at the Medical Department of Vanderbilt University and the University of Nashville. Similarly, Dr. Sneed, a native of Tennessee, received his medical training at the University of Nashville, where he graduated with high honors. Dr. Hubbard performed many duties at the newly formed medical school—he was dean, professor of chemistry

and therapeutics, and the school's first president, serving for 45 years. Dr. Sneed was also heavily involved at Meharry as a faculty member, specifically as a professor of surgery and surgical anatomy in Meharry's early years.

Growth and Evolution

During the first decade of Meharry's existence, lectures, recitations, and quizzes were the primary teaching methods. By the mid-1880s, students were engaging in laboratory work in chemistry, which included qualitative analysis, urinalysis, and toxicology. By 1900, as medicine became increasingly complex and specialized, there were significant curricular reforms at Meharry. The medical school also began to make entrance requirements more difficult, urging prospective students to complete college before applying to the school.

The changes in Meharry's curricula reflected the curricular reforms undertaken throughout the nation, prompted by the rise of proprietary medical colleges, which admitted everyone with the ability to pay tuition and graduated quasi-trained physicians. By the end of the century, Meharry adopted the admission requirements of the American Medical Association. Consequently, students had to pass an arduous examination in English, arithmetic, algebra, physics, and Latin before being admitted.

Meharry's dental and pharmaceutical departments were established in 1886 and 1889, respectively. While Dr. Hubbard obtained money and laboratory equipment for the dental school at conventions, early students were asked to bring their own tools, if they had any. The pharmacy school graduated its first class in 1890. The school obtained its highest enrollment in 1929, with 159 students. As the Great Depression severely crippled the nation's economy, the pharmacy school's enrollment rapidly declined. As a result, the school closed in 1938.

During the life of the program, more than 600 pharmacists were trained. While many were employed in drugstores, a large number opened their own businesses. In 1912, construction began on the George W. Hubbard Hospital. Andrew Carnegie, Julius Rosenwald, Robert Fulton Boyd, as well as other individuals,

churches, and corporate gifts provided money for the hospital's construction.

In 1910, the School of Nursing of Mercy Hospital was transferred to Meharry when the George W. Hubbard Hospital opened. By the mid-1930s, more than 200 women had graduated in nursing from Meharry's Hubbard Hospital. Many were employed in hospital administration, on faculties of nursing schools, and in public health centers.

In June 1910, Abraham Flexner published *The Flexner Report on Medical Education in the United States and Canada: A Report to the Carnegie Foundation for the Advancement of Teaching*. This book, popularly known as the Flexner Report, recommended reforms to medical school curricula. Specifically, Flexner strongly advocated that students have a college background in chemistry, biology, and physics before being admitted to medical school. He also recommended the closure of medical schools with inadequate facilities and methods of instructions.

Among the seven Black medical schools, Flexner recommended the closure of five and the continuation of two. He recommended that Howard Medical School in Washington, D.C., and Meharry be enhanced and preserved. Influential groups—the American Medical Association and various foundations headed by wealthy men such as Andrew Carnegie, John D. Rockefeller, Julius Rosenwald, George Eastman, and Edward Harkness—endorsed the report and urged medical schools to adopt the reforms. The American Medical Association Council on Medical Education devised a system of accreditation based on the Flexner Report. Meharry obtained an A rating when the council first awarded accreditation.

New Challenges

On September 30, 1915, leaders from medicine, religion, and education applied and received approval for a charter of incorporation in the name of Meharry Medical College, giving it independence from Central Tennessee College, which had changed its name to Walden University in 1900. On February 1, 1921, John James Mullowney, a 1908 graduate of the Medical Department at University of Pennsylvania and a former faculty member of Girard College in Philadelphia, became the second president of Meharry Medical College.

Prior to Dr. Mullowney's assuming the presidency, Meharry was in crisis. Its buildings were dilapidated; the school's library and medical supplies for students were inadequate. Faculty members were overworked and underpaid. At Hubbard Hospital, patients were neglected, and surgeries were often conducted with inappropriate equipment and in unsanitary settings. These conditions cost the Medical School its A rating when the American Medical Association revisited the nation's medical schools.

Under Dr. Mullowney's stewardship, admission requirements were raised; the number of faculty increased; research and hospital facilities expanded exponentially. The bed capacity in Hubbard Hospital increased to 140; outpatient clinics were restructured according to specialty and were fully staffed, enabling doctors to treat a multitude of people; and a hospital superintendent, who oversaw the daily functions of the Hubbard Hospital, was hired. As a result of these changes, Meharry regained its A rating by the American Medical Association in 1923.

During its early years, Meharry was located in the southern section of Nashville and was housed in several small buildings that were adequate for its needs during that period. As Meharry continued to expand, its early plants and facilities became outdated, making it necessary for the college to erect new facilities. However, by the 1920s, with the assistance of the General Education Board, the Rosenwald Fund, George Eastman, the Harkness Foundation, the City of Nashville, and Meharry alumni, Meharry moved to one street west of Fisk University in North Nashville, its present location. Because of the proximity of the schools, Fisk and Meharry formed a mutually beneficial relationship. By the 1930s, many aspiring physicians obtained their undergraduate education at Fisk before attending Meharry to obtain their medical degrees.

In 1937, the American Medical Association placed Meharry Medical College on probation after an evaluation by its Council on Medical Education and Hospitals. The council found deficiencies in Meharry's organization and administration and took note of the lack of teachers with postgraduate training. The following year, Dr. Mullowney retired due to health reasons. Meharry's Board of Trustees appointed Edward L. Turner to

succeed Dr. Mullowney as the school's president and dean of the School of Medicine. Turner, a native of Illinois, received his medical training at the University of Pennsylvania.

Under Turner's tenure as president, African American faculty became more visible in leadership roles at the medical college. Furthermore, Dr. Turner changed the school's curricula, stressing the importance of a more scientific approach and emphasizing the importance of proper clinical procedures. During Turner's presidency, Meharry began to experience financial difficulties, which troubled the institution throughout the 1940s. In 1944, Dr. Turner resigned as president; the Meharry Board of Trustees appointed Dr. Mation Don Clawson to serve as president in 1945. His presidency was short lived, as he resigned in 1950.

Modern Leadership

Between 1950 and 1952, an interim committee directed the school's affairs until Harold D. West, the first African American president of Meharry, began his term in 1952. Dr. West, a native of New Jersey and a graduate of University of Illinois with a master of science and doctorate of philosophy degree in biochemistry, worked untiringly to bring positive change to Meharry. Under his tenure as president, the school launched a \$20 million capital campaign, purchased land close to the campus, and expanded the Hubbard Hospital.

Furthermore, during Dr. West's presidency, the school redefined its purpose, terminating the School of Nursing and the Division of Dental Technology. Drastic enhancements were made to the curricula and facilities in the schools of medicine and dentistry. The task of keeping Meharry Medical College solvent and accredited took its toll on Dr. West's health. In May 1965, he asked the board of trustees to allow him to retire.

From 1966 to 1968, for the second time in Meharry's history, the school was governed by an interim committee until the former dean of the medical school, Lloyd Charles Elam, was appointed president. Dr. Elam, a native of Arkansas, was the second-youngest president in Meharry's history. He did his medical training at the University of Washington at Seattle. As president, Dr. Elam launched an ambitious fund-raising campaign, working to secure money for physical facilities.

Moreover, under his leadership, Meharry established a graduate school that offered the PhD degree in basic sciences and the School of Allied Health Profession in tandem with Tennessee State and Fisk universities. New facilities were constructed for the schools of medicine, dentistry, and a new hospital was constructed in the 1970s. Elam served as president for 13 years and subsequently continued his service to the school as a distinguished member of the teaching faculty.

In 1981, Dr. Richard Lester, a member of Meharry's Board of Trustees and chairman of the Department of Radiology of the University of Texas Science Center, became the medical college's interim president for one year. David Satcher became the third African American man to become president of Meharry. He was president from 1982 until 1993; he was appointed director of the U.S. Centers for Disease Control in Atlanta in 1993 and was nominated by President Bill Clinton to the position of surgeon general of the United States in 1997.

In 1994, Dr. John E. Maupin Jr. became Meharry's ninth president. A graduate of Meharry's School of Dentistry in 1972, he was charged with orchestrating the construction and renovation of facilities, merging the clinical staffs, and helping to generate momentum in the community around the continued relevancy of Meharry Medical School. In January 2007, Wayne J. Riley became president of Meharry. Dr. Riley succeeded Dr. Anna Cherrie Epps, who was Meharry's interim president from June 2006 until December 2006. Dr. Riley, a native of New Orleans, earned four degrees. He completed his medical training from Morehouse School of Medicine.

MENDEZ V. WESTMINSTER SCHOOL DISTRICT OF ORANGE COUNTY

Mendez v. Westminster School District of Orange County (1947) joined lawsuits against four districts in California, all charged with segregating presumably Spanish-speaking children. The Education Code of California requires children to attend the school designated by their district according to residential location. In the four districts of this case, the school board placed children of Mexican descent in schools designated exclusively for children who were not proficient in the English language, regardless of where they lived and without an accurate evaluation of the children's proficiency in the English language. The federal district court ruled in 1946 that segregation in schools violated the constitutional right that grants students equal protection under the law. The school district appealed, and on April 14, 1947, the Ninth Circuit Court of Appeals in San Francisco upheld the decision that schools could not segregate based on national origin. This case set a legal precedent for the eventual abolishment of the "separate-but-equal" doctrine in 1954 in the case of *Brown v. Board of Education, Topeka, Kansas*. Though this case was only at the state level, it essentially overruled *Plessy v. Ferguson* (1896) by upholding Mexican American students' right to desegregated education in California public schools. This entry focuses on the facts of the *Mendez* case and its impact.

Facts of the Case

African American children have consistently struggled with the issue of segregation in U.S. schools. Segregated schools sent the message to African American children that they were inferior to Whites. This feeling of inferiority affected students' confidence to succeed academically. Children of Mexican

descent had similar confrontations with segregation and equal opportunity in the public school system. While African Americans suffered discrimination because of the color of their skin, Mexican Americans suffered discrimination because of their language or the Mexican origin of their names.

The public school system receives its funding from the state, but the local school districts function independently, as long as they abide by the equal protection provisions prescribed in the state's constitution. In California, the constitution supports the furtherance of equal education to all children pursuant to the Fourteenth Amendment. The constitution provides for the special treatment of children with handicaps such as language deficiency, but such a conclusion is drawn after examining the children and classifying them based solely on their language abilities and not on their ethnicity or ancestry.

In the Southern California district of El Modeno, Lincoln School was designated exclusively for children of Mexican descent, and Roosevelt School enrolled predominantly English-speaking students, with less than a quarter of the students being Spanish speakers. Although the two schools administered the same standardized tests and followed the same curricula, treating students separate but equal is a violation of the Fourteenth Amendment. The students at Lincoln School tested as mentally superior to those in Roosevelt School, but many of the exceptional students remained in Lincoln School instead of graduating to Roosevelt School, based on their levels of command of the English language. Parents protested regarding the school district's segregation policies, but the school board did not make any changes to its policies.

The Garden Grove Elementary School District segregated Spanish-speaking children through the fifth grade, but set the standard that it was unreasonable to segregate children past fifth grade.

In the Westminster School District, children of Mexican descent attended Hoover School, and the English-speaking (with 14 Spanish-speaking students) attended Westminster School, even if they lived in the Hoover elementary division. The residents protested the obvious and irrational segregation, but segregation policies remained similar to those in the district of El Modeno.

In the Santa Ana City School District, the language-determinative tests gave inaccurate

results, so children were placed in the Spanish-speaking school based only on the Mexican origin of their names. In this district, the Spanish-speaking students attended Fremont School, while Franklin School was composed of predominantly English-speaking students. The school board allowed 26 children of Mexican descent living in the Fremont district to attend Franklin School and 35 children not of Mexican descent living in the Fremont district to attend Franklin School. The parents of several Spanish-speaking children protested because their children attended Fremont School instead of Franklin School. The board of education responded by requiring those 26 children of Mexican descent attending Franklin School and living in the Fremont district to attend Fremont beginning the following fall. The school board did not require the English-speaking children attending Franklin and living in the Fremont zone to move to their respective zone. The school board clearly intended to affect only the children of Mexican descent with its decision.

Responding to lawsuits by the parents, Federal District Judge Paul J. McCormick ruled on February 18, 1946, that segregation in these schools was a violation of the equal protection clause of the Fourteenth Amendment. The decision was upheld by the Ninth Circuit Court on April 14, 1947, after the school district appealed and the court ruled that segregation based on nationality was unconstitutional. While the immediate decision affected Mexican Americans, 2 months later a statute was repealed that allowed segregation in schools for Asians. Not only did this case create a foundation for equality in California, but the brief written for the *Mendez* case was used as a model for the arguments used in 1954 in *Brown v. Board of Education, Topeka, Kansas*, which abolished the "separate-but-equal" doctrine and made segregation illegal across the United States.

Impact of the Ruling

Children may be discouraged from competing against other children who have a strong command of language. Children with a disadvantage, such as a language barrier, are segregated after extensive testing that records the disadvantage of the child as so pronounced that a separate environment would be most beneficial to the child.

Such children become more confident in their abilities and are better able to compete with English-speaking children once they are more comfortable with the language. Segregation policies and practices like these came about to help children learn English, but this does not justify the continuous segregation occurring in these school districts in California. Even though facilities had the same books, courses, and curricula, children of Mexican descent were singled out based on their ethnicity, a clear violation of the Fourteenth Amendment.

Continuous segregation not only affects those who are segregated but also has an impact on those from whom the children are segregated. Spanish-speaking children who are isolated are hindered by their lack of exposure to the English language. The separation of the students creates two distinct groups, which may promote hostility between them. Interpersonal relationships affect students in academics as well as in their long-term interactions. Continuous segregation beyond fifth grade has an adverse effect on both groups of students. Segregation of children based solely on language proficiency perpetuates a hierarchy that more than likely will affect long-term interactions.

The ruling in the *Mendez* case set a more clear-cut standard for segregation in schools. The Fourteenth Amendment provides that every public school student have rights based on the equal protection provision. To avoid discrimination against any racial or ethnic group, it is important to implement ideals focusing on the furtherance of equality and justice for all.

MENTORING PROGRAMS

Mentoring may be described as a positive relationship between two individuals in which one individual teaches or guides the other and both benefit. Mentoring has been reflected in myriad relationships throughout human existence, including relationships between fathers and sons, older male family members (grandfathers, uncles, cousins) and younger male family members, mothers and daughters, older female family members and younger female family members, laborers and their apprentices, church elders and their communicant class, teachers and students, and coaches and players.

Mentoring has always represented a vital component of the African American educational experience but has seen significant changes since desegregation. This entry on mentoring explores the causes of those changes as well as their impact on mentoring as a component of the African American educational experience.

Historical Background

Before segregation, African American children were surrounded by mentors in their families, schools, churches, and communities. The extended family represented a vital component of the mentoring process because of its direct involvement with the schools, churches, and businesses in the community; a sense of responsibility for any young person was prevalent, and thus mentoring was essentially a way of life. The richness of oral tradition resulted in the passing of wisdom from one generation to the next over family meals, Sunday school classrooms, or checker games on front porches. Financial poverty may have been a

reality for most African American families at this time, but wealth existed in the quality of their relationships.

After desegregation, political, social, and economic factors contributed to the dissolution of this rich tradition. African American communities dissolved when members of extended families moved out and away from each other. Unfortunately, most African American children were no longer surrounded by a sea of mentors because the faces seen in their schools, businesses, and communities were predominantly White. Moreover, institutional and social racism prevented or hindered the development of positive relationships between African American children and many of the White adults who now surrounded them.

As a result of their alienation in schools and communities, many African American children chose to “drop out” either academically or socially. Alarming statistics confirming this phenomenon resulted in the development of mentoring programs for African American students that sought to help their participants regain either a positive academic identity, a positive social identity, or a combination of both. Some programs operate on a national level, while others are more regional. Table 1 provides a limited review of mentoring programs that currently operate to promote the academic and social well-being of their participants:

Key Components of Mentoring Programs

Depending on their focus, mentoring programs utilize a variety of activities to provide opportunities for academic and social growth. For social growth, rites of passage programs (for example, the Bridge Builders, Coming of Age) have been instrumental in effecting positive change for African American children and adolescents by reconnecting powerful relationships within the African American community. Rites of passage programs give credence to the awkward transition from childhood to adulthood; too often in our current society, adolescence represents a turbulent period, and if adolescents are not given the option of participating in a positive program that helps them explore the myriad of questions this transition naturally evokes, the likelihood of them making negative choices greatly increases. Rites of passage programs provide a safe environment for African American adolescents to explore their heritage, to reconnect to the past, to plan and implement community service projects that connect to the present, and to explore career opportunities in envisioning their future.

As a mentoring program, rites of passage programs provide positive role models for African American adolescents. Through planned events, program participants and adult mentors work

Table 1 Programs With Mentoring Components

<i>Mentoring Program</i>	<i>Relative Size</i>	<i>Dominant Focus</i>

Debutantes for Christ	Regional	Social
Empowered Youth Programs	Regional	Academic/Social
Young Leaders Academy	Regional	Academic/Social
Young Lions	Regional	Social

through sessions that help the participant gain a vision of who he or she is and his or her purpose in the community. This vision is cemented in African philosophy and an African-centered paradigm that provides the foundation for the rites of passage. The rich interaction between participants and their mentors made possible by discussions and activities centered on adolescent transition to adulthood helps participants form an image of themselves that crosses over into adulthood and, with it, adult responsibilities. To mark this crossing over, rites of passage programs culminate with initiation ceremonies in which participants step forward within their communities to assume their new responsibilities as defined by the program.

What once represented a scattered grassroots movement, rites of passage programs now have a national connection through the National Rites of Passage Institute, founded and directed by Paul Hill Jr.; in its mission statement, the National Rites of Passage Institute explains that its purpose is to “provide the Training, Programming, Evaluation, International Field Trips, and Dissemination of Information to develop a critical mass and community of servant leaders.” Dedicated to its purpose, the institute represents a wealthy resource for communities and organizations wanting to start a rites of passage program that reflects both the strengths and needs of a given community.

Other mentoring programs promote social growth through a wide array of activities depending on the program’s focus. These activities include summer leadership academies, educational field trips, and college tours. Such programs may use curriculum that covers goal setting, career planning, etiquette training, and community service. Usually the program concludes with a special event such as a graduation ceremony or a special trip. In faith-based mentoring programs, the curriculum focuses on one particular study; for example, *Debutantes for Christ* acts as a rites of passage program that partners older Christian women with young African American women. The curriculum focuses on gender issues, spirituality, and cultural background from a biblical perspective. Recently, the Book of Esther has been the focus of their Bible studies; young and old review the story and how

it could apply to their lives today. The study culminates with a cotillion in which the “new Esthers” are presented to society.

For academic growth, mentoring programs employ academic monitoring, after-school tutoring, Saturday academies, Exam Lock-Ins, or a combination of these activities. Academic monitoring affords the mentor the opportunity to help parents make contact with the school. By asking teachers of the child or adolescent to complete weekly or biweekly progress reports, the mentor can help parents be aware of missing assignments or upcoming assignments as well as help the mentor detect any academic weaknesses that can be addressed during tutoring sessions.

The mentor may be able to make suggestions to help the parents find ways to support their children academically. Some programs are more intentional about helping parents and guardians by holding monthly meetings or seminars on topics related to the academic well-being of their children or adolescents. Topics may include the importance of parent–teacher conferences, understanding standardized testing, helpful Web sites, and practical suggestions for helping the child or adolescent enjoy reading and studying.

Saturday Academies allow program participants to receive additional academic support in subjects such as reading comprehension and math that represent traditional achievement gaps. One program mentioned in Table 1, Empowered Youth Programs (EYP), employs the Saturday Academy as a way to bridge achievement gaps for program participants. The academy is held on a college campus from 8:30 a.m. until 1:00 p.m. During that time, program participants are involved in academic rotations on key areas, including reading comprehension, vocabulary, math, and science. The program allows mentors to access student work to ensure continuous communication between academic mentors and program participants.

Each Saturday, program participants receive reports from their mentors that show their progress; academic mentors offer specific praise for areas successfully completed by the participant as well as encouragement to redo areas that show a lack of improvement. Immediate feedback represents a critical factor for positive academic development and can help the mentor provide the necessary encouragement and support.

An Exam Lock-In represents an intensive exam preparation held over the course of a weekend; academic mentors and participants “camp out” in a local high school working through one-on-one tutoring, individual preparation, and group study sessions as participants prepare for final exams or state end-of-course tests representing final exams. Academic mentors are instrumental in showing participants how to study, how to organize information, and how to process it to make it accessible during the exam.

Commonalities Among Mentoring Programs

In successful mentoring programs, several common factors exist that sustain the mentoring relationship, keep it positive, and allow it to operate as a survival strategy. These factors include the program’s commitment to (a) a set of well-defined goals with expected outcomes, (b) positive growth for the younger member of the relationship, and (c) quality time spent together to ensure the development of the younger member.

Relative to goals and outcomes, successful mentoring programs determine these before the beginning of any mentoring relationships. Effective program administrators review the data concerning the group they wish to serve, determine the child’s or adolescent’s needs based on data rather than ill-informed preconceived notions, set goals with expected outcomes, and plan the activities that will foster those outcomes as a result of the mentoring relationship.

To help programs be more effective in their support of children and adolescents, the Search Institute has published 40 developmental assets for children, as well as 40 developmental assets for adolescents; the assets are divided into two categories, external and internal. External assets include support, empowerment, boundaries and expectations, and constructive use of time, while the internal assets help the child or adolescent develop a commitment to learning, positive values, social competencies, and a positive identity.

Each asset is subdivided into five to seven specific examples of how the asset could be developed to encourage healthy development for the participants. For example, under the external asset of support, the Search Institute lists family support,

positive family communication, other adult relationships, caring neighborhood, caring school climate, and parent involvement in schooling as possible areas of work for mentoring programs. Effective mentoring programs use such information along with the data concerning their participants either to develop or to compare the goals for their programs.

If a mentoring program wanted to evaluate its overall plan before initiating the mentoring relationships, the Friends of Children Web site contains a list of 10 essential elements of a Friends of Children Program as well as a Theory of Change. The 10 essential elements mirror several of the developmental assets proposed by the research of the Search Institute that represent their goals, while the Theory of Change shows a well-developed action plan. This action plan includes five key elements: (1) needed resources for (2) activities and services that will build (3) chapters of Friends of Children with elements that will help with (4) the implementation of certain strategies that will (5) produce expected outcomes for program participants. To better serve their participants, an effective mentoring program develops an action plan similar to the one described to help program leaders develop a clear vision of the program before the first mentoring relationship begins. Careful planning results in a better experience for program participants, and the attainment of expected outcomes are more likely. The Internet provides easy access to such plans, and program planners can search according to the program’s intended focus: academic or social.

Positive growth for the younger member of the relationship should be documented in two ways: one for the younger member and one for the mentoring program; for both, the documentation acts as a self-assessment. For the younger member of the mentoring relationship, concrete evidence of growth in targeted areas provides encouragement and support; in addition, the ability of a young person to employ self-assessment can become a valuable survival strategy. Many mentoring programs initiate this process by presenting the goals and expected outcomes to the child or adolescent and their parent or guardian; then, periodically, the mentor and mentee review the mentee’s achievement relative to the goals and expected outcomes.

A brief discussion that allows the younger member to express why they believe there have been gains with guided input from the mentor models goal setting and self-assessment.

Monitoring growth for the younger member of the relationship also provides a twofold self-assessment for the mentoring program. First, if the mentors use the same activities to engage the younger member of the relationship, measuring growth relative to the program's goals and expected outcomes will determine whether the activities are effective or require modification or replacement. Second, the mentoring program has a responsibility to the younger member of the relationship about the quality of the mentor; measuring growth can be a reflection of the mentor and his or her effectiveness. This information could be helpful in defining the training program for mentors before they begin a mentoring relationship.

Another commonality among mentoring programs for African American children and adolescents involves the amount of quality time spent in the mentoring relationship. This element remains the critical factor to the success of the mentoring relationship. As a result, many mentoring programs have a minimum time requirement that mentors spend with program participants. As the African American community is restructured and the number of single-parent households increases, the mentors become partners with parents and extended family members as they work for the healthy academic and/or social development of the child or adolescent.

Characteristics of an Effective Mentor

The quality of any mentoring program depends on the mentors; mentors should be selected based on the goals and expected outcomes established by the program. First and foremost, the mentors must be able to make a time commitment to the young person. Effective mentoring relationships are not built on one activity but are the result of a sustained relationship. The mentor must be committed to working with the young person on a regular basis.

Effective mentors must be able to set and maintain boundaries, uphold the parent's discipline actions when appropriate, and employ active listening skills to encourage the young person to

engage in discussions. Effective mentors should be able to recognize developmental characteristics so that their responses to the young person's behavior will be appropriate.

Mentoring Programs as Agents of Change

Mentoring programs can operate as agents of change and spread their sphere of influence when the program is effective in its beginning stages. The Minority Achievement Committee (MAC) was originated 12 years ago by some of the senior African American male students of Shaker Heights High School in Ohio. After seeing the dramatic statistics concerning African American males in their school district, this group decided to start their own mentoring program for African American male underclassmen.

Initially, the program met once a month in the auditorium and was led by the senior members; the seniors decided on a plan of action and then delivered a "talk" series to and with the underclassmen. Because of the success of that original program, females wanted to start their own version of the program. Now, the program has five additional components that reach throughout the school district. They include the following:

1. *Early Intervention:* A program focusing on kindergarten students
2. *Extended Learning Time:* After-school and Saturday tutoring sessions for underclassmen who require additional academic support
3. *Focus on Study Skills*
4. *Parent Involvement:* A group for parents to help them understand the educational system and how they can better support their children
5. *Study Groups:* Study circles initiated and supported by the school.

The success of this mentoring program shows what is possible when adults and adolescents are committed to supporting and encouraging positive development for young people.

MEREDITH V. FAIR

Meredith v. Fair (1962) was one in a series of lawsuits that sought to desegregate the South's formerly all-White or all-Black universities. While this case and the appellate ruling ordering desegregation of the University of Mississippi were relatively straightforward, the arrival of James Meredith on the Ole Miss campus triggered rioting in which two people were killed. Meredith, nevertheless, went on to graduate and later wrote a book about his experiences.

Historical Context

In 1950, the U.S. Supreme Court acknowledged that in the context of higher education, segregation was discriminatory, in contravention of the Fourteenth Amendment, because the separation created inequality by "[impairing] and [inhibiting] a student's] ability to study, to engage in discussions and exchange views with other students." The Supreme Court's pronouncements in *McLaurin* and its companion case, *Sweatt v. Painter*, along with its parallel denunciation of segregation in the K-12 sector, were met by fierce resistance in Mississippi.

The Mississippi State Sovereignty Commission was charged by the Mississippi legislature in March 1956 to "protect the sovereignty of the state of Mississippi" from "encroachment thereon by the Federal Government." Ex officio members of the commission included the president of the Senate, attorney general, speaker of the house, and the governor. This concentration of political power created a nearly insurmountable barrier to higher education desegregation.

With the help of the NAACP Legal Defense Fund, several African American men attempted to break through this barrier over the course of the mid- to late 1950s. Their applications to the University of Mississippi were thwarted by changes in admissions policies, admissions requirements that included recommendations from alumni, physical intimidation, imprisonment, and in one case a death. These efforts continued into the 1960s.

Upon leaving the U. S. Air Force in 1960, James A. Meredith took to the pursuit of higher education,

using the GI Bill to enroll in Jackson State University, a historically Black university. In January 1961, Meredith requested application materials from the University of Mississippi, which were received by Meredith within one week. Hendrickson (2003) attributes this quick turnaround to an assumption on the part of the registrar, Robert B. Ellis, that Meredith was White. Meredith formally applied for admission to the University of Mississippi on January 31, 1961. His application contained a formal photograph of himself and a note stating the following:

I sincerely hope that your attitude toward me as a potential member of your student body reflects the attitude of the school and that it will not change upon learning that I am not a white applicant. I am an American-Mississippian-Negro citizen.

His application was denied on February 4. That May, James A. Meredith decided to challenge the Ole Miss decision and with the NAACP Legal Defense Fund sued to compel admission to the University of Mississippi.

Facts of the Case

At the federal district court, Judge Sidney J. Mize, an Ole Miss law alumni, declared, "The proof shows on this trial, and I find as a fact, that there is no custom or policy now, nor was there any at the time Plaintiff's application was rejected, which excluded qualified Negroes from entering the University." Attorneys for the state argued that Meredith's application was denied because he was a "troublemaker who was lacking in moral fiber." Meredith's claim was dismissed, and he appealed to the Fifth Circuit Court of Appeals.

Here, the court made some specific findings of fact regarding the dual system of higher education in Mississippi: No African American students attended any of Mississippi's historically White colleges, and no White students attended any of Mississippi's historically Black colleges. Additionally, the court acknowledged documentation of official state action enforcing the system's segregated status. The court ruled that Meredith's application was denied on the basis of his race and overturned the decision of the district court. The

University of Mississippi was ordered to admit Meredith. The state appealed to the U.S. Supreme Court, which declined to review the case. As such, the judgment of the Fifth Circuit stood.

While the court proceedings ended in time for Meredith to begin his studies with the start of the Fall 1962 semester, entry to Ole Miss was delayed as state and federal officials jockeyed from September 15 to September 30 to allow Governor Ross Barnett to appease segregationist supporters. During this time, the state found Meredith ineligible for enrollment under the recently passed Senate Bill 1501. Meredith was falsely charged with a criminally defective driver's license—charges that Attorney General Robert F. Kennedy, as head of the Justice Department, ordered dropped.

During this period, racial tensions throughout Mississippi swelled, and President John F. Kennedy dispatched 31,000 federal troops around the state to maintain peace. Two thousand seven hundred troops were stationed in the college town of Oxford, Mississippi. Due to the fear of violence, Meredith was escorted by 500 U.S. marshals to a campus dormitory at 6 p.m. on Sunday, September 30. The idea was to have Meredith registered and begin classes on Monday morning. As Meredith settled into the dorm, mob violence ensued. Two persons, French journalist Paul Guihard and Walter Ray Gunter, a bystander, were killed that night. It is estimated that 2,500 to 3,000 Mississippians were involved in the rioting, resulting in 370 military and civilian casualties and 300 arrests; a small fraction of these were students.

Meredith began his studies on Monday, October 1, and graduated from the University of Mississippi in 1963. He pursued graduate education at the University of Ibadan in Nigeria and received an LLB from Columbia University in 1968. Meredith became a minor player in Mississippi politics as a conservative activist and supporter of Jessie Helms and David Duke. His memoirs of his time at the University of Mississippi are captured in his 1966 autobiography, titled *Three Years in Mississippi*.

Impact of the Ruling

One year after Meredith's graduation from the University of Mississippi, the U.S. Congress passed the Civil Rights Act of 1964, pursuant to which

the state of Mississippi was indicted in 1969 for its maintenance of a dual system of higher education. Meredith's case provided the foundation for the *Ayers v. Fordice* litigation, which brought finality to court-supervised higher-education desegregation in Mississippi.

MILLIKEN V. BRADLEY

Milliken v. Bradley (1974) is one of the most significant school desegregation cases decided by the U.S. Supreme Court since its landmark ruling in *Brown v. Board of Education, Topeka, Kansas* (1954), which outlawed legal segregation in public education. The case involved a challenge to a court-ordered desegregation plan in Detroit, Michigan, that included the outlying suburban school districts as part of the remedy. The lower courts held that a Detroit-only desegregation plan would not effectively desegregate the school system because it was already 65% African American; an effective desegregation remedy required the inclusion of the surrounding suburbs. Representatives for the suburban districts objected, arguing that an interdistrict remedy exceeded the remedial power of the federal courts because there had not been any finding of liability on the part of the outlying districts. By a 5–4 decision, the U.S. Supreme Court sided with the suburban districts, agreeing with them that an interdistrict remedy exceeded the equitable powers of the federal courts. By rebuffing the district court’s interdistrict desegregation remedy, the *Milliken* ruling significantly limited the scope of remedial options available to federal courts in fashioning desegregation decrees within a climate characterized by “White flight” to the suburbs. This entry explores the background, the facts, and the impact of *Milliken v. Bradley*.

Background

Milliken v. Bradley originated in 1970, with a class action suit brought by the Detroit branch of the National Association for the Advancement of Colored People (NAACP) and individual parents. They charged that the Detroit Board of Education, in concert with state officials, had intentionally operated a racially segregated public school system in violation of the equal protection clause of the Fourteenth Amendment and the mandate in *Brown*. After ruling for the plaintiffs, the district court, after considering several remedial options, ordered an interdistrict remedy that included Detroit’s overwhelmingly White suburban school districts. The court reasoned that a Detroit-only remedy

held no promise of substantially desegregating the city’s public schools. This action was taken even though the outlying districts were not parties to the case and there were no claims of constitutional violations against them. Subsequently, suburban districts were allowed to intervene, but they were prohibited from making any claims or offering any defenses to issues already adjudicated in the case. Instead, the court restricted their participation to giving advice on the propriety of a metropolitan desegregation plan and submitting objections, modifications, and alternatives to any such plan. The U.S. Sixth Circuit Court of Appeals affirmed the district court’s decision in part, concluding the following:

Any Detroit only segregation plan will lead directly to a single segregated Detroit school district overwhelmingly black in all of its schools, surrounded by a ring of suburbs and suburban school districts overwhelmingly white in composition in a State in which the racial composition is 87 percent white and 13 percent black.

Consequently, the court of appeals held that including the outlying suburbs represented the only feasible means to effect meaningful desegregation of the Detroit public schools. But the court of appeals remanded the case to the district court so that all the suburban districts that might be affected could be made parties to the case and have a voice in the construction and implementation of a remedial plan.

U.S. Supreme Court Ruling

A deeply divided U.S. Supreme Court, by a 5–4 vote, sided with the suburban districts and set aside the rulings of the lower courts. The Court held that the federal courts had exceeded their equitable powers by ordering a cross-district remedy in the absence of a finding of constitutional violations by the suburban districts. According to the majority, the boundaries of separate and autonomous school districts cannot be set aside for purposes of fashioning a desegregation remedy unless it can be shown “that there has been a constitutional violation within one district that produces a significant segregative effect in another district.”

The *Milliken* ruling triggered a number of pointed dissenting opinions from the justices who voted in the minority. Justice Byron White, in an opinion joined by Justices William Brennan, William Douglas, and Thurgood Marshall, lamented the majority's holding. White decried the fact that despite a court finding of unconstitutional conduct by the Detroit Board of Education, no remedy, in his view, adequate for the scope of the violation would be implemented. This was occurring, he opined, not because a remedy could not be found but because "an effective remedy would cause what the Court considers to be an undue administrative inconvenience to the State." Writing separately, Justice Douglas noted that the effect of the Court's decision in *Milliken* would be to "freeze in place" the funding inequities between the mostly Black and poor Detroit public schools and the mostly White, affluent suburban school districts. Justice Marshall, who had been the lead attorney for the NAACP during the *Brown* cases, viewed the Court's decision as a great step backward in the struggle to achieve equal educational opportunity for all children, regardless of race:

The rights at issue in this case are too fundamental to be abridged on grounds as superficial as those relied on by the majority today. We deal here with the right of all of our children, whatever their race, to an equal start in life and to an equal opportunity to reach their full potential as citizens....Our Nation, I fear, will be ill-served by the Court's refusal to remedy separate and unequal education, for unless our children begin to learn together, there is little hope that our people will ever learn to live together.

Impact of *Milliken*

The Supreme Court's ruling in *Milliken* severely restricted the power of federal courts to order city-suburban desegregation plans at the very moment when "White flight" to the suburbs was rendering solutions to racial separation in public schools impractical. Since the end of World War II, Whites had been increasingly moving to the growing suburbs throughout the nation, taking economic opportunity and urban tax bases with them. To add insult to injury, the *Milliken* ruling came on

the heels of the Supreme Court's ruling in *San Antonio Independent School District v. Rodriguez*, in which a 6–3 majority held that funding inequities between affluent and poor school districts do not offend the equal protection clause of the Fourteenth Amendment. As a consequence, the rejection of the lower courts' chosen remedy in *Milliken*, especially in northern and western metropolitan urban areas without a history of de jure discrimination, would place the starkest racial and economic disparities within public schools beyond the scope of effective remedies. In interpreting *Milliken*, Gary Orfield writes as follows:

Milliken viewed desegregation as unfairly punishing the suburbs. The Court ruled that unless it could be shown that either suburban communities or discriminatory state action created the pattern of all-white suburbs and heavily black city schools, Detroit would have to desegregate by mixing its dwindling white enrollment with its huge and rapidly growing black majority. . . . Since the minority population in the industrial North is much more heavily concentrated in a few big cities than it is in the South, this decision guaranteed that desegregation would be limited and temporary in much of the North.

The *Milliken* decision significantly reduced the effectiveness of court-ordered busing as a desegregation tool in northern and western metropolitan areas. It also coincided with strong public opposition to busing. This backlash had intensified as federal courts made it clear that desegregation did not simply apply to southern school systems with a history of segregation by law; rather, northern and western school districts without a history of de jure segregation could also be found in noncompliance with *Brown*. Surveys indicated that close to 90% of Whites preferred neighborhood schools over mandatory busing. These same surveys also indicated, to the chagrin of many civil rights advocates, that busing was also unpopular within a sizable segment of the African American community. Therefore, the Supreme Court's decision appeared to be a capitulation to the intense public opposition to busing that permeated the political environment of the 1970s. By placing most suburbs beyond the reach of the federal courts, the Supreme

Court's ruling in *Milliken* foreshadowed its subsequent determinations in the late 1980s and 1990s that school districts under long-standing desegregation orders should be declared unitary and relieved of federal supervision, despite evidence of continuing racial segregation in the schools.

MILLS V. BOARD OF EDUCATION OF ANNE ARUNDEL COUNTY

Mills v. Board of Education of Anne Arundel County (1939) was the second of two cases in which African American teachers in Maryland sought to obtain the same pay for their work as White teachers. Supported in both cases by the National Association for the Advancement of Colored People (NAACP), the teachers lost their first lawsuit against the state but won the second suit against the local board. Even so, it was some

time before equal pay became the rule and longer still before separate schools for Whites and African Americans were declared unconstitutional. This entry explores the background, the facts, and the significance of the *Mills v. Board of Education of Anne Arundel County* case.

Historical Context

The educational system for African Americans in Anne Arundel County, Maryland, at the beginning of the 20th century was in many respects similar to the systems in the southern United States. Maryland provided segregated educational facilities for African American children. Situated south of the Mason-Dixon line, between the North and the South, and on the mid-Atlantic seaboard, Maryland was an enslaving state but one that remained loyal to the Union during the Civil War. Though it operated under martial law for much of the war because of widespread sympathy with the secessionist states, it nevertheless was one of the first states to abolish enslavement through its Constitution of 1864.

Maryland took the first steps toward provision of free public education as early as 1825. Its 1867 Constitution, still in effect, mandates an efficient system of free public schools. By the turn of the century, each county and Baltimore City had a local board of education, often called “school commissioners,” that was authorized by statute to provide and maintain the schools. The city and counties provided for schools through local property taxes, and the state supplemented these funds through taxes levied specifically for education. In addition, in 1922, the state established an Equalization Fund meant to equalize the provision of education across the various counties regardless of wealth by providing supplemental funds to poorer counties that had difficulty meeting school costs. These costs included minimal salaries for teachers that were established by statute.

Separate Schools

The state school board superintendent recommended that the state provide separate (free) education for “colored children” in 1866. In 1869, Anne Arundel County allotted some \$83.31 for the purpose of maintaining separate schools for African Americans, apparently allotting money

for the first time. In 1872, there were 10 such schools in the county, with an enrollment of 307 children. The first of these schools had been built on land donated by African American parents and built with funds from the Freedman's Bureau. Because Maryland schools were already segregated, little changed in 1896 when the U.S. Supreme Court decided and later applied *Plessy v. Ferguson* (1896), establishing the "separate-but-equal" doctrine as the law of the land. Though Maryland schools were segregated, they were never equal.

Anne Arundel County is one of 23 counties in addition to Baltimore City constituting the governmental subdivisions of Maryland; it includes Annapolis, the state capital. Now largely a suburban community in part bordering Baltimore, Anne Arundel County historically was viewed as part of Maryland's eastern shore and southern tier, an area more culturally similar to the southern states at the beginning of the 20th century. While Maryland's population and economy were diverse, as was its geography, the population in the southern tier, including Anne Arundel County, consisted primarily of English and African Americans who were mainly engaged in tobacco growing and other kinds of farming, as well as harvesting fish, oysters, and crab from the Chesapeake Bay, on which the county sits. In 1940, African Americans represented 29% of the total population in the southern tier and eastern shore, and by 1980 they were 21% of the population.

Anne Arundel County received not only state funding for educational purposes but also monies from the Equalization Fund. For the most part, the county sought to follow state law as to the minimum educational program. In 1916, legislation established a minimum program requiring that all employed teachers be qualified teachers, that minimum salaries graduated for experience be paid to all teachers who met the state teaching requirements; that schools for White youth remain in session at least 180 days each year, and that public schools for African American youth remain in session at least 140 days each year; among other things.

Although the state had enacted legislation establishing state-approved teacher training schools for African American teachers in 1908, some time thereafter the state requirements for the certification

of both White and African American teachers became uniform. Maryland passed in 1904 the first schedule that set a minimum salary for White teachers. The first schedule that set a minimum salary for African American teachers was not passed until 1918. It set the salary at \$280 per year for African American teachers, while the minimum for White teachers that year was \$600 per year.

Acting Against Inequality

Activism around educational inequality gained momentum around this time. For instance, in 1918 the State Colored Teachers Association of Maryland, which had been organized two years earlier, listed as its two principal goals the equalization of teachers' salaries and the equalization of the school term. In 1923, citizens brought an unsuccessful suit, based on the ordinance of estimates, seeking to require the Baltimore City School Board to equalize the pay between White and African American teachers. Baltimore City later voluntarily equalized these salaries. Further, in the late 1920s, the association introduced bills to end the dual salary scale in each session of the legislature to no avail.

Finally, the NAACP entered the movement against discriminatory teachers' salaries in Maryland in 1936, after having first unsuccessfully brought similar suits in North Carolina and Virginia. These salary cases were part of the initial steps in the NAACP's long-term campaign to undermine and eventually challenge the separate-but-equal doctrine. Thurgood Marshall, a native of Baltimore who later became a U.S. Supreme Court Justice, was the special assistant to the NAACP. He became the attorney for suits in Montgomery County, Maryland, in 1936 (*Wm B. Gibbs, Jr. v. Bromme*) and in Calvert County, Maryland, in 1937 (*Elizabeth Brown v. Board of Education of Calvert County*). Both suits for mandamus were settled out of court with plans to equalize teachers' salaries over time.

The African American teachers of Anne Arundel County followed these cases with a great deal of interest. Having established the Colored Teachers Association of Anne Arundel County in 1932, and also having periodically petitioned the county board for the equalization of salaries, the association decided to make a final appeal to the board of

education before instituting a suit. Phillip Brown was the African American teachers' spokesperson at the meeting held January 5, 1938, with the Board of Education of Anne Arundel County. The teachers argued that they should receive the same remuneration as other teachers in the county.

The Board of Anne Arundel County went on record as favoring a revision of the State Equalization Law, presumably so that it would apply to teachers' salaries and provide equal pay for equal work in addition to equalizing the provision of education between poor and rich counties. But, according to the board, there were no funds with which to raise the African American teachers' pay. The board then took up the issue again on October 4, November 2, and November 23, 1938. At the November 23 meeting, the board decided to increase African American teachers' pay by 10%. But because it became clear to the teachers that any equalization of their salaries would take several years, the teachers decided to proceed with their suit. Walter Mills, an African American teacher in Anne Arundel County, indicated that he would willingly serve as plaintiff in such a suit.

An Earlier Case

Walter Mills, with Thurgood Marshall as one of the attorneys, filed a suit against the Maryland State Board of Education, the State Superintendent of Education, and the Treasurer and Comptroller of the State, the object of which was the equalization of salaries, in *Mills v. Lowndes* (1938). They calculated that successfully suing state officials would render it unnecessary for them to file separate suits in every county of the state that maintained a dual salary scale because the decision would apply to the entire state.

The suit maintained that the dual salary laws violated the Fourteenth Amendment, either on their face or in practice, and alleged that only White teachers were employed to teach in schools for White children and only African American teachers in the schools for African American children. It also alleged that most of the counties paid the African American teachers materially less than the salaries paid to White teachers. The suit then pointed to the separate statutes that set one minimum-salary scale for "White teachers" and another, lower minimum-salary scale for "teachers in

colored schools." Further, it sought an injunction against the state officials prohibiting them from distributing the equalization funds, funds which, it maintained, aided in the perpetuation of discriminatory salaries.

The court dismissed the case, finding that the relief sought was not proper, and not proper as against these general state officers. The court reasoned that only the county government had the power to enforce the statute in making contracts with teachers, and the county had to be afforded an opportunity to be heard as a party to the case before state funds could be properly withheld from it. The court explained that while the state authorities had the power to enforce the statutes where teachers were paid less than the minimum, they were powerless to restrict the counties from paying teachers more than the minimum or equalizing teacher salaries.

Further, the court held that prohibiting the distribution of the equalization fund was improper because it would be futile to the plaintiff's ultimate goal and it would harm counties that had in fact equalized teachers' salaries but were beneficiaries of the fund, among other things.

Though the case was dismissed, the court framed the central issue for the later case as whether the minimum salary statutes for teachers, although not discriminatory on their face, were administered in many counties in a way that constituted discrimination against "colored teachers solely on account of race and color," a violation of the equal protection of the law.

Facts of the Case

Mills, the African American teacher employed by the Anne Arundel County Board of Education in 1939, when he instituted the suit, *Mills v. Lowndes*, became a principal with four teacher assistants at Parole Elementary School, a so-called colored school. Mills had attended Bowie State Normal School, a school for training "colored teachers" and held a first grade teacher's certificate and a principal's certificate issued by the Maryland State Board of Education. He was now in his eleventh year of teaching.

Mills, with Thurgood Marshall, Leon Ransom, and William Hastie as his attorneys, instituted a second lawsuit in the same federal district court in which the earlier case had been filed. This time,

however, they instituted the suit against Anne Arundel County Board of Education and its superintendent on behalf of Mills and other African American teachers in Anne Arundel County. The suit again called attention to the Maryland statutes setting different minimum salary standards for White teachers and those teaching in colored schools and alleged as a practical manner that only Whites taught in White schools and only African American teachers taught in African American schools. The latter, the suit claimed, were paid less in Anne Arundel County than White teachers, solely on account of their race or color, an unconstitutional discrimination prohibited by the Fourteenth Amendment.

This time, Mills sought to enjoin the board from making a distinction solely on the ground of race or color in the fixing of salaries and from paying him or other African American teachers less than the amount paid to Whites. Further, he sought a decree declaring that the board's policy as maintained and enforced, whether or not pursuant to controlling statutes, violated the Fourteenth Amendment.

The Court Speaks

The federal district court held that Anne Arundel County School Board had discriminated against Mills in the practice of his profession solely on account of his race. It first noted that Maryland enacted legislation in 1937, effective September 1, 1939, that made the school term for African American children the same as the school term for White children. It explained that there was also legislation in 1939 establishing a new and slightly different state minimum-salary schedule graduated for experience and qualifications for White teachers. This statute raised the salaries paid to White teachers and set a minimum of \$1,250 for a teacher with a first-grade rating and nine years or more of experience. There was no change in the separate minimum-salary schedule for teachers in African American schools. The minimum salary for these teachers with a first-grade rating and nine years or more experience was \$765.

The court then rejected in part the argument that the statute was discriminatory on its face, reasoning that the statutes set minimum salaries, not maximums; that the counties were the final arbiters

of salaries and could pay higher and equal salaries, and noted that some did. Further, the court reasoned that the statute made a distinction between White teachers and teachers in African American schools. Theoretically, a White teacher teaching in an African American school would presumably be paid according to the lower minimum-salary scale for teaching in an African American school. Thus, the court noted that while the statutes permitted discrimination by the counties, it did not necessarily require it. It then declared the controlling question as "not whether the statutes were unconstitutional on their face," but whether in their practical application they constituted discrimination on account of race or color that was unconstitutional.

Observing that there was a state minimum-salary schedule for White principals serving at elementary schools that listed a minimum salary of \$1,550 when a principal had qualifications and staff comparable to those of Mr. Mills, the court noted that there was no minimum salary schedule for principals of African American elementary schools. However, Anne Arundel County had minimum-salary scales for both African American and White principals. It listed the salary for White principals with comparable qualifications and assistants serving in an elementary school consistent with the state minimum salary at \$1,550 and listed the minimum salary for similarly skilled and staffed principals at African American elementary schools at \$955.

The court explained that Anne Arundel County for several years had paid higher salaries than the minimum requirements. Mr. Mills's actual salary was \$1,058, while three other similarly qualified White principals earned \$1,800 that year. Though the defendants argued that the White principals had superior professional attainments and efficiencies than Mr. Mills, the court reasoned that the difference in the amounts paid to these particular individuals could not explain the fact that the minimum county scale would require that any White person receive a minimum salary of \$1,550, a sum higher than that paid to Mr. Mills. In other words, the court commented, if Mills had been White, the county would have had to pay him \$1,550.

Furthermore, recognizing that the case was filed on behalf of other African American teachers in Anne Arundel County, the court observed that the

salary scales contained a host of differentials between teachers and principals and between elementary school and high school teachers. But the court found that of the 243 White teachers in Anne Arundel County and the 91 African American teachers, not one of the African American teachers received as much salary as any White teacher of similar qualifications.

Finding Discrimination

The court thus held that Anne Arundel County School Board in discriminating between White and African American teachers had discriminated against Mills, an African American teacher in the practice of his profession solely on account of his race or color in violation of the Fourteenth Amendment. It held that Mills was thus entitled to injunctive relief against the continuation of the discrimination to the extent that it was based solely on grounds of race or color; and that he was entitled to a decree that impermissible discrimination did exist.

However, the court refused to grant that part of Mills's injunction that appeared to remove all discretion from the county regarding salaries. Instead, the court suggested that the county should pay both African American and White teachers the same minimum salary established for Whites but that they were free to pay individuals more than the minimum based on individual merit. Further, with both sides acknowledging that the board faced financial difficulties in raising African American teachers' pay, the court delayed the effective date of the injunction until the next budget cycle.

Impact of the Ruling

In light of the decision in *Mills v. Board of Education of Anne Arundel County*, the board, with the consent of African American teachers, agreed to raise African American teachers' salaries as of January 1941 retroactive to the beginning of the school year in September 1940. However, in the decision's immediate aftermath, the county seemed poised for resistance.

In the spring of 1940, the assistant superintendent for the county visited each school in the county. Later, all teachers received two sets of

letters, ranking them as either first- or second-class teachers and informing them that they would not receive salary raises based on experience if they ranked second class, in accordance with new legislation passed in 1939 and presumably based on the assistant superintendent's visit as an evaluation. The new law prohibited county superintendents from providing incremental increases in salary based on experience for those teachers whose certificates they rated as second class.

Not surprisingly, most of the African American teachers received letters ranking their certificates as second class. This effort appeared to exploit the language in the *Mills* case allowing for higher salaries to individuals based on merit. But real resistance and possible retaliation did not materialize. Most African American teachers were later reclassified as ranking in the first class, and the Maryland legislature in 1941 established a single salary schedule for all teachers.

The *Mills* cases, therefore, were not only beneficial to African American teachers in Anne Arundel County but also to those throughout Maryland. In addition, the *Mills* cases spurred the NAACP in its campaign to equalize teachers' salaries in other states. The NAACP and other local groups attacked discriminatory teachers pay in 11 other southern states of the United States, most resulting in the equalization of pay.

Further, the NAACP had some limited success in challenging and demonstrating a pattern and practice of discriminatory pay even in cases in which school boards sought to exploit the "merit" language in *Mills* in order to perpetuate discrimination (*Davis v. Cook*, 1948), and some early success in suggesting that county boards were administrative arms of the state subject to the Fourteenth Amendment (*McDaniel v. Board of Public Instruction for Escambia County, Florida*, 1941).

Though the goal of the NAACP campaign, of which salary equalization was a part, was to undermine segregation by making it too expensive for the states to maintain, states' commitments to segregation proved tenacious. So, for instance, in Anne Arundel County overall, schools remained segregated and decidedly unequal. This would continue to be the case as a matter of law until the NAACP altered its strategy to attack segregation

per se and won its landmark U.S. Supreme Court decision in *Brown v. Board of Education, Topeka, Kansas* (1954). Even then, and after the implementation of a school choice program, it would be 1966 before Anne Arundel County would nominally be desegregated.

MISSOURI EX REL. GAINES V. CANADA

Missouri ex rel. Gaines v. Canada, Registrar of the University of Missouri, et al. (1938) represents the first case in which the U.S. Supreme Court ordered

an all-White university to accept an African American applicant. Because the applicant left the scene, that order was never implemented. It set a precedent, however, for later cases seeking to open universities to African Americans and, in time, for the landmark *Brown v. Board of Education, Topeka, Kansas*, ruling (1954). This entry looks at the background, the facts, and the impact of the *Missouri ex rel. Gaines v. Canada* case.

Historical Context

Racial segregation in all areas of public accommodation, including in public education, was pervasive in the United States in the 19th century. This practice occurred during what was commonly known as the “Jim Crow Era,” in which segregation was essentially the law of the land and was sanctioned by the Supreme Court in *Plessy v. Ferguson* (1896), which established the “separate-but-equal” doctrine. African Americans could be kept separate from Whites so long as the facilities to which African Americans were confined were equal to those provided to Whites.

In the 1930s, the National Association for the Advancement of Colored People (NAACP) began its legal campaign to end segregation, especially in the education arena. However, by this time, the races had been separated legally for such a long time that the separate-but-equal doctrine had become firmly entrenched in the United States. Thus, the NAACP recognized that, more than likely, a direct challenge to the doctrine and to *Plessy v. Ferguson* would fail. Therefore, the NAACP sought to compel the courts to enforce the “equal” prong of the separate-but-equal doctrine. In other words, rather than attack segregation itself, the NAACP elected to challenge the relative poor quality of African American education, compared to the education provided to White students, by alleging that the Black institutions were not physically or otherwise equivalent to their all-White counterparts. The rationale behind this “equalization strategy” was that it would be so expensive for states to maintain truly equal education for African Americans that the states would voluntarily desegregate its schools.

In advancing its newly created legal strategy, the NAACP elected to focus its efforts on higher

education in southern and border states as opposed to public elementary and secondary schools. The organization chose this route because there were virtually no graduate or professional schools for African Americans in these areas, and African Americans were not typically allowed to go to school with Whites in those parts of the country. Armed with this strategy, the NAACP began to selectively file lawsuits to end segregation in education.

In 1935, Lloyd Gaines, an African American male who had recently graduated with honors from Lincoln University in Jefferson City, Missouri, applied for admission to the School of Law at the University of Missouri. Lincoln University, which did not have a law school, was a liberal arts college maintained by the State of Missouri specifically for African American students. Gaines was not only an honors student, having received a bachelor's degree in history, but also a member of the Alpha Phi Alpha fraternity, and he was president of his graduating class. Prior to attending Lincoln University, Gaines had graduated as valedictorian of his high school in St. Louis, and he had taken courses at Harris Stowe State College, a Black teachers college in the city. The School of Law at the University of Missouri was an all-White institution. Mr. Gaines's application for admission was denied because he was African American.

The *Gaines* case was the perfect vehicle to advance the NAACP's strategy of ending segregation in schools by attacking the "equality" prong of the separate-but-equal doctrine. Therefore, the NAACP on behalf of Mr. Gaines filed a lawsuit in the Missouri courts seeking to compel Gaines's admission to the University of Missouri Law School. Gaines asserted that the refusal to admit him to the law school constituted a denial of equal protection in violation of the Fourteenth Amendment to the U.S. Constitution.

Facts of the Case

The University of Missouri, an institution for Whites only, operated the only law school in the state of Missouri. The parallel Black university in Missouri, Lincoln University, did not operate a law school. However, a Missouri statute, § 9622 of the Revised Statutes of Missouri (1929), allowed for

any African American resident of the state of Missouri to apply for attendance "at the university in any adjacent state" for any course offered at the State University of Missouri that was not taught at Lincoln University. Pursuant to this statute, the State of Missouri would pay the reasonable tuition rates and fees for such attendance when no Black in-state facility was available.

As mentioned, Lloyd Gaines, an African American student, applied for admission to the University of Missouri School of Law in 1935. The registrar at the University of Missouri advised Gaines to communicate with the president of Lincoln University, who in turn referred him to the Missouri statute previously referenced. Rejecting the suggestion that he apply to law school in a neighboring state, Gaines continued in his quest to attend the law school at the University of Missouri.

The University of Missouri acknowledged that Gaines's "work and credits at the Lincoln University would qualify him for admission" to the School of Law. However, asserting that it was "contrary to the constitution, laws and public policy of the State to admit a Negro as a student in the University of Missouri," Gaines's request for admission was denied. Gaines maintained that the University of Missouri violated the equal protection clause of the Fourteenth Amendment of the U.S. Constitution when it refused to admit him. Therefore, with legal assistance from the State of Missouri and from the NAACP, he filed a petition for mandamus seeking to compel the University of Missouri to admit him to its law school.

Court Rulings

Maintaining that Gaines should have applied for admission to law school in an adjacent state, as permitted by § 9622, the trial court denied relief. The trial court's decision was affirmed by the Missouri Supreme Court. In a 6–2 decision, the U. S. Supreme Court reversed, stating:

By the operation of the laws of Missouri, a privilege has been created for white law students which is denied to Negroes by reason of their race. The white resident is afforded legal education within the State; the Negro resident having the same qualifications is refused it there, and must go outside of the State to obtain it.

That is a denial of equality of legal right to the enjoyment of the privilege which the State has set up, and the provision for the payment of tuition fees in another State does not remove the discrimination.

[Nor], can we regard the fact that there is but a limited demand in Missouri for the legal education of Negroes as excusing the discrimination in favor of whites. [P]etitioner's right was a personal one. It was as an individual that he was entitled to the equal protection of the laws, and the State was bound to furnish him within its borders facilities for legal education *substantially equal* to those which the State there afforded for persons of the white race, whether or not other Negroes sought the same opportunity. *Missouri ex rel. Gaines v. Canada*, 305 U.S. 337, 349–351 (1938). (emphasis added)

The Supreme Court went on to state that Gaines “was entitled to be admitted to the law school of the [University of Missouri] in the absence of other and proper provision for his legal training within the State” (305 U.S. 337, 352). Thus, the matter was reversed and remanded to the trial court.

Impact of the Ruling

Lloyd Gaines never attended the University of Missouri Law School, or any other law school. Even after the Supreme Court's decision, the State of Missouri was not willing to admit Lloyd Gaines to the all-White University of Missouri Law School. Therefore, the Missouri legislature introduced a bill to provide Lincoln University with money to establish a law school. The bill was signed into law in May of that year, and the newly completed law school opened its doors in September 1939.

The NAACP believed that this hastily created Black law school was blatantly unequal to the University of Missouri Law School. Unfortunately, however, the NAACP could not seek legal redress in the courts because Lloyd Gaines had suddenly and mysteriously disappeared without a trace. After a diligent search, Mr. Gaines could not be located. Eventually, therefore, the NAACP did not oppose the state of Missouri's motion to dismiss the *Gaines* lawsuit.

The Supreme Court's rulings in *Gaines* were not carried out because of Gaines's disappearance; thus the NAACP's argument that the hurriedly created Black law school was not in fact equal could not be tested in the courts. A decade passed before another *Gaines*-type case would present itself before the highest court in the land. In that regard, 10 years after *Gaines* was dismissed, the Supreme Court heard three cases that ultimately furthered the path toward ending “separate-but-equal” education in public schools: *Sipuel v. Board of Regents of University of Oklahoma* (1948), *Sweatt v. Painter* (1936), and *McLaurin v. Oklahoma State Regents* (1936).

In *Sipuel*, an African American female applied for admission to the University of Oklahoma Law School, the only taxpayer-funded law school in the state. She was denied admission because of her race, and the trial court upheld the board of regents' decision not to admit her. She then made application for a writ of mandamus in the District Court of Cleveland County, Oklahoma. The writ of mandamus was refused, and the Oklahoma Supreme Court affirmed the judgment of the district court. On appeal to the U. S. Supreme Court, the Court, in a unanimous, four-paragraph per curiam opinion, reaffirmed *Gaines* and held that the State of Oklahoma was constitutionally obligated to provide Sipuel with an equal education. In that regard, on remand, the trial court gave the state the choice of either admitting Sipuel to the law school, or establishing a separate Black law school.

In *Sweatt v. Painter*, Sweatt, an African American mailman, was denied admission to the University of Texas Law School solely because of his race. At that time, pursuant to a state statute, the University of Texas Law School was restricted to White students only. After the initial filing of the lawsuit, but before the Supreme Court ruled, the State of Texas created a law school for African Americans. Reversing the trial court's finding that the education offered to African American students at the newly created law school was “substantially equivalent” to the education provided at the University of Texas School of Law, a unanimous Supreme Court held that the separate schools did not provide “substantial equality in . . . educational opportunities.” As a result, the Supreme Court held that Sweatt could not be denied admission to

the University of Texas Law School, and the Court struck down the Texas statute that restricted the school to Whites only.

On the same day that the Supreme Court decided *Sweatt*, it issued a unanimous opinion in *McLaurin*. In *McLaurin*, the State of Oklahoma admitted McLaurin, an African American doctoral student, to pursue his education at the previously all-White University of Oklahoma under the threat of legal action. However, pursuant to an Oklahoma statute that mandated that African Americans and Whites be taught “upon a segregated basis,” McLaurin was forced to sit at an assigned seat in the classroom specified for African Americans only; he was given a special table in the library; and, although he could eat in the cafeteria at the same time as White students, he was assigned to a special table. The Supreme Court unanimously struck down the Oklahoma statute and held that once African American students are admitted into a state-supported graduate school, they must be treated equally.

Thus, *Gaines*, the NAACP’s first Supreme Court victory in a school desegregation case, united with *Sipuel*, *Sweatt*, and *McLaurin*, three unanimous decisions, cast serious doubt on the viability of the separate-but-equal doctrine. These cases laid the groundwork for the landmark case of *Brown v. Board of Education*, (1954), in which the Supreme Court declared that “separate educational facilities are inherently unequal” and held that “in the field of public education the doctrine of ‘separate but equal’ has no place.”

MOREHOUSE COLLEGE

Morehouse College is a private, 4-year men’s historically Black liberal arts college located in the West End neighborhood of Atlanta, Georgia. It is one of only four 4-year men’s colleges in the United States, and the only historically Black college that is a men’s college. The mission of Morehouse College is “to develop men with disciplined minds who will lead lives of leadership and service.” The school’s motto is *Et facta est lux*, Latin for “And then there was light,” a reference to Genesis 1:3, which harkens back to Morehouse’s connection to the Baptist church and spirituality that is a hallmark of the institution.

Martin Luther King Jr. is perhaps the most notable in a long and distinguished list of Morehouse alumni in many fields of endeavor: in academia, former college presidents Mordecai Wyatt Johnson

(Howard), James Nabrit Jr. (Howard), and Michael Lomax (Dillard); in the fields of politics and civil rights, former Atlanta mayor Maynard Jackson, former National Association for the Advancement of Colored People (NAACP) chairman Julian Bond, and New York Congressman Major Owens; in the fields of sports, entertainment, and the arts, actor Samuel L. Jackson, Olympian Edwin Moses, and filmmaker Spike Lee; in the fields of the military and business, U.S. Army Lieutenant General James Hall, former associate publisher of *Jet* magazine Robert E. Johnson, and Nathaniel Bronner, founder of Bronner Bros. cosmetics; and clergymen such as theologian Howard Thurman, former chairman of the Morehouse College Board of Trustees, the Reverend Otis Moss Jr., pastor of Olivet Institutional Baptist Church in Cleveland, and the Reverend Calvin Butts, pastor of Abyssinian Baptist Church in New York.

This entry discusses Morehouse College's history, its academic programs, alumni, campus facilities and holdings, and student life and athletic programs.

Historical Background

Morehouse College started as the Augusta Institute, founded in 1867 under the auspices of the American Baptist Home Missionary Society, a society dedicated to educating African Americans in the post-bellum South. Three men were involved in the founding and initial operation of the Institute: the Reverend William Jefferson White, a clergyman and furniture maker; the Reverend Edmund Turney, a founder of the National Theological Institute in Washington, D.C., an institution established for the education of freed African Americans; and Augusta native Richard C. Coulter, a former enslaved African and National Theological Institute graduate.

Early Years

The institution first operated out of the Springfield Baptist Church, the oldest African American church in the United States. Twelve years later, in 1879, the Reverend Frank Quarles led a movement to move the institution closer to the center of the state in Atlanta. The institute was relocated to the state capital and renamed the

Atlanta Baptist Seminary, where the first seminary classes were hosted by Rev. Quarles in the basement of the Friendship Baptist Church. The seminary was located in several locations in Atlanta until 1885, when the institution finally broke ground on a 14-acre site in Atlanta's West End, where Morehouse stands today. By 1897, the charter of the seminary was amended to grant the institution full college powers, and it was again renamed, as Atlanta Baptist College.

By 1899, the college faced a crisis, as African American Baptist leaders expressed a desire for greater governance over affairs at both the Atlanta Baptist College and the neighboring Spelman Seminary, resulting in a power-sharing governance cooperative structure between the Home Board of the Southern Baptist Convention, the American Baptist Home Mission Society, the Georgia Baptist Convention, and the Negro Baptist Education Society.

Under the leadership of Dr. John Hope, the institution's first African American president and a Phi Beta Kappa graduate of Brown University, Atlanta Baptist College became Morehouse College in 1913. The college is named in honor of Henry Lyman Morehouse, who served as the first secretary of the board of trustees for the Atlanta Baptist Seminary. Following Hope's presidency, which spanned the years from 1906 to 1931, Dr. Samuel H. Archer was named president and led Morehouse from 1931 to 1937, successfully maintaining the institution during the Great Depression. After Archer's resignation, Dr. Charles D. Hubert served as interim president from 1937 to 1940.

The Mays Presidency

In 1940, Dr. Benjamin Elijah Mays, Morehouse's most renowned leader, took office. Born in South Carolina and educated at Virginia Union University, Bates College, and the University of Chicago, Mays assumed the presidency just 5 years after completing his doctorate in religion, though he had previously taught and served as dean at Howard University. Among Mays's many accomplishments as president of Morehouse are the strengthening of the Atlanta University System, which evolved into the Atlanta University Center (AUC); improving the faculty through a 17-fold increase in the number of faculty members with

terminal degrees from his appointment between 1940 and 1967; presiding over a substantial increase in the size and quality of the campus physical plant, through the construction of classrooms, laboratories, and dormitories; and the establishment of a chapter of Phi Beta Kappa at Morehouse in 1968.

Alongside these administrative accomplishments, Mays also assisted in the development of many Morehouse students who went on to become prominent leaders in their respective fields. Among the students that Mays mentored are Dr. Charles V. Willie, professor emeritus at Harvard University; Dr. Samuel Dubois Cook, president emeritus of Dillard University; Lerone Bennett, writer and historian; Dr. Louis Sullivan, former secretary of Health and Human Services, and Dr. Walter Massey, former president of Morehouse College and former director of the Nation Science Foundation. Mays's best protégé was the Reverend Dr. Martin Luther King Jr., who wrote of Mays's influence as a counselor and mentor in his autobiographical account of the Montgomery bus boycott, *Stride Toward Freedom*. Mays delivered the eulogy at King's funeral in 1968, one year after stepping down from the presidency at Morehouse.

Mays is also credited with advancing the philosophy at the college termed the "Morehouse Mystique," a spiritual and intellectual sense of leadership, brotherhood, and service rooted in the pursuits of Mays's life—intellectual discovery, religious examination, and service in the name of improving the lives of African Americans.

Subsequent Leaders

Morehouse's first alumnus leader, Dr. Hugh M. Gloster, served as president from 1967 to 1987. Gloster's notable accomplishments included increasing the college's endowment to \$29 million and overseeing the construction of a dozen new campus buildings, including the Martin Luther King Jr. International Chapel. Gloster also presided during the founding of the Morehouse School of Medicine in 1975, which became independent of Morehouse College in 1981.

In 1987, the presidency was turned over to Dr. Leroy Keith, another Morehouse alumnus, who increased the institution's endowment to \$60 million and presided at the time when Nima Warfield was

named the first Rhodes Scholar from Morehouse (and the first from a historically Black college). Dr. Wiley A. Perdue served as interim president from 1994 to 1995, when alumnus Dr. Walter E. Massey was named president.

Under the Massey administration, Morehouse articulated the goal of becoming one of the U.S.'s finest liberal arts colleges. During this period, Morehouse College undertook Massey's charge to become an "academic village," linking intellectual and scholarly pursuits with communal, unifying values. This effort coincided with the largest fundraising campaign in Morehouse's history, which raised \$105.7 million by June 2006.

After Massey announced his resignation from the presidency in 2007, Morehouse announced the appointment of its 10th president, Dr. Robert M. Franklin, effective July 2, 2007. Like every president appointed after 1967, Franklin is a Morehouse alumnus.

The University Today

During the 2003–2004 academic year, 2,736 full-time and 148 part-time students from 42 states and 12 foreign nations were enrolled at Morehouse College, which is accredited by the Southern Association of Colleges and Schools (SACS). Morehouse College aspires to be among the finest liberal arts colleges in the United States, with such attributes as a 15:1 student/faculty ratio, being one of 262 colleges in the United States with a Phi Beta Kappa chapter, an endowment of \$118 million, and producing three Rhodes, five Fulbright, five Marshall, and five Luce scholars. Morehouse is a member institution of the Atlanta University Center (AUC), the world's largest consortium of historically Black colleges and universities, including Spelman College, Clark Atlanta University, the Interdenominational Theological Center, and the Morehouse School of Medicine.

Curriculum

Morehouse grants the bachelor of arts and bachelor of science degrees in 26 majors in three divisions: Business Administration and Economics, Humanities and Social Sciences, and Science and Mathematics. To earn a degree from Morehouse College, students must successfully complete 120

semester hours of courses, complete the college's core curriculum, complete at least 60 semester hours of coursework in residence at Morehouse, and present a cumulative grade point average (GPA) of 2.00 or greater. The core curriculum consists of 53 credit hours in the humanities, mathematics, natural sciences, and social sciences, which are intended to emphasize learning outcomes in the following domains: critical thinking, analytic and problem-solving skills, citizenship in an international and cross-cultural perspective, communication, ethical behavior and leadership, knowledge of the natural sciences, an understanding of social institutions and aesthetics, philosophy and religion, and the African American experience.

Academic achievement is a core principle of the mission of Morehouse College. The college provides a 4-year academic honors program, which provides outstanding students with the opportunity to enroll in small courses with exemplary faculty. Students are admitted to the honors program as entering freshmen or may elect to apply as second-semester freshmen or first-semester sophomores with recommendations from professors and a GPA of 3.25 or better. Upon matriculation, approximately 10% of Morehouse College graduates go on to medical school, 9% to law school, another 9% to MBA programs, 7% to engineering graduate programs, and 10% into other graduate areas of study.

As a member of the Atlanta University Center, Morehouse students are able to take courses at member institutions. In addition, Morehouse has exchange programs with the 16 member institutions of the Associated Colleges of the South, and the following colleges and universities: Claremont-McKenna, Dartmouth, Davidson, New York University, Pitzer, St. John's, Stanford, the University of California, San Diego, and Vassar. For students who wish to major in subjects that Morehouse does not offer, the college maintains articulation agreements that allow their students to study in these majors at Atlanta Metropolitan College, Georgia Tech, and Lansing Community College, and Morehouse is affiliated with the National Articulation and Transfer Network (NATN).

Facilities and Archives

The Morehouse campus covers 61 acres and consists of 40 buildings, including 10 academic

buildings and 12 residence halls. Morehouse College is the home of the Martin Luther King Jr. International Chapel, a center dedicated to the development of global communities of hope through reconciliation, nonviolence, science, and spirituality. Academic centers at Morehouse College include the Leadership Center, a training center that examines contemporary ethical and social concerns of relevance to African American life and culture; the Corella and Bertram F. Bonner Office of Community Service, which promotes volunteerism and public service stewardship among the Morehouse student body; and the Andrew Young Center for International Affairs, which pursues the globalization of Morehouse's academic programs, curricula, and activities to prepare students to serve the international community.

Morehouse College's academic library is the Robert Woodruff Library; it is shared with the other member institutions of the Atlanta University Center. The library contains more than 1 million items, comprising print volumes, electronic books, microforms, government documents, dissertations and theses, periodicals, compact discs, and databases. The Woodruff Library is also the home of historical documents and papers detailing the history of historically Black colleges and universities in the Atlanta area, including the John Henrik Clarke Africana Collection, the Henry P. Slaughter Collection, and the Countee Cullen/Harold Jackman Memorial Collection of visual and performing arts.

Morehouse College is the future home of the King Collection, a 10,000-piece collection of notes and unpublished speeches written by alumnus Martin Luther King Jr. The collection was very nearly auctioned, but the auction was averted by a June 23, 2006, deal engineered by a consortium of Atlanta businesses and individuals led by Mayor Shirley Franklin, which paid \$32 million to King's estate. While the permanent home of the papers is unknown at this time, it has been suggested that the papers will be stored in the short term at the Atlanta History Center, the University of Georgia, or the Woodruff Library.

Campus Life

All freshmen are required to live on the Morehouse College campus in one of the 12 residence halls, and

returning students are allowed to continue to live in the halls. Morehouse College students have access to more than 50 clubs and organizations on campus, including the Alpha Phi Alpha, Kappa Alpha Psi, Omega Psi Phi, Phi Beta Sigma, and Iota Phi Theta fraternities. The performing arts are highly esteemed at Morehouse College, with the Concert Band, Jazz Ensemble, Maroon Marching Machine Band, and the world-famous Morehouse College Glee Club. The glee club received international recognition when the group performed the national anthem with Natalie Cole during Super Bowl XXVIII in 1993 and were featured at the opening and closing ceremonies of the 1996 Centennial Olympic Games in Atlanta. Reflecting the college's spiritual legacy, Morehouse College students have access to the William Danforth Chapel and the Martin Luther King Jr. International Chapel. Morehouse College students are represented by the Student Government Association, which is responsible for sponsoring new student orientation, homecoming, the Miss Maroon & White Pageant, and many campus events. Morehouse College's student newspaper, the *Maroon Tiger*, has been recognized for excellence by the Associated College Press.

The Morehouse College mascot is the Maroon Tiger, and the college competes in the Southern Intercollegiate Athletic Conference (SIAC) in Division II of the National Collegiate Athletic Association (NCAA) in the following sports: basketball, baseball, cross country, football, golf, tennis, and track and field. Perhaps the most famous Morehouse College athlete was track and field star Edwin Moses, two-time gold medal Olympian. Donn Clendenon, MVP of the 1969 World Series as a member of the New York Mets, played collegiate baseball at Morehouse College. Morehouse College has the most enduring college football rivalry among historically Black colleges and universities with Tuskegee University: the two schools have played each other for 97 years, since 1902.

Morehouse College shares a special relationship with Spelman College, a historically Black women's college adjacent to the college campus. Spelman College shares a similar history and mission to Morehouse College and has been affiliated with Morehouse College and Atlanta University as charter members of the Atlanta University Center since 1929. There are many shared traditions

between Morehouse College and Spelman College, including the annual Spelman-Morehouse Christmas Carol Concert.

MORGAN V. O'BRYANT

The case of *Morgan v. O'Bryant* (1991) was one of the many cases that followed the historic *Brown v. Board of Education, Topeka, Kansas* (1954) ruling that declared segregated schools unconstitutional. More than a decade after that ruling, many states had not yet eradicated the remnants of segregation in their school systems. The *Morgan* case involved an order by the Boston School Committee approving the layoffs of several hundred teachers. The federal circuit court ordered that teachers at one city high school would be protected from the layoffs in order to maintain the school's desegregation efforts. The court felt that keeping the present teachers on the faculty was necessary to eliminate some of the effects of past segregation and to protect the progress made toward desegregation of the high school. This entry addresses the background, the facts, and the aftermath of the *Morgan v. O'Bryant* case.

Historical Context

The U.S. Supreme Court decision in *Brown v. Board of Education Topeka, Kansas* (1954) to abolish segregation in the school system left loose ends. In *Brown*, legally mandated discrimination (de jure segregation) had been eliminated in student placement; however, the courts still had to examine every aspect of school functions, including faculty, administration, activities, transportation, and facilities. Desegregation was not instantaneous, and its installment spurred a flood of school-related discrimination proceedings in the court system.
